FLOUR MILLERS OPPOSE WHEAT EXPORT

The Newspaper's Staff Reporter January 27, 2019

LAHORE: Flour millers have opposed the government decision of exporting wheat fearing it may cause shortage in the local market as prospects of the current crop in Sindh are not hopeful.

Flour Mills Association Chairman Naeem Butt told a press conference here on Saturday that despite their opposition the government was planning to export wheat instead of value-added products of the commodity.

They said Khyber Pakhtunkhwa and Balochistan were already facing wheat shortage while there were reports of poor crop in Sindh this season. These factors coupled with export could lead to scarcity of the commodity in the local market and the government would have to import wheat at the cost of precious foreign exchange.

He said wheat export refunds worth Rs2.5 billion were already outstanding creating liquidity problems for the exporters. He demanded that Federal Minister for National Food Security and Research Sahibzada Mehboob Sultan, who was present on the occasion, play his role in resolving this and other issues of the industry. Officials of the food department and district governments were harassing the millers in the name of fortification of wheat flour, whereas results of the pre-mix being provided to the units this year have not been good for the flour.

The minister promised to help resolve 'genuine' demands of the industry.

Mr Sultan said the wheat export issue would be raised at the next meeting of the Economic Coordination Committee. Replying to a question about the miseries of potato growers, Mr Sultan said the government would start procuring the crop within a week to help stabilize its market prices.

He said the potato crop yield this year hit record 4.6 million ton while its export too would set a new record as officials concerned had had useful meetings with the ambassadors and other authorities of China and Belarus in this respect.

SALE OF DRY FRUITS REMAINS LOW DUE TO HIGH PRICES

N H ZUBERI | JAN 27TH, 2019 | KARACHI

The sale of dry fruits remains sluggish during the current winter season due to high prices which made it beyond the reach of the common man. The winter is the peak season for dry fruit sellers and around

70 percent of the annual sale happens during winter season, shopkeepers clamed. There is a continuous increase in the prices of dry fruits, said a customer.

The prices of all kinds of dry fruits remained high in the wholesale markets of the city during the ongoing winter season. Every year during the winter season, consumers flock in a large number to wholesale and retail markets to make their desired purchases of dry fruits to browbeat the cold season, but this year the buying activities at wholesale and retail markets were extremely low.

Dry fruits are mainly imported from Afghanistan, Iran, the USA and India while substantial variety is also grown locally. Traders also attribute the rise in prices to slow growth in imports and low production in the country and costlier imports.

Already overburdened by the unprecedented increase in prices of essential commodities during the last few years, customers have declined more than 30 to 40 percent as compared with previous winter seasons when the local currency was comparatively stable against the dollar, said the dealers. During a visit to some of the markets of the dry fruits it was revealed that demand of most of the dry fruits has plunged sharply during the current winter season on account of inflated their prices.

Despite sluggish sale the most favourites and popular dry fruit thus remains the peanut. Vendors serving hot peanuts roasted in sand are the charm of the winter in the city. Late night gatherings of friends and family are not complete without peanuts. The medical experts say these dry fruits contain great amount of energy.

According to the rates of dry fruits collected from different markets in the city the price of one kilogram of dry apricot (Khubani) is Rs 589; 1000 gram of ‘Ajwa khajoor’ Rs 3,000; 250 grams of American walnut without shell (Maghaz Akhrot) is Rs 475; 500 grams of ‘Kishmish/Meva’ is Rs 525; 500 grams of ‘Kaaju’ Rs 1,550; 250 grams of American almond Rs 500; 500 gram of Malka almond is Rs 999; 500 gram of ‘Anjeer’ Rs 990; one kilogram of walnuts (shells) Rs880; one kilogram of Plain Cashew is Rs 2,500 and one kilogram of Sundarkhani raisin Abjosh is Rs 875.

PROCUREMENT OF CONSIDERABLE QUANTITY OF POTATO UNDER STUDY

TAHIR AMIN | JAN 27TH, 2019 | ISLAMABAD

The federal government is considering to procure considerable quantity of potato in a bid to facilitate potato growers and avoid crisis like situation, it is learnt. Official sources revealed to Business Recorder that an important meeting regarding the current situation about potato export, which is going to start formally in the first week of February, was held. Federal Minister for National Food Security & Research Sahibzada Mehboob Sultan, Advisor to Prime minister on Commerce and Industries Abdul Razak Dawood and Federal Secretary Food Security Hashim Popalzai were present in the meeting along with other senior officials from both the ministries.

Sources said Mehboob Sultan informed the meeting that the ministry was considering all possible options to dispel apprehensions of potato growers and basic focus was to facilitate the potato export. The potato export would start soon with potential increase that year, he added. In the meeting various options were discussed to facilitate the smooth export and address the issues of potato farmers. It was also revealed that the Ministry of National Food Security was setting up a facilitation centre in Okara (Punjab) for the farmers/exporters prior to the start of export.

Popalzai apprised the meeting that the government was negotiating with the stakeholders and different options were being considered. It was proposed in the meeting that the Pakistan Agriculture Storage and Services Corporation (PASSCO) might procure a considerable quantity from the growers to provide relief. The purpose of this would be to facilitate the potato growers and eschew the crisis situation. Federal Minister Mehboob Sultan said the government was negotiating with the provincial agriculture department (s) and there was another option regarding the provision of cold storage facility to the potato growers/farmers by the provincial government. These options are under negotiation and after the deliberations one or both of them will be finalised.

The basic purpose for the procurement of potato by the government is to directly benefit the growers and the Federal Minister for Food Security and Research assured that there should not be any uncertainty among them as efforts were targeted towards the ultimate benefit of the farmers. The government is also negotiating for reduction of Afghan tax on potato to facilitate the potato growers. About 300,000 to 400,000 tonnes potatoes are exported every year. The export of potato to Afghanistan has already been started and around 25 trucks have reached Kabul so far. Briefing the meeting, the officials of Ministry of National Food Security said they were in liaison with provincial agriculture departments as well. The meeting was further informed that there was no tax imposed on the export of potato and for the purpose Federal Board of Revenue (FBR) had been consulted to facilitate the export of potato.

The issue of Afghan duty (as Afghanistan is the route through which it is exported to other states), which has been imposed since 2015 and is around 25 percent, was also taken into account. The negotiations for decrease in the said duty are underway through diplomatic channels, which would help the farmers and exporters.

The export of potato formally starts in the last week of January every year and a substantial increase is expected in export this year. The potato from Pakistan is exported to Russia, Malaysia, Gulf countries and Sri Lanka. China and Tajikistan are expected to get considerable share of potato export from Pakistan. China, as was told by its ambassador last week, is quite keen in buying Pakistani potato.

NEW SUGARCANE VARIETIES INTRODUCED

APP January 27, 2019

FAISALABAD: Ayub Agricultural Research Institute has introduced three new varieties of sugarcane, which would give 40 percent more yield, compared with the existing varieties.

This was stated by AARI Director General Dr Abid Mahmood, while talking to APP on Saturday.

Pakistan is the fifth largest sugarcane producing country in the world. However, the average yield is far less than its potential due to various reasons.

Moreover, water shortage and climatic changes were posing serious threat to the sugarcane production, he said, adding that to combat these challenges and enhancing the production, scientists of Sugarcane Research Institute of AARI have evolved three new varieties, including CPF-250, CPF-251 and CPF-253, which would give 40 percent more yield and require 30 percent less water to complete the growth cycle. To a question, he said the area under sugarcane cultivation was reducing due to water shortage, marketing issues and encouragement of other cash crops by the government.

“Only in Punjab, the area under sugarcane cultivation has decreased 27 percent during this year,” he said, adding that this situation may cause negative impact on sugarcane.

He said the newly-devolved varieties were successfully tested by the scientists of the institute under different agro-ecological zones and were expected to be approved for mass cultivation by the Punjab Seed Council next month.

FLOUR PRICES INCREASED BY RETAILERS

Aamir Shafaat Khan January 26, 2019

KARACHI: Retailers have pushed up prices of various wheat flour varieties but flour millers deny increasing any rates.

Shopkeepers are now charging Rs230 for five kg flour bag, as against Rs220, while the 10kg bag now costs Rs460-470 versus Rs430-440, saying millers are responsible for the price jump.

Pakistan Flour Mills Association (PFMA) Sindh Zone chairman Mohammad Jawed Yousuf, while refuting the claim of retailers, told Dawn that “we have not [raised] prices for the last two to three months, but I cannot comment on the price rise made by the retailers.”

The price of flour No. 2.5 has been unchanged at Rs1,900 per 50kg bag, followed by Rs2,000-2,025 of fine and maida rates, he added.

“Some millers are also selling flour at discount rate,” Jawed claimed, adding the rate of 100kg wheat bag in open market had also been pegged at old price of Rs3,460-3,465 for the last two months.

Retailers said the millers had supplied flour varieties at increased rates in the last one week without giving any reason.

However, the provincial or city administration is least bothered over price issues, leaving consumers at the mercy of market forces.

GOVERNMENT TO PROTECT INTEREST OF LOCAL TOBACCO GROWERS: NA SPEAKER

RECORDER REPORT | JAN 26TH, 2019 | PESHAWAR

Speaker, National Assembly, Assad Qaisar has unequivocally said that rights of tobacco growers, small companies and associated dealers would be protected. He was chairing a meeting to discuss matters relating to tobacco growers here on Friday. The meeting among others were attended by Senator, Mushtaq Ahmad Khan, Special Assistance to Chief Minister on Industries, Abdul Karim

Khan, MNA, Usman Khan Tarakai, Member FBR, Ahmad Mushtaq, Secretary Agriculture and concerned officials and representatives of tobacco growers were also present on the occasion.

Participants of the meeting told that Rs300 tax on tobacco would benefit multinational companies, and on the contrary it would increase the burden on small companies. It was demanded that tobacco crop should be declared provincial-crop and it should be placed under the ambit of provincial government.

AGRARIAN ECONOMY: EXPERTS URGE INDUSTRY STATUS FOR AGRICULTURE SECTOR

Published: January 26, 2019

LAHORE: Panelists at the Express Forum said the agriculture sector should be declared an industry, in accordance with Section 5 of the Factories Act 1934. They added that the Minimum Wages Ordinance 1969 should also be extended to the sector.

Adviser to Chief Minister on Agriculture Sardar Abdul Haye Dasti, women's activist Begum Mehnaz Rafi, human rights activist Mumtaz Mughal and Abdullah Malik were the panelists. The session was moderated by Ahsan Kamray. The panelist highlighted the condition of the agriculture sector in Pakistan and said 75% of the population was linked to it. Dasti said the government was working hard to uplift the agriculture sector as it would help achieve the target of 10 million jobs.

"We are combining education, research and awareness under one umbrella so that we can make good policies," he said. "The last government spent billions of rupees on various projects, but the result was zero."

He said the Pakistan Tehreek-e-Insaf's (PTI) government was launching projects that would benefit the agriculture sector. "Urea prices have been reduced. Duties on the import of machinery have also been waived which will benefit farmers." "Women play a major role in agriculture production, sowing, weeding, livestock rearing and running cottage industries as well as in post-harvest operations such as threshing, winnowing, drying, grinding, husking and storage," he highlighted.

Women's activist Begum Mehnaz Rafi said the agriculture sector should be declared and notified as an industry, in accordance with Section 5 of the Factories Act 1934. The section empowers the labour and human resource department to notify the agriculture sector as an industry.

"To enhance the capacity for policymaking on relevant regulatory and legal issues, such as land tenure, water governance, food safety, seed certification, adaptation of international standards and agreements into the national systems, strengthening food safety and quality control and management system, there is a dire need to collect sex and gender disaggregated data to address the gender disparity faced by agrarian women workers in Punjab."

She said the social protection of women working in agriculture activities could be ensured through their registration with Punjab Social Protection Authority and they should gradually be covered under PESSI and EOBI.

Speaking on the occasion, Mumtaz Mughal said Minimum Wages (for unskilled workers) Ordinance, 1969 should be extended to the agriculture sector through a notification by the government.

"Collective bargaining is an important means to improve wages, working conditions, safety and health of agricultural workers," she said.

Speaking on the occasion, Abdullah Malik said a mass awareness campaign should be conducted on laws for women empowerment and their implementation through helplines or women's police help desks.

GOVT CONSIDERING TO PROCURE 100,000 TONNES OF POTATOES

Amin Ahmed January 25, 2019

ISLAMABAD: In an attempt to provide relief to potato growers, the Ministry of National Food Security and Research has proposed procurement of 100,000 tonnes of potato through Pakistan Agriculture Storage and Services Corporation (Passco).

The proposal, initially turned down by the Ministry of Finance, is now being forwarded to Prime Minister Imran Khan for approval.

It has been suggested that Passco will buy potato from farmers at a cost of Rs11 per kilogram, which would be sold in the market during Ramazan in May and ahead of the wheat harvest.

The situation was reviewed during a meeting here on Thursday at the food ministry, jointly chaired by Food Minister Mehboob Sultan and Adviser to PM on Commerce Razak Dawood.

Sultan said his ministry is exhausting all possible options to dispel the apprehensions of potato growers and facilitate the crop's export which will start soon.

The move is expected to ease the pressure on farmers by assuring them a reasonable price. Punjab grows about 95 per cent of the total crop in the country, and currently farmers are selling it at Rs6 per kilogram. The procurement will allow farmers to prepare for the next crop of maize and rice thereafter, a ministry official said.

Pakistan's total potato production is estimated at 4.6 million tonnes this year versus a domestic consumption of 3.1m tonnes (or 15.4kg per capita), leaving a surplus available for export and seed for next crop. The country exported 570,000 tonnes of potato last year.

According to ministry officials, the export of potato starts during the first week of February every year, but the issue started to flare up when the crop in some areas was harvested prematurely, thus creating a glut.

Meanwhile, the commerce ministry is negotiating with Afghan authorities to reduce duty on Pakistani trucks entering the country for onward export to Central Asian Republics. Presently, there is a 25pc duty on Pakistani trucks which the government is trying to bring down to 5pc, officials said.

The country also exports potato to Malaysia and is now negotiating with China as well, with their delegation expected to visit Islamabad next month.

COMMODITIES: COTTON MARKET BUZZES AGAIN

The Newspaper's Staff Reporter January 25, 2019

KARACHI: The cotton market on Thursday witnessed increased trading which was induced by incentives given in the mini-budget for revival of industrial activity and confidence building measures for businesses.

The lethargic spell of the past few weeks finally seems to be lifting. It took almost six months for the Teheerk-e-Insaf government to spell out policy directions.

Consequently, there was higher demand for cotton as the budget was taken positively and could work as a basis for some long-term business and industrial activity in the country. According to brokers, the period of wait and see has come to an end and the business community will start taking long-term decisions.

Cotton prices generally remained firm but increased flow of buying orders clearly indicated that the textile industry would now start performing better owing to measures and concessions given in the mini-budget.

The world leading cotton markets gave mixed trend with New York cotton losing some of the gains recorded a day earlier while Chinese and Indian cotton gave erratic behavior. The Karachi Cotton Association (KCA) spot rates were firm at overnight level at Rs8,700 per maund.

The following deals were reported to have changed hands on ready counter: 400 bales, station Mirpur Mathelo, at Rs8,800; 2,000 bales, Saleh Pat, at Rs8,700; 4,400 bales, Khairpur, at Rs8,300-8,400; 1,000 bales, Khanpur, at Rs8,900; 200 bales, Mianwali, at Rs8,250; 404 bales, Marot, at Rs8,200; 1,000 bales, for Abbas, at Rs7,900-8,100; 600 bales, Yazman, at Rs7,900; 400 bales, Haroonabad, at Rs7,850; and 400 bales, Chishtian, at Rs7,850.

FERTILIZER: ANOTHER MIDDLING YEAR

BR Research January 25, 2019

Another year went by and the yearly urea off-take remained under 6 million tons. The last time it went beyond the mark was way back in 2010. Ever since it has averaged 5.6 million tons. No wonder Pakistan's agriculture growth, area under cultivation, and yields have not been anything to write home about.

The urea application in CY18 went down by 1 percent year-on-year at 5.81 million tons – while that of DAP went down by 6 percent year-on-year to 2.23 million tons. The much increased awareness of the usage of phosphate fertilizer has resulted in improved balanced fertilizer ratio at 2.6:1, having remained north of 4:1 during CY10-CY15. Continuation of subsidy on DAP has played its vital role in keeping the DAP usage up.

That said, the total speeding on urea and DAP combined in CY18 was 17 percent higher at Rs305 billion. All of it is attributed to higher average product prices. Urea was dearer by an average 16 percent year-on-year, with December price almost touching Rs1800/bag – a 27 percent increase from the start of the year. DAP price averaged even higher at Rs3276/bag with a 25 percent year-on-year increase – having increased 27 percent throughout the year.

The urea and DAP spending has crossed Rs300 billion for the first time since CY15 – having amounted to Rs260 billion in previous two years. Hardly any movement in the whole equation is volume driven – apart from DAP, which goes on to show the farm income for CY18 would be poorer in terms of margin – as clearly, the product prices could not have gone up in the same proportion.

The DAP to urea spending ratio at 39 percent for CY18 is the highest ever. A rupee is being spent on DAP for every Rs1.53 spent on urea, which is an improvement from a rupee on every two rupees on urea till CY16. The government has announced removing GIDC on fertilizer feedstock consumption, which could lead to a reduction of Rs200/bag or 11 percent in urea prices.

This could prove vital to keep the demand going at current pace – if not further improve. The farm economy should do better this time around, as tube well electricity prices have also been halved. Whether or not this results in higher application in terms of volume or better yields remains to be seen – but it will surely offer better profit margins to the farmers.

BREED FISH TO ELIMINATE MOSQUITO POPULATION

By Our Correspondent Published: January 25, 2019

HYDERABAD: Viewing the ever-rising mosquito population as a threat to the human health, experts have suggested taking advantage of certain fish species as a method of ‘biological control’ of the insect. At a seminar, held in Sindh University’s Faculty of Natural Sciences, the speakers preferred biological control of mosquitoes over the existing rampant application of chemical ways.

“Chemical control disturbs the aquatic ecosystem and aquatic food chain,” observed Prof Dr Naeem Tarique Narejo. He considered the biological control agents as the best available to destroy mosquito larvae.

He said the very small fish like Gambosia, Gadusia, Puntius and Tilapia were best control agents which eat mosquito as well as larvae. Prof Narejo said that the insects grew in the stagnant waters where the small fish were released to exterminate their population.

“Fish isn’t only a nutritional source for humans. They can be pivotal for preventing humans becoming ill with mosquito-caused illnesses,” Prof Dr Muhammad Younis Laghari said.

CLIMATE-SMART AGRICULTURE STUDY LAUNCHED

By By News Desk Published: January 25, 2019

LAHORE: The Climate-Smart Agriculture (CSA) study for Punjab province was launched at a ceremony in Lahore on Thursday.

The Food and Agriculture Organisation of the United Nations (FAO), the International Centre for Tropical Agriculture (CIAT) and Agriculture Delivery Unit, the government of Punjab have jointly prepared the study.

The study highlights climate-smart agriculture strategies that can help mitigate and adapt to extreme weather events in Punjab. Also, at the same time, it contributes to increased agricultural productivity and food security in the province. The study emphasises the need for agricultural diversification, reducing dependence on cash crops and switching to higher value nutritious crops. It also points out the urgent need to improve water management strategies, increase irrigation efficiency and reduce water wastage.

In addition, it provides an assessment of the provincial policy and institutional environment for CSA, identifies barriers and solutions for the province and district-level policy design and implementation.

Speaking on the occasion, Deputy FAO Representative in Pakistan Farrukh Toirov said: "It is critical to take pre-emptive measures to address challenges presented by climate change to the agriculture sector, food security and economic growth of Pakistan and its provinces. The CSA study for Punjab is a step in that direction. CSA initiatives sustainably increase productivity, enhance resilience and reduce or remove greenhouse gases.

The study will be instrumental in the assessment of provincial policy and institutional environment for CSA, identification of barriers and solutions for the province and district-level policy design and implementation, and highlighting financing opportunities for CSA investments at the provincial level.

Additional Secretary Task Force Punjab Agriculture Department Beenish Fatima Sahi appreciated the collaborative effort in the preparation of the study and highlighted the importance of CSA for agriculture in Punjab.

She said agriculture is important to the Punjab economy, contributing approximately one-quarter of provincial GDP. The province also accounts for two-thirds of the total national agriculture output. The sector employs over 45% of the Punjab labour force and is the main employment source of nearly three-quarter of the female labour force.

The climate-smart agriculture (CSA) concept aims to improve integration of agriculture development and climate responsiveness. It aims to achieve food security and broader development goals under a changing climate and increasing food demand.

Pakistan is considered to be one of the most vulnerable countries to climate change, with serious impacts on agriculture and food security, due to its geographical location – ranking as the 7th country most affected from natural disasters (1996 – 2005) on the Global Climate Risk Index for 2017.

FARMERS CRITICISE 'MINI-BUDGET'

RECORDER REPORT | JAN 24TH, 2019 | ISLAMABAD

The farming community denouncing the Finance Supplementary (Second Amendment) Act, 2019 asked the government to boost up agriculture sector by taking real steps instead of cosmetic measures. The finance minister Wednesday announced to cut interest rate at agricultural loans from 39 percent to 20 percent to bolster the agriculture sector. He said the agriculture loans have already witnessed 22 percent boost during the Pakistan Tehreek-e-Insaf (PTI) government's first six months.

The minister also announced reduced duty on diesel from 17% to 5% for agriculture sector. Talking to Business Recorder, senior leader of Pakistan Kissan Ittehad Rao Tariq Ashfaq said that as usual the government has ignored 63 percent of Pakistani people in the budget. He said if the government was really giving any importance to the agriculture sector, it would have taken steps to reduce prices of fertilizers, end the role of middleman in agri-marketing and provide significant incentives to the farmers on input costs. He said that at present, farmers are facing serious problems and they are protesting on the roads against their exploitation by middlemen.

Another senior leader of farming community, Mohammad Ibrahim Mughal said that the government should have provided significant subsidies to the farming community on fertilizers, machinery, seeds, pesticides and other agriculture inputs, besides ensuring early handling of different crops from the farms to market. He added that no positive step has been taken to benefit 63 percent population of the country but just a few announcements have been made which are of no use.

At present, different major crops and livestock are facing many diseases and as a result farmers are running from pillar to post to deal with the issues but the government has altogether ignored their problems.

The government should have taken steps to enhance cotton production in the country and make arrangements to lift potato like crops from farms by modernising the markets. He said orange crop is also hit by virus and this year orange exports may witness massive decline, Ibrahim added.

He said that the government must have taken solid steps to promote Halal meat exports which, according to him, have the potential to generate massive foreign exchange for the country. He said that Pakistani livestock sector contributes about 56.3% of the value of agriculture and nearly 11% to the agricultural gross domestic product (AGDP), saying that a number of local industries are totally reliant on livestock and a growth in livestock would result in growth of allied industries.

CONCERN VOICED OVER SHRINKING OF LAND UNDER CULTIVATION

ABDUL RASHEED AZAD | JAN 24TH, 2019 | ISLAMABAD

A parliamentary panel expressing serious concerns over reducing agricultural land under cotton cultivation has said that it is badly damaging national economy. Senate Standing Committee on National Food Security and Research, which met here under the chairmanship of Senator Syed Muzafar Hussain Shah on Wednesday, showed grave concern over the gradual shrinking of land under cotton cultivation during the past few years.

The panel said the government should take immediate measures to save the country from such losses, highlighting the importance of specifying some zones for the cotton cultivation over which farming of no other crop was permissible.

Briefing the committee, Cotton Commissioner Dr Khalid Abdullah gave details of cotton production during different fiscal years, which, he said, had declined from 13.595 million bales in 2011-12 to 11.980 million bales in 2017-18.

Abdullah said scarcity of certified seed, decreased profitability and issues of plant population were the main reasons behind decrease in cotton production. He suggested that cotton production should also be increased in Khyber Pakhtunkhwa and Balochistan to enhance its overall yield.

He said that priority to cotton districts by IRSA and reduction in electricity tariff for agriculture tube wells would also be helpful in promoting cotton production.

The committee directed the relevant officials to bring up modern seeds of various crops and reduce cost of growing of the crops to attract farmers to bring more land under cultivation. The government must provide subsidy to agriculture sector to increase cultivation and in this connection agriculture machinery, water supply, power supply, seed provision, connecting of the farms with agri markets play a critical role, the committee recommended.

The chairman of the committee also underlined the need for encouraging the production of long staple cotton crop, which was having considerable export value and could earn foreign exchange for the country. He asked the Ministry of National Food Security and other concerned officials to come up with a detailed plan in that connection by taking federation units on board on how to enhance crop cultivation in the country. The ministry was asked to have brainstorming session with the stakeholders and progressive farmers on how to enhance overall crop production and what steps should be taken to encourage cultivation of long staple cotton.

The chairman asked the Pakistan Agricultural Research Council (PARC) to organise wheat seminars with proper management and invite 50 growers from each district to participate in the wheat seminar in their respective areas. The PARC was asked to brief the committee in the next meeting about the speakers who would deliver speeches in seminars and about the topics of their presentations.

Meanwhile, president of Zarai Taraqiati Bank Limited (ZTBL) informed the committee that it had disbursed loans of around Rs 3145.387 million since October 2018. He informed the committee that the bank has over 90 percent recovery rate on fresh loans. On the occasion, the chairman said the matter of increasing the paid capital of ZTBL would be taken with Finance Ministry.

The PARC informed the committee about appointments over 692 vacant posts in the council. The committee was informed that 98.3 percent of wheat sowing target has been achieved so far.

‘USE OF HEIS RESULTS IN 20 PERCENT INCREASE IN CROP YIELD’

ZAHID BAIG | JAN 24TH, 2019 | LAHORE

Best global agricultural practices and use of high efficiency irrigation system (HEIS) adopted by the potato growers of Kasur district under PepsiCo's Sustainable Farming Programme (SFP) have resulted in increase of 10 to 20 percent in yield besides reduced cost of production, saving water and positive impact on environment. The SFP is a global initiative launched by PepsiCo where the company engages with farmers from which it sources directly, and provides education on field agronomy, fertilizers, irrigation, plant protection techniques, environment and new technologies.

This was disclosed at an event arranged by the company on Wednesday showcasing global best practices in sustainable farming, so that PepsiCo potato growers can employ those processes and techniques at the farm level in order to become more sustainable.

The demonstrations were conducted on a grower's model farm in Kasur, where growers had the opportunity to see how sustainable practices improved both quantity as well as quality of potato crop yield. In 2017 alone, PepsiCo growers helped conserve approximately 1 billion liters of water by using HEIS on their farms.

"We are excited about imparting critical knowledge on sustainability best practices to our growers," said Zahid Saleem, Head of PepsiCo Pakistan's Agronomy function. "By putting this knowledge into action, our growers are helping the environment and also improving their own livelihoods in the process."

He said that the programme was initiated in year 2016 when large scale trainings were arranged for the growers under this programme regarding conservation of water, best agricultural practices and environment. He said year 2019 is the year for compliance. He disclosed that audit teams from different countries would come and check the practices adopted by the growers in under SFP programme in Pakistan and only those would continue who will be find following the guidelines.

CFO of Company, Omar Yousaf said that quality of the crop was improved during the last five years while company never focused on price strategy instead of long term relations. 'The price fluctuates on both sides while company believes in long term productivity', he added.

Operational Manger Yasir Ghani said that growers were earlier using double water than required for their potato crop. He said there was huge potential to reduce the cost of production and water saving. He said the company was the market leader in the salty snacks category, and procures 100 percent of the potatoes used for its products in Pakistan from local farmers.

Anees Amin, Agro Regional Manager of the programme speaking on this occasion said that the Company had set a target of achieving 15 percent of water saving on the farms of growers under SFP programme by year 2025.

QATAR LIFTS BAN ON IMPORT OF PAKISTANI RICE

By Our Correspondent Published: January 24, 2019

ISLAMABAD : The Qatar government has finally agreed to lift the ban on Pakistan-origin rice, during Prime Minister Imran Khan's visit on January 21-22. Pakistan's Ministry of Commerce had been taking up the issue of excluding Pakistan in the tender with the Qatar government time and again; however, it was finally resolved after PM Imran's visit.

Qatar agreed to include Pakistani rice in the tender documents of the Central Tendering Committee (CTC), which falls directly under the purview of Qatar's Ministry of Economy and Commerce. Although the private sector in Qatar continued to import rice from Pakistan, the CTC, which procures state-supplied subsidised rice for Qatari citizens, made its tender Indian-origin specific, thereby effectively banning the rice import from any other origin, including Pakistan during 2011-12.

Reportedly, the main reason for this change was the substandard and low-quality of Pakistani rice supplied by the exporters against the government tenders in 2011-12. The Indian rice exporters were the ultimate beneficiaries of this situation and Indian rice exports to Qatar reached 142,000 tonnes in 2017 from 18,774 tonnes in 2011.

As a viable solution, a third-party inspection for the supply of rice through CTC tenders and taking strict action against those involved in supplying substandard rice in future will be offered to ensure quality rice. The lifting of ban is expected to provide additional $40-50 million of rice exports to Qatar if the quality is maintained. Qatar annually imports 200,000 tonnes of rice.

Adviser on Commerce, Textile and Industries Abdul Razak Dawood stated the government is taking different measures for export enhancement, including reclaiming traditional markets, besides accessing new markets. He said one of the initiatives is to manage removal of restrictions on Pakistani products in foreign markets.

MINISTER HINTS AT INCREASE IN FARM SECTOR ALLOCATION

The Newspaper's Staff Correspondent January 23, 2019

HYDERABAD: Sindh Livestock Minister Abdul Bari Pitafi has said that in the past meagre allocations were made in the budget for the agriculture sector of Pakistan and most of those were spent in the irrigation sector. But now the Sindh government is trying to increase those allocations for the farm sector.

He was speaking at the conclusion of the two-day 4th International Conference on Agriculture, Food and Animal Sciences 2019 at Sindh Agriculture University (SAU) Tandojam on Tuesday.

He said that with the increased budgetary allocations in the agriculture sector, different projects for agriculture and livestock sectors would be launched to improve their performance. Such conferences were helpful because foreign experts shared their latest research and offered solutions to different issues confronting the agriculture and livestock sectors.

He said recommendations formulated in such conferences proved to be effective in those two sectors. He said the project of artificial insemination was launched in Sindh to preserve rare breed of cattle, which would benefit their breeders and livestock holders.

He said the Sindh government was trying its level best to improve the livestock sector performance and expressed the hope that it would yield good results when compared with other provinces. He appreciated the role being played by SAU.

Speaking on the occasion, SAU Vice Chancellor Dr Mujeebuddin Sehrai said that various conferences, symposia, training programmes of international level were organised in the university for the betterment of agriculture and its related sectors. He announced to publish a research journal comprising papers and recommendations presented by international experts in this fourth conference. He said the journal would be sent to the federal and provincial governments for incorporation in their policies.

Visiting Professor Mushtaq Memon presented his recommendations. Recommendations of other experts were also presented.

One of the recommendations said that river Indus being vital source of Pakistan's water should be given due attention. It said storage capacity of the existing dams should be enhanced and lands hit by waterlogging and salinity should be recovered by taking measures based on modern technology.

It said that measures should be taken for arresting decline in the levels of groundwater on war footings in order to conserve that precious resource.

The experts in their recommendations suggested that Indus River system was the largest contiguous system in the world which was facing different issues due to climate change, inadequate flows, increased population etc.

One of the recommendations called for introduction of new methodologies of research in the agriculture sector at the government, industry and university levels in order to achieve growth in all respects.

Director general fisheries Dr Nazeer Kalhoro, Dr Abdullah Arijo and others also spoke.

FISHERMAN RECORDS WATERSPOUT IN RARE WEATHER PHENOMENON

RECORDER REPORT | JAN 23RD, 2019 | KARACHI

Boat skipper trawling a boat with his crew members for tuna fish about 57 nautical miles off the Ghora Bari coast of Sindh recorded the rare weather phenomenon of waterspout earlier this week, the WWF-Pakistan said on Tuesday.

The oceanic spectacle that shows up rarely and resembles the tornado, skipper Saeed Zaman captured through lenses last Monday, Jan 21, 2019. "This rare weather phenomenon was previously reported by fishermen on 28 February 2016 near Sakoni off Kalmat Khor, Balochistan," the WWF-Pakistan said.

Unfolding the story, Zaman said that he sighted in the morning to a massive waterspout swirling to his boat suddenly but succeeded to drift away, saying that it first looked like a huge patch of cloud. He said that the waterspout was latter seen descending. None of the other boats fishing in the same area also were unmoved to reach the waterspout.

Muhammad Moazzam Khan, Technical Advisor on Marine Fisheries at the WWF-Pakistan, the waterspouts are usually formed along the cumulus type of clouds. “This type of waterspout is generally not associated with thunderstorms which usually dissipate in short time,” he said, adding that waterspouts have long been recognized as serious marine hazards. Stronger waterspouts pose threat to small boats.

He said that fishers maintain a considerable distance from such a phenomenon. “The average spout is around 50 metres in diameter, with wind speeds of 80 kilometres per hour,” he said, adding that “the most waterspouts last for up to one hour, though the average lifetime is just 5 to 10 minutes”.

The formation of a waterspout takes place over five stages; the first stage is the formation of a disk on the surface of water, known as a dark spot; the second stage is a spiral pattern on the water surface; the third stage is a formation of a spray ring; the fourth stage is where the waterspout becomes a visible funnel; and the lifecycle ends and fifth stage where the waterspout decays.

WWF-Pakistan appreciated the alertness and vision of the fishermen who have been trained to record such rare events including release of endangered marine animals. Contrary to its name, a waterspout is not filled with water but is a column of cloud-filled wind rotating over the ocean’s surface.

It descends from a cumulus cloud and the water inside a waterspout is formed by condensation in the cloud. There are two types of waterspouts including tornado and fair-weather.

The clouds from which waterspouts descend are not fast-moving, so fair-weather waterspouts are often static. Both waterspouts require high levels of humidity and a relatively warm water temperature compared to the overlying air. Waterspouts are most common in tropical and subtropical waters but this is the second authentic record of its occurrence from Pakistan coast.

MODALITIES TO MAKE SAARC FOOD BANK FUNCTIONAL DISCUSSED

RECORDER REPORT | JAN 23RD, 2019 | ISLAMABAD

The government of Pakistan hosted the 10th SAARC Food Bank board meeting on Tuesday. Pakistan hosted the meeting at its turn in alphabetical order amongst SAARC States after Nepal. This meeting had particular significance from the perspective of deliberations to work out recommendations for operationalizing the Bank. For this purpose international development partners working in the region may also be engaged, says a press release issued here.

Dr M Hashim Popalzai, Secretary, Ministry of National Food Security and Research during the inaugural session of the meeting on 21st January, 2019 underscore the important role this Bank can play in supply of food grains in the region to achieve the goal of regional food security as our region is home to around 1/4th of the world population. He said that all members of the SAARC Food Bank can mutually work out the modalities for operationalising the Bank with the support of SAARC Secretariat. He further said that Pakistan has surplus production of food grains that may be supplied in the region.

The board meeting deliberated on various aspects of the Food Bank and Board members from SAARC member states including Afghanistan, Bangladesh, Bhutan, India, Maldives and Sri Lanka were actively engaged during the meeting. Dr Javed Humayun, Senior Joint Secretary being Nodal Point from Pakistan for the Bank chaired the Board meeting.

Sahibzada Muhamnad Mahboob Sultan, Minister for National Food Security and Research also attended the closing ceremony of the meeting held on 22nd January, 2019 as the chief guest. He said that SAARC countries are tied in several commonalities of culture, food and environment that can lead us in making joint efforts to our fight to end hunger, poverty and malnutrition in the region. He urged upon the need to further make joint efforts to address the regional level challenges like climate change and also shifting of focus on enhancing intra-regional supply of food products.

For this purpose SAARC Food Bank provides an excellent platform to its member states to interact with each other for intra-regional supply of food grains. The minister for NFSR also announced that the government of Pakistan has doubled the quantum of wheat from 40,000MT to 80,000MT being maintained as Pakistan’s share for this Regional Food Bank, as per requirement.

At the end of the meeting, the minister for NFSR presented souvenirs to SAARC Food Bank Board Members. The other senior officials from the Ministry of National Food Security & Research, Ministry of Foreign Affairs and Pakistan Agriculture Research Council also attended the event.-PR

COTTON SPOT RATES FIRM ON LEAN BUSINESS

RECORDER REPORT | JAN 23RD, 2019 | KARACHI

Official spot rate was unchanged on the cotton market on Tuesday in the process of lacklustre business activity, dealers said. The official spot rate was unchanged at Rs 8,700, they added. In the ready session, not a single deal reported till our going to the press, they said.

Prices of seed cotton in Sindh were at Rs 3000-3700, in the Punjab seed cotton prices at Rs 3000-3700 and in Balochistan, rates of seed cotton were at Rs 3200-3700, they said.

According to the market sources main buyers and sellers were conspicuous by their absence ahead of announcement of mini-budget.

Cotton analyst Naseem Usman said that trading activity may improve after the announcement of mini-budget, due today (Wednesday).

The ginners were under pressure due to huge stock of unsold cotton stock with them, other brokers said.

Cotton prices drifted lower on the international markets, they said.

FCCI SEEKS ABOLITION OF DUTY ON COTTON YARN

By Imran Rana Published: January 23, 2019

FAISALABAD: The regulatory duty on polyester and cotton yarn must be withdrawn in the upcoming mini-budget to strengthen the domestic manufacturing units, urged Faisalabad Chamber of Commerce and Industry (FCCI) President Syed Zia Alumdar Hussain.

Recalling the visit of Finance Minister Asad Umar to Faisalabad on October 4, 2018, Hussain pointed out that the minister had assured him of numerous corrective measures, which would be undertaken gradually, in order to step up dwindling exports of the country.

Appreciating the measures introduced by the government, the FCCI president welcomed the restoration of advance payment facility and provision of gas at 6.5 cents per million British thermal units (mmbtu) and electricity at 7.5 cents per unit.

He expressed optimism that as per the government's pledge, the issue of outstanding tax refund claims, amounting to Rs250 billion, would be resolved by February 15.

"All these efforts have yielded positive results with exports rising 2% and imports narrowing down," he said. "Similarly, foreign remittances also recorded a growth of 10%." He suggested to the government to divert its focus towards the domestic manufacturing sector, which was directly linked with job creation besides heavy contribution to the overall economic development.

Hussain lamented that cotton production had dropped by 400,000 bales. To make up for the shortfall, the government has withdrawn the duty on cotton import. "However, the duty on cotton yarn and polyester still haunts the manufacturers including the power looms."

He noted that businessmen had been assured of swift resolution of the issues confronted by the manufacturing sector. However, he regretted, a powerful mafia was hatching a conspiracy to get regulatory duty imposed for vested interests in order to sell locally made polyester yarn at higher rates.

CLOUD SEEDING TECHNOLOGY: GOVERNMENT TO ACQUIRE TECHNOLOGY TO COPE WITH DROUGHT LIKE SITUATION: NDMA CHIEF

ABDUL RASHEED AZAD | JAN 22ND, 2019 | ISLAMABAD

The government in collaboration with stakeholders concerned has started an effective response to deal with drought like situation in Balochistan and parts of Sindh. This was stated by Chairman National Disaster Management Authority (NDMA) Lieutenant General Omar Mahmood Hayat while talking to Business Recorder here on Monday.

"The facts being provided to me show 420,000 families in eight districts of Sindh and 135,000 families in 18 districts of Balochistan are explicitly undergoing drought impacts where millions of livestock have perished with billions of dollars economic and social loss," he further said.

Referring to the cloud seeding technology used in the United Arab Emirates (UAE) and other countries to generate artificial rain, he said that NDMA should conduct a research over the technology and approach those authorities to acquire the technology to cope with the drought issue.

He said that some global reports put Pakistan as third water-scarce country of the world which is contributing more to aggravate the drought conditions prevailing in the country. He said the secretary agriculture Balochistan informed him that underground water table has receded below 800 feet to 1200 feet whereas same situation is in Sindh's districts of Tharparkur, Metiari, Dadu, Hyderabad and others, which has increased the risks for social and agricultural development in the province.

"Pakistan has the ability to overcome the drought issue but it only requires proper vision and direction to take all the stakeholders together for a better and durable strategy to handle the situation," he remarked.

"The drought in 2018 has severely affected agriculture and livestock sectors of 8 districts of Sindh and 18 of Balochistan resulting in the loss and unavailability of food for half a million families and fodder for over millions of livestock," he said.

The NDMA in collaboration with PDMAs of Sindh and Balochistan held consultative seminars to mull over the prevailing drought phenomenon in the provinces and formulated a comprehensive report submitted to the President and Prime Minister Offices for approval and also with other relevant stakeholders, the chairman NDMA said.

The NDMA chief said that recently, the authority organised a national consultative workshop on drought mitigation, which was attended by the President Arif Alvi, Deputy Chairman Senate Saleem Mandviwalla and other senior state officials.

The event eventually culminated with the drought consultative process which NDMA started in October 2018 by organising a seminar followed by meetings in Karachi on 30th and 31st October, 2018, he added. The chairman NDMA said that the workshop enabled NDMA to grasp the ground reality and know exactly the extent and dimensions of the prevailing drought condition, its impacts on different sectors, relief provided so far and future needs.

PUNJAB GOVERNMENT EVOLVES PLAN TO PROMOTE SUNFLOWER CULTIVATION

RECORDER REPORT | JAN 22ND, 2019 | SIALKOT

Punjab government has evolved a comprehensive plan for the promotion of Sunflower and other oil seed crops in the Province. Under the programme sunflower would be cultivate on more than 2.10 lakh acres of land in different areas of the Province.

Sources in Agriculture department told Business Recorder on Monday that the step was being taken to produce maximum edible oil aimed at lessening the import and to produce maximum edible oil in the province. At present only 34 percent edible oil is being produced within country while 66 percent was being imported for catering the domestic needs for which government was spending huge foreign exchange on the import of edible oil every year.

The demand of edible oil was increasing rapidly due to the fast increase in population of the country and under the situation extra efforts were being made for cultivating oil seed crops including sunflower for minimizing the import of edible oil. The cultivation of sunflower crop could play a vital role in enhancing the production of edible oil because the sunflower seeds had 40 percent oil capacity as compare to other oil seed crops. As many as 4700 acres of land in Sialkot, Daska, Pasrur and Sambrial tehsils of Sialkot district would be brought under sunflower crops.

Keeping in view the importance of edible crops the Agriculture department was making strenuous efforts for motivating the growers that they should cultivate sunflower crop in their fields and get maximum economic benefits and help in enhancing the production of edible oil sources said. The sunflower growers had been directed that they should complete cultivate sunflower crop by mid of next month in their respective fields.

MINISTER INAUGURATES PAKISTAN HORTICULTURE EXPO 2019

RECORDER REPORT | JAN 22ND, 2019 | LAHORE

The Punjab Agriculture Minister Malik Nauman Ahmad Langrial has said that high value agriculture and horticulture production is a highly profitable enterprise which increases employment opportunities and bring increased commercialization in the agricultural sector.

He was speaking at the inauguration of a two-day event ‘Pakistan Horti Expo 2019’ being arranged by the Punjab Agriculture Department at the Expo Centre here on Monday. Secretary Agriculture Punjab Dr Wasif Khursheed and other high ups of the department also attended the opening ceremony. A large number of exporters, growers and other stakeholders of horticulture business from local and abroad are participating in the event.

Malik Nauman said that this event would give a new horizon and open new doors of opportunities for producer, exporter and companies indulging in horticultural and high values crops business in this country. He also appreciated agriculture department for organizing such a mega event.

During his visit at Horti Expo, Langrial also held meeting with delegations which came from Tajikistan, Indonesia and Malaysia and discussed matters of mutual interest.

WHO CARES ABOUT THE POTATO CRISIS?

Amjad Mahmood Updated January 21, 2019

BURNING the crop and taking out protest rallies in the Kasur, Pakpattan and Sahiwal districts of Punjab’s potato zone reveal the growing unrest among potato growers. Currently the market rates for potatoes are much lower than their cost of production.

To the concern of the nascent PTI-government, farmers seeking a support price mechanism for their produce as a protection against negative market forces launched a province-wide protest drive from Jan 15 by staging a sit-in outside the Punjab Assembly.

The provincial government reacted swiftly and managed to end the protest at least for the time being. It arranged a meeting of the protestors’ leaders with federal authorities this Wednesday (Jan 23) with the promise that an all-out effort would be made to resolve all issues related to exporting potatoes.

Punjab, particularly the 12-district-belt that runs from Kasur up to Khanewal district in the south, is the hub of potato production for it gives over 95 per cent of the national produce. Potato is a major staple food and has a significant contribution to the national domestic consumption and food needs.

Despite all odds, growers have reaped a bumper crop. But the commodity has not been fetching a reasonable price from the market, creating a potentially disastrous situation

Despite all odds, growers have reaped a bumper crop as potato acreage has been increasing on a year on year basis. But the commodity has not been fetching a reasonable price from the market. In Okara Mandi, the major potato market in the region, a bag of around 120kg was being sold for around Rs650-725 last week — much lower than its production cost.

Safeer Hayat, a potato trader from Okara, claims that he stored a large quantity of the crop last year in the hope of getting a good price during the off-season. But he could only get Rs1,000 per bag against his total purchase, plus storage cost, of Rs2,200 per bag.

Mr Hayat fears the bumper crop this year will result in a glut in the market and may further lower prices.

Potato Growers Society Vice President Chaudhry Maqsood Ahmad Jatt claims that the total cost of a bag of potatoes, from sowing up till it's transportation to the market, stands at over Rs2,000. Hence, growers are losing at least Rs1,300 per bag at the current rates.

Providing a breakup of the cost, he explains that at least 13 bags of potato seed are used per acre for sowing and each bag of quality imported seed costs Rs9,000. A sum of Rs60,000-70,000 per acre is spent on fertilisers, pesticides, labour and paying rent for land.

Whereas after harvesting, growers have to pay Rs100 per jute sack, Rs100 per bag for transportation, Rs10 as loading and unloading charges and Rs20 commission to the arhti (commission agent).

The difference between the cost of production and yield price is so high that it has left growers unable to sow the next crop — maize — he says.

Mr Jatt, who is also the chairman of the Potato Research and Development Board Punjab, recommends that the government take at least two steps to improve the lot of potato growers and save them from financial losses.

Firstly, it should immediately arrange and promote export through land routes to neighbouring Iran and Afghanistan up to the Central Asian States.

Then, it should announce a subsidy, like in India, for potato exporters with the condition that they will pay the growers prime rate for the produce.

Lahore Chamber of Commerce and Industry President Almas Haider seconds Mr Jatt's suggestion and urges the government to immediately provide relief to potato exporters for disposing off the surplus 1.6 million tonne potato crop in foreign markets to save the domestic market from crashing.

He argues that as the Pakistani potato is in great demand in Russia, Malaysia, Sri Lanka and the Middle East, its export to these and other destinations may not only save farmers but also help earn precious foreign exchange.

The government, however, is so far oblivious to the plight of the growers. “The rulers are not even listening to our problems let alone trying to solve them,” grumbles a farmer leader who has been abortively trying to get an appointment with Punjab Governor Muhammad Sarwar for more than a month.

“The government is offering subsidies worth billions of rupees to sugar millers but ignoring potato growers despite repeated demands,” says Pakistan Kisan Ittehad Punjab President Rizwan Iqbal.

In line with the rest, he adds that as a short-term measure the government should announce a subsidy for potato exporters and support price for the crop which will save farmers from starvation.

TENANTS HAVE NO WAY OUT

Dr Abdur Rehman Cheema | Sultana Ali Updated January 21, 2019

Many of us were shocked when a man in Badin recently attempted to sell his eight-year-old daughter to an elderly landlord after failing to pay him back a Rs100,000 loan. It was shocking because we hardly ever ponder over the trade-offs that these landless and subsistence farmers have to make in their daily lives.

“We frequently acquire financial help from our landlords, hoping we’ll be able to pay them back following the harvest season,” says a landless farmer from the union council of Massoo Bozdar in Tando Allahyar.

Borrowing from landlords is a general practice among those farmers who don’t have access to financial services. According to one estimate, up to 85 per cent of farmers are still formally excluded from financial services. Agricultural loans account for only 7.6pc of total bank loans and are limited to Punjab for the most part.

As we went to different villages of Sindh and talked to landlords and landless tenants, we found that the poor live on subsistence, have little or no savings but face all exigencies of life. Keeping in view the absence of basic public services, landlords are a blessing in disguise in many ways. They help these landless tenants survive. Surely, many of them do so not out of affection for farmers but to exploit their cheap labour in the long run.

If the crop fails, the tenant remains in debt. As a result, he keeps borrowing from the landlord until the next crop

If we put ourselves in the shoes of these poor farmers, a less incriminating role of the landlord would emerge. The landlord helps farmers meet expenditures on all occasions, such as weddings, festivals, house building and harvesting. Moreover, the landlord also sometimes helps farmers meet their daily consumption needs.

In the absence of alternative livelihoods, social protection and skills, farmers cannot easily walk away from starvation. A cash economy where people can work and get paid in cash every day or every month is nearly missing in rural Sindh.

Choices are not many for farmers. We could not track some of the families we met six months ago to see any socioeconomic changes in their lives. Some poor farmers, who were unable to repay their loans, had no choice but to flee. They did it at night to minimise the risk of being chased and chained by the landlord.

“We are daily-wage labourers. But before migrating to Alamani farm, we were living a contented life as farm tenants. The 2010 flood submerged our land and damaged the crop. We went in debt of Rs100,000. We knew we could not pay it off our whole lives. The debt would only increase with the passage of time. So we decided to flee without informing anyone,” said one Ms Jasgi, a 50-year old from Tando Allahyar district.

The landlord is not altruistic. So his help comes at a cost. If the crop fails, the tenant remains in debt. As a result, the tenant keeps borrowing from the landlord until the next crop. This means he is bound to work for the same landlord as long as he is in debt.

Sometimes farmers cannot maintain a record of their borrowing due to illiteracy. “I worked as a farmer with a landlord and maintained all records of inputs like seeds, fertilisers and pesticides. We also borrowed money for household expenditures. But at the time of the settlement, there was a difference of Rs50,000 between my record and that of the landlord. When I asked him to give me my due share based on the fair calculation, the landlord used inappropriate words and expelled me from the area. Now I am helpless,” says Vishnu Kolhi, former tenant-farmer who now works as a teacher in a private school in Tando Allahyar.

While macroeconomic growth strategies are necessary to increase the size of the economy, a lot needs to be done to address this micro-dynamic of rural poverty. It will ensure that benefits of this growth reach the poor and the marginalised. It’s only through a multi-pronged poverty reduction strategy that effective linkages can be created to meet the needs of the poor and track the allocation of funds for meaningful change.

AGRICULTURE NEEDS NO POLITICAL HEAT

Mohiuddin Aazim Updated January 21, 2019

Agriculture cannot perform up to its potential unless there is a smooth working relationship between federal and provincial governments.

This is not the case right now: the federal government wants the removal of the current chief minister of Sindh and treats the opposition parties — the PPP and the PML-N — with utter contempt while grievances of the PTI’s coalition partners in Balochistan refuse to go. The opposition parties as well as independent analysts have expressed serious reservations about the manner in which the anti-corruption drive is moving on. Some people call it selective and one-sided.

Under these circumstances, the PTI needs to make sincere efforts to improve the relationship with Sindh and coalition partners in Balochistan. “Without this, a strategy to promote agriculture can hardly yield the desired results,” opines a former secretary of the Sindh Agriculture Department.

“And, apart from making political environment less hostile, the issue of an acute shortage of irrigation water in Sindh and Balochistan must be addressed on an urgent basis.” The agricultural output in the two provinces continues to suffer due to the scarcity of water.

Federal Minister for National Food Security and Research Sahibzada Mahboob Sultan is relying on a 19-point strategy for agricultural recovery and growth. He shared with agriculturalists some key elements of this strategy at a recent seminar on the cotton sector in Multan.

Under this strategy, the government intends to increase the funding for research on agriculture by 500 per cent, keep prices of agricultural implements low, reduce imports of fertilisers and agricultural inputs and promote their local production, mitigate effects of urbanisation on agriculture and provide financial and technical support for upgrading the services’ extension wings of provincial agriculture departments.

The government has projected 3.6pc agriculture growth for the current fiscal year. Whether the sector can actually grow this much with three of the four major crops — cotton, rice and sugarcane — showing signs of weakness is a million-dollar question

These and some other aspects of his agriculture promotion strategy need lots of financial resources. Given the current fiscal woes, the implementation of the strategy, at least during this fiscal year, seems just too ambitious.

Besides, the bureaucracy in Sindh, with about one-fourth share in the country’s agriculture, is frightened. Instead of doing routine jobs, many officials are busy responding to the enquiries by the National Accountability Bureau (NAB) and other investigation agencies. One can feel an air of bitterness in all provincial departments. Agriculture is no exception.

Perhaps it is time for the PTI to take the smaller provinces on board when it comes to designing and implementing policies of national importance. Senior officials of the Sindh Agriculture Department complain that the federal government has so far not taken them on board in the formulation of “any 19-point strategy for agricultural revival and growth”.

Regardless of whether the federal government has formulated the strategy without seeking input from all provinces, the key question is: will agriculture grow this year at 3.6pc, the yearly average that the five-year economic growth plan of the PTI has envisaged? Officials of the Ministry of National Food Security and Research are optimistic about it. But they are unwilling to share the projected growth in each sub-sector of agriculture ie major and minor crops, livestock and fisheries and forestry.

Federal ministers, including Finance Minister Asad Umar, take pride in the fact that during the six months of the PTI government, agricultural lending increased, as did the overall credit disbursement to the private sector. But higher agricultural lending alone does not indicate higher productivity.

Government officials conveniently forget the fact that a massive rupee depreciation and uptick in headline inflation have not only increased the cost of living for all Pakistanis but also made agricultural inputs costlier, requiring farmers to obtain more bank loans.

The PTI promised in its election manifesto that it would optimise the existing subsidy programmes for agriculture and introduce new ones. That has not happened so far — not at a scale to make any impact on agricultural growth in the current fiscal year, farmers’ groups point out. The PTI had also promised to share the cost of investment required to boost agricultural productivity. That, too, has not happened.

Agriculturalists across Pakistan are still waiting for Chinese investment to trickle in the agriculture sector. Minister for Planning and Development Makhdoom Khusro Bakhtiar says that the much-awaited meeting of the Pak-China joint working group on agriculture will be held in mid-February. Until the outcome of that meeting is shared with all provinces and the details of the memorandum of understanding signed earlier on agricultural cooperation between the two countries made public, speculating on the direction and pace of agricultural growth is just too difficult, officials of the Sindh Agriculture Department say.

In the last fiscal year when the overall economy grew 5.8pc, growth of the agriculture sector was 3.8pc. But that had come in the wake of a weaker growth of 2.1pc a year earlier. Now the government has projected 4.2pc growth for the overall economy and 3.6pc for agriculture for the current fiscal year.

Whether agriculture can actually grow this much with the base growth rate of the last year, and with three out of four major crops — cotton, rice and sugarcane — showing signs of weakness, is a million-dollar question.

Naturally, the reliance for agricultural growth in 2018-19 will be on livestock that also had recorded 3.8pc sub-sectoral growth in 2017-18 against 2.9pc in the preceding fiscal year. If the agriculture sector as a whole is going to grow at 3.6pc this year then this can happen only if the livestock sector posts a higher growth. But that's not too easy due to the base effect and also because we haven't seen any breakthrough in livestock productivity.

Two of the several points of the PTI's agricultural growth strategy are about setting up livestock productivity promotion zones and investment in supply chain of this sector. Both need to be implemented with sufficient transfer of federal funds for this purpose and financial and technical preparedness of the provinces.

In Sindh and Balochistan, nothing of the sort has happened thus far, though some progress has been made in Punjab, officials of agricultural departments of the smaller provinces say.

Fisheries, too, continue to suffer. The governments of the coastal provinces of Sindh and Balochistan could have easily taken the lead in this area, but that has not been the case.

RESTRICTIVE GENDER NORMS AFFECT INNOVATION IN THE AGRI SECTOR

Amin Ahmed Updated January 21, 2019

SINCE there's a progressive trend towards diversification into the non-farm sector, farm size reduction, and loss of the ability to earn solely from agriculture, the role of women in the sector is becoming increasingly important.

"Time is overdue to start reforming gender norms that affect Pakistan's agriculture sector," says the just-released research report published by the International Maize and Wheat Improvement Centre

(CIMMYT). Despite successful harvest seasons, feeding Pakistan's large and growing population requires continual innovation, it says.

The research report recommends that Pakistan must leverage all of its resources to meet its development challenges and goals. The Sustainable Development Goals (SDGs) signed by Pakistan include a number of gender and food security indicators, such as eliminating hunger for all.

All of the SDGs aim "to leave no one behind" and deliver more equitable development outcomes. Around $100 billion could be injected into Pakistan's economy annually if women had equal opportunity of contributing.

Already about 75 per cent of women and girls in Pakistan are employed in the agriculture sector, 60pc of them unpaid. Hence, a new and inclusive approach to agricultural development is required

Already about 75 per cent of women and girls in Pakistan are employed in the agriculture sector, 60pc of whom are unpaid. Hence, a new and inclusive approach to agricultural development is required.

The research report, titled "Opportunities for strengthening gender equity in Pakistan's wheat sector," collates evidence from four research activities. The report authored by Dr Kristie Drucza, reveals "what is required to increase technology adoption and new agriculture practices that will help increase yields."

Some of the strongest forces behind persistent gender gaps are harmful social norms and stereotypes that limit expectations of what women can or should do, and this ultimately limits the country's food security and growth.

Rural women are shut out of decisions, consultations, and research at the local and national levels. Existing gender inequalities put women in a disadvantaged position in the agriculture sector and hamper their economic contributions to the household and nation, Dr Drucza says.

Women's contribution to agriculture, as identified by national statistics, is under-reported and under-valued.

Dr Drucza points out that women's contribution to the agriculture sector – home-based livestock rearing and vegetable farming – are devalued by extension workers and researchers and are not considered 'agriculture'.

This framing, along with a limited understanding of 'gender' and a male bias in agriculture, limits the support women receive when trying to innovate in agriculture and support their families.

Not enough is known about women in Pakistan's agricultural sector, especially in male-dominated crops such as wheat. Rural livelihoods are changing in Pakistan and more knowledge about how male and female farmers are coping with these changes is needed to ensure food security for new types of households.

While gender norms are frequently cited as barriers to change, they can be harnessed to deliver positive change for women, men, families and communities.

Agricultural research for development professionals, policymakers, and extension workers should consult women more, advocate for women's participation in extension activities, promote gender equality, and collect more data on women's role in agriculture.

Dr Drucza argues that women should be involved in agricultural research as principal investigators, designers, analysts, scientists and authors. Pakistan needs to leverage all its resources to create inclusive and sustainable development.

The research concludes that restrictive gender norms have a negative impact on women's ability to innovate and be productive, but can be reduced by policy initiatives that raise awareness on gender inequality and emphasise female-headed household participation and husband and wife co-participation in extension activities, among other culturally nuanced recommendations.

The report emerged from evidence collated from a four-year research for development project funded by the German government and sought to improve the gender-equality focus of wheat-related research and development.

UNWHOLESOME FOOD WEIGHING 35,600KG SEIZED IN LAHORE

RECORDER REPORT | JAN 21ST, 2019 | LAHORE

The Punjab Food Authority has unearthed two food businesses producing adulterated food products in the densely populated areas of the provincial metropolis here on Sunday. The raids were conducted under its Director General Captain Muhammad Usman(R) in the area of Badami Bagh and Taj Bagh after getting information from PFA vigilance cell. The authority has confiscated more than 35,600 kilograms unwholesome food products.

Muhammad Usman said that provincial food regulatory body shut down Abdullah Grinding Unit on account of adulteration in Badami Bagh. He said that spices were being prepared on the surface of the earth by missing bran (choker), sawdust and loose non-food grade colour in it. While substandard spices supplied in the adjacent areas of Lahore without packing foam and labeling this is a violation of Punjab Pure Food Regulations. He informed that PFA sized 19,000 kilograms red chili, 17,000 kilograms turmeric and a huge quantity of raw material from the spot. The authority also collected samples of spices and sent for laboratory test for further examination, he added.

In Taj Bagh area, PFA raided Bukhari Muraba (Jam) factory and sealed it by confiscating 350kg rotten fruits, 200kg sugar syrup, 50kg harmful chemicals, 20kg textile colours, and non-food grade drums. Muhammad Usman said that enforcement team also witnessed an abundance of mosquitoes and flies in the blue drums which were being used for storing of jam. He said that it is compulsory for food business operators to follow the law which set by PFA.

DG said that Punjab Food Authority is doing work under the zero-tolerance policy against food adulterators in Punjab on the directions of Chief Minister Punjab Usman Buzdar. He vowed that PFA will control the food-related issues and eliminate the adulteration mafia from Punjab very soon.

PFA SEALS TWO FOOD BUSINESS OPERATORS

By Our Correspondent Published: January 21, 2019

LAHORE: PFA officials conducted raids on Sunday under the directions of Director General Captain (retd) Muhammad Usman and sealed two food businesses producing a large quantity of adulterated food items in the densely populated areas of Badami Bagh and Taj Bagh. The authority confiscated over 35,600 kilogrammes of unwholesome food products.

The director general said that the provincial food watchdog has sealed Abdullah Grinding Unit in Badami Bagh for adulteration. The unit was producing adulterated spices by mixing bran, sawdust and non-food grade colouring. The spices were being supplied without packaging and labelling to several areas adjacent to the city, the DG stated.

He added that the authority seized 19,000 kilogrammes of red chilli powder, 17,000 kilogrammes of turmeric and a huge quantity of raw material from the scene. PFA also collected the samples of the spices and sent them to the laboratory for further examination, he said.

Meanwhile, in another raid in Taj Bagh area, food safety officials raided Bukhari Muraba, a jam factory, and found less than satisfactory cleanliness and hygiene. The provincial watchdog has sealed the unit and confiscated 350 kilogrammes of rotten fruits, 200 kilogrammes of sugar syrup, 50 kilogrammes of harmful chemicals, 20 kilogrammes of textile colouring and non-food grade drums.

Enforcement teams also reported an abundance of fruit flies and mosquitoes in the drums used to store the jam. “It is compulsory for food business operators to follow the laws laid down by the authority,” Usman expressed.

As per the orders of the Punjab chief minister, the authority has adopted a zero-tolerance policy against food adulterators in Punjab, the director general said. He vowed that PFA will continue to curb food related issues and will endeavour to eliminate adulteration mafia from Punjab. He added that anybody can read the complete set of guidelines as prescribed by the authority on PFA’s website or their Facebook Page.

NEWS COVERAGE PERIOD FROM JANUARY 14st TO JANUARY 20th 2019

GUARD TO INTRODUCE DROUGHT-TOLERANT RICE VARIETY

ZAHID BAIG | JAN 20TH, 2019 | LAHORE

After successfully launching the hybrid rice varieties, the Guard Agriculture Research and Services Limited (GUARD) is soon going to introduce drought tolerant rice variety to mitigate the negative impact of water shortage on rice production. This was disclosed by the Guard Agri Chief Executive Shahzad Ali Malik while addressing the Company’s annual sales conference here on Saturday. SAARC Chamber Vice President and Chairman of the Company Iftikhar Ali Malik, Executive Seed Division Shah Rukh Malik and others also addressed on this occasion.

Malik said that their company started working in 1999 to import, acquire and develop the latest agricultural and crop technologies to produce quality seed aimed at increasing per acre yield and help the nation build grain surpluses to achieve adequate food security. 'Since then we have got approved seven different hybrid rice varieties from the Pakistan Agricultural Research Council (PARC) successfully being sown across Sindh and other parts of the country while last year the company also introduced a heat tolerant variety,' he added.

He said that their heat tolerant variety was giving results even in the hottest region of Larkana. He said that their company keeping up its tradition of twenty years was still carrying out research and development to introduce such seeds of different corps which could achieve higher yields resulting in prosperity of the farmer and strengthening of agricultural economy.

SAARC Chamber of Commerce & Industry Vice President Iftikhar Ali Malik speaking on this occasion threw light on the history of his company and the efforts it started in collaboration with Chinese to introduce hybrid rice varieties which have more yielding potential and greater resistance against different diseases.

He said that SAARC Chamber's headquarter building was ready to commence operations in Islamabad. He said that a nine storey building had been constructed at a cost of Rs800 million. He vowed that his company would continue striving to bring agricultural revolution and maximizing production of different agricultural crops.

Guard Agri General Manager Rizwan Younus also announced launch of rental services of three different types of harvesters for rice crop which could help the farmers to bring down the post-harvesting losses.

PUNJAB COTTON CROP MISSES OUTPUT TARGET AS WEATHER TURNS PATCHY

Munawar Hasan January 20, 2019

LAHORE: Cotton yield in Punjab province has nosedived about one-sixth per hectare as a fall in the area under cultivation, unusually hot weather, stubborn pests, and substandard cotton seed took toll on the crop, The News has learnt.

Latest numbers showed the cotton production in the most populous province fell short of target by a massive 28.84 percent in 2018-19, while it is less than 11.90 percent if compared with last year's output, according to latest official estimates.

As per second provincial estimate of cotton output for the year 2018-2019, the final harvest of cotton has been assessed at 7.11 million bales in the crop year against official target of 10 million bales, showing a decline of 29 percent against the target.

This year's production is short by 11.90 percent, compared with last year's output of 8.07 million bales.

The area under cotton cultivation during Kharif 2018-19 has been 1.94 million hectares against that of 2.05 million hectares in the corresponding period a year ago, showing a dip of 5.14 percent over the previous kharif.

As far as yield is concerned, there has been 15.89 percent cut in per hectare production if compared with the target, while a drop of 7.67 percent has been witnessed against the last year's yield.

The officials blamed decrease in area under cultivation as one of the reasons of decline in cotton production in Punjab.

Climate-related incidences like prolong hot and dry weather were also stated as having adverse effect on the yield in core areas of Multan, DG Khan and Bahawalpur divisions.

Moreover, stunting of crop, attack of white fly, pink bollworm, and other pests also dealt a blow to the yield this year.

Interestingly, sources said, about 90 percent of total cotton area is presently under Bt cotton varieties that have been touted as being resistant against pest attack.

However, many Bt cotton seeds varieties were producing poor yield and quality.

Sources alleged that provincial government even provided a subsidy of Rs700/bag in South Punjab districts on substandard Bt cotton seed varieties like IUB-2013, FH-142, FH- Lalazar and MNH-886 as these are susceptible to pests and diseases like whietfly, jassid, cotton virus, bollworms, etc.

Bt cotton variety FH Lalazar, failed to deliver high yield during trials conducted on a government farm. Lalazar in 2014-15 produced 166 kilograms/acre against the expected 450 kilograms/acre. Similarly, yield from MNH886 and FH142 also remained unexpectedly low.

According to official data, a significant area in Punjab was under Bt cotton varieties MNH 886, FH-142, which were claimed to be heat-stress-tolerant and bollworm-resistant, as well as virus-tolerant, but failed to deliver desired outcomes.

Furthermore, there is no refugia and buffer zone for genetically modified (GM) cotton crops for pest management. Refugia, a fence/boundary of non Bt/GM crops of same variety around Bt/GM crop is highly recommended to delay pests from developing resistance against GMO varieties.

The efficacy of refugia depends on the extent of simultaneous flowering and fruiting of the refugia and the main Bt crop. Absence of refugia can cause serious negative impact on crop quality and production, the sources said adding the government is not paying any attention to this aspect.

PAKISTAN IMPORTS OVER 1.06 MILLION TONS OF MALAYSIAN PALM OIL IN 2018

Our Correspondent January 20, 2019

KARACHI: Pakistan imported 1.06 million tons of Malaysian palm oil till November 2018, higher than 1.02 million tons imported in 2017, Shamsul Iskandar bin Mohd Akin, deputy minister of Primary Industries in Malaysia said on Saturday.

The deputy minister, who is heading a delegation of officials from the Malaysian Palm Oil Board (MPOB) and Malaysian Palm Oil Council (MPOC), attended the 4th Pakistan Edible Oil Conference at a local hotel.

He said over the years, the oils and fats trade between these two countries has expanded to products like oleo-chemicals, palm kernel expeller, cooking oil, confectionary fats and many other products being used by the food and non-food industries in Pakistan.

“Pakistan’s oils and fats market has grown significantly, from 2.7 million metric tons in 2000 to over 4.4 million metric tonnes in 2017,” the deputy minister said. The market has grown by almost double over this time, and palm oil alone accounted for more than 50 percent of this total.

“In 2017, Pakistan accounted for 6.1 percent of the total Malaysian palm oil exports and is the third largest single country importer of Malaysian palm oil,” Shamsul Iskandar bin Mohd Akin said.

Malaysian oil export to Pakistan stood at 1.02 million tons in 2017, showing an increase of 15 percent compared to the preceding year. In November of 2018, Malaysian palm oil exports to Pakistan exceeded the volume exported in 2017, and stood at 1.06 million tons or $650 million, he added.

Oil palm plantations currently cover 5.82 million hectares of agriculture land in Malaysia and contributed $18.2 billion to Malaysia’s export earnings in 2017.

“The palm oil industry has been an important and consistent contributor to our country’s economy, and I sincerely believe that it will continue to do so in the long term,” Akin said.

Malaysia and Pakistan have a very long-standing palm oil trade relationship, one that can be traced back more than 40 years, he said, while appreciating the recent visit of Prime Minister Imran Khan and his meeting with Malaysian Prime Minister Dr Mahathir Mohammed.

He pointed out that one of the agreements reached at the meeting between the premiers was the partial abolition of visa for travel between the two countries.

The deputy minister said Pakistan was among the first export destinations in which Malaysia has major investments in bulking installation and refineries, with the liquid cargo jetty dedicated for the handling of palm oil.

There were other opportunities to tap, considering Pakistan’s strategic geographical location, he said, adding that Malaysian companies were encouraged to come to Pakistan and to collaborate with local companies in developing other areas in oils and fats trade, including oleo-chemicals, biomass utilisation and animal feed.

Palm oil is the leading vegetable oil in the international export trade, accounting for 56 percent of the total world’s oils and fats exports in 2017. Major Malaysian palm oil export destinations are China, India, European Union, Pakistan and the US.

The deputy minister appreciated the office bearers of Pakistan Vanaspati Manufacturers Association, All Pakistan Solvent Extractors Association, Pakistan Edible Oil Refiners Association, and Pakistan Soap Manufacturing Association for inviting him for the keynote address.

AS DROUGHT CONTINUES IN ACHHRO THAR, HERDERS STRUGGLE TO SAVE ANIMALS

Jan Khaskheli January 20, 2019

HYDERABAD: Farmers in the drought-stricken Achhro Thar (white desert) are currently dealing with sickly and weak animals mainly due to nutrition deficiency.

Muhammad Saleh Chaneho, a herdsman from Achhro Thar, said weakness among animals was a major problem farmers faced during the drought. “The main reason is nutrition deficiency among animals, because the drought has burnt vegetation and plants, leaving animals in a helpless situation,” he added.

Only camels, goat and sheep were able to survive in the desert, as they eat all kinds of shrubs and plants, which big animals (cows) do not take.

Saled could not provide any authentic data on animal deaths; however he said herders and farmers feared high mortality because of the dryness and unavailability of fodder.

Belonging to village Tarr Verahi, Saleh claims to have around 400 goats, a dozen cows, and seven camels. Their family’s sustenance depends solely on livestock rearing. Presently, like other herdsmen, they are also afraid of losing their animals in case the dryness persists.

“Because of the drought, we do not have any option other than selling animals at cheap rates to sustain our families,” he said.

Saleh brought his animals with his sons for vaccination at sand dunes near the famous Village Haji Banko Chaneho, near Khipro town, Sanghar district on the last day of “International Training Workshop on bovine reproduction and artificial insemination”.

The workshop was organised jointly by Sindh Agriculture University, Higher Education Commission (HEC) Pakistan, and Sindh Agriculture Growth Project (SAGP) Livestock Component at Sindh Agriculture University Tandojam.

Four teams of veterinary practitioners, 10 in each, were engaged in administering vaccinations to animals during the day long camp at sand dunes. Five other teams, representing leading pharmaceutical companies of Pakistan also contributed medicines for the animals.

A large number of men had brought their herds, including cows, goats, sheep, buffaloes, and camels for vaccination from nearby villages.

Dr Pershotam Khatri, associate professor and chairman, Department of Animal Reproduction, and coordinator of the workshop, said they had brought medicine stock for 25,000 animals in the most ignored Achhro Thar desert.

Dr Khatri, who also belongs to the desert area, said the indigenous Thari cow breed was now rare because of ignorance on part of the government to preserve this threatened indigenous specie.

“We have come here to provide access to herdsmen residing in remote areas of the desert to get their animals vaccinated,” Dr Khatri said, appreciating livestock farmers, who travelled long distances to reach the camp.

He claimed this was the first move taken by the SAU to help the most ignored white desert herdsmen.

Herder Rasool Bakhsh Chaneho said some families in the desert still had as many as 500 to 800 goats and similar numbers of cows, sheep and camels. Livestock rearing was their sole livelihood, he added.

“Presently, we have observed that underground water table has dropped further, and people have to face problems in fetching water from traditional wells,” Rasool said.

Talking about common diseases among animals, Rasool said they have traditional methods of treating animals by local herbal plants. “But animals are hungry now, and we have no fodder to feed and save them,” he lamented.

Haji Arisar from Village Haji Osman Chaneho, who brought his 60 goats and sheep at the vaccination camp, said small animals were infected by swine flu because of dryness.

Only some farmers could afford to bring fresh green grass from the canal areas on camels, the others herded their animals in the area for dried plants and vegetation, he said.

Dr Dileep Kumar, representing a pharmaceutical company and originally from the Thar desert, said there was an absence of political will to save livestock, which was the major source of income for the residents of the desert.

“These people having the largest herds of about 100-1,000 animals per family, do not like to sell their assets. But now they are compelled to do so at low rates,” Dr Dilip said.

Pointing at those who exploit the situation caused by the drought, Dr Dilip said that traders bought goats at Rs2,000 or Rs3,000 from these herders.

“The price is as much as one kilogram of mutton costs at an urban restaurant,” he said.

Milk was also sold at a mere Rs30-Rs35 by the herdsmen, which was as cheap as a small bottle of mineral water in the city, the doctor shared, while pointing out that the same milk was sold at Rs90-Rs100 in urban neighbourhoods.

“Arid zones like Thar, Achhro Thar, Kachho and Kohistan are main contributors in the supply of meat and mutton products. These people feed the country through their products, milk, meat, and dairy, but they are unable to feed their children, who are dying of hunger and malnutrition,” Dr Dilip said.

At the concluding session, Prof Mushtaq A Memon, a livestock specialist from Washington, who conducted the training sessions, said there was need to involve veterinary practitioners for advising livestock farmers. He asked veterinarians to implement what they have learned during the workshop and help livestock farmers in the fields.

He appreciated the participants, who learned a lot throughout the sessions and also in the field, while vaccinating, performing surgeries, and advising herders.

Prof Dr Gerhard Schuler, from Giessen University of Germany said he hoped this workshop helped farmers and professionals learn to deal with cattle heads and increase productivity. He was inspired by the farmers who travelled long distance from remote areas to reach the camp with animals for vaccination.

Atta Chaneho, a local influential person, who facilitated the herdsmen at the camp along with SAU organisers, said the area was experiencing the worst drought. “The community people and their animals need support at this difficult time,” he added.

The herders demanded the government to set up subsidised fodder banks in accessible areas to save the animals and livelihoods.

COTTON PRODUCTION DECLINES 7.7PC

Parvaiz Ishfaq Rana January 19, 2019

KARACHI: The country is likely to import 3.5-4 million bales — costing up to $1.2 billion — as the crop size for season 2018-19 is estimated at 10.8m bales, against the annual demand of around 15m bales.

According to figures issued by Pakistan Cotton Ginners Association, Pakistan’s cotton production up to Jan 15 fell by 7.74 per cent or 877,800 bales to 10.456m bales.

Punjab being the largest cotton producer suffered heavily, recording a 10.79pc decrease in output to 6.324m bales, from 7.089m bales in same period last year. In absolute terms, 764,804 fewer bales were produced in the province.

Against this, Sindh — faced with shortage of irrigation water at sowing stage — performed slightly better but also witnessed a drop of 2.66pc in output as it fell to 4.132m bales, from 4.245m bales in corresponding period of last season.

Bridging shortfall through imports to cost $1.2bn

In addition to less area coming under cultivation, factors such as poor quality seed and pesticides are hitting the cotton crop for the last 5-6 years. Switching to other crops such as sugarcane under political clouts has reduced the cotton cultivated area to 6m acres, from 9m.

Talking to Dawn, All Pakistan Textile Mills Association former chairman Yasin Siddiq said the country would require around 3.5-4m bales of imported cotton. Out of these 4m bales, the industry would need around 2.5m bales of long staple cotton used to produce fine count yarn required for high-valued textile products.

The government recently withdrew 3pc customs duty, 2pc additional customs duty and 5pc sales tax, allowing textile industry to import duty-free cotton to meet domestic demands of long and extra-long staple cotton.

A leading cotton dealer and exporter, Maqbool Saddiq, said the government should also resolve the issue of contamination and poor packing which has adversely affecting the price for Pakistani cotton in the world market.

Once this issue is resolved, it will not only help the local textile industry to have quality cotton for producing yarn and textile products but also push up Pakistani crop's price in the world market.

Around 0.1m bales have been exported in the current season, he added.

Saddiq suggested that the State Bank of Pakistan could play a major role in ensuring good packing by restricting its loan to ginners and putting a condition of six sided packing which is practiced all over the world.

OVER 50 EATERIES, SHOPS RAZED TO GROUND IN HILL PARK'S VICINITY

RECORDER REPORT 2019/01/19

KARACHI: Karachi Metropolitan Corporation's (KMC) anti-encroachment drive continues with full swing as on Friday the civic body razed over 50 restaurants and shops that were 'illegally' built around the Hill Park's jurisdictions.

The Illegal constructions were carried out on a 20 acre area of land over the period of time and were being used for commercial purpose.

KMC officials told that value of retrieved land is estimated to be around Rs 50 billion.

Aided by police and rangers, the officials of anti-encroachment department, reached at the site along with heavy machinery and remained busy all the day removing constructions that include Dua Restaurant, Iman Restaurant, Ashi Restaurant, Three Queen Restaurant, Oasis Restaurant, Meraj Amusement Park, Oasis Meraj Garden, Mini Golf Club, Golf Culb Meraj Hall and a boundary wall.

The Metropolitan Commissioner Dr Syed Saifur Rehman supervised the operation while senior director (coordination) Masud Alam, senior director anti-encroachment Bashir Siddiqui, director media management Bashir Sadozai, director municipal services Noman Arshad and other KMC officials were also present.

The Hill Park, covering an area of 65 acres of land was constructed back in 1965. However, some influential persons occupied a huge portion of the recreational facility with constructing restaurants and shops through fake and bogus documentations, with impunity.

In past, the officials told that KMC made several attempts to recover the area of land, but to no avail as the occupants approached the courts and acquired stay orders. However, the fresh anti-encroachment operation has been initiated on directions of the Supreme Court.

The officials said the civic organizations are implementing the top court's orders and the action against encroachments is being taken impartially which is being carried out jointly by the KMC, district administration, Rangers, police, district municipal administration, cantonment boards, Sindh Solid Waste Management Board and others.

The drive will continue till the removal of encroachments from all parks, sports complexes, playgrounds and over 108 roads in the city.

The Karachi Mayor Waseem Akhtar has vowed to remove illegal constructions around Hill Park, Jheel Park, Aziz Bhatti Park and Bagh Ibn-e-Qasim to ensure better recreational facilities to the residents.

On January 6, 2019, the civic body claimed to have caved in as many as 4000 shops and structures in the metropolis since the beginning of ongoing anti-encroachment operation.

SFA FINES RESTAURANTS, SEALS THREE FACTORIES

RECORDER REPORT | JAN 19TH, 2019 | KARACHI

Sindh Food Authority (SFA) on Friday carried out raids against sale of substandard eating items in various parts of metropolis and fined restaurants and sealed three factories. Teams of SFA raided the eating outlets in Burns Road, Saddar, North Karachi and New Karachi areas of the city, according to an announcement of the authority.

SFA teams inspected the restaurants in Saddar and Burns Road and found the unhygienic conditions there. Fining these restaurants, SFA granted two-week time to these restaurants to improve the hygienic conditions. In North Karachi and New Karachi areas of the city, SFA conducted raids at the factories manufacturing toffees, ketchup, roasted onion, mayonnaise and other eating items. During the inspection, it was found that ketchup is not being manufactured by tomato but from some other raw materials, which is injurious to human health. SFA confiscated all the products, manufactured from substandard raw materials and sealed the factory. Authority also sealed two other factories.

97.17PC WHEAT SOWING ACCOMPLISHED

FAZAL SHER 2019/01/19

ISLAMABAD: Sowing of 97.17 percent wheat crop for the year 2018-19 has been completed on 8.583 million hectares of land against the total target of 8.833 million hectares in the country.

A senior official of Ministry of National Food Security and Research (MNFS&R) told this to Business Recorder. Wheat sowing in Punjab and Khyber Pakhtunkhwa has been completed, while seven percent sowing of the crop in Sindh and around 29 percent in Balochistan is remaining, he added.

Punjab and Sindh cover around 88 percent of the total area and contribute 92 percent of the total wheat production in the country. “Out of 8.583 million hectares, Punjab has completed sowing of wheat over an area of 6.564 million hectares, Sindh 1.046 million hectares, Khyber Pakhtunkhwa 0.687 million hectares, and Balochistan 0.286 million hectares,” official told.

The Federal Committee on Agriculture (FCA) has fixed wheat crop production target at 25.572 million tonnes from an area of 8.833 million hectares during Rabi 2018-19. Out of 25.572 million tonnes, Punjab will produce 19.5 million tonnes, Sindh 3.800 million tonnes, Khyber Pakhtunkhwa 1.362 million tonnes and Balochistan will produce 0.900 million tonnes.

According to the Food and Agriculture Organisation (FAO), cultivation of 2019 Rabi (mostly irrigated) wheat crop was completed in December 2018. Below average rains in October and November 2018 coupled with low irrigation water availabilities for the predominantly irrigated wheat crop have hampered planting operations. It said according to the Indus River System Authority (IRSA), as of October 2018, irrigation water supplies for the Rabi crops are estimated to be 40 percent below the previous 10 years average.

According to farmer advisory issued by Pakistan Meteorological Department (PMD), current weather is favourable for tillering of wheat crop, as cold night temperature prevails. The farmers should apply first irrigation to wheat crop after 20-25 days after sowing at tillering stage. Apply one bag of urea or one-and-a-half bag of calcium ammonium nitrate (CAN) per hectare with first irrigation. Apply second irrigation to early sown wheat crop after 65-75 days after sowing as well as apply one bag of urea or one-and-a-half bag of calcium ammonium nitrate (CAN) per hectare.

The PMD informed that a fresh westerly wave is likely to enter western parts of the country today and is likely to grip most parts of the country on Sunday. Under the influence of this weather system, widespread rains (with few moderate to isolated heavy falls) are expected in Malakand, Hazara, Peshawar, Mardan, Kohat, Rawalpindi, Gujranwala, Lahore, Sargodha, Faisalabad and Sahiwal Divisions, Islamabad, Gilgit-Baltistan and Kashmir from Sunday to Wednesday. Snowfall (moderate to heavy intensity) over hills is also expected in Malakand Division (Swat, Chitral, Kalam, Malamjabba and Upper Dir), Hazara Division, Murree and Galliyat, Kashmir and Gilgit-Baltistan during the period.

Rain is expected at scattered places in Quetta, Zhob, Kalat, Makran, DI Khan, Bannu and DG Khan Divisions from Saturday (evening/night) to Sunday. Light rain is also expected in Karachi, Hyderabad, Sukkur, Larkana, Bahawalpur and Multan Divisions on Sunday.

https://epaper.brecorder.com/2019/01/19/17-page/759242-news.html

AROUND 10.4M COTTON BALES REACH GINNERIES

2019/01/19

MULTAN: As many as 10.456 million bales of seed cotton (phutti) reached ginneries across Pakistan till Jan 15, registering a shortfall of 7.74 percent compared with the corresponding period of last year.

Out of total arrivals, over 10.358 million (10,358,696) bales have undergone the ginning process, says a fortnightly report of Pakistan Cotton Ginners Association (PCGA), issued here on Friday.

Arrivals in Punjab were recorded at over 6.324 million (6,324,540) bales showing a 10.79 percent shortfall and over 4 million (4,132,385) bales in Sindh registering 2.66 percent shortfall compared to corresponding period of the last year.

Total sold out bales were recorded at over 8.8 million (8,810,641) bales including over 8 million (8,709,741) bales, bought by textile mills and another 100,900 bales, purchased by exporters.

Around 1.646 million (1,646,284) bales were still lying with the ginneries as unsold stock.

Sanghar district of Sindh continued to remain on top with cotton arrival figures of over 1.28 million (1,283,777) bales, while Rahimyar Khan district of Punjab secured second berth with arrival figure of 1.16 million (1,163,074) bales.—APP

GROWERS SEEK INCREASE IN SUGARCANE PRICE

Bureau Report January 18, 2019

PESHAWAR: Sugarcane growers held a protest rally outside a sugar mill on Charsadda Road here on Thursday and demanded increase of sugarcane price up to Rs190 per 40kg. They asked the government to resolve the issue within 24 hours otherwise the farmers would again block the road on Friday (today).

The protest was led by former MPA Abdur Rehman Khan Kafordheri, Arbab Jameel Ahmed, Fazlullah Khan Daudzai and others. They were holding banners and placards inscribed with demands for solution to their demands.

The protest also caused a traffic jam on the busy thoroughfare at least for an hour, but the protesters dispersed after assurance by the local administration and MPA Jahandad Khan that the issues would be resolved at the earliest.

Speaking on the occasion the farmers' leaders said that in Sindh and Punjab provinces sugar mill owners had already implemented a decision of the Supreme Court and started payment from Rs180 to 190 per 40kg sugarcane, while in Khyber Pakhtunkhwa the millers were not ready to comply with the court order.

They pointed out that the millers in Dera Ismail Khan had also agreed to pay Rs173.5 per 40kg to the farmers but in Peshawar, Mardan and Charsadda the mill owners were not paying attention to farmers' demands.

HUMAN DIET CAUSING GRAVE DAMAGE TO PLANET: STUDY

AFP Updated January 18, 2019

PARIS: The way humanity produces and eats food must radically change to avoid millions of deaths and "catastrophic" damage to the planet, according to a landmark study published on Thursday.

The key to both goals is a dramatic shift in the global diet — roughly half as much sugar and red meat, and twice as many vegetables, fruits and nuts, a consortium of three dozen researchers concluded in The Lancet, a medical journal.

"We are in a catastrophic situation," said co-author Tim Lang, a professor at the University of London and policy lead for the EAT-Lancet Commission that compiled the 50-page study.

One billion people are hungry while 2bn are eating too much of wrong foods, causing obesity, heart disease, diabetes

Currently, nearly a billion people are hungry and another two billion are eating too much of the wrong foods, causing epidemics of obesity, heart disease and diabetes.

Unhealthy diets account for up to 11 million avoidable premature deaths every year, according to the most recent Global Disease Burden report.

At the same time the global food system is the single largest emitter of greenhouse gases, the biggest driver of biodiversity loss, and the main cause of deadly algae blooms along coasts and inland waterways.

Agriculture — which has transformed nearly half the planet's land surface — also uses up about 70 per cent of the global fresh water supply.

"To have any chance of feeding 10bn people in 2050 within planetary boundaries" — the limits on Earth's capacity to absorb human activity — "we must adopt a healthy diet, slash food waste, and invest in technologies that reduce environmental impacts," said co-author Johan Rockstrom, director of the Potsdam Institute for Climate Change Impact Research.

"It is doable but it will take nothing less than global agricultural revolution," Rockstrom said.

The cornerstone of "the great food transformation" called for in the study is a template human diet of about 2500 calories per day.

"We are not saying everyone has to eat in the same way," Lang said. "But broadly — especially in the rich world — it means a reduction of meat and dairy, and a major increase in plant consumption."

The diet allows for about seven grams (a quarter of an ounce) of red meat per day, and up to 14. A typical hamburger patty, by comparison, is 125 to 150 grams.

For most rich nations, and many emerging ones such as China and Brazil, this would represent a drastic five-to-ten-fold reduction.

Not only do cattle pass massive quantities of planet-warming methane, huge swathes of carbon-absorbing forests — mostly in Brazil — are cut down every year to make room for them.

"For climate, we know that coal is the low-hanging fruit, the dirtiest of fossil fuels," said Rockstrom. "On the food side, the equivalent is grain-fed beef."

It takes at least five kilograms of grain to produce a kilogram of meat.

And once that steak or lamb chop hits the plate, about 30pc will wind up in the garbage bin.

Dairy is also limited to about one cup (250grams) of whole milk — or its equivalent in cheese or yoghurt — per day, and only one or two eggs per week.

At the same time, the diet calls for a more than 100pc increase in legumes such as peas and lentils, along with vegetables, fruits and nuts.

Grains are considered to be less healthy sources of nutrients.

"We can no longer feed our population a healthy diet while balancing planetary resources," said The Lancet editor-in-chief Richard Horton.

"For the first time in 200,000 years of human history, we are severely out of sync with the planet and Nature."

The report drew heavy fire from the livestock and dairy industry, and some experts.

"It goes to the extreme to create maximum attention, but we must be more responsible when making serious dietary recommendation," said Alexander Anton, secretary general of the European Dairy Association, noting that dairy products are "packed" with nutrients and vitamins.

Christopher Snowdon of the Institute of Economic Affairs in London said the report "reveals the full agenda of nanny-state campaigners."

"We expected these attacks," said Lang. But the same food companies pushing back against these findings realise that they may not have a future if they don't adapt," he said.

"The question is: does this come by crisis, or do we start planning for it now."

POTATO EXPORT TALKS BEGINS WITH AFGHAN GOVERNMENT

FAZAL SHER | JAN 18TH, 2019 | ISLAMABAD

Pakistan has started negotiations with Afghan government to decrease 25 percent duty imposed by Afghan authorities on export of potato from Pakistan to benefit local formers and exporters. An official said that Federal Minister for National Food Security and Research (MNFS&R) Sahibzada Muhammad Mehboob Sultan during a meeting with some parliamentarian said that the government is making utmost efforts to resolve the issue of potato.

He said that Ministry of NFS&R has started coordination with provincial agriculture departments regarding the issue. The minister said that no tax is imposed on the export of potato by the government. "The issue of Afghan duty which is around 25 percent and has been imposed by Afghan authorities since 2015 also came under discussion during meeting with the parliamentarian," he said, adding that the minister said that negotiations regarding decrease in the said duty are underway with Afghan government through embassy.

PRE-MERGER APPLICATION OF SUGAR MILL CLEARED BY CCP

RECORDER REPORT | JAN 18TH, 2019 | ISLAMABAD

The Competition Commission of Pakistan (CCP) has cleared a pre-merger application of a sugar mill for the acquisition of another sugar mill, as the transaction will not create strengthening of a dominant position in the relevant market. According to a recent order issued by the CCP, the Commission had received a pre-merger application ("Application") of a proposed acquisition pursuant to Section 11 of the Competition Act, 2010 ("Act") read with Regulation 6 of the Competition (Merger Control) Regulations, 2016 ("Merger Regulations") through which M/s AKT Sugar Mills (Private) Limited ("Acquirer") intends to acquire certain immovable and movable assets, including the mill, of M/s Gulf Sugar Mills Limited ("Seller"). All the requisite information/documents pertaining to the application was completed by the applicant on 17th December 2018.

The Commission has examined the Application as well as all the documents attached therewith, the market scenario, and its observations on the basis of independent research/investigation in the relevant market. The Phase-I competition assessment of the intended acquisition has resulted in the following findings:

The business activities of the undertakings concerned are (for the Acquirer) production and sale of sugar and by-products.

The business activities of the undertakings concerned are (For the Target) production and sale of white sugar and its by-products.

In the proposed transaction, the Acquirer intends to acquire certain immovable and movable assets, including the mill, from the seller. The mill, ie, sugar manufacturing facility/mill in Ghotki, Sindh, comprising of land and building and entire infrastructure, the sugar manufacturing plant and machinery comprised in the Mill, and some land situated in Punjab is being acquired. Currently, only the target is engaged in the relevant product market of "Manufacture & Sale of Sugar and by-products" having a geographic market identified as of "Pakistan".

At present, the seller has a market share of in Sindh. Post-transaction, the Acquirer will gain presence in the market while its sponsors will have a slight increase in their market share as they have interests in other companies involved in the relevant market.

The transaction is not likely to result in the creation or strengthening of a dominant position in the relevant market. The intended merger does not meet the presumption of dominance as determined under Section (2) (1) (e) read with Section 3 of the Competition Act 2010 ("Act"), CCP maintained.

In conclusion, the proposed transaction is not likely to substantially lessen competition through the creation or strengthening of a dominant position in the relevant market. The proposed transaction is hereby authorized under Section 31 (1) (d) (i) of the Act, the CCP added.

MOON'S FIRST COTTON PLANT DIES A DAY LATER

By Tech Desk Published: January 17, 2019

China revealed pictures of the first cotton plant springing to life on the moon. However, the plant was short lived as it couldn't survive in freezing temperatures.

The cottonseed sprouts became the first biological matter to grow on the moon and according to the probe's biological chief designer, the plant laid the foundation for a lunar base and long-term space exploration program. The cost of taking the plant into the moon was roughly estimated at 10 million yuan (£1.15million).

The Chang'e-4 lunar probe landed on January 3 and transmitted the first-ever "close range" image of the far side of the moon. China's National Space Administration applauded the launch as a first that "lifted the mysterious veil" of the far side of the moon and claimed it as a major achievement for the country's ambitious space program.

The plant was relying on sunlight at the surface of the moon but could not make it as temperatures dropped as low as -170°C during darkness.

Night on Moon lasts for almost two weeks after which the probe would wake up again having witnessed its first lunar night since the probe landed.

"Life in the canister would not survive the lunar night," said Prof Xie Gengxin of Chongqing University who was leading the design of the experiment.

The Chang'e-4 probe's rover Yutu-2 was also put to a "midday nap" to avoid overheating when the sun was directly overhead and temperatures could be controlled.

According to The Guardian, fruit fly eggs were also placed in the canister with cottonseed. Scientists hope to create a micro-ecosystem where the plants would provide oxygen to the fruit flies which would then produce carbon dioxide required for photosynthesis. No confirmations were made by the space agency whether the eggs hatched or not.

CHINA EXPRESSES INTEREST IN IMPORTING PAKISTANI POTATOES

By Usman Hanif Published: January 18, 2019

KARACHI: China has expressed keen interest in importing Pakistani potatoes at a time when farmers are facing a crisis due to low prices and demanding subsidy to continue to produce the crop.

"China seems to be keen to buy Pakistani potato, which is vastly encouraging," said a statement released by the Ministry of National Food Security and Research on Thursday.

The Asian superpower expressed willingness to buy the vegetable during a meeting with the Pakistani ambassador.

Recently, the potato growers staged a protest because the cost of cultivation came in at Rs9 per kg, which was over two times the price offered by middlemen. Owing to surplus production, the middlemen gave just Rs4 for one kg of potato.

In Karachi, the potato is priced close to Rs25 per kg due to the addition of the cost of transportation, fuel, labour and other expenses.

The offer from China will provide much-needed relief to the growers who are demanding subsidy.

China, which imports 1 million tons of potatoes from different countries, will begin potato import from Pakistan after sanitary and phytosanitary measures (SPS) are complied with.

"This move will have a multidimensional impact on the growers and exporters of Pakistan," said All Pakistan Fruit and Vegetable Exporters, Importers and Merchants Association (PFVA) Chairman Abdul Malik. "Had this opportunity not emerged, the growers would have no other option but to bury the huge surplus quantity, thereby sustaining hefty financial losses."

The exact potato production in Pakistan could not be given but the most quoted number was 6 million tons, said Federation of Pakistan Chambers of Commerce and Industry (FPCCI) former vice president Waheed Ahmed.

Pakistan exports 300,000-400,000 tons annually but still it is left with a surplus quantity which causes problems for the growers.

Each year, the export of potatoes usually starts in the last week of January but this year, around 25 trucks have already gone to Kabul in the past two days, according to the Ministry of National Food Security.

The ministry, through the Department of Plant Protection (DPP), establishes a facilitation centre in Okara every year.

The purpose of this facility is to assist the exporters and streamline the cumbersome procedure.

In order to encourage the exporters, the government has lifted all the duties linked to potato exports. Pakistan exports the crop to the Central Asian countries, Russia, Malaysia, Gulf states and Sri Lanka.

Afghanistan levies around 25% duty on the Pakistani potato exported to Central Asian states via its territory. The government of Pakistan has taken up this issue with the Afghan authorities and expects to find a solution.

GOVERNMENT VOWS TO HELP RESOLVE ISSUE OF POTATO PRICE

AAMIR SAEED | JAN 17TH, 2019 | ISLAMABAD

The Pakistan Tehreek-e-Insaf government Wednesday assured potato farmers to resolve the issue of prices of their produce by consulting all stakeholders. The members of the opposition parties urged the government to buy the farmers produce through PASSCO; so that prices of the vegetable can be stabilised in the open market.

Minister for National Food Security and Research Sahibzada Mehboob Sultan assured the opposition members that the government was ready to address the issue of potato farmers in consultation with all stakeholders as it wanted to facilitate them.

The minister said that numerous countries including China and Belarus had shown their interest in purchasing Pakistani potato. Pakistan produces 4.4 million tonnes of potato per annum. About 3.2 million tonnes of potato is consumed in the country while 600,000 to 700,000 tonnes of potato is exported.

China had shown interest in purchasing 50,000 tonnes of Pakistani potato and Belarus wanted to buy 35,000 tonnes of potato, he informed the House.

Minister for Aviation Division Muhammad Mian Soomro informed the House that Pakistan International Airlines (PIA) was in process of finalising its strategic business plan to further improve its performance.

He said the plan would be submitted to the government in March/April 2019 that would help improve the performance of national carrier.

The minister informed the House that several profitable new routes like Sialkot-Sharjah, Lahore-Muscat, Islamabad-Doha and Lahore-Bangkok-Kuala Lumpur had been added, adding that more new routes (Sialkot-Paris-Barcelona, Peshawar-Sharjah, Peshawar-Al Ain, Multan-Sharjah and Jeddah and Medina) will commence from January and February 2019.

He said that 20-year-old and highly expensive software system had been replaced with a new one which was very cost-effective, economical and efficient. The government had terminated about 200 ghost employees, he added.

The minister said as a result of verification, 700 degrees of employees were found fake and out of which, 402 employees were terminated, adding that 35 cases were under process for disciplinary proceedings whereas 263 employees approached the court of law and sought stay orders.

Federal Minister for Communication and Postal Services, Murad Saeed informed the House that the cabinet had approved more postings of community welfare attaches in Saudi Arabia to resolve problems of overseas Pakistanis.

He said the people working abroad could approach Pakistani Embassy in Saudi Arabia round the clock to get their problems resolved. He said people who went abroad were neither getting salaries nor enjoying working conditions as agreed by their employers before their departure from Pakistan.

FARMERS CONTINUE PROTESTS ON MALL ROAD

By Our Correspondent Published: January 17, 2019

LAHORE: Farmers from districts across the province protested for the second day on the Mall Road on Wednesday. The protesters demanded that the government reduce the price of agriculture inputs and ensure better rates for their produce.

Farmers, primarily potato growers, staged a demonstration over the price crash of their produce. They emptied a trolley of potatoes in front of the Punjab Assembly while carrying baskets full of tubers on their heads. The farmers also shouted slogans against the government and indicated that the potatoes were a gift for the Punjab chief minister.

The protestors also set a huge stock of potatoes on fire to indicate that their commodity was of no worth in the market. They demanded that the government demand a minimum of Rs12 for a kilogramme of produce. The farmers also urged the government to reduce the prices of agriculture inputs, including fertilisers, seeds, electricity and diesel for tube wells and other raw materials. They alleged that the price of potatoes in the market is three times less than the cost price.

Speaking to the Express Tribune, farmer Allah Ditta said that the price of vegetable markets was so low that farmers were unable to cover production costs. "In some cases, the farmer cannot even recover the cost of transporting the produce to the market. The price for fresh potatoes in wholesale markets hovers between Rs600 to Rs1,100 for 100 kilogrammes while the cost of transporting the produce is usually in the thousands, depending on the distance from the farm to the market," he explained.

"Bringing our produce to the market is an additional labour and transportation cost," said Nabi Baksh, another farmer. Similarly, farmers are also not receiving a fair price for sugarcane, he claimed.

Several others maintained that the potato and sugarcane crops were rotting. As a result, we are facing financial losses amounting to hundreds of thousands of rupees. The government should provide farmers with subsidies for fertilizers and crops so that production costs can be reduced, they stated. They threatened to continue their protests for an indefinite period if their demands were not met.

Meanwhile, Punjab Agriculture Minister Malik Nouman Ahmad Langrial assured farmers that the government will take every possible step to prevent them from being exploited.

Langrial said that the provincial government had written a letter to the federal government for fixing the support price of potatoes at a reasonable level to prevent financial loss. He stated that it is the federal government's prerogative and the provincial government is doing its best to ensure a better price for different crops.

He added that the government also held meetings with the owners of sugar mills. Another meeting is scheduled for January 23 to ensure that all outstanding dues of sugarcane growers are paid.

He assured protestors that the government will introduce a number of schemes aimed at the welfare of farmers to bring down the input costs of different crops. He said that the Punjab Chief Minister Sardar Usman Buzdar had constituted a committee to ensure payments to sugarcane growers. "I will take your complaint to the federal government regarding the fact that farmers are facing problems in transporting potatoes to Iran and Afghanistan", he said. The farmers called off their protest after negotiations with the government.

Official price statistics from the Punjab Agriculture Marketing Information Service reveal that the price of 100kg of potatoes at wholesale markets is Rs750 in Lahore, Rs900 in Faisalabad, Rs1,250 in Rawalpindi, Rs900 in Multan and Rs700 in Okara. All these places are major producers for potatoes in Punjab.

PAKISTAN'S RELIANCE ON IMPORTED COTTON ON THE RISE

By Kashif Hussain Published: January 17, 2019

KARACHI: Owing to unavailability of high quality cotton in Pakistan, the country's textile industry is becoming increasingly reliant on imported fibre.

The cotton imported from the United States has been greatly helping the textile industry cope with challenges such as high production costs and compliance requirements. Consequently, the cotton import from the US is rapidly increasing.

According to statistics released by the US cotton promoter – the Cotton Council International (CCI), the number of textile mills and garment manufacturers importing US cotton in Pakistan has greatly increased over the past six years.

In 2012, big spinning and weaving units with US licence as well as textile manufacturers including those producing yarn and fabric were limited to six or seven. The number increased to 63 by 2018. Pakistan now ranks 5th in the list of top importers of cotton from the US.

According to statistics, Pakistan's annual demand for cotton is 14 million bales while production ranges between 10 and 10.5 million bales. Pakistan is importing about 1.5 million bales from the US.

The Pakistani firms importing cotton made in the US mostly comprise spinning and weaving mills. However, the denim and garment manufacturers and knitting units are also importing American cotton. Three of the most popular retail brands in Pakistan, Gul Ahmed, Al-Karam and Nishat Chunian are also importing cotton from the US.

The US textile industry itself makes extensive use of the high-quality cotton grown at home. According to Pakistani textile industry, though the US cotton comes at a high price, the percentage of material waste is considerably low while the cost incurred on maintenance of machinery is also low, giving adequate benefits through premium prices of final products.

Speaking on sidelines of the Heimtextil fair in Frankfurt, Cotton Council International Director Supply Chain Marketing South and Southeast Asia William R Bettendrof said there were three basic qualities that distinguished the US cotton from the rest of the world – consistency in quality, strength and length of its thread.

In the US, the agriculture sector faces strict government surveillance, which is a reason for the high-standard crops. The US Agriculture Department, the agency for environmental protection, food and drug authorities and other federal state agencies monitor the sector and provide data to cotton farmers about agricultural medicines and the use of manure.

In case of non-implementation of public rules, the relevant people face civil and criminal action, which is why an effective system for long-term measures for the production of cotton is in place.

For cotton, the competition with mid-fibre is quite challenging because the artificial thread, though can be used in several ways, is a man-made invention. If dependence on the artificial thread grows, it will cause difficulty for the upcoming generations due to the rapid pollution caused by landfills, polyester fibre and synthetic fibre.

Cotton USA representative in Pakistan Mazhar Hussain Mirza told The Express Tribune that the US produced more than 20 million bales, of which 85% was exported.

Pakistan is importing 1.5 million bales from the US. Pakistan has become the fifth largest country that imports American cotton, according to a recent survey.

He said due to depreciation of the rupee, the cost of imported cotton had risen but Pakistani importers of the US cotton had been able to avoid the impact due to the premium prices.

ECC ALLOWS DUTY-FREE COTTON IMPORTS

Khaleeq Kiani Updated January 16, 2019

ISLAMABAD: The government on Tuesday ordered immediate clearance of about Rs36 billion refund claims of exporters and allowed tax and duty-free import of cotton in addition to mandating the payment of duties and taxes on import of vehicles in foreign exchange.

The decisions were taken at a meeting of the Economic Coordination Committee (ECC) of the Cabinet presided over by Finance Minister Asad Umar.

In response to demands of the textile industry, the ECC approved withdrawal of customs duty, additional customs duty and sales tax on import of cotton effective Feb 1-June 30, 2019.

Mandates duties on imported vehicles to be paid in foreign exchange by overseas Pakistanis; orders settlement of Rs36bn refund claims

The step is aimed at ensuring sufficient cotton supply for textile industry – especially its export segment.

The decision was based on the plea that Pakistan had been a net cotton importer since 2001 while the domestic cotton was of short-to-medium staple length, leaving local textile manufacturers to import long and extra long staple cotton for finer yarn counts for subsequent transformation into high value-added finished products.

Import of cotton has remained duty free till the slab of 0pc was abolished in 2014-15 and custom duty of 1 per cent was imposed along with the 5pc sales tax. Later on, 1pc slab was increased to 2pc and then 3pc along with the imposition of 2pc additional duty to make it 5pc. Currently, cotton is subject to 3pc customs duty, 2pc additional customs duty and 5pc sales tax.

The prime minister’s export package was announced in Jan 2017 under which the textile sector was provided number of facilitations including withdrawal of custom duty and sales tax on imported cotton effective Jan 16, 2017.

These duties and taxes were re-imposed on July 15, 2017 to facilitate lifting of local cotton. However, these were withdrawn again effective Jan 15, 2018 and then re-imposed effective July 15, 2018.

The textile ministry had once again demanded withdrawal of these taxes and duties now saying the industry consumed around 12-15 million bales per annum while local crop this year was estimated at 10.78m bales of 170kg, showing a decrease of 9.7pc compared to last year and a decrease of 24pc against the initially fixed target of 14.37m bales.

The ECC also approved a summary of the Commerce Division seeking payment of duty and taxes on all imported vehicles in new and used condition under personal baggage or gift scheme, through foreign exchange arranged by Pakistani nationals themselves or local recipient supported by bank encashment certificate showing conversion of foreign remittance to local currency.

The government, in import policy of 2016, had allowed import of such vehicles under above schemes to facilitate overseas Pakistanis. There had, however, been complaints that the schemes were massively misused by commercial importers. As a result, the ECC on Oct 6, 2017 rationalised import schemes by ordering payment of duties taxes in foreign exchange. The abrupt policy change led to about 6,000 vehicles being stranded at seaports.

The commerce ministry proposed, as a result, that the new schemes should come into force for vehicles arriving after Feb 28, 2018 but the issue remained unsettled. Subsequent meetings between the government and various stakeholders revealed that around 5pc of cars under these schemes were imported by the bona fide overseas Pakistani.

As a result, the commerce division proposed that misuse of schemes should be prevented by introducing a change in import order 2016 that all vehicles imported under such schemes should be subjected to payment of duties in foreign exchange arranged by Pakistani nationals themselves or local recipient supported by bank encashment certificate showing conversion of foreign remittance to local currency.

The meeting also approved another summary to clear outstanding claims of drawback of local taxes and levies (DLTL) under the exports incentive scheme announced by the government under the Finance Act 2014-15. The ECC decided that cases, which were submitted in time but were pending due to want of funds, will be entertained by the government.

The meeting was told that one of the major impediments faced by export-oriented industry was the liquidity crunch due to the held up sales tax refunds and non-release of budget for the DLTL and hence, in continuation of government policy to support export sector, their liquidity should be improved by clearing the backlog of sales tax refunds and duty drawbacks as promised in the government's 100 day agenda.

The Commerce Division demanded that funds for drawback of local taxes and levies, allowed under the PM's export package, should be released by the finance ministry within one week. Verified claims worth Rs36bn were pending with the State Bank of Pakistan.

It was also suggested that going forward, sales tax refund claims and customs duty drawback may be paid by the SBP through authorised dealers immediately at the time of realisation of export proceeds.

The ECC also approved regulatory amendments in the Export Policy Order 2016 and Import Policy Order 2016 as proposed by the Commerce Division.

These will be submitted for consideration of the Federal Cabinet. The amendments are aimed at enhancing ease of doing business in the country.

CENTRE YET TO DEVOLVE LIVESTOCK AND FISHERIES DEPT TO PROVINCE, SINDH ASSEMBLY TOLD

Tahir Siddiqui Updated January 16, 2019

KARACHI: The Sindh Assembly was on Tuesday informed that the livestock and fisheries department had not been completely devolved to the province under the 18th Amendment to the Constitution.

Furnishing a statement during Question Hour in the assembly, Minister for Livestock and Fisheries Abdul Bari Pitafi said that the federal government had not fully devolved all functions and assets of the department to the province.

He said that these assets included the Korangi Fish Harbour, shrimp hatchery at Hawkesbay, livestock labs and other infrastructure.

Sindh has not been given control of Korangi Fish Harbour and shrimp hatchery at Hawkesbay

The minister further said that the provincial government had taken up the matter with the inter-provincial coordination ministry for devolving the assets to the province.

“A meeting was held on December 27, 2018 in which we sought sufficient funds from the federal pool for the provincial sector,” he added.

In reply to a question, asked by Khurram Sher Zaman of the Pakistan Tehreek-i-Insaf, the minister said that the provincial livestock department was engaged with the federal government for the funds to be spent on development of fisheries.

In reply to another question by Mr Zaman regarding unlawful fishing, Mr Pitafi said that the department was continuously combating against influential mafia in coastal brackish water area.

He said that more than 350 illegal nets were confiscated and cases were referred to the courts of law concerned. “About 120 illegal nets have been burnt after seeking the order from the honourable court”, he added.

The minister said that as far as the inland water was concerned regarding the illegal possession of influential people on any public water bodies, no written complaint was lodged by the bona fide fishermen in the fisheries department.

Replying to other questions, he said that the country’s first “Bio-safety Level Laboratory and Quality Enhancement Cell for Highly Virus Vaccine Development” was also being established in Karachi.

The livestock minister said that vaccines of bird flu and foot-and-mouth diseases (FMDs) of livestock would be produced in this laboratory.

He said that the scheme was initiated in 2013 with a cost of Rs 160.639 million and had to be completed by 2018. However, it suffered delays owing to “typical” way of construction of such laboratories.

“The civil work is 95 per cent completed and now just the equipment has to be installed. The laboratory would be functioning by this year,” the minister assured.

To another question asked by opposition member Nusrat Sehar Abbasi, he said that a project to control “Surra”, an infectious disease among livestock, was initiated with the cost of Rs59.883m in arid and coastal zones at Thatta, Badin, Tharparkar, Umerkot, Sanghar, Khairpur and Jamshoro.

He said that the scheme was completed in June 2018.

To a supplementary question, he said medicine sufficient for 147,000 animals was imported and as many as 25,338 camels and horses were treated.

TCP DECIDES TO DISCARD UREA IMPORT TENDER

RIZWAN BHATTI | JAN 16TH, 2019 | KARACHI

Following the directives of the federal government, the Trading Corporation of Pakistan (TCP) has decided to scrap urea import tender as presently there is no urgency. The second urea import tender was issued by the state-run grain trader in December on the directives of the Economic Coordination Committee (ECC) of the Cabinet to avoid shortage in Rabi season as domestic urea producers were unable to produce sufficient quantity of the commodity due to gas curtailment.

The state-run grain trader opened urea import tender on January 4, 2019 and received some 11 bids for urea supply. One bidder submitted a regret letter, while the remaining 10 international suppliers/bidders quoted prices ranging from $295.87 per metric ton to $309.70 per metric ton on Cost and Freight (C&F) basis.

According to bid evaluation report prepared by the TCP bid evaluation committee, out of 10 bids, some three bids, including first lowest bid were non-responsive as they were failed to fulfill the terms and conditions, sources said.

The bid evaluation committee declared first lowest bid of M/s KeyTrade non-responsive due to violation of clause 7 of the tender documents, as the validity of bank guarantee was not as per the requirement. The TCP also declared the bid of M/s MidGulf non-responsive due to non-provision of affidavit as per clause 8(b)(vi) of the urea tender.

In addition, bid of M/s Samsung C&T was also non-responsive due to non-provision of financial status report as per clause 8 (b) (vii) (ii) and NTN mismatches with authority letter.

Following the PPRA rules, the TCP displayed the bid evaluation report on its website for 10 days and accordingly, a list of the received bids was sent to federal government for consideration and subsequent views.

The bid award committee of the TCP met Tuesday and following the directives of the federal government decided to scrap the tender as presently the demand for the commodity is on decline in the domestic market and there is no urgency for import. A TCP official said that presently urea prices in the world market are unstable and witnessing a declining trend since the opening of the tender. Secondly, the import will take almost 30 to 35 days and may reach Pakistan by the end of Rabi season, therefore it was decided to scrap the tender. The validity of all received bids was some 13 days and today all the bids will also expire, he added.

The state-run grain trader had recently completed import of some 100,000 metric tons of urea to meet the domestic demand in Rabi season.

FOOT AND MOUTH DISEASE HITS MEAT EXPORT

By Our Correspondent Published: January 16, 2019

LAHORE: The export of meat has been affected by the spread of foot and mouth disease (FMD) in various districts of Punjab due to intensity of the cold weather.

The virus has become more resistant and multiplies rapidly in winter making cattle more vulnerable to the disease. Blisters appear on the hoofs and mouths of the affected cattle. Animals even die in the worst conditions. The experts said both pet and wild animals could fall prey to the virus.

The cattle traders have also revealed that animals brought to Lahore and other cattle markets across Punjab were not examined thereby spreading the virus to the other animals.

Abdul Ghaffar, a cattle dealer, shared that he and his companion had brought 30 big and small animals to the market a week ago, out of which seven got affected by the disease.

The Punjab livestock authorities said it was an epidemic and vaccines were being administered to the cattle to curb the disease. So far, 20 million animals have been vaccinated and the disease was gradually declining in the province.

Punjab Livestock and Dairy Development Minister Sardar Hasnain Darishek has said efforts were being made to eradicate the disease in the affected districts and animals have been vaccinated five times in various districts of Southern Punjab.

Ministry of National Food Security and Research has decided to commence a five-year comprehensive plan across the country to diagnose and eradicate the FMD. The veterinary experts said the disease has been affecting the cattle since the past decades. The disease did not claim any life but prevented the export of the meat of the affected animals. The annual loss caused due to the disease has exceeded $692 million.

MINISTER INAUGURATES OSTRICH MEAT SHOP IN LAHORE

By Asif Mehmood Published: January 16, 2019

LAHORE: Minister for Livestock and Dairy Development Department Sardar Hasnain Dreshak inaugurated the University of Veterinary and Animal Sciences' ostrich meat shop located on Abdul Qadir Jilani Road on Tuesday.

University of Veterinary and Animal Sciences Vice Chancellor Dr Talat Naseer Pasha and Ostrich Association of Pakistan President Raja Tahir Latif were also present on the occasion.

On Monday, the Punjab Livestock Department decided to ensure the supply of ostrich meat at butcher shops across the province, even on meatless days such as Tuesdays and Wednesdays. The department in collaboration with the University of Veterinary and Animal Sciences and Ostrich Association of Pakistan worked on the project to promote the sale of ostrich meat.

Speaking on the occasion, Dreshak said that ostrich farming is a new but profitable business. “The ostrich meat will be available on a daily basis at several departmental stores and butcher shops. Ostrich meat is more beneficial and nutritious than mutton and beef and is a good source of nutrition for people of all ages.”

The minister went on to say that the shops will carry ostrich farms names, tag numbers, number of birds and weights. Usually, 2.5-2.45 kilogrammes of meat is obtained from one ostrich. Initially, 400 farms have been registered in Punjab where 20,000 birds are kept.

The meat will be sold between Rs1,300 and Rs1,500 per kilogramme. The price of one ostrich is around Rs60,000, said the minister, adding the prices will, however, slash with the increased breeding of the birds. He further said that the government is working for the provision of standard and cheap meat to the masses. Replying to a question, the minister said that talks will be convened with the federal government regarding the export of the ostrich meat. Dreshak said the last installment of the subsidy to be given to the ostrich farms has yet to be made. The decision regarding the subsidy will be made in the next fiscal year.

Dr Pasha said that the aim of this project was to connect the consumer with the farmer and help farmers have easy access to market so that they improve their economic status.

A large number of people from civil society, officials of the livestock department and UVAS faculty members attended the event.

OSTRICH FARMING ALLOWED IN SINDH, PA TOLD

Tahir Siddiqui Updated January 15, 2019

KARACHI: The Sindh Assembly was informed during Question Hour on Monday that ostrich was not defined as a protected bird under the provincial wildlife laws and its farming was allowed under relevant laws.

Furnishing a statement on the floor, Forest and Wildlife Minister Syed Nasir Hussain Shah said that a special permission for ostrich farming was required to be obtained from the provincial authorities as for poultry farming.

He said that a private farm had been established in Thatta for ostrich farming.

In reply to a question, he said that the Rs150.97 million project of rehabilitation and improvement of wildlife sanctuaries at the Haleji Lake, Langh Lake, Thatta and Qambar could not be completed owing to paucity of funds, and added that it would be completed in June.

He said that different jobs at the Haleji Lake, including liner plantation along the inspection path, development of floating mounts, development of a pelican island, restoration of historical information centres, development of the fun area for children, restoration and repair of lavatories, restoration of the crocodile enclosure, installation of a wireless system, and construction of floating rooms, had been carried out.

In reply to another question asked by opposition member Nusrat Sehar Abbasi, the minister said that a Rs50m project for habitat restoration and development of water harvesting facilities at the KNP, Karachi, and Jamshoro was expected to be completed by June 2019.

However, he added, the project's date of completion had been extended by two years because of paucity of funds.

Answering a question by opposition member Arif Mustafa Jatoi, the minister said the Pai Forest in Shaheed Benazirabad had been declared a game reserve.

He said that hunting was not allowed in the Pai Forest, but the government was empowered to relax the rules and issue permits for hunting in special cases.

In reply to another question, Mr Shah furnished details of the year-wise allocation and utilisation of the budget for plantation and rehabilitation of forests during the past five years.

The minister said Rs612m was allocated in 2017-18.

Giving answer to a question, he said that the local fishermen were catching Indus blind dolphin as previously the Sindh fisheries department was issuing fishing permits for the catch.

He said that the population of the endangered species had remarkably increased since 2014 when the issuance of fishing licences by the SFD was finally stopped with efforts of the Sindh wildlife department.

The minister also told the house on a question by opposition member Arsalan Taj Hussain that 12 different species were declared endangered in the province. They were: Sindh ibex, Afghan urial, Indian wolf, honey badger, mugger, or marsh crocodile, gharial, or gavial, smooth-coated Indian otter, Indus blind dolphin, greater flamingo, freshwater turtles, hog deer (axis porcinus) and chinkara deer.

He said that several steps had been taken to conserve the endangered species. The steps, he said, included the establishment of a series of protected areas such as National Park, 34 wildlife sanctuaries and 13 game reserves for protection, conservation and management of endangered wildlife species.

Besides, the minister said, the Sindh Turtles and Tortoise Protection, Conservation and Compensation Rules 2014 had been enacted to ensure the conservation and protection of turtles in the province.

WORKER DIES IN CLASH NEAR PAKPATTAN FARM

Shafiq Butt Updated January 14, 2019

SAHIWAL: A farm worker was killed and 16 others were injured in a 'clash and exchange of fire' between the administration of Baiel Gunj Military Stud Farm and tenants, commonly called Mazareen, in Pakpattan district on Saturday evening.

The clash reportedly erupted over the removal of a 'dysfunctional' power transformer which fed a tube well irrigating the farmland.

Villagers in the nearby farm claimed that heavy firing was heard for 50 minutes. Sources said that 13 tenants and four security personnel of the farm were injured in the clash.

Rescue 1122 sources confirmed that they shifted the injured to the Baiel Ganj Basic Health Unit and the Pakpattan DHQ Hospital.

Pakpattan Health Authority CEO Imtiaz Rana told the media that emergency was declared in the DHQ Hospital. The sources said Mamshad Ahmed, son of Haji Manzoor, succumbed to his wounds sustained in the clash.

As police did not reportedly register the case, some 500 residents and Mazareen from Farid Nagar Colony, adjacent to the farm, marched in protest towards the Pakpattan police chief office.

Carrying the worker’s body, the protesters demanded the registration of an FIR against the culprits.

Later, the protesters assembled outside the deputy commissioner’s office where the sit-in continued for over four hours.

Sources in police confirmed that the DPO office had to call reserve police force to avoid any possible clash around the farm. They said the road connecting Pakpattan with Deepalpur and Kasur had been closed.

The sit-in ended when ¬a three-member committee comprising Deputy Com¬mis¬sioner Ahmed Kamal Maan, DPO Mariya Mah¬mood and SP Investigation Syed Abbas Shah met the protest leaders.

Mr Maan told Dawn by phone that the protesters dispersed after an assurance that FIR would be registered under the law.

DPO office spokesperson Asif said the body was taken to the DHQ Hospital for autopsy.

Rai Khizer Hayat, the station house officer of Chak Badiyain police station, told Dawn that the FIR was being registered.

He said that a murder case was being registered on the compliant of Mohammad Akbar against 13 men belonging to the security administration of the military farm.

FRANCE, PAKISTAN ENJOY EXCELLENT TIES IN EDUCATION, AGRI SECTORS

RECORDER REPORT 2019/01/14

FAISALABAD: French Embassy Counsellor for Cooperation and Cultural Affairs Andre de Bussy has said that France and Pakistan are enjoying excellent educational and agricultural ties.

He called on University of Agriculture Faisalabad Vice Chancellor Dr Zafar Iqbal Randhawa at VC Chamber. Faculty of Food, Nutrition and Home Sciences Dean Dr Masood Sadiq Butt and Dr Rizwan also attended the meeting.

Andre de Bussy also stressed upon the need to further strengthening agricultural, academic, textile and cultural ties to get benefit from each other experiences that will help combat the common challenges. He said that they would help UAF promote Cheese culture. He said that French language courses being offered at UAF will help raise understandings among the people.

UAF Vice Chancellor Dr Zafar Iqbal Randhawa said that the university was having the faculty of 700 and out of which 480 faculty members are PhDs. He said the majority of the university doctors had studied abroad. He said that they were setting up different clubs of foreign qualified faculty members of Europe, America and China so that they can interact with the experts of country where they studied and contribute their effective role to address the challenges and problems. He said that UAF ties with educational and research institutions were being further boosted.

DEMAND FOR FRESH FISH SURGES WITH INTENSE WEATHER

By Our Correspondent Published: January 14, 2019

LAHORE: Citizens flocked fish selling points in the metropolis as the demand for fresh fish has surged with the intensity of cold weather.

Winter brings with it an increase in the demand for fish and fresh catch, not usually available during the rest of the year.

In Lahore, there is a market known for selling stale fish and it is easily available in the city but now the fresh fish is also available on the streets of the provincial capital. People can choose an alive fish from a water tank and buy it. The white meat can be used in many ways including making a curry of it or frying it in the oil. The vendors selling fresh fish can be seen on Lahore Ring Road, Aziz Bhatti Road, GT Road and Bedian Road.

Mohammad Javaid, a buyer, said only a person who had eaten a fresh fish before could know the real taste of it. One of the ways to check the freshness of a fish is that if the skin is slightly pushed with a finger it would return to its original shape again. There are several kinds of fish including Kala Rahu fish available on live fish selling point on Zarar Shaheed Road in Lahore. The rate hovers around Rs300 per kilogramme.

Hafiz Shahid, a fish seller, said he buys fish from a farm and keep them into a water tank. In the fish market, one can buy all types of fish caught from river or sea. However, alive and fresh fish is available at the makeshift selling points only.

COUNTRY NEEDS BETTER KINNOW VARIETIES TO COMPETE GLOBALLY

By DR MUHAMMAD KHURSHID Published: January 14, 2019

ISLAMABAD: Pakistan grows citrus fruit over an area of 206,569 hectares in all the four provinces with total production of around 2.5 million tons as per 2015-16 statistics.

Punjab produces over 98% of the fruit mainly in Sargodha district because of its favourable growing conditions and adequate canal and sub-soil water. Kinnow constitutes 80% of the citrus fruit and is a major export commodity.

Application of modern techniques and traditional practices at all stages of growth and during the post-harvest phase can not only add value to the fruit which attracts premium prices but can also increase exports which fetch foreign exchange.

Citrus Research Institute Sargodha is responsible for undertaking research and development work on kinnow and other citrus varieties, besides the Pakistan Agricultural Research Council (Parc).

Pakistan is the 12th largest producer of kinnow in the world but the fruit is losing its vigour in the country because of diseases, low yield, poor quality and lack of international compatibility with the much liked seedless kinnow. Pakistan may lose even the existing export markets if challenges are not adequately and timely addressed.

Like other crops, the citrus is also attacked by a variety of insects, pests and diseases. Some of these insects, pests and diseases not only affect quality and quantity of the produce, but also hurt the plant life. That is why Pakistani citrus orchards have a lower life cycle as compared to other citrus growing countries.

Major damage to the citrus fruit in Pakistan is caused by canker, melanose and scab. Other insects and diseases include leaf miner, peel miner, psylla, lemon butterfly, black fly, white fly, fruit fly, mealy bug, etc.

Although all these pre-harvest diseases can easily be controlled through sustainable integrated pest management in fields and post-harvest, no serious and immediate efforts have so far been made by the agriculture departments, growers and other stakeholders like the academia, scientists, donor agencies and input suppliers.

The most alarming issues faced by the growers and exporters are the loss of vigour and quality of the existing kinnow germplasm. The Mandarin variety's germplasm was introduced in Pakistan in 1950, which has now lost its vigour and quality not only in terms of production, but also in relation to immunity from diseases.

There is no dedicated citrus breeding centre in the main growing area of Sargodha and the nursery stock obtained from existing mother trees is weak, infested with diseases and is of inferior quality. Therefore, the orchards established with the help of such saplings are not good for getting higher yields and producing quality kinnow.

Owing to this, the available quantity for exports will decrease, which may lead to the loss of overseas markets and foreign exchange earnings. Three kinnow varieties namely Kinnow LS (less seed), Pumpkin and Mandarin are grown the world over, particularly in Egypt, Turkey, Spain, China and the US, but Pakistan has a very old and weak germplasm of kinnow and it needs to develop hybrid varieties.

In addition to this, Pakistani kinnow is heavily infested with canker and scab diseases, which greatly affect its quality and production. If adequate remedial measures are not taken, the kinnow production may vanish in a couple of decades.

Water shortage is another major challenge as canal water is getting scarce and underground water is mostly salty. Citrus requires water in February, May, June, November and December. From November through February, canal water is not available due to their closure for annual cleaning. In May and June, most of the available water goes to the paddy crop.

Increasing cost of inputs including the labour, coupled with a short harvest period, also affects the production and trade. The quality of exportable harvest is affected by unskilled labour, improper post-harvest handling, inadequate cold chains, poor transportation facilities and weak capacity to comply with phytosanitary and quarantine regulations.

Citrus growers in Sargodha have reported a poor outreach programme of the Agricultural Extension Department. Lack of awareness among the growers of selecting and planting quality saplings, lack of proper traditional practices like pruning, field operation, timely watering, disease control and other operations may lead to the loss of yield as well as quality output.

For harvest and post-harvest operations, trained labour is essential as their absence increases chances of disease attacks on the damaged fruit even before packaging and transportation. Mechanical pressure during harvest, transportation and improper handling of the fruit during plucking, transportation and packaging also lead to the loss of quality.

The Department of Plant Protection (DPP) is mandated to meet the quarantine and phytosanitary requirements under the International Plant Protection Convention and the World Trade Organisation. The DPP has established a kinnow export facilitation office at Bhalwal and this has greatly helped in swift inspection and issuance of export permits at the doorsteps of exporters.

The institutional issues related to the shortage of professional staff, capacity building of professionals and logistics should be adequately addressed to further improve the DPP’s efficiency.

Pakistan enjoys the best soil and ecological conditions for kinnow and citrus production. The total production of 2.5 million tons without any major outside support speaks volumes about the existing potential.

Kinnow has emerged as an important export commodity as Pakistan exported a record 370,000 tons amounting to $222 million in 2017 compared to 325,000 tons in 2016. Kinnow exports are increasing every year and they can be further raised by supporting the growers through provision of improved germplasm and seedless varieties, improved orchard management, post-harvest quality control and enhanced phytosanitary and quarantine inspection and facilitation.

There is a need to quickly initiate the development of improved varieties and for the purpose, Parc as well as the Citrus Research Institute Sargodha and provincial agriculture departments should join hands.

The introduction of seedless varieties from abroad could also enable increased and sustainable production of kinnow for enhanced trade. Agriculture departments are required to engage the farmers and develop a comprehensive strategy for addressing the priority issues in the short term and follow a long-term strategy for citrus development on a sustainable basis aimed at increasing exports. There is a need to identify the growers, prepare a database and develop a platform involving the growers, exporters and traders for listening to grievances of the growers and exporters.

Awareness campaigns should be kicked off about field practices, harvest and post-harvest handling, transportation and processing through an integrated and coordinated programme involving all the stakeholders.

FARMERS – A NEGLECTED LOT FOR DECADES

By Zafar Bhutta Published: January 14, 2019

ISLAMABAD: Pakistan is an agriculture-based economy but farmers have been neglected for decades due to pro-industry policies of successive governments.

The 2013-18 tenure of the Pakistan Muslim League-Nawaz (PML-N) government proved quite damaging for the agriculture sector when it posted a negative growth and cotton production hit its lowest in recent history.

During the PML-N's five-year administration, the focus had mainly been on textile tycoons while the farmers were at the mercy of these businessmen. In 2015-16, the agriculture sector recorded a negative growth of 0.19% against growth projection of 3.9%, which indicated the lack of attention paid to the farm sector.

That government also allowed cotton import from India at zero duty, benefitting Indian farmers and domestic textile millers whereas local growers continued to suffer.

Cotton production had been virtually stagnant since 1991-92, fluctuating in a range of 10 to 12 million bales annually. The harvest fell to 9.9 million bales in 2015-16 compared to average consumption of 15 million bales, turning Pakistan a net cotton importer.

A committee listed different causes for the stagnant cotton harvest, which included the use of old first-generation rather than fourth-generation Bt technology, absence of better quality seeds, lack of measures to tackle cotton leaf curl virus, low processing quality at ginning factories and high contamination levels in the produce. These factors brought down the income of cotton farmers and led to a 20% reduction in the area planted with the crop from 2004 to 2016.

In 2016, the Pakistan Tehreek-e-Insaf (PTI) urged the then government to immediately impose an agriculture emergency and address the challenges faced by the farmers. Later, when the PTI came to power in August 2018, its government decided to declare an agriculture emergency as part of its programme of first 35 initiatives under the first 100 days of administration in a bid to ensure a decent income for the farmers.

The government has formed a task force for the sector comprising Finance Minister Asad Umar, Adviser to Prime Minister on Commerce, Textile and Industry Abdul Razak Dawood and Minister for Foreign Affairs Shah Mahmood Qureshi. Another task force has also been constituted to help improve the livestock sector and undertake necessary reforms. The minister for national food security will work on the livestock sector.

However, the government has so far failed to address the major challenges encountered by the farmers, who have a dominant share in the economy as they produce many key crops. Cartels and mafias have influenced power corridors as many industries are now receiving subsidies.

The fertiliser industry is getting subsidised gas but urea prices have been increased, which has raised the cost of inputs for the farmers.

Separately, the textile industry has started receiving electricity from the national grid at a subsidised tariff. The powerful lobby has also managed to get a subsidy of Rs25 billion on gas supply to their captive power plants.

However, when the Ministry of National Food Security and Research presented a case to the Economic Coordination Committee (ECC) for raising the wheat support price, the rate was kept at the same level of Rs1,300 per 40 kg, which had been in place for the last four years.

The government also allowed sugar barons the export of sweetener but it was linked with clearance of outstanding bills of the farmers. However, sugar millers refused to start the crushing season unless that condition was withdrawn, forcing the PTI government to remove the condition.

This is a tale of continued suffering for the farmers. The PTI government has so far not managed to take revolutionary measures under the agriculture emergency to improve the condition of deprived farmers, particularly the small ones.

The farming community had been left at the mercy of cartels in the past and nothing significantly different is being witnessed under the current government. If the same challenges persist, the time is not far when the country will start facing food insecurity.

NEWS COVERAGE PERIOD FROM JANUARY 7th TO JANUARY 13th 2019

FOOD PRICES CRAWL UP AHEAD OF MINI-BUDGET

Aamir Shafaat Khan Updated January 13, 2019

KARACHI: Retailers have pushed up prices of essential food items including sugar and vegetables prices ahead of the mini-budget which will be announced on Jan 23.

Sugar now costs Rs60 per kg versus Rs55 per kg a few days ago following an increase in the wholesale price to Rs57-58 per kg from Rs55 per kg. Two months ago, the wholesale price of sugar was Rs52-53 per kg.

Retailers with old stocks of sweetener are now taking full advantage of the fresh price hike in wholesale markets and are demanding Rs5 per kg more from consumers.

Talking to Dawn, Patron-in-Chief Karachi Wholesalers Grocers Association (KWGA) Anis Majeed said the issue of late cane crushing and reports of low sugarcane crop can be blamed for the recent price hike.

The price may remain under pressure as a number of mills have yet to start cane crushing over price dispute, he said. However, he ruled out any shortage of sugar in the wholesale market.

Mr Majeed feared further price shocks in case the government raises import duties on raw materials and finished items in the mini budget.

Pakistan's sugar exports plunged to 182,142 tonnes ($55.5 million) in 5MFY19 from 320,593 tonnes ($129m) in same period last year. In FY18, sugar exports swelled to $1.469m tonnes ($508m) from 307,348 tonnes ($161m) in FY17. Sugar production fell by seven per cent to 6.565m tonnes in FY18 from 7.048m tonnes in FY17.

The price of Nestle tea whitener 950 gram pack went up to Rs865 from Rs825 while 375 grams pack now costs Rs425 as against Rs400. The company did not mention any reason of price rise in a letter issued to retailers.

Despite the ongoing winter season, soft drink manufacturers have also increased the prices of beverages.

The price of one litre and 1.5 litre cola bottles produced by two main beverage makers surged by Rs5 per bottle, followed by Rs 10 increase for jumbo bottles.

Vegetables become expensive

Not to be left out, vegetable retailers are making huge windfalls by charging over 100 per cent profit from consumers on wholesale rates.

The retail price of onion is now Rs 30 per kgm from Rs 25 per kg earlier on. In Sabzi Mandi, wholesale price of onion hovers between Rs10-15 per kg.

The same situation exists for potato. The retail price of the root vegetable has been raised to Rs30 per kg from Rs20 per kg, while its wholesale price hovers between Rs10-12 per kg.

Tomato can be purchased at Rs40 per kg which was selling at Rs 20-30 per kg. Its wholesale price is Rs 20-25 per kg.

President Falahi Anjuman Wholesale Vegetable Market New Sabzi Mandi Super Highway Haji Shahjehan said retailers are depriving consumers from taking benefit of low rates of Sindh's onion and tomato crop and Punjab's potato crop.

Transportation charges have definitely increased due to Rs23 per kg hike in CNG rates coupled with diesel and LPG prices which have pushed up the cost of living for everyone, he said.

Cucumber and turrai now sell at Rs80 per kg which were priced Rs40-50 per kg. Lokki and tinday are now available at Rs60 and Rs80 per kg as against Rs40 per kg each few days back. Shimla mirch (capsicum) prices moved up to Rs80 from Rs60 per kg. Bhindi (lady finger) is available at Rs120 as against Rs80 per kg.

A retailer said tomato prices are rising as the vegetable could not ripe due to low temperatures. As a result, unripe tomatoes are being sold in the market in larger quantities.

SUGARCANE GROWERS CRITICISE NON-IMPLEMENTATION OF COURTS ORDER

AMJAD ALI SHAH 2019/01/13

PESHAWAR: Sugarcane growers have expressed serious concern over the government's failure to implement courts order regarding payment of the sugarcane price to the farmers and warned to agitate after three days if the mills owners did not clear their dues.

Talking to this scribe here, the leaders of Farmers' Alliance said that in Punjab province the sugar mills owners were paying from Rs 180 to 190 for per 40-kg sugarcane to the farmers while in Khyber Pakhtunkhwa the growers at the disposal of millers. The millers are looting the farmers at their free will as the price fixed by the Supreme Court was also not paid to them.

The agriculture, they said was stated to be backbone of the country's economy but despite that it was the most neglected sector because the farmers were not given any kind of incentive/financial support to increase the agriculture produce.

About the growing prices of fertilizers and agriculture tools, machinery, the farmers said that this sector had never been a priority of the successive governments and thus farmers were also switching over to other professions.

"We have given three days ultimatum to the millers to clear our dues within three days as per decision of the Supreme Court which had already fixed sugarcane per maund price at Rs 180 otherwise the farmers will start observing sit-in outside Khazana Sugar Mills Peshawar," Abdur Rehman Khan, a grower said.

Another farmer Jameel Khan said that if the government was really sincere to improve agriculture sector then it should provide incentives to the farmers to encourage them.

How the farmers will improve the agriculture when they are not given fertilizer at reasonable price, irrigation water at the proper time," he said and asked the government to provide interests-free agriculture loans to the farmers on easy installments.

Another leader of growers and Pakistan Muslim League-N provincial joint secretary Israrullah Khan said that the people of different sections of society including farmers had badly suffered due to the menace of terrorism and now it was government's duty to support the affected people.

He said that most of the population in rural areas had to depend on agriculture but they could not improve it unless the government announces sufficient facilities/ incentives for them. He suggested that agriculture department should play its role effectively to encourage the farmers by providing them with facilities including quality seeds, necessary training so that they could increase agriculture produce in respective localities.

Israrullah also asked for construction of form to market roads to help the farmers transport their produce to the markets easily on minimum charges.

LOWER PRICES OF AGRO PRODUCTS COSTING HEAVILY ON FARMERS

Mehtab Haider January 13, 2019

ISLAMABAD: Pakistan's neglected farm sector is facing a crisis-like situation as produce of different crops have witnessed lowest ever surge in prices in domestic market at a time when cost of their inputs is skyrocketing.

The prices of tomato, potato, onion and other farm produce have witnessed lowest ebb after which the urban class is getting cheaper products, but it's costing heavily to the farmers living in rural areas as they are unable to recover cost of their production.

Actually the middleman is earning money as they are getting farm produce at cheapest rates and selling in urban areas at higher rates.

The food prices have become flat exactly at zero percent increase in December 2018 compared to the same month of the previous year, making it quite difficult for the neglected agriculture sector farmers to even recover cost of their inputs as prices of diesel, fertiliser and pesticides have gone up enormously especially in last few months.

According to official data of the Pakistan Bureau of Statistics (PBS) as well as official documents, food-based prices in December 2018 witnessed 0.05 percent increase compared to the same month of 2017.

The food prices touched almost zero percent increase, making it difficult for farmers to recover their cost.

"The crisis like situation is brewing up for agriculture sector in Pakistan where prices of their produce have witnessed lowest ebb despite the fact that the cost of production has gone up enormously," official sources told The News. The food prices witnessed negative 1.4 percent in December 2018 in compared to November 2018. The sharp decline in prices of farm sector has started impacting overall economic activities in rural areas as sale of motorcycles witnessed major decline in recent months of the current fiscal year.

In the last cabinet meeting when briefing was given on the CPI-based inflation, two federal ministers raised objections over the prices data arguing that it did not match with the ground realities.

When minister for planning showed that the inflation was impacting higher quintile group severely then it was mentioned that people having more income were affected by higher increase in prices of different commodities and services on which the PBS captured data of these products to gauge inflationary pressures.

In first six months period, from July-December 2018-19, with average CPI-based inflation of 6.2 percent, the transport prices witnessed highest surge of 17.7 percent on average against 3.7 percent in the same period of the last financial year 2017-18. Secondly, the education expenses went up by 12.1

percent in first half of the current fiscal compared to 11.1 percent in the same period of the last financial year.

Contrary to education, the health inflation decreased and witnessed surge of 7.4 percent in July-Dec period of the current fiscal year against 11.4 percent in the same period of the last year.

The CPI-based inflation on recreation and culture witnessed upward trends as its prices have gone up by 7.7 percent in July-Dec period of the current fiscal against 0.4 percent surge recorded in same period of the last financial year.

CHINA TO IMPORT POTATOES: ENVOY

Amin Ahmed Updated January 12, 2019

ISLAMABAD: China plans to import potatoes from Pakistan, said Ambassador Yao Jing on Friday.

The envoy in a meeting with Minister for National Food Security and Research Sahibzada Mehboob Sultan said his country will shortly send a delegation to Islamabad to finalise arrangements and fulfilling the requirements sanitary and phytosanitary measures (SPS).

He said that Beijing wants to import more from Pakistan, especially food items are cherries, potato, wheat, citrus, rice and mangoes. China wants to build stronger socio-economic ties with Pakistan on the basis of reciprocity, he added.

Pakistan’s annual potato yield currently stands at around 4.2 million tonnes as against domestic requirement is 3.75m tonnes – leaving a sizable surplus. About 97 per cent of the vegetable is grown in Punjab while the rest in other provinces.

The fresh crop of potato, which hit the local market in early December 2018, will be ready for export by the end of January prior to the visit of Chinese delegation.

The country has already taken steps to promote the export of cotton for which a facilitation centre for exporters is already operational in Okara.

The envoy informed Sultan that hybrid rice seed experts from Pakistan will soon be invited to see and monitor the facilities in China.

The minister told Jing that the Pakistani government will soon make a decision on the import of Chinese hybrid rice seed.

Over the recent past, 29 rice hybrids were received from the Hubei Provincial Seed Group of China by Pakistan Agriculture Research Council, and tested at the Rice Research Institute at Dokri, Larkana. Eight of them were found promising with paddy yield of more than 100 maunds per acre.

At the institute, various local varieties were being converted for the development of indigenous rice hybrids. The Rice Research Programme has so far acquired more than 22,500 lines from the International Rice Research Institute in Philippines which are high-yielding with desirable grain quality.

The establishment of foot and mouth disease (FMD) free zone in Pakistan was also discussed and Sultan invited Chinese experts to visit three districts of Punjab which have been identified as FMD-free.

The minister informed the envoy that the first meeting of the joint working group created to implement the memorandum of understanding signed during Prime Minister Imran Khan's visit to China in November will take place in Islamabad next month to explore areas of cooperation between the two countries in agricultural sector.

Chinese assistance to set up the FMD vaccine plant in Pakistan will be among the agenda of the group's meeting, the minister said.

Jing informed Sultan that Chinese companies are interested to come to Pakistan and set up special economic zones with agriculture being one of the six major areas identified by Chinese government.

Sultan told the envoy that the two countries could identify and start working on areas of mutual benefit in the field of agriculture prior to the 'Belt and Road Conference' scheduled to open on April 27 in China.

WHEAT TO BE EXPORTED WITHOUT SUBSIDY

RIZWAN BHATTI /2019/01/12

KARACHI: After a gap of 10 years, Pakistani wheat will be exported without subsidy as a number of bidders have agreed to procure commodity at higher than minimum price fixed by PASSCO.

In order to offload the stocks of wheat before arrival of new crop, Economic Coordination Committee (ECC) of the Cabinet allowed the export of some 0.1 million tons of wheat. Accordingly, Pakistan Agricultural Storage & Services Corporation (PASSCO) invited bids for the sale of commodity and fixed a minimum price of Rs 32,500 per metric ton. In response to the wheat export tender some 42 bidders/ exporters submitted bids for export of commodity. Out of total participants, some 12 bidders agreed to procure commodity without subsidy and at higher than minimum price fixed by PASSCO.

The highest bid was received from M/s Abdul Wasey Floor Mills, which was agreed for procurement of 10,000 tons wheat at Rs 32,759 per metric tons compared to minimum price of Rs 32,500 per metric ton. M/s Chappal Traders and M/s LP Trading Company were the second highest bidders as both quoted Rs 32,666 per metric ton for 25,000 metric tons and 10,000 metric ton respectively.

M/s D.D Ship breaker was the third highest and offered to procure 25,000 metric tons of wheat at Rs 32,629 per metric ton. M/s M.M Commodities quoted Rs 32,627 per metric ton for 25,000 metric tons, M/s Chappal Enterprises Rs 32,556 per metric ton for 10,000 metric tons, Conwill Pakistan Limited Rs 32,529 per metric ton for a quantity of 25,000 metric tons, M/s Sindh Feed and Allied Products Rs 32,524 per metric ton for 25,000 metric tons and M/s Meskey and Femtee Trading Co. Rs 32,517 per metric ton for procurement of 25,000 metric tons.

In addition, M/s Garib Sons Pvt. offered Rs 32,513 per metric ton for 25,000 metric tons, M/s Abu Bilal Trading Rs 32,512 per metric ton for 25,000 metric tons and M/s Tahhar International quoted Rs

32,506 per metric ton for 25,000 metric tons. While, the remaining bids were less than the minimum price fixed by the PASSCO.

Sources said that previously over 2 million tons of wheat was exported at subsidies ranging from $155 per metric ton to $159 per metric ton due to lower international price. However, with increasing prices of wheat in the world market and rupee devaluation, exporters have agreed to export commodity without government subsidy.

Currently, average wheat price in the international market is about $240 per metric ton compared to $210 per metric ton previously. The export of wheat without subsidy will be initiated after a gap of ten years, sources said.

Sources said that as per tender term and condition, as bidders were required to submit bids accompanied by 2 percent Earnest Money of the total value of the bid amount in shape of Bank Draft/Pay Order/Cashier’s Cheque/Banker’s Cheque

The successful bidder will be required to sign an agreement for the demanded quantity of wheat within seven days after issuance of acceptance letter. To sign the agreement, the bidder will be required to deposit further 3 percent to complete the 5 percent Performance Money requirement.

Sources said that some bidders have deposited bids less than 2 percent of earnest money and as per tender term these bids will not be entertained.

The successful bidders (Highest Rate) will have to deposit total value of the bid stock and lift the entire contracted quantity within 30 days and minimum 40 percent of contracted wheat stock must be lifted within first 15 days of lifting period or up to extended time approved by the Competent Authority (MD PASSCO) upon request of the bidder with cogent reasons on “case to case” basis, after signing of agreement.

Successful bidders can lift the stocks from designated PASSCO Centers in packets of 1,000 metric tons by depositing full amount equivalent to 1,000 metric tons. Currently PASSCO is evaluating the bids and the tender will be awarded in the next few days, sources said.

DELEGATION VISITS KCCI MEAT EXPORTS TO MALAYSIA SUGGESTED

RECORDER REPORT 2019/01/12/

KARACHI: Malaysian Economic Adviser Haji Roslin Abdul Rehman has urged the business community of Pakistan to seriously explore the possibility of exporting meat to Malaysia which is $2 billion meat market where 76 percent of meat is being imported from numerous countries.

“Pakistan and Malaysia can also develop a joint global brand for Halal meat export,” Malaysia Terengganu Province’s economic adviser said, in a meeting with members of Karachi Chamber of Commerce and Industry where a Malaysian delegation visited.

The adviser informed that half of the demand for meat in Malaysia is being fulfilled by importing meat from Australia, Brazil, New Zealand, India, China and Thailand, which are all non-Muslim countries. He noted with concern that not a single container of meat is being exported from Pakistan despite the fact that both Muslim countries have been enjoying excellent brotherly relations for many years," he said.

Haji Roslin told the KCCI members it was a very good opportunity for Pakistani meat exporters and they must collaborate with Malaysian business community to effectively penetrate the Malaysian market where only 24 percent meat is supplied locally. He said after visit by his Pakistani counterpart, now Malaysian Prime Minister Mahathir Bin Mohamad would be visiting Pakistan in March 2019. "Malaysian Ministers for Religion and Agriculture will also be here and they may endorse any Pakistani slaughter house or any meat processing factory intending to export meat to Malaysia," he said.

KCCI president Junaid Esmail Makda assured the delegates that the Karachi Chamber would certainly encourage exporters to dispatch meat to Malaysia and would also carry out a study to examine and identify the irritants responsible for zero export of meat from Pakistan to Malaysia.

"Any irritant that the study to reveal hindering meat trade between Pakistan and Malaysia, will certainly be brought to the notice of Federal Ministry of Commerce with a request to take steps for resolving the same to facilitate the exports of meat to Malaysia," he said.

Makda further said that the meat industry of Pakistan entered the world markets long ago and its red meat is in great demand particularly in Middle Eastern and Southeast Asian countries.

He said that the production of quality meat is directly linked with livestock, being produced in Pakistan. With agriculture as its backbone, Pakistan is said to be the fifth largest livestock producer in the world, he said.

KCCI president said that both countries share healthy bilateral relations based on cooperation in different economic spheres particularly in trade and investment. "In 2017, goods exported to Malaysia were merely $166.48 million while the imports worth $1,167.13 million indicate huge trade imbalance in favour of Malaysia by $1 billion," he said.

Makda said that KCCI wants to strengthen trade ties and explore new bilateral trade prospects with Malaysia. "We believe Pakistan's improved relations and enhanced trade with brotherly countries such as Malaysia would ensure prosperity and create a win-win situation for both the countries," he said, adding that Malaysian companies can choose between setting-up a liaison office, branch office or incorporate a Pakistani company as either its wholly owned subsidiary or joint venture with a Pakistani/overseas partner.

He opined that there was a huge potential for joint ventures and investment in the areas of Islamic Finance, Halal food industries, energy sector, low cost housing, infrastructure development, telecommunications and education, etc.

KCCI vice president Asif Sheikh Javaid, chairman of its Diplomatic Missions and Embassies Liaison Subcommittee Shamoon Zaki, ex-VP Agha Shahab Ahmed Khan and KCCI Managing Committee members also attended the meeting.

CHINA WANTS TO BUY CHERRIES, POTATO AND WHEAT FROM PAKISTAN

By Our Correspondent Published: January 12, 2019

ISLAMABAD: China is keen on building stronger socio-economic ties with Pakistan and is interested in importing more from the country, said Chinese Ambassador Yao Jing.

In a meeting with Federal Minister for National Food Security and Research Sahibzada Muhammad Mehboob Sultan, he elaborated that cherries, potato, wheat, citrus, rice and mangoes were the most desirable food items.

He said that China will formally invite Pakistani experts to monitor the hybrid rice seed expertise of China and the facility.

Also speaking on the occasion, the minister said that it is heartening that both countries have signed free trade agreement (FTA), which has facilitated expansion of bilateral trade.

Sultan said, “We are moving ahead to collaborate in achieving foot and mouth (FMD) free zone and a memorandum of requirements for the establishment of FMD free zone is currently being negotiated by both sides.” He added, “We believe in ease of doing business and if we collaborate for the elimination of FMD it will boost our meat export to China.”

Talking further on the issue, he said that they could identify areas of mutual benefit in the field of agriculture and begin work before the belt and road conference in April. He said they would welcome experts in cotton, rice, cage culture fisheries and citrus to Pakistan. “We are open to learn as our ultimate goal is to move towards food security, zero hunger and ultimately poverty alleviation.”

It is pertinent to mention that on the request of the Ministry of National Food Security and Research the Chinese side organised specialised training programmes on hybrid rice technology.

On the request of the Ministry of National Food Security and Research, it was agreed that China would urgently initiate the process of potato export to China after fulfilling the SPS requirements. It was agreed that a delegation of experts would soon visit Pakistan to finalise the arrangements.

Sultan remarked that they looked forward to the implementation of the agreement signed during Prime Minister Imran Khan’s visit to China and discussing matters of mutual benefits during the Joint Working Group (JWG) meeting due to be held in February this year in Pakistan.

He expressed satisfaction that bilateral relations are growing in the right direction and will be in mutual interest of both the countries.

CEREAL PRODUCTION SHRANK IN 2018

The Newspaper’s Reporter January 11, 2019

ISLAMABAD: The aggregate cereal output of the country during the 2018 cropping season — including wheat, paddy rice and maize — fell by six per cent to an estimated average level of 42 million tonnes.

According to a Pakistan-specific report of the Global Information and Early Warning System released by United Nations Food and Agriculture Organisation, output slipped from record levels in 2017, when bumper yields were achieved due to favourable weather conditions and adequate input supplies, including irrigation water supplies and good access to fertilisers and other basic inputs.

The publication issued on Wednesday says that planting of the Rabi wheat crop completed last month, and below average rains in October and November, coupled with low irrigation water availabilities for the predominantly irrigated wheat, have hampered planting operations.

Official data from early last month indicated that 8m hectares were planted with wheat — 9pc below last year's near-average level. In December, the Pakistan Meteorological Department released a 'drought alert' indicating that parts of Sindh and Balochistan are experiencing moderate to severe drought conditions due to persistent below-average rainfall.

According to Indus River System Authority, irrigation water supplies for Rabi crops are estimated to be 40pc below the previous ten-year average. As of the second dekad of December 2018, southern parts of Punjab and Sindh and eastern of Balochistan exhibited below normal vegetation conditions, and the reduced water availability for irrigation raises concerns for yield prospects.

PFA TO ESTABLISH NUTRITION CLINICS IN PUNJAB

By Our Correspondent Published: January 11, 2019

LAHORE: The Punjab Food Authority (PFA) has decided to establish nutrition clinics to given citizens with diabetes guidance regarding their diet in all 36 districts in the province.

The decision was announced by PFA Director General Muhammad Usman while visiting a nutrition awareness camp at Services Hospital on Thursday. He stated that 15 dietary experts at the camp are providing the people with information regarding the importance of having a proper diet while suffering from diabetes.

Visitors are also being screened for diabetes and high blood pressure free-of-charge at the camp while their height and weight is also being checked, he added. The PFA DG, Services Hospital Medical Superintendent Dr Syed Qaiser Zia and Endocrinologist Department HOD Dr Khadija Irfan surveyed the camp and discussed various dietary issues faced by citizens. Meanwhile, awareness pamphlets were also distributed among the visitors.

On the occasion, PFA Director General Muhammad Usman directed officials to establish nutrition clinics as soon possible. According to the PFA spokesperson, more than 500 individuals were given advice on how to consume a better diet after a thorough check-up while pamphlets were distributed to more than 1,000 patients suffering from diabetes.

It is high time we spread awareness in order to control the menace of diabetes, the director general said.

Endocrinologist Department HOD Dr Khadija Irfan said that action against the adulteration mafia and other measures by the Punjab Food Authority have raised a lot of awareness among citizens. Meanwhile, Dr Syed Qaiser Zia stated that diabetes is a deadly disease which can be controlled by maintaining a proper diet.

'HORTI EXPO' TO BEGING ON JANUARY 21

RECORDER REPORT | JAN 10TH, 2019 | LAHORE

The Punjab Agriculture Department (PAD) is organizing a two-day 'Pakistan Horti Expo 2019' from January 21 to 22 at the Expo Center in the provincial metropolis in order to highlight Pakistani fruits, vegetables and related products at the international level. The expo will provide an opportunity to farmers, importers, exporters and companies dealing in Horti products during this exhibition, said a spokesman of the department here on Wednesday. Organizers hope that this expo will provide an opportunity to introduce Pakistani products at international level and also help developing durable relations between stakeholders in horticulture industries.

PAKISTAN EAGER TO BOOST FRUIT EXPORTS

By Our Correspondent Published: January 10, 2019

ISLAMABAD: Federal Minister for National Food Security and Research Sahibzada Muhammad Mehboob Sultan has expressed the desire to boost trade between Pakistan and Tajikistan as the former produces the world's best kinnows and mangoes. In a meeting with Tajikistan Ambassador Jononov Sherali on Wednesday, he agreed to hold a meeting of the Pakistan-Tajikistan Ministerial Commission by April this year to discuss matters of mutual benefit in the agriculture sector. The federal minister said Tajikistan must consider the import of Pakistani mangoes as the Central Asian state was already importing dairy products, sugar and potato from Pakistan.

RAMZAN SUGAR MILLS: NAB TO FILE REFERENCE AGAINST HAMZA

The Newspaper's Staff Reporter Updated January 09, 2019

LAHORE: The National Accountability Bureau (NAB), Lahore, has decided to file a reference against Opposition Leader in Punjab Assembly Hamza Shahbaz in the Ramzan Sugar Mills case.

"NAB has decided to file a reference against Hamza Shahbaz for his alleged role being chief executive of the Ramzan Sugar Mills to get constructed a bridge facilitating his mills out of the public money in Chiniot," a senior official told Dawn on Tuesday.

An amount of Rs200 million was approved by then chief minister and Hamza's father Shahbaz Sharif for the construction of the bridge.

He said the reference was likely to be filed by the end of this month.

The National Accountability Bureau has already announced filing a reference against Leader of the Opposition in the National Assembly Shahbaz Sharif in the Ramzan Sugar Mills case.

According to the NAB, Shahbaz Sharif, being chief minister of Punjab, had issued a directive for the construction of a drain in Chiniot district primarily to benefit the sugar mills owned by his sons.

The PML-N president misused his authority as Punjab chief minister to benefit factories owned by his sons, it said.

Hamza's brother Salman Shahbaz is also facing similar charges being director of the mills but the bureau has not yet decided whether to include his name in the reference or not.

Salman Shahbaz is in the United Kingdom.

According to NAB, Salman left the country to skip its hearings.

Hamza was stopped from leaving the country at Lahore airport last month as his name was on the exit control list (ECL).

Hamza is also facing an inquiry in income beyond means case.

OPP INVITED FOR DEBATE TO DEVISE FOOLPROOF WHEAT POLICY

Intikhab Hanif January 09, 2019

LAHORE: The Punjab government on Tuesday vowed to devise a farmer-friendly wheat procurement policy in consultation with the provincial lawmakers, and agreed to discuss threadbare grabbing of state land and who changed laws to convert residential areas into commercial zones.

The assurances came in response to two resolutions that PML-N MPAs Safdar Shakir and Sheikh Alauddin moved during the assembly session which began at 12:20pm instead of the scheduled 11am.

The opposition members pointed out quorum twice, but the session continued due to the treasury's overwhelming presence. "Pointing out short quorum on a private members day is regrettable," Law Minister Raja Basharat said.

He said while the opposition was disrupting the proceedings he had got extended the mandate of a committee formed to have the rules of business amended to allow for the production of MPA Khwaja

Salman Rafique, who is in the custody of the National Accountability Bureau (NAB). “We are going to do this during this session and also constitute the Public Accounts Committee and standing committees tomorrow,” he said. Permission to allow the rules of business committee to function during the current session was also granted.

Responding to Mr Shakir’s resolution on wheat procurement, Food Minister Samiullah Chaudhry said that the government was devising a farmer-friendly policy. He looked perplexed when the chair asked him whether he was opposing or supporting the resolution.

After the chair sought the House’s approval of the resolution, Pakistan Tehreek-i-Insaf’s Saeed Nivani said the previous government’s policy was flawed and had led to exploitation of farmers. The food minister agreed and asked members to debate the issue and help the government form a better policy. “Unlike the recent past, no farmer will be humiliated now,” he claimed.

Responding to the resolution moved by Mr Alauddin about the establishment of educational institutions in a residential area of Lahore, the law minister regretted that institutions were misused and destroyed to grab state land. He said hotels, expo centres and shopping malls were allowed to be built on hundreds of kanals but the present government was retrieving the grabbed state land.

He said the government was also trying to restore cities of Punjab to their original shapes, offering the opposition a day-long debate on the issue to suggest proposals.

Earlier, PML-N’s Samiullah Khan said the House faced a crisis in the absence of the speaker or deputy speaker on Monday. And a press release issued by the office of the deputy speaker said later in the evening that he was in Rahim Yar Khan where he was called over by the UAE crown prince — who was hunting there. The deputy speaker had undermined sanctity of the House, he alleged.

Minister Chaudhry Zaheer retorted that the crown prince was on a goodwill visit. The present government would not allow any hunting, he claimed.

Responding to an adjournment motion moved by PML-N’s Chaudhry Ashraf, Health Minister Yasmin Rashid said after the death of a child at Ganga Ram Hospital, the government posted senior registrars to paediatric emergency wards of all hospitals. No junior doctor would discharge a child without consulting a senior doctor, she said, adding that the trainee doctor who had treated the child had been fired after an inquiry.

Minorities Minister Ejaz Alam assured PML-N minority member Khalil Tahir Sandhu of the resolution of the age-old issue of return of the property of Lahore’s Rang Mahal School, Sialkot’s Murray College and Rawalpindi’s Gordon College to the Christian community soon. Supporting him, the law minister said the previous government had delayed the issue.

PML-N’s Zaheer Iqbal criticised the chief minister’s recent visit to south Punjab and said the cabinet meeting in Bahawalpur was just a ploy. He continued to speak even after the chair disallowed him.

Speaking during the question hour, the law minister promised that recruitment process of 1,000 police constables in Faisalabad and promotions in all ranks would be completed.

Earlier, the House adopted a resolution condemning Indian atrocities against Kashmiri people and seeking an early resolution of the dispute. The resolution was moved by Mr Sajid Khan.

While praying for all the martyrs of Kashmir and early recovery of the injured, the House, through the federal government, asked all world bodies to demand the killings be stopped forthwith and the dispute resolved.

125,000 TONNES OF KINNO EXPORTED

The Newspaper's Staff Reporter Updated January 09, 2019

KARACHI: Pakistan exported 125,000 tonnes of kinno from December 2018 till to date at the rate of $500 per tonne.

The country fixed the export target at 350,000 tonnes for this season, which will conclude in March/April.

All Pakistan Fruit and Vegetable Exporters, Importers and Merchants Association (PFVA) Patron-in-Chief Waheed Ahmed on Tuesday stated that the kinno export target would be achieved if rains do not destroy the orchards and goods carriers movement remains smooth.

The country exported 375,000 tonnes of kinno worth $200 million last year. He said bulk exports of the citrus fruit were made mainly to Russia, the Philippines, Indonesia and the UAE.

However, Pakistan has failed to capitalise on the Iranian market for the last eight years where 80,000-100,000 tonnes could easily be shipped, he deplored.

Waheed said the association has submitted recommendations to the Federal Minister National Food Security and Research regarding enhancement in production and exports of fruits and vegetables leading to creation of ample employment opportunities for millions of people.

THE COTTON WOES

RECORDER REPORT | JAN 9TH, 2019 | EDITORIAL

It is unfortunate that cotton production and its acreage in the country have been declining steadily over the years. A bumper crop of 15 million bales was cultivated in 2011-12, which declined to about 14 million bales in 2014-15 and further to 9.9 million bales in 2015-16. It recovered somewhat to 11.9 million bales in 2017-18 but is again estimated to decline to little over 10 million bales during the current year, showing a steep fall of 5 million bales over the last seven years. According to the latest figures issued by the Pakistan Cotton Ginners Association (PCGA), cotton production up to 1st January, 2019 stood at 10.273 million bales as compared to 11.108 million bales in the corresponding period of last year. During this period, Sindh produced 4.111 million bales or 2.42 percent less than the output of 4.123 million bales last year while the fall in production in Punjab was more pronounced at 10.63 percent, or 6.162 million bales as opposed to 6.895 million bales last year. It may be mentioned here that the fall in Sindh was less pronounced than Punjab despite severe shortage in water availability in the former province at the initial stages of cotton crop. The major reasons for the fall in cotton production over the years have been declining areas under cotton cultivation, pest attacks and lower water availability. About 9 million acres were cultivated during 2011-12 which have come down to 5.9 million acres in 2018-19.

An almost consistent decline in cotton output is a very bad news for the country. It is one of the major cash crops for the farmers who largely depend on its income for other necessities of life. Lower income from this crop would obviously depress the farmers' standards of living. Besides, it is very important crop for the economy as it has a share of 1.0 percent in GDP and contributes 5.5 percent to agriculture value addition. Also, it absorbs a bulk of labour force, both in the cities and rural areas, of the country and is a major foreign exchange earner and stimulates growth in other sectors. Sadly, however, the output of cotton production has been even less than domestic textile industry's needs of 13.2 million bales in most of the years, necessitating imports in large quantities and expenditure of precious amount of foreign exchange. Two key factors seem to have contributed to this poor performance. Firstly, attractive profitability of competing crops has led to shifting in area under cotton cultivation over the last several years, especially in the cotton producing districts of Punjab. Secondly, per hectare yield of cotton continues to be poor, inducing the farmers to cultivate other crops. These factors have forced the cotton industry to import cotton from abroad, especially of better varieties, for producing value-added items: raw cotton imports stood at 3.6 million bales in FY18 compared to 2.9 million bales in FY17.

In our view, the government, for a variety of reasons, needs to change the policy and chalk out a plan to increase cotton production in the country. Over the past few years, growers have clearly shifted from the production of cotton to sugarcane due to the political clout of sugar industry and vast amount of subsidies offered to sugarcane farmers. The present government needs to take a bold decision to avoid subsidies which would reduce the burden of subsidies on the budget and allow the country to utilise its land resources according to the comparative advantage and maximise the productivity of agriculture sector in accordance with the international price signals. We know that the production of sugarcane is less labour-intensive and the plant root stays for about three years but cotton is a semi-drought crop and needs far less water. Since the country is faced with water shortage, the production of cotton crop could be ideal for a country like Pakistan.

ARID SALINE LANDS: USE OF HALOPHYTES AS UNUSUAL CROPS URGED

RECORDER REPORT | JAN 9TH, 2019 | KARACHI

The utilization of halophytes as unconventional crops for arid saline lands holds immense potential to ensure food security in future, Prof Xiaojing Liu of Chinese Academy of Sciences expressed while speaking at the second day of the three-day long international conference on 'Sustainable Development: Halophytes for Green Revolution'.

The Institute of Sustainable Halophyte Utilization (ISHU) of Karachi University (KU), has organized second international conference at the Karachi University Business School (KUBS), which will conclude today.

Prof Xiaojing Liu informed the audience about research of his group that can improve crop productivity and minimize the salt build up following salty water irrigation. He stressed on research-based amendments in soil structure and chemical composition that can prevent degradation of soil.

Prof Todd Egan from USA highlighted that salinization of lands is one of the major impediments for conventional agriculture especially in the arid and semiarid regions of the world. Lack of rain and high temperatures can further aggravate the situation in these areas.

Most of our conventional crops are salt-sensitive and can't endure even low levels of soil salinity. Hence, there is dire need for innovative approaches to overcome aforementioned problems. He said that his team has prepared a "super absorbent" that can retain about 90 percent of the soil moisture and essential nutrients, a pre-requisite for long-term crop productivity. Use of such material can be of immense aid for high saline agriculture.

Prof Hans Werner Koyro from the Giessen University, Germany, delivered lecture about global climate changes and use of 'Biochar' as a potential remedy to minimize harmful impacts of climate change on plants. Use of Biochar can be one of the solutions for enhancing productivity of our agricultural lands, he said. Biochar can sequester sodium and heavy metals, which are toxic for plants.

Islamic University Islamabad's Environmental Sciences professor Dr Irfan Khan presented his views about the use of halophytes for the success of United Nations Sustainable Development Goals (SDGs), particularly of SDG-2, which aims to eliminate hunger from the world. Halophyte cultivation as non-conventional crops is also in accordance with Pakistan's National Sustainable Development Policy, he said.

He stressed on the fact that generally there is a gap between policy-making bodies and academia, which has to be bridged in order to make these policies successful. He also praised the organizers for holding the conference and declared it the need of the time.

STRATEGY IN THE WORKS TO ACHIEVE COTTON OUTPUT TARGET

Amin Ahmed Updated January 08, 2019

ISLAMABAD: The government is formulating a strategy to achieve the target of 15 million cotton bales by the end of 2019, with special focus on increasing the area under cultivation and decreasing inputs cost.

In this regard, the government strategy will focus on zero GST on pesticides, subsidy on fertilizers and redu¬ced rates of electricity, Min¬is¬¬ter for National Food Secu¬rity and Research Sahibzada Muhammad Mehboob Sultan said on Monday.

Addressing a seminar, titled 'Grow cotton, save economy and earn foreign exchange', the minister shared salient features of the government's upcoming strategy for the commodity.

The new strategy, to be announced in coming days, will also ensure availability of a considerable amount for loans to small farmers.

The minister said the government was well aware of the issues faced by farmers and is striving to come up with viable solutions.

"We are confident that in 2020 farmers will give us good returns on cotton," he said.

The government is considering an increase in funds for agricultural research from current 0.2 per cent to 1pc. The government will ensure low inputs cost and best quality for cotton farmers. The provincial governments will be asked to put their share in the cotton industry boom.

The government also aims to restart the Pak-Arab fertiliser plant which is closed for the past two years due to shortage of gas.

The minister said federal and provincial research centres have been able to develop disease and pest resistant cotton varieties, as well as methods where water could be saved.

The upcoming cotton strategy will focus on water conservation, training cotton farmers in modern farming techniques, and aims to do away with complicated laws and upgrade them to improve cotton mechanisation and provision of best seeds.

COMMODITIES: COTTON MARKET CAUGHT IN UNCERTAINTY

The Newspaper's Staff Reporter January 08, 2019

KARACHI: The cotton market was unable to ward off uncertainty and lack of confidence as buyers stayed away and trading activity dipped down to rock bottom.

The entire cotton economy is currently faced with adverse domestic and world factors, inhibiting textile spinners to build up their stocks.

Despite short crop, the textile industry seems reluctant to replenish stocks which is worrying, observed a leading cotton broker.

The Indian cotton crop is also reported to be much short than anticipated earlier, says the Cotton Association of India (CAI).

However, it is encouraging to see that a large number of Pakistani textile producers of home and contracted textiles are participating in the four-day international trade fair, Heimtextil in Frankfurt from Jan 8-11, which is the world's biggest display of textile goods.

According to Trade Development Authority of Pakistan, around 222 leading Pakistani textile producers are participating.

Meanwhile, trading on ready counter was extremely negligible as big buyers were conspicuous by their absence and the market remained devoid of much needed activity.

The Karachi Cotton Association spot rates were firm at weekend level at Rs8,700 per maund.

The entire cotton economy cycle seems to have come to a standstill because at each stage the stakeholders are currently in a fix and unable to clear dues of each other on holding huge stocks of unsold phutti (seed-cotton), cotton and cotton yarn and this having a spillover impact up to the value-added sector.

‘SALT-TOLERANT PLANTS COULD TACKLE FOOD INSECURITY’

The Newspaper’s Staff Reporter Updated January 08, 2019

KARACHI: Experts at the inaugural session of a three-day international conference which opened at Karachi University (KU) on Monday underscored the need for exploring the potential of salt-tolerant plants to tackle increasing food insecurity.

These efforts, they emphasised, must be supported by background research aimed at bringing out solutions that are both economically and environmentally viable and sustainable.

Titled ‘Sustainable development: halophytes for green revolution’, the event began at KU’s business school. It’s the second international conference organised by KU’s Institute of Sustainable Halophyte Utilisation (ISHU) on the campus.

Speaking on the conference theme, Prof Hans-Werner Koyro, a senior plant ecologist from Germany, said that the requirement of getting good quality food was increasing day by day with the growing population.

One solution to address this challenge, he pointed out, was to explore halophytes, salt-tolerant plants that grew in waters of high salinity. These plants offered a range of benefits, including their use as food, fodder and biofuel.

These plants also contained medicinal properties and helped protect the coastline.

Prof Koyro, however, cautioned researchers on how they should work with these plants and urged them to “restructure their work”.

“You must have detailed background knowledge of the environment you choose to work in as well as information about the resistance of the plant, its benefits and disadvantages before you start work,” he said, emphasising that the research needed to be ecologically sustainable and economically feasible.

“A university like KU needs to ensure that you do not end up creating worse (environmental) conditions than before,” he added.

Dr Miguel Clusener-Godt, director of ecological and earth sciences division of Unesco, appreciated KU’s research endeavours in the field of halophyte biology.

He was of the view that food shortages could be minimised by adopting halophyte as nonconventional crops for already salt-affected land. The conference theme, he noted, was in line with the sustainable development goals and also with Unesco’s Man and the Biosphere Programme.

Dr Benno Boer, chief of natural sciences, Unesco Bangkok office, spoke about the efforts of KU’s scientists in global halophyte research and said that they made substantial contributions putting Pakistan on the world map as a country with significant achievements in this important scientific subject.

He appreciated ISHU's research initiatives and said that increasing waterlogging and salinity was a major problem in Sindh and the government would support initiatives offering solutions in this regard.

KU Vice Chancellor Professor Dr Muhammad Ajmal Khan presented a global overview of population growth, water availability situation, and the status of natural resources.

"The changing climatic conditions have exacerbated the situation. We have to find new avenues to enhance our food production, make clean energy, as well as reduce pressure on limited freshwater resources for agriculture in arid regions," he said.

On how halophytes could help, Prof Khan said that cultivation of these plants thriving on saline water could help produce fodder for livestock especially in areas like Thar where livestock was directly linked to human survival and prosperity.

"We have already developed a model halophyte fodder farm in Thar. The provincial chief minister has also visited it and shown interest in taking it to the next level," he said, hoping that the farm would soon see big plantation.

He was of the opinion if the government took advantage of this important research, Tharis wouldn't have to migrate to other places in search of food.

Earlier, Dr Bilquees Gul, ISHU director, welcomed attendees and said that the aim of the conference was to discuss sustainable use of halophytes and bring together leading experts in the field of halophyte biology to develop a collaborative programme.

`MILLS PRESSURISING GROWERS TO SELL SUGAR CANE AT LOW RATES`

By Our Staff Correspondent | 1/8/2019 12:00:00 AM

HYDERABAD: The Sindh Abadgar Board (SAB) on Monday slammed sugar mills` failure to pay notified price (Rs182/40kg) of sugar cane for 2018-19 to growers and use of threats to pressurise farmers to sell their crop at lesser price.

The SAB meeting expressed concern over threats of registration of cases under `false` charges against growers in some districts. It was in spite of the fact that liabilities of even last year had not been cleared yet, the meeting added.

Participants were informed by growers from different districts that they were being paid Rs140 to Rs160 for the 2018-19 crop by millers while some were being paid their dues in the name of this year`s advance payments against the crop.

The meeting noted that Habib Sugar Mill deducted 30 per cent to 40pc crop of growers whereas Al-Noor and Habib sugar mills were not issuing cane price receipt (CPR) to farmers.

The SAB received complaints that growers were being told to submit their undertaking regarding clearance of their liabilities, although those remained pending; farmers were being `blackmailed` as well.

The meeting observed that the evidence was being brought to the notice of the Sindh cane commissioner. It urged small growers neither to succumb to millers` blackmailing tactics nor give anything in writing about their liabilities. Farmers should submit their complaints before the cane commissioner.

The SAB said Digri Sugar Mill owner was issuing threats of registration of cases to the growers who demanded last year`s dues.

The owner has submitted an application to the Hyderabad range DIG against growers for `harassing` him. A similar complaint was received about threats of registration of FIR against growers by the Ranipur Sugar Mill management.

The meeting said police were intimidating farmers in collusion with the mill owner.

MILLS, GINNERS ADOPT WAIT-AND-SEE ATTITUDE

RECORDER REPORT | JAN 8TH, 2019 | KARACHI

Main participant adopted wait-and-mood on the cotton market on Monday in expectations of positive developments, dealers said.

The official spot rate was unchanged at Rs 8,700, they added. Prices of seed cotton in Sindh were at Rs 3000-3800, in the Punjab seed cotton prices at Rs 3000-3800 and in Balochistan, rates of seed cotton were at Rs 3200-3800, they said.

In the ready session, not a single deal reported till our going to the Press, they said.

According to the market sources a kind of dullness persisted as both mills and ginners showed no interest in fresh deals.

Cotton analyst, Naseem Usman said that trading activity slowed down despite short crop production in the country. Traders related to the textile sector is expecting better outcome of three-day Heim Textil, starting from Tuesday in Frankfurt (Germany), nearly 222 Pak firms are participating the exhibition.

Furthermore, main participants adopted wait-and-see mood, awaiting for positive results from the US-Chine trade talks, due shortly, he added.

Besides, he said that Cotton Association of India (CAI) down sized the estimate of cotton production to 335 million bales for the current season.

Experts said that the huge stock of unsold cotton yarn is creating a financial problem. They said that in Faisalabad a large number of power looks have shut down and owners were selling their heavy machineries in scrap, in brief, it looks that cotton economy is currently under a crisis like situation.

Cotton prices went up in the international markets, they said.

AGRICULTURE: FOOD TRADE DEFICIT RISING AGAIN

Mohiuddin Aazim Updated January 07, 2019

Pakistan's food trade deficit shrank to $1.4 billion in the last fiscal year from $2.43bn a year ago. But a reversal of the trend is clearly in sight during the current fiscal year.

In the first five months of 2018-19, the food trade deficit stands at $954 million. If no major initiatives are taken to boost food exports and contain imports, the full-year deficit may again end up close to $2bn. Even exports of 0.5m tonnes of wheat and wheat products, as suggested by the Ministry of National Food Security and Research, cannot enhance food export earnings to a level to avert this possibility.

In the past, we have seen the food trade deficit growing even in the midst of record wheat and sugar exports.

Import volumes of pulses in July-November went up about 65pc, which shows little attention is being paid to minor crops

A delay in the acceptance of some demands of the millers for sugar exports, availability of a smaller surplus of non-basmati rice and an extended ban on deep-sea fishing during this fiscal year, which reduced fish hauling in the first quarter, have diluted the gains in food exports.

As a result, our food export earnings totalled just $1.51bn in five months to November, up only 1.27pc from the year-ago earnings of $1.49bn, according to the Pakistan Bureau of Statistics (PBS).

Against this, food imports totalled $2.47bn, down 9.28pc mainly due to the imposition of higher tariffs from $2.72bn in the year-ago period, leaving a gap of $954m.

If sugar exports had begun earlier, production of non-basmati rice varieties in Sindh had not been affected by water scarcity and the authorities had resolved a controversy over the ban on deep-sea fishing on time, total food exports could have been higher.

These factors have actually belittled some gains in food exports so far this fiscal year, like larger basmati shipments and an increase in export earnings of fruits and vegetables.

The main problem with Pakistan's food exports is that their growth rate is inconsistent. There are many reasons for it, but one of them relates to politics. In the absence of a peaceful political atmosphere, agriculture and food trade suffer a lot.

Take the example of sugar. Towards the end of the PML-N government, the traditional tiff between sugar cane growers and sugar mills acquired a new dimension and continued even after the installation of the new PTI government.

A proactive judiciary also entered the scene — and for quite right reasons. But the end result is that the millers' stubborn attitude across Pakistan and too much politicising of the sugar mills' affairs in Sindh led to delayed cane crushing. Then the millers' demand that they should be allowed to export sugar regardless of whether they had previously defaulted on bank loans led to an impasse

The PTI government at the centre was not in a mood to accept it. But finally it had to, and sugar exports began picking up pace quite late. As a result, sugar export earnings suffered.

Export earnings of non-basmati rice in five months of this fiscal year fell chiefly owing to fewer shipments. In most rice-growing areas of Sindh and in some areas of Punjab, paddy cultivation suffered in the previous year, reducing the exportable surplus. That Sindh continues to suffer from an acute water shortage this year too and rice growers say the output here can decline as much as 30 per cent mean that there is little scope for boosting non-basmati rice in coming months.

Seafood export volumes have declined in July-November mainly because of a controversial ban on deep-sea fishing on the issue of seaworthiness of fishing trawlers.

Government officials say that the issue has been resolved and hope that seafood exports will pick up now. But no one can say if overall seafood exports in the current year will surpass that of the last year.

Traditionally, we see a food trade deficit every year, thanks to unsustainable growth in exports and rising imports of food items, including palm and soybean oils, pulses, dry milk and tea — and a large number of finished food products ranging from formula milk and power diet to expensive brands of coffee, honey, confectionary products and whatnot.

At a time when the overall foreign trade deficit remains a big headache for foreign exchange–starved Pakistan, we can hardly afford such a large food trade deficit. Clearly, there is a need to slash it. But that is not possible if the federal and provincial authorities and the private sector involved in agriculture and agro-based food exports sit together with a single-point agenda of boosting agricultural productivity and promoting food exports.

On the import side, further revision in non-essential food items can also be considered keeping in view that the tariff hikes made so far have started making a dent in imports.

In addition, import substitution efforts must also be accelerated. Higher local output of oilseed crops has already started reducing its imports. The provincial governments of Punjab and Khyber Pakhtunkhwa have been working on olive plantation for several years. There is a need to expedite those projects along with continuing regular oilseed crops. The production of dried milk can be boosted with a little effort.

The cultivation of pulses on the fringes of major crop farm fields should be promoted to meet growing domestic needs and save foreign exchange. In the first five months of this fiscal year, import volumes of pulses have gone up by about 65pc, which shows how little attention is being paid to minor crops in general and pulses in particular.

Pakistan and China will soon finalise details of a plan on how Chinese public- and private-sector companies will help us enhance our agricultural output and food exports under the China-Pakistan Economic Corridor (CPEC).

Some other countries, including the United States, Germany and Japan, are already working closely with our provincial governments and helping us improve agricultural output. There is a need to integrate all these efforts, take all stakeholders on board and launch a big three-pronged strategy, officials and people associated with the food industry say.

Such a strategy should aim at improving per-hectare yields of food crops and promoting import substitutions with greater financial and knowledge investment, discouraging imports of finished food imports and encouraging more high-end, value-added food products.

BANNED, EXPIRED FOOD ITEMS SEIZED

RECORDER REPORT | JAN 7TH, 2019 | PESHAWAR

Khyber Pakhtunkhwa Food Safety and Halal Food Authority has seized different banned and expired items during raids at various outlets in Hayatabad Peshawar on Sunday. According to Spokesman of the Food Authority, Waqarullah Khan, a team led by Director Operations Khalid Khattak and Assistant Director Wasif Shah had conducted raid on different food outlets and restaurants in Hayatabad and university road areas.

He said that the team has seized different banned and expired items from Shaheen Chemist, Mr Cod and Jans daily. He further said that directives are being issued to them to visit Khyber Pakhtunkhwa Food Safety and Halal Food Authority office where fine will be imposed after coordination with technical wing of the authority.

NEWS COVERAGE PERIOD FROM DECEMBER 31st TO JANUARY 6th 2019

AGRICULTURE SECTOR SHOWING MIXED TRENDS

Shahid Iqbal Updated January 06, 2019

KARACHI: The country’s major crops have shown significant increases in yield per hectare during the last four years.

The State Bank of Pakistan’s “Statistical Bulletin – January 2019” reported that the yield per hectare of wheat grew to 2,917kg per hectare in 2017-18, from 2,762kg — an additional 155kg per hectare over the period.

However, in FY18, the yield of wheat recorded a drop from last year, falling by 56kg per hectare.

Recently, the government allowed exporting wheat from the country — currently in surplus — but refused to offer subsidies since local prices of the crop exceed global levels. Total wheat production in 2017-18 stood at 25.507 million tonnes.

Major crops record high yields

Similarly, rice production also didn’t show any sign of water crisis (the crop requires the highest amount of water for cultivation) as the yield per hectare went up to 2,569kg in 2017-18, from 2,422kg per hectare in 2014-15 — an increase of 147kg per hectare during the last four years.

The area under production, however, only only showed a marginal growth, edging up to 7.449m tonnes in 2017-18 versus 7.003m tonnes in 2014-15.

However, the export of rice fetched significantly higher amount. The country earned $1.933 billion through the crop's export in FY18 as against $1.575bn recorded in FY15.

Sugarcane — another water-heavy crop — witnessed growth in both the area under cultivation as well as the yield per hectare over the last four years.

The yield per hectare of sugarcane jumped to 61,197kg in 2017-18 from 55,062kg in 2014-15 — representing an addition of 6,135kg per hectare.

This significant surge in area and yield created glut of sugar in the country and the exporters found it difficult to export as the sugar prices were lower in the international market. As a result, the government allowed a total of 1.1m tones of sugar export but the exporters are demanding subsidies to cover up losses expected from foreign sales.

Despite the glut, however, the area under cultivation increased by 201,000 hectares to 1.342m hectares in 2017-18. Cotton also recorded an upward trajectory over the last three years but could not touch the highest yield per hectare recorded in 2014-15. The crop's yield per hectare in 2017-18 was 752kg, falling short of 802kg in 2014-15.

The yield had dipped to 581kd per hectare in 2015-16 before recovering again in FY18.

WHOLESALE TRADE: GOVERNMENT PLANS MODERN FRUIT, VEGETABLE MARKET

By Qaiser Shirazi Published: January 6, 2019

RAWALPINDI: Government will launch a mobile app to keep people updated with the officially announced prices of fruits and vegetables in Rawalpindi.

The government will set up a modern wholesale fruit and vegetable market outside the urban area to facilitate traders and wholesalers, Deputy Commissioner Dr Umar Jahangir said chairing a meeting of Market Committee representatives on Saturday.

For the first time in city, a government run vegetable and fruit market will become functional to control the prices of green grocery items, he said.

The new market will also have online presence allowing people to know prices of groceries, milk, and yogurt on single click.

The provincial government has removed Market Committee Chairman Raja Jahandar and Vice Chairman Maqbool Khan appointed during the Pakistan Muslim League-Nawaz (PML-N) government. Moreover, traders' leader Qaiser Kiyani has been tipped off as the new market committee chairman and an official notification will be issued next month, the meeting was told.

It was decided to make the market committee functional, market committee's chairman, vice chairman and two MPAs Madam Farah and Wasiq Qayyum will look after the committee themselves.

The prices of all grocery items will be decided and uploaded online which the locals will be able to know on whatsapp click and will also be able to lodge complaints of excessive charging online on which the administration will on spot conduct raid and will take action against the said hawker, shopkeeper, challans will be done and sent to magistrate, shopkeepers will have to inscribe prices on the charts present within the shops, the wholesale markets, salt market, pulse markets, goods transport, grain markets will be transferred outside the city within two years after which the city's traffic jam system will improve while the district administration has also decided proper price magistrates, assistant commissioner has been handed over the authority of magistrate's summary trials.

GOVERNMENT URGED TO ESTABLISH LIVESTOCK FARMS IN JHELUM

RECORDER REPORT |JAN 6TH, 2019 | KARACHI

President of Pakistan Businessmen and Intellectuals Forum (PBIF) Mian Zahid Hussain has emphasized that the government should establish livestock farms to facilitate benefit and attract local investors in order to revive the livestock sector in the Jhelum district.

He said there existed good scope for organised dairy farms, cattle/goats/sheep fattening farms, cattle/poultry feed mills, leather shoes and leather products' units could also be established in Jhelum. He said Jhelum was an important district of population exceeding 1.2 million with huge potential of agriculture, industry, mineral and tourism.

The agriculture products are comprised of various commodities, vegetables and fruits including ground nuts, rice, wheat and sugar cane. More than 100 industrial units are established in the city including cement, flour, chemical, tobacco, textile composite and oil mills with a small industrial zone to facilitate industrialists.

Jhelum has very rich reserves of mineral resources. Minerals like Rock Salt, Brine, Gypsum, Coal, Limestone, Marble and Silica Sand are being exploited commercially by private and public sector agencies in the district. Talking to the business community of Jhelum, he said that under the early-harvest CPEC projects Neelum-Jhelum Hydropower Plant was included; first of four turbines commenced operations in April 2018.

When all four turbines will become fully operational they will add 969MW to the national grid. Several small dams have been established including Karot, Tainpura, Jammergal, Domeli, Gurha Utam Singh, Shah Habib and Fatehpur dam, which have strengthen the irrigation system in addition to development of electricity generation. He said Jhelum had several tourist attraction points which might be used to boost tourism in the country after renovation on modern lines. The tourism points include Kewra Salt Mines, Tilla Jogian, Rohtas Fort and Jhelum River. Kewra is a major tourist attraction, drawing up to 40,000 visitors a year while Tilla Jogian being the highest peak in the

Eastern Salt Range also attracts many people. Fish farms, modern restaurants, fast foods spots and shops containing locally manufactured products can be established to boost commercial activities and facilitate tourists.

MNA from Jhelum, Federal Information Minister Fawad Chaudhry has shown interest in developing and preserving ancient sites in the locality; thus expected that tourism in the area would be increased, he added. Mian Zahid Hussain said that given to the current economic situation where trade deficit was reported as $ 15 billion, current account deficit reached $ 6 billion, foreign investment is a mere $ 900 million while USD has aggressively appreciated to Rs 138 in the first five months of current fiscal year, government needs to search and explore new avenues of investment, trade and industry. Every sector of the economy should be simultaneously activated so that collective efforts can be made to strengthen the national economy.

$107M AGREEMENT SIGNED WITH ADB FOR FARM-RELATED WORKS IN BALOCHISTAN

By Saleem Shahid | 1/6/2019 12:00:00 AM

QUETTA:TheAsianDevelopment Bank (ADB) and the Balochistan government on Saturday signed an agreement for a $107 million project aimed at improving irrigation inf rastructure and water resource management in the province.

Additional Chief Secretary of Planning and Development Sajjad Ahmed Bhutta and ADB Country Director Xiaohong Yang signed the agreement during a ceremony which was also attended by Chief Minister Jam Kamal Khan Alyani and provincial ministers Nawabzada Tariq Hussain Magsi and Zahoor Ahmed Buledi.

`Agriculture remains the backbone of Balochistan`s economy,` said Ms Yang on the occasion. `This project will introduce efficient water usage systems and practices to help farmers improve productivity and farmincomes,` she added.

Agriculture accounts for almost two-thirds of Balochistan`s economic output and employs 60 per cent of the province`s 13 million population,but the drought-like situation in many parts of the province for years and poor water management has put the agriculture sector and those who rely on it at risk. The poverty rate in the province is almost double the national average.

The Balochistan Water Resources Development Sector Project will focus on improving irrigation infrastructure and water resource management in Zhob and Mula river basins. The two rivers irrigate vast areas of farmland in Balochistan.

Among the infrastructure that will be upgraded or built for the project are a watershed protection dam and command area able to hold 36 million cubic metres of water; 276 kilometres of irrigation channels and drainage canals; and facilities that will make it easier for people, especially women, to access water for domestic use. In total, about 16,592 hectares of land will be added or improved for irrigation.

The project will protect watersheds through extensive land and water conservation efforts, including planting trees on 4,145 hectaresof barren land to combat soil erosion.

Its output includes pilot testing of technologies, like solar-powered drip irrigation systems on 130 hectares of agricultural land, improving crop yields and water usage on 160 fruit and vegetable farms, and demonstrating high-value agriculture development.

`The project will also establish a water resources information system that will use high-level technology such as satellite and remote sensing to conduct river basin modelling and identify degraded land for rehabilitation,` said Ms Yang.

The ADB will also administer two grants for the project, including $3 million from the Japan Fund for Poverty Reduction and $2 million from the High-Level Technology Fund. In addition, a $2 million technical assistance will help Balochistan`s provincial government improve its institutional c apacity to address the risks and potential impact of climate change in the agriculture sector, as well as build a climate-resilient and sustainable water resources management mechanism in the province.

KINNOW EXPORTERS TARGET TWO NEW MARKETS THIS YEAR

By Our Correspondent Published: January 4, 2019

ISLAMABAD: Federal Minister for National Food Security and Research Sahibzada Mehboob Sultan has announced that Pakistan's fruit exporters can target two new international markets – the Philippines and China – this year for citrus shipments.

He made the announcement during a visit to a citrus export processing unit in Bhalwal, Sargodha.

The minister emphasised that Pakistan's land was blessed with immense natural resources and it was the most fertile. "We have best farmers and agriculture marketing experts but ironically we could not achieve desired results. There is a lack of administration or management for channeling those resources," he said.

He voiced hope that food experts and economists could work out a viable solution for self-reliance in food, adding that Pakistan could access lucrative international markets through quality exports.

"Punjab has an exclusive position internationally in the production of agricultural crops; kinnow is our pride and … is exported to 58 countries across the world," he said.

He expected about 20% increase in citrus exports from Pakistan in the current season. Last year, the country exported 30,000 tons of kinnow to Indonesia – the second largest market after Russia.

The minister also pointed to the many challenges Pakistan was facing internationally, particularly in dealing with the European Union and developed countries, which were erecting barriers in the way of exports of agricultural goods. The US, Australia, Japan, South Korea and even a few Central Asian countries are not importing Pakistani kinnow anymore and those who are importing are not paying attractive prices.

"The world is setting new standards for imports such as sanitary and phytosanitary standards, elimination of pesticide residue, cold treatment and pest-free area," the minister said. "These are difficult and costly conditions and hence affecting our exports to a considerable level."

He underlined the need for following the principles of integrated management and producing quality agro-products.

He said Pakistan's citrus exporters were facing two problems which included citrus canker and citrus graining as the EU, Australia and the US had stopped imports from countries where these diseases were found in the citrus fruit.

"We have to work jointly to continue to be part of the international trade and have to adopt new methods and bring our production in line with the standards defined by the World Trade Organisation (WTO)," the minister said.

He asked all stakeholders to come up with a comprehensive plan including a facility for the inspection of diseases, a disease control programme, building nurseries for disease-free saplings, meeting international standards and access to new and profitable international markets.

He pointed out that his ministry had established a facilitation centre in Bhalwal, where inspectors of the Department of Plant Protection would facilitate exporters regarding inspection and issuance of sanitary and phytosanitary certificates.

TRADING ACTIVITY IMPROVES ON COTTON MARKET

RECORDER REPORT | JAN 4TH, 2019 | KARACHI

Trading activity improved on the cotton market on Thursday as mills showed fresh interest in buying to replenish their stock, dealers said. The official spot rate was unchanged at Rs 8,800, they added. Prices of seed cotton in Sindh were at Rs 3000-3800, in the Punjab seed cotton prices at Rs 3000-3800 and in Balochistan, rates of seed cotton were at Rs 3200-3800, they said.

In the ready session, about 8000 bales of cotton changed hands between Rs 7200-9000, they said.

Market sources said that shortage of quality cotton propelled mills to cover their short position. Poor off-take of cotton is creating uncertainties among the cotton traders, they observed.

The Pakistan Cotton Ginners Association (PCGA) issued it's fortnightly report, showing nearly 10.03 million bales of cotton reached at the country's ginneries.

Besides, according to the data issued by the PCGA, there were total 1300 ginning factories across the country out of which the ginning process was continued in 326 ginning factories including 220 in Punjab province and 106 in Sindh province.

Cotton analyst, Naseem Usman said that trading activity likely to improve in the coming days.

Cotton prices were almost down in the international markets, they said.

The following deals reported: 400 bales of cotton from Tando Adam at Rs 7200, 900 bales from Shahdadpur at Rs 8350, 600 bales from Khairpur Mirus at Rs 8200/8400, 400 bales from Ghotki at Rs 8650/8850, 1000 bales from Rohri at Rs 8600, 400 bales from Saleh Pat at Rs 8600, 200 bales from Mirpur Mathelo at Rs 8650, 400 bales from Sarhad at Rs 8650, 200 bales from Fazilpur at Rs 9000, 600 bales from Haroonabad at Rs 8700, 400 bales from Chistian at Rs 8500, 1000 bales from Fort Abbas at Rs 8000, 200 bales from Maroot at Rs 8100, 600 bales from Bahawal Nagar at Rs 8300/9000, they said.

GOVERNMENT TENDERS TO EXPORT 100,000 TONNES WHEAT

RECORDER REPORT | JAN 4TH, 2019 | HAMBURG

A state agency in Pakistan is tendering to sell and export 100,000 tonnes of wheat under a new government programme agreed in November, European traders said on Thursday. The tender from the Pakistan Agricultural Storage and Services Corporation (PASSCO) closes on Jan. 11, traders said. Pakistan's government on Nov. 20 approved the export of up to 500,000 tonnes of subsidised wheat to reduce large local supplies.

Pakistan's export programme is being watched closely by grain traders as large additional volumes of wheat can be rapidly placed on world markets. "I anticipate that Sri Lanka, the United Arab Emirates, Oman and Indonesia will be among potential markets for the import of Pakistani wheat," one trader commented.

In early 2018, Pakistan also approved the export of wheat

FOOTPRINTS: SUGAR WARS

Mohammad Hussain Khan Updated January 04, 2019

ELDERLY share-cropper Khalil Ahmed Arain was stirring sugarcane juice with a five-foot ladle in a small village of lower Sindh district. He made sure that the slow heating process of the juice should not cross the boiling point. Extra material collected in the form of foam was separated from concentrated liquid, to cool. And when it solidified enough it was rolled into small lumps of gurh, as a final product ready for sale.

He didn't sell his sugarcane crop to the sugar factory, for it was offering an inadequate price of Rs120/40kg against the notified price of Rs182/40kg for the 2018-19 season. Arain had a small quantum of produce and he preferred jaggery manufacturing — though it is uncommon in this part of Sindh.

Sitting on a charpoy in a thatched straw hut in fields, Arain's bigger counterpart and my host, Umer Bughio, told me that "I have a better deal, since instead of selling my sugarcane crop to the sugar factory, I sold it to cattle traders as fodder."

This season, Bughio and his colleagues decided to sell sugarcane as fodder in an emerging trend amongst the sugarcane producers of lower Sindh — the home of sugar mills — as they find this option somewhat more profitable than selling their produce to what they say are arrogant sugar factory owners.

The growers are not only getting payment in cash but also saving on other expenditures, ranging from the cost of harvesting/cleansing grass attached with sugarcane, to transportation and offloading at the factory's gate.

"Selling crop for livestock and cattle is not at all a bad bargain under the existing conditions this year, when factories are unwilling to pay the due price," remarked Bughio, adding that he was still holding harvest on around 100 acres, anticipating that millers would go for overkill when they don't get adequate sugarcane supplies to produce sugar. "Ensuing competition amongst the millers will jack up the price." Of the 150 acres brought under sugarcane cultivation, he sold crop from 20 acres to fodder traders.

Of the country's 80-plus sugar factories, 38 are located in Sindh and close to 50 in Punjab. Wealthy mill owners are once again denying farmers the notified price and seeking judicial intervention — though there may be little chance of getting a favourable order.

From this month onwards, the growing season will slowly inch towards closure. Farmers will want to free up land for other crops. As sugarcane crushing draws closer millers will start paying more than the notified price. But by this time growers have already sold their major chunk of crop at a low rate to middlemen who act as millers' agents.

"Fodder's price remains high this year and it enables us to sell our produce," said Bughio. "Those rearing animals and livestock herds are paying Rs140/40kg for sugarcane and it is a price millers deny." Fodder traders are bringing their labourers to harvest crop and are transporting it from fields to their workplace for onward sale.

Sugarcane producers get payment on the basis of the weight of the crop, that is supplied after grass has been cleaned from each stick of sugarcane. This reduces the weight. Millers then make deductions, on flimsy grounds. In Sindh, sugarcane cultivation has become a tricky job.

The sugar industry has seen unnatural growth in Sindh over last few years, even though water shortages had serious implications of this water-intense crop. According to grower Nadeem Shah, the unavailability of water flows badly affected sugarcane's health this year. "In many water-deficient areas, the sugarcane crop didn't have the required growth," he said. He sold his sugarcane crop from his six acres in Matiari for Rs100/40kg and for Rs80/40kg in Sujawal to Karachi-based livestock breeders.

Sugarcane is almost a year-long crop, needing plenty of water flows till it matures. In the last kharif 2018 season, Sindh faced an overall 18pc water shortage. Reduced irrigation water flows are a regular phenomenon, especially in the command areas of the Sukkur and Kotri barrages, making sugarcane cultivation increasingly unviable.

Pakistan's sugar millers are mostly influential politicians. With their connections, they call the shots, while farmers end up hard done by. Despite billions of rupees worth of subsidies from the public exchequer to millers, the federal and provincial governments fail to get the price notification implemented. "Pakistan is producing more sugar than its consumption needs, which is around 5.2m tonnes to 5.5m tonnes, necessitating the export of surplus sweetener for which millers pressurise the government to provide subsidies," says another grower, Mahmood Nawaz Shah.

In the 2017-18 season, confided an officer, the Sindh government paid a provincial subsidy of Rs3.25bn (Rs9.30/1kg) to sugar mills located in Sindh as export rebate; of 1.7m tonnes of Pakistani sugar's export, 0.9m tonnes were exported from Sindh. The State Bank of Pakistan is said to have asked the Sindh government to pay its remaining share out of the federal subsidy.

"It is a classic case of the lack of governance," asserts Mahmood. "The issue is not whether the provincial or federal government pays the subsidy, but the point is that despite this unwanted financial burden on the national kitty, farmers don't get adequate price. What is the purpose of pumping billions of rupees subsidy into sugar industry, then?"

MINISTER CALLS FOR STRATEGY TO BOOST KINNO EXPORTS

The Newspaper's Reporter Updated January 04, 2019

ISLAMABAD: Pakistani growers must adopt the principles of integrated pest management standards for agro-based products in order to compete against the European Union and other developed countries in kinno exports.

Minister for National Food Security and Research Sahibzada Mehboob Sultan said this on Thursday during a meeting with exporters, growers and other stakeholders at Citrus Export Processing Unity at Bhalwal, near Sargodha.

Sultan said that United States, Australia, Japan, South Korea and some Central Asian Republics are not importing Pakistani kinno anymore, while those importing our citrus fruit are not paying good prices.

However, he informed, Philippines and China are now open to exports of Pakistani citrus fruits. Last year the country exported 30,000 tonne kinno to Indonesia; the second biggest market after Russia. The export of kinno to these two states is expected to grow by 20 per cent, he said.

The country's kinno is exported to 58 countries across the world.

New standards for importing agricultural products are being set — including sanitary and phytosanitary measures, pesticide residue elimination, cold treatment and pest-free area — which have made our products costlier for export destinations, he said.

The minister said the sector was facing problems of citrus canker and graining, which are detrimental to "kinno" exports with EU, Australia and US already have banned imports from countries where these diseases are reported in citrus fruits.

He assured growers, exporters and stakeholders of his ministry's full cooperation and urged to formulate a comprehensive plan to increase kinno exports. The blueprint should include a facility for inspection of diseases; infection control programme; building nurseries for disease-free saplings; ensuring observance of good agricultural practices and integrated pest management standards; and access to new and profitable international markets.

COTTON PRODUCTION FALLING AS SOWING AREA SHRINKS SHARPLY

Parvaiz Ishfaq Rana Updated January 04, 2019

KARACHI: A consistent fall in cotton cultivation area for the last seven years has eventually reduced crop production to little over 10 million bales this year from the bumper crop of 15m bales in 2011-12.

Almost 9m acres were under cotton cultivation in 2011-12. The sowing area steeply declined to 5.9m acres in 2018-19 as opposed to government estimates of 7.3m acres, but no successive governments took any action to arrest the situation, with the result that the country now relies on imported cotton to meet local demand.

Over the past few years, growers shifted from cotton to sugarcane due to various reasons — the most prominent being the political clout wielded by the sugar industry. Furthermore, growers preferred sugarcane as it is a less labour-intensive crop and the plant root stays for a minimum of three crops.

Cotton is not only a cash crop but is also ideal for a country like Pakistan which is faced with water shortage because it is a semi-drought crop and needs far less water for irrigation than any other crop, said Mian Mahmood Ahmed, a grower and ginner.

“Unfortunately cotton production has been reduced to the extent that today the country has to import a substantial quantity of cotton by spending between $1-1.5 billion to meet domestic consumption of around 15m bales,” he said.

Declining area under cotton cultivation over the years is resulting in lesser cotton production and if the trend is not arrested it will ultimately result in footing bigger bill for cotton imports and a burden on country’s depleted foreign exchange reserves.

According to the latest figures issued by Pakistan Cotton Ginners Association (PCGA), cotton production up to Jan 1 stood at 10.273m bales — 7.52 per cent short crop compared to last season (2017-18) when production stood at 11.108m bales.

During the period under review, Sindh produced 4.111m bales or 2.42pc less crop over corresponding period of last year when production stood at 4.213m bales.

Interestingly, Sindh still managed to produce more cotton as compared Punjab despite facing severe irrigation water shortage at the initial stage.

Cotton production in Punjab stood at 6.162m bales or 10.63pc less than last season when production stood at 6.895m bales.

It would be in the best interest of the country if the incumbent government chalks out a plan to increase cotton production or war footings and by increasing cultivation land for the cop and restricting other crops from replacing areas.

The new agriculture policy should ensure that sugarcane and wheat production should be brought down to the level to only to meet local consumption since surplus production of these two crops has to be exported by providing subsidies. Hence cotton production should be maximised and there should be exportable surplus since it never needed subsidy on exports.

ECC APPROVES SUPPLY OF GAS TO FERTILISER PRODUCERS

By Shahbaz Rana Published: January 2, 2019

ISLAMABAD: The federal government on Tuesday allowed the diversion of gas from power plants to fertiliser units in order to ensure availability of a key agricultural input but deferred decision on giving exemption from public procurement rules for the import of petroleum products from Azerbaijan.

Headed by Finance Minister Asad Umar, the Economic Coordination Committee (ECC) of the cabinet decided to ensure continued supply of gas to the urea manufacturing plants. Owing to the shortage of gas, there were difficulties in the provision of energy to these units.

The ECC directed the Ministry of Industries to chalk out a plan for keeping urea plants fully functional throughout the year, according to the ECC's decision. The step is aimed at ensuring sufficient production of fertiliser to meet farmers' needs.

Prices of urea have been increased recently due to the hike in gas prices by the government. After that, the government in December 2018 also increased the price of imported urea by 6.3% and fixed it at Rs1,712 per 50kg bag.

Before the increase in gas prices, the local urea manufacturers were selling the 50kg bag at Rs1,610, which they have now increased to Rs1,740.

The ECC also put off decision on providing cash assistance to Pakistan Machine Tool Factory, asking the Ministry of Industries to prepare a strategy first for revitalising the sick unit. It approved allocation of up to 25 mmcfd of additional gas from the Adhi field to Sui Northern Gas Pipelines Limited (SNGPL) for meeting existing demand.

The ECC deferred decision on giving exemption from Public Procurement Regulatory Authority (PPRA) rules of 2004 for buying petroleum commodities from Azerbaijan.

It instructed the PPRA – an attached department of the Finance Division – to give, in writing, that it did not have objections to the proposed arrangement.

The Petroleum Division had sought exemption from PPRA rules for a petroleum product purchase deal with Azerbaijan on a government-to-government basis, initiated by the previous Pakistan Muslim League-Nawaz (PML-N) government.

The Petroleum Division, in its proposal, stated that Pakistan was currently facing a severe shortage of energy, which was not only causing hardships for the people but was also inhibiting economic growth of the country.

In November 2016, the then cabinet approved a summary for signing an inter-governmental agreement (IGA) between Azerbaijan and the government of Pakistan on cooperation in the field of energy. That included cooperation for the development of supply and trading opportunities for crude oil, oil products, liquefied natural gas (LNG) and liquefied petroleum gas (LPG), joint construction of terminals and storage of LNG, LPG and other hydrocarbons.

The signing ceremony of the IGA was held at the Prime Minister's Office in February 2017. Accordingly, Pakistan State Oil (PSO) negotiated a term sale and purchase agreement for petroleum products with Azerbaijan's Socar under the umbrella of IGA.

PSO board of directors has already approved the term sale and purchase agreement for its execution subject to approval of the ECC by invoking Rule 5 of PPRA Rules 2004.

The ECC also approved guidelines for the export of half a million tons of wheat products. In November 2018, the ECC decided to export surplus wheat/products of the public sector.

The Ministry of National Food Security and Research suggested that provincial governments and Passco should process the export of wheat by placing tenders for the surplus of 500,000 tons.

The successful bidder will provide a performance guarantee of 120% of the difference between the issue price of wheat (to flour mills) and the bid price, which may be released on the submission of export documents within 90 days.

The export of wheat and wheat products should be completed before April 30, 2019 while the export process should be completed by June 30, 2019 in order to facilitate exporters in completing necessary formalities.

ECC ORDERS SMOOTH DELIVERY OF UREA TO FARMERS

Khaleeq Kiani Updated January 02, 2019

ISLAMABAD: Amid rising prices despite subsidised imported stocks, the Economic Coordination Com¬¬-mittee (ECC) of the Cabinet on Tuesday directed the Ministry of Industries and Production (MoIP) to chalk out a plan for continuous and smooth operation of urea plants in the country throughout the year.

The meeting presided over by Finance Minister Asad Umar also could not take a conclusive decision on two other major agenda items — signing of fuel supply agreement with Azer¬baijan and payment of dues to employees of Pakistan Machine Tool Factory — owing chiefly to lack of prior consultations.

While reviewing the fertiliser demand and supply situation, the ECC directed MoIP for easy availability of sufficient urea stocks to meet demand of the farmers' community.

Advises further consultations on fuel supply deal with Azerbaijan

Sources said the meeting was informed that while reasonable urea stocks were available in the country augmented by 100,000 tonnes of imports last month, the price did not fall below Rs1,850-1,860 per 50 kg bag in the market against a price set at Rs1,712 per bag for imported commodity.

It was observed that some fertiliser plants were not releasing their stocks to the desired level due to upcoming annual maintenance schedule. Also, the subsidies on account of imported and domestic gas blend on a long-term basis was also an issue as existing arrangements would come to an end by close of this month for two fertiliser plants — Fatima and Agritech.

The meeting was informed that the provincial government did not intervene into the matter as required. It was pointed out that a crackdown on hoarders was delayed on the request of some fertiliser companies and their distribution networks and the fertiliser review committee or the ECC had also not pressed for such a move in their respective meetings last month to avoid an impression of harassment.

Sources said some members of the committee were of the view that decision making on transaction to transaction would be an inappropriate course of action given the fact that gas suppliers, fertiliser producers and the end consumers and policy makers keep changing their positions month after the month.

While about Rs4.7 billion supplementary grant had been approved by the federal cabinet for gas supply and its subsidy mechanism until end-January for domestic production im¬¬ports, there should be clear line of action based on all the factors on a year-long basis. It was also highlighted that an early decision was required on allocation of about 66 million cubic feet per day (mmcfd) of additional gas from Mari field.

The ECC while considering the proposal regarding provision of funds for personnel related dues in the Pakistan Machine Tool Factory (PMTF), directed the Ministry of Industries and Production to come up with a strategy to revitalise the unit.

The ECC observed that the PMTF had done great service for the engineering sector and had the potential to effectively carry on this role, for which it needed to be strengthened.

The ECC approved proposal of Ministry of Energy (Petroleum Division) for supply of up to 25mmcfd additional gas from Adhi Gas Field to Sui Northern Gas Pipelines Ltd. (SNGPL) to meet the existing gas demand on the system.

ECC also discussed proposal of Ministry of Energy (Petroleum Division) for fuel supply agreement bet-ween Pakistan State Oil (PSO) and State Oil Com¬pany of Republic of Azer¬bai¬jan (Socar). The Committee advised Ministry of Energy to carry out further consultations with stakeholders including Ministry of Com¬merce and Public Procure¬ment Regulatory Authority before a final decision in the matter.

The meeting was infor¬med that PSO and Socar had finalised a term sale and purchase agreement (TSPA) for supply of petroleum products under an inter-¬governmental agreement (IGA) signed by the two governments in February 2017.

After vetting the TSPA, the Law Division had desired its approval by the board of directors of the PSO. While approving the TSPA, the PSO board directed the company to ensure its approval from the federal cabinet as required under Rule 5 of Public Procurement Regulatory Authority Rules 2004.

The Rule 5 required that whenever PPRA rules come in conflict with an obligation or commitment of the Federal Government arising out of an International treaty or an agreement with a State or States, or any international financial institution, the provisions of such international treaty or agreement shall prevail to the extent of such conflict.

The Petroleum Division had proposed to the ECC that since the TSPA was finalised under a bilateral government agreement and the two companies were owned by the two states, the ECC and the cabinet should clear the commercial arrangement between the two companies. The ECC desired that opinion of the commerce ministry in terms of import and that of procurement authority in terms of exemption of competitive bidding should be obtained before reaching a final decision.

PFA ENFORCES BAN ON SALE OF UNPACKED SPICES

By Our Correspondent Published: January 1, 2019

LAHORE: To curb the menace of adulteration, Punjab Food Authority (PFA) has banned the sale of open spices in Punjab from Tuesday (today). Provincial food watchdog's director general, Captain (Retd) Muhammad Usman, highlighted that the authority has enforced a law related to the sale of unpacked spices.

The law was originally introduced in June 2017 and the authority had given an 18-month business adjustment time to the industry and dealers, he added. He indicated that the authority has imparted practical training to the industry and traders before introducing this law.

As per the new legislation, it is mandatory for the industry and traders to print the name and address of the manufacturer or supplier, ingredients, weight, manufacturing and expiry dates, he underscored. Usman said that incidents of adulteration are very common in open spices.

"These adulterated and substandard spices cause several diseases among consumers so the authority has introduced this law. It has directed all its enforcement teams to ensure effective implementation of this new law. Violators will have to face dire consequences and all their products will be confiscated," he said.

The DG added the authority is leaving no stone unturned to provide safe and health food across Punjab. Speaking to The Express Tribune, a wholesale spice dealer from Akbari Market, Muhammad Ehsan, said all traders in the biggest wholesale market of the province were selling open spices for decades. Now the authority has introduced a packaging law which will negatively impact their business.

He agreed with the rationale of the authority that adulteration was on the rise in the sale of open spices. He, however, indicated that the new law will increase prices.

WHAT IS 'ACTUALLY' BEHIND UREA PRICE RISE?

MUSHTAQ GHUMMAN | JAN 1ST, 2019 | ISLAMABAD

The federal government is abuzz with “inside” information that the domestic fertilizer industry is involved in urea stocking due to which price of commodity is showing a continuous upward trend, well-informed sources told Business Recorder. However another view is that the Ministry of Industries and Production has taken a few half measures to control shortage of urea and bring down its market price at a time when wheat sowing season was at its peak which proved ineffective and urea prices have shown an increase of Rs 10 per bag since fixation of imported urea at Rs 1712 per bag to Rs 1860 from 1850 per bag.

The sources said, provincial governments which are supposed to take administrative measures to control urea prices have not played their due role in ensuring sale of urea at printed rate.

“I think one plant which will shut down after a couple of months, is not offloading its entire production of urea and is involved in raising stocks,” said an official in Ministry of National Food Security and Research on condition of anonymity.

Official sources told Business Recorder that in order to improve supply of urea fertilizer, ECC in its meeting on December 4, 2018, considered proposals by Ministry of Industries & Production (MoI&P), i.e., two fertilizer plants that are on Sui Northern Gas Pipeline Company’s (SNGPL) system should continue operation till January 31, 2019 and price of gas may be capped at Rs 782/MMBTU by picking up the price differential which would be credited to SNGPL as subsidy.

ECC, while according approval, constituted a committee to review the pricing issue. The committee comprising MoI&P, Finance Division, Petroleum division, Law Division and Federal Board of Revenue was tasked to take into account possibility of offsetting GIDC demand as subsidy, viability of Rs 150/bag as variable contribution margin and mechanism of payment of subsidy to SNGPL. MoI&P was to incorporate the finding of the committee in the summary for the Cabinet and further allowed to move the summary for supplementary grant.

The committee was convened the same day and it was agreed that (a) GIDC cannot be adjusted against subsidy, (b) Variable Contribution Margin (VCM) already worked out by MoI&P in consultation with all stakeholders was appropriate and therefore rationale of capping gas price at Rs 782/MMBTU and that (c) MOI&P will initiate the summary for the Cabinet’s approval for amount and mechanism of subsidy and for the supplementary grant so required.

The sources stated that for augmenting supply of urea and its production at viable cost, MoI&P proposed that SNGPL may be given subsidy as follows: (i) Rs 167/MMBTU (weighted average) for supply of gas to Fatimafert and Agritech for the gas consumed at 62.38 blend till December 7, 2018; (ii) Rs 869/MMBTU on supply of 1005 RLNG to these plants from December 08, 2018 to January 31, 2019; (iii) the amount of Rs 0.79 billion may be paid forthwith on actual basis and Rs 3.91 billion (approx) may be paid in two monthly tranches on December 7, 2018 (or as early thereafter) and January 7, 2019; the latter is subject to final reconciliation; and (iv) in the CFY 2018-19 no budgetary allocation has been made in the demand of Ministry of Industries & Production for this scheme and Federal Cabinet may allow supplementary grant of Rs 4.70 billion in the relevant demand of MoI&P for payment of price differential as subsidy to SNGPL. The cabinet, in its previous meeting had accorded approval of this proposal, submitted by the MoI&P.

AFGHAN DPS CONVERT ROCKS INTO GREEN FARM IN CHAGAI VILLAGE

Saleem Shahid January 01, 2019

QUETTA: Afghan refugees in the remote district of Chagai have transformed rocks and desert into a green farm, contributing to the local economy and a better environment with the help of UNHCR and the technical support of FAO.

Posti refugee village is a self-sufficient organic farm in barren hills of a rocky desert area in Chagai district of Balochistan.

The village is situated about 65 kilometres from Dalbandin, the main city of Chagai. Farm products of the village are well known in local markets and its vegetables, especially luffa, have become very popular in Dalbandin.

"This was a desert several years ago but we turned it into a green land," said Gul Khan, who left Afghanistan due to war several years ago and came to Posti refugee village located at the border with Helmand province of Afghanistan.

Mr Khan said that when he arrived in the area with family, they used to go to far-flung areas and work as daily wage workers and after some time they were able to build mud houses, although bringing material for construction was a big task because there was no road in the middle of the mountains.

"Everybody used their own resources to build these farms. People who could not afford tractors used hand trolleys and even their shirts," Mr Khan said, adding that the journey was far from smooth, with floods being the main threat that used to destroy everything, leaving them to restart again from zero.

"Fields, we have prepared are now producing wheat, tomato, chili, cucumber and other vegetables, which are supplied to Posti refugee village and the nearby market in Dalbandin," Mr Khan said.

"We are the only source to provide fresh vegetables to the area people, but now the underground water level is decreasing, resulting in low harvest," he said.

In order to educate refugees of the village how to grow vegetables and other crops with limited water, the UNHCR, with the technical support of FAO, is piloting an agricultural project in the area.

AGRICULTURE: FARMERS' WAIT FOR PTI TO DELIVER ON PROMISES CONTINUES

Mohammad Hussain Khan December 31, 2018

With a huge growth potential for crop diversification, Pakistan's agriculture sector is in need of modernisation.

It's not just about machinery or equipment. The sector can make great strides if the authorities adopt a scientific and modern approach under a strong regulatory framework.

Structural issues, ad hoc-ism, insufficient policy thrust, weak writ of government and increasingly unreliable water flows are major challenges. At least a dozen important research bodies remain without regular heads.

The sector recorded 3.81 per cent growth in 2017-18, 3.5pc in 2016-17 and minus-0.19pc in 2015-16.

The government has planned an investment of Rs200 billion for the next two to three years. The Ministry of National Food Security and Research (MNFSR) has unveiled an Rs82bn package aimed at increasing yields and improving water efficiency.

In major crops, Sindh was unable to meet the wheat sowing target for 2018-19. Punjab met its target, but Sindh could achieve only 73pc of it by the middle of December owing to a water shortage of 35-40pc in the Rabi season.

Sindh had to face a 50-70pc water shortage in Kharif, which affected cotton and rice. Cotton acreage showed a decline in 2018-19 in Punjab and Sindh. Against the national sowing target of 2.95 million hectares, farmers could use only 2.4m ha, indicating a drop of 10.9pc from a year ago and missing the target by 18.6pc.

Sindh reported a loss of 31pc in acreage over last year while the decrease was 5.2pc in Punjab as Pakistan struggles to meet the target of 14m bales.

The Pakistan Cotton Ginners Association (PCGA) said the total cotton production was 9.9m bales by Dec 15. It reported this amidst a controversy about the weight of a bale that the PCGA says is 140 kilograms while the worldwide standard, including in Pakistan, is 170kg.

Nationally, rice production remained 2.7pc over and above the target of 6.931m tonnes. Again, Sindh recorded a 10.8pc decline in terms of area and production while the production in Punjab was 15.7pc higher than the target, provisional figures show.

Sugar cane farmers continue to face a perennial conflict with millers. Sindh and Khyber Pakhtunkhwa recorded a decline of 16.1pc and 1.4pc, respectively, in 2018. Acreage in Sindh dropped 16.1pc, but the production in Punjab was 47.1m tonnes against the target of 44m tonnes.

Pakistan Agriculture Research Council (PARC) Chairman Dr Yusuf Zafar believes the government needs fiscal space to effectively manage agriculture through the Public Sector Development Programme (PSDP). It should re-appropriate funds from unproductive uses, he adds.

“The government plans to promote cadge fishing in water bodies to increase fish exports to $1bn from $40m,” Mr Zafar says.

There is a serious concern about Pakistan’s food import bill ($6.13bn in 2016-17). A major chunk of it is edible oil ($2bn). Cultivating oilseed crops and sesame can be helpful for import substitution. Sesames exports, as per one estimate, may fetch $45m from the Middle East. Sunflower farming is another option. But its area in Sindh has slumped to 60,000-80,000ha from 266,000ha in 2010-11.

The government seems to be giving great importance to the livestock sector. A scheme to promote backyard poultry to end poverty will take place nationwide. “Meetings have been held with the heads of all provincial livestock departments,” says an office of the Punjab livestock department.

Policy interventions like foot and mouth disease control through vaccination and calf fattening schemes have yielded good results in Punjab with the annual allocation of Rs6bn. “We have reduced the foot and mouth disease to 5pc from 35pc in 2013-14," he says, adding that other provinces should follow suit.

Water is arguably the most important factor for any growth in agriculture and livestock sectors. The government would initiate the second phase of the lining of watercourses at a cost of Rs68bn. Besides lining, the command area of small dams will be developed in rain-fed areas, which may save nine million acre feet (MAF). The first phase of lining under the National Programme for Improvement of Watercourses (NPIW) was executed in the Musharraf regime on a cost-sharing basis. Sindh has built recharge/storage dams in Jamshoro, Karachi, Nagarparkar and Dadu.

Surface water availability is a must for food security. Researchers believe the introduction of crop zoning can help overcome water shortages. Pakistan Council of Research in Water Resources (PCWR) former chairman Dr Mohammad Ashraf says cultivation of high-delta crops — sugarcane and rice — must stop in water-deficient areas. "Aren't foreign exchange earnings by means of rice exports useless if food imports cost billions of dollars every year?" Rice exports mean Pakistan is actually exporting water used in rice cultivation, he adds.

Crop patterns must be defined and strictly adhered to in order to save surface water through crop zoning. "We grow sugar cane in South Punjab where people don't have access to drinking water. Similarly, the cotton-growing area of Ghotki in Sindh has witnessed unprecedented growth of sugar cane," he says.

Groundwater mining continues at an alarming rate. Dr Ashraf says he is concerned about the matter: it increases the farmer's cost of inputs and harms soil productivity as the groundwater level drops alarmingly. Water mining needs a regulatory framework without any delay. Researchers believe groundwater aquifer is developed in millions of years. It is depleting fast and, according to one estimate, around 53MAF water was being pumped every year. The aquifer level in Quetta has dropped to 1,200-1,400 feet from 100 feet, according to Dr Ashraf.

Punjab government pitched in an Rs8bn subsidy in agriculture, with a Rs2.18bn allocation for 500,000 bags of DAP fertiliser, crop insurance for small farmers, Rs5,000 per acre for oilseed crop cultivation on 156,000 acres, and the provision of 100,000 bags of certified cottonseeds.

Sindh offers nothing of the sort as it seems comfortable with the two ongoing World Bank–funded programmes.

GROWERS' BODY WANTS WHEAT SUPPORT PRICE FIXED AT RS1,500 PER 40KG

The Newspaper's Staff Correspondent December 31, 2018

HYDERABAD: Sindh Chamber of Agriculture (SCA) demanded on Sunday the government should fix support price of wheat at Rs1,500 per 40 kilogramme, raising it from Rs1,300 announced six year back.

The meeting presided over by president SCA Kabool Kahtian said that high rise in cost of inputs has like diesel, seed, fertilisers etc had necessitated likewise enhancement in the support price of wheat.

The meeting expressed concern over shortage of water and said that level of water in Tarbela dam was recorded at 1,402 feet, barely 16 points short of the dead level at 1386ft, which foreboded shortage of water in next Kharif season as well.

The meeting said that since sowing of summer crops in Sindh started two months before Punjab began cultivation of Kharif crops, Sindh should be provided water from Tarbela and Mangla dams ahead of Punjab. Farmers in Sindh had already borne huge losses in Rabi season because of water shortage, it said.

The meeting drew attention to falling prices of onion and tomatoes and feared farmers would not even be able to meet their production cost if the prices kept falling. The farmers, therefore, should be provided relief and their onion produce should be exported, it said.

The meeting called for withdrawal of land auction notices issued to growers who had defaulted on payment of debt to agriculture bank. Water shortage had adversely affected crops, therefore a new survey of farmers' losses should be carried out and loan should be waived, it said.

The meeting demanded that tractors should be provided to growers for which draws had been held six months ago.

GWADAR FISHERMEN CALL OFF STRIKE AFTER SUCCESSFUL NEGOTIATIONS

Behram Baloch Updated December 31, 2018

GWADAR: The protesting fishermen of the port city of Gwadar on Sunday called off their month-long strike after successful negotiations with officials of the provincial government and the Gwadar Port Authority.

Official sources said that Gwadar Port Authority Chairman Mir Dostain Khan Jamaldini and the provincial government officials held negotiations with Fishermen Alliance leader Khuda-i-Dad Wajo in a protest camp where a large number of fishermen were present.

Mr Jamaldini and Additional Deputy Commissioner Anis Ahmed Gorgage said that demands of the fishermen were justified and informed the protesting fishermen that the government had accepted their all demands.

They said Chief Minister Jam Kamal Khan Alyani had ordered the Gwadar Port Authority to construct a jetty in Gwadar.

Among the fishermen's demands included their access to the sea for fishing at the eastern side of Gwadar coast. They were of the view that with the construction of Eastbay Expressway fishermen would be denied their access up to the sea where they had been fishing for decades.

“We want protection of our centuries-old livelihood,” Mr Wajo said while announcing to call off the strike.

However, he said, if implementation on the demands was not begun within a month the fishermen would again launch a protest.

Provincial Minister for Information Zahoor Buledi, MNA from Gwadar Mohammad Aslam Bhootani, Senator Kohda Babar and MPA of the area Hamal Kalmati have played an important role in the success of negotiations.

MACRON VOWS TO PROTECT FRENCH FARMERS, SHARES SUBSIDY PLAN

AP February 24, 2019

PARIS: President Em¬¬¬¬¬¬¬ma¬¬¬nuel Macron pledged on Satur¬day to protect European farming standards and culinary traditions threatened by aggressive foreign trade practices that see food as a “product like any other.”

Macron’s speech at his country’s premier agriculture fair was aimed at assuaging French farmers’ anger at government policies seen as favouring urban elites and neglecting the heartland cherished for producing famed cheeses and wines.

Europe’s “civilisation of eating well, of gastronomy, of the art of living” is now threatened by world powers that pursue aggressive trade policies and “consider food a product like any other,” without taking into account environmental, health or culinary concerns, Macron said.

Macron proposed using blockchain technology to trace the source of food and putting Europe in the “avant-garde of agricultural technology.”

He spoke amid European Union talks on its next agricultural aid plan, a major source of funding for French farmers. He appealed for unity at those talks and argued against calls to re-nationalise French farming policy.

“In agriculture just like in many other areas, we must invent a new global deal. Yes, we must be on the offensive, carrying out a deep reform of trade policies,” said Macron, who didn’t shy from engaging in technical conversations with farmers as he walked past their stands. Around midday, Macron was offered a mini hamburger made of Cantal cheese and Salers beef, a famous breed native of central France.

He appealed to French farmers to view their livelihoods in a global context, but many are struggling under day-to-day debt and uncertainty about the future. Macron is seen by many in rural France as epitomising out-of-touch city elites, and many French farmers want more government help to face growing foreign competition.

Macron is trying to tackle the concerns head-on by spending all day Saturday at the Salon d'Agriculture in Paris, where farmers showcase their livestock, food and wines. He's meeting with dairy farmers, pork producers, vintners and others.

The yearly Salon has long been a key event of the French political calendar, with French presidents often using the event to test their popularity. Jacques Chirac used to spend whole days at the fair drinking and speaking with farmers while patting their cows. Back in 2008, Nicolas Sarkozy was involved in a spat with man who refused to shake his hand and the former president hit back with an insult.

Security was tight for Macron's visit Saturday, which came as yellow vest protesters held anti-government protests around Paris and other cities for a 15th straight weekend.

Macron, whose approval ratings have bounced back in recent weeks, was booed at last year's farm fair over plans to ban a popular pesticide and trade deals.

'TOXIC FOOD' DEATH TOLL RISES TO SIX AS ANOTHER MEMBER OF FAMILY DIES

Imtiaz Ali Updated February 24, 2019

KARACHI: Another member of the same family died during treatment on Saturday, taking the death toll to six in the "poisonous food" tragedy, officials said.

Ms Bina, who was admitted to the Aga Khan University Hospital, died during treatment, confirmed South SSP Pir Mohammed Shah.

Five siblings — three brothers and two sisters — had died on Friday morning after consuming "toxic food" which they had ordered from a restaurant in Saddar while staying at Qasr-i-Naz, a federal government official residence near the State Guest House where the family had stayed after their arrival from Balochistan on Thursday.

The senior officer said that she was an aunt of the dead siblings.

The SSP said the cause of death of all six family members appeared to be the same food.

32 persons detained briefly, 33 samples collected for lab testing, two restaurants sealed

The children were aged between one-and-a-half years and nine years while their aunt was in her early 20s.

Quoting the mother of the children, the SSP said that even the one-and-a-half-year-old boy had also eaten the biryani, which they had ordered from the restaurant in Saddar.

Sharing initial findings of the case, SSP Pir Mohammed Shah told Dawn that the children's mother started vomiting and collapsed inside the bathroom at around 3.30am.

Her husband, Faisal, assumed that she had suffered a heart attack and rushed her to the AKUH, where she got first aid. When the couple returned to their room at Qasr-i-Naz at around 9am on Friday, they were shocked to see that their two children were already dead and three others were unconscious. Faisal's sister was also barely able to speak.

Then Faisal took his five children and sister to the AKUH again at around 10am where all the five children were pronounced dead.

Quoting the doctors, the South SSP said that the children had died around half an hour before their arrival at the hospital. He said the children's mother survived because of timely treatment. Since there was no more room in an air ambulance, the couple had already left for Quetta by a commercial flight on Friday evening while the bodies of their children were later on flown by the air ambulance for burial in Balochistan.

The officer said that Faisal Kakar is a local landlord in Balochistan.

The two restaurants which supplied the food to the family had been sealed for investigation.

The officer said that they had detained several employees of both restaurants with some staff of Qasr-i-Naz and they were released after getting their statements. Till late in the evening no FIR had been registered.

Pir Mohammed Shah said that he had phoned Faisal, father of the deceased children in Balochistan, and asked him for giving a statement through WhatsApp for lodging of an FIR.

"Police are now solely relying on findings of the labs to ascertain the exact cause of deaths, to determine the course of investigation," said the officer.

Post-mortem examinations of all the five children were done at Dr Ruth Pfau Civil Hospital Karachi on Friday and the body viscera would be sent to Lahore.

The South SSP disclosed that they could not send the autopsy reports of the children to Lahore's forensic lab on Saturday as it was the weekend. Therefore, the viscera have been kept in cold storage for preservation, which would be sent to Lahore on Monday.

Police have detained at least 32 people from three different places and collected 33 samples along with a team of the Sindh Food Authority and KU's HEJ, while a famous biryani restaurant, which supplied biryani to another restaurant in Saddar, had also been sealed, said DIG South Sharjeel Kharal.

The senior officer told Dawn that 32 people had been detained from the restaurant from where the family bought biryani from, as well as the eatery which had originally supplied the biryani.

The DIG said the two restaurants and the room, store and kitchen of Qasr-i-Naz had also been sealed for investigations.

Dr Shakeel Ahmed of HEJ Research Centre of Karachi University told Dawn that they had collected 11 samples which included vomits, clothes, powder, blankets and floor from the Qasr-i-Naz room.

Director general of the Sindh Food Authority Amjad Leghari told Dawn that they had taken the samples of the food, which would be sent to the technical lab located in Korangi. Mr Leghari clarified that they also sealed the biryani restaurant because it originally supplied the foodstuff to the other eatery as the food boxes obtained from the room carried its name.

The death of five siblings and their aunt apparently caused by toxic food in the city on Friday once again highlighted the lack of an official laboratory in the province to ascertain the exact cause of the deaths, prompting the authorities to send the victims' viscera to Punjab's forensic lab for an identical purpose, it emerged on Saturday.

Sources in medico-legal section told Dawn that the samples of the five children had been collected to be sent to the Sindh government's chemical examiner's lab located on the premises of the Dr Ruth Pfau Civil Hospital Karachi, but the lab had been "closed" for the last several months as the chief chemical examiner had been removed for "unprofessionally" conducting tests of the "liquor" seized from a room of the hospital in Clifton where a politician was lodged in a sub-jail during a visit by the then chief justice of Pakistan, Mian Saqib Nisar.

The sources said that recently another official had been appointed as chief chemical examiner, but so far the lab had not issued any report of samples sent to it pertaining to poison or poisonous substance or food.

The samples were gathering dust there and bad smell was emitting from it, said the sources.

An official in the medico-legal section told Dawn on condition of anonymity that they had sent samples pertaining to poison to the KU lab recently but the officials concerned told them that the provincial government had only asked them for DNA tests, not for poison tests.

The sources said that since the provincial government's chemical examiner's lab was not "functioning properly", the viscera were being sent to Lahore for ascertaining the exact cause of deaths of the five children and their young aunt.

PFA DESTROYS 28,641 LITRES OF ADULTERATED MILK

RECORDER REPORT | FEB 24TH, 2019 | LAHORE

Dairy safety teams under the supervision of veterinary experts of the Punjab Food Authority (PFA) continued an operation against milk adulterators on the second consecutive day in Punjab.

DG PFA Captain Muhammad Usman (r) said that the action was being taken on the special directions of Prime Minister Imran Khan regarding control the bad practice of milk adulteration. He said that food authority overall inspected 1,723 milk vehicles by placing screening checks on the entry and exit points of 36 districts.

The screening pickets held from Lahore to Raheem Yar Khan and Rajanpur to Attock by holding crackdown in 144 Tehsils simultaneously. He said that PFA examined the 256,731 litres of milk being carried on hundreds of vehicles for supplying in different cities of Punjab from dairy farms.

While in Lahore, safety teams have taken milks samples for the screening test and checked 140 litres of milk. During the operation, 28,641 liters adulterated milk recovered from dozen of vehicles was also split on the spot.

He said the PFA had disposed of 26,536 litres of milk over proved contamination of water other chemicals which used to enhance the thickness of milk. Whereas authority found adulteration of hazardous powder in 2,105 litres milk. On the other hand, the food authority unearthed a fake milk factory in the rural area of Chicha Watni and it also got registered an FIR in Kasool Police Station besides handing the accused over to the police after the raid.

HINA PLANS TO EXPAND LAND USED TO GROW SOYABEANS, OTHER OILSEEDS

RECORDER REPORT | FEB 24TH, 2019 | BEIJING

China plans to expand the amount of land it uses to grow soyabeans and other oilseeds by around 330,000 hectares in 2019, its agriculture ministry said on Thursday. The ministry did not give numbers for country's oilseed acreage in 2018, but the soyabean area in the 2017/18 crop year that ended last September was 8.245 million hectares. The vast majority of China's oilseed crop is made up of soyabeans.

Thursday's announcement came after China released its first policy statement of the year earlier in the week, which highlighted a plan to boost domestic soyabean production. The pledges come as Beijing remains entangled in an on-off trade war with the United States, its second largest supplier of soyabeans.

Beijing has been seeking ways to reduce its reliance on US soyabeans, although the two sides have recently been in talks aimed at ending the trade dispute. Beijing will further raise subsidies for soyabean farmers in northern China to help expand acreage in the region, the Ministry of Agriculture and Rural Affairs said in the announcement on its website.

China also plans to develop and promote new varieties of soyabeans with high yields of oil and protein. The nation mainly uses soyabeans to make soyameal, an animal feed ingredient. Despite the push on domestic production, agriculture minister Han Changfu said on Wednesday that China would still rely on imports for soyabean supplies.

Beijing also plans to expand rapeseed production around the Yangtze river and peanut planting in parts of northern China, according to Thursday's announcement. China aims to keep its cotton acreage at 3.33 million hectares and sugar planting at about 1.53 million hectares in 2019, the document showed.

CM KAMAL ORDERS ACTIVATING PROVINCIAL FOOD AUTHORITY

By Mohammad Zafar Published: February 24, 2019

QUETTA: In the wake of the Karachi incident in which five members of a family from Quetta died after consuming ‘toxic food’, Chief Minister Jam Kamal ordered to immediately functionalise the Balochistan Food Authority (BFA) in order to take strict action against elements selling substandard food.

As per the orders issued under the Food Authority Act, 2014, CM Kamal will be the BFA chairman and concerned authorities have been directed to launch a crackdown against businesses selling unhygienic food, according to an official handout on Saturday.

Members of provincial assembly Yar Muhammad Rind, Jan Muhammad Jamali, Asghar Khan Achakzai, secretaries for food, health, Public Health Engineering, industries, livestock, local government, agriculture; director general for food; Quetta Chamber of Commerce and Industry president, members of local trade and hotels’ community have been included in the provincial authority.

On Friday, five children of a family died in Karachi after allegedly consuming toxic food, prompting authorities to seal a branch of a popular biryani chain for investigation.

In October, Balochistan Secretary for Food Asghar Harifal sent the proposal to the provincial government for establishment of the Balochistan Food Authority (BFA) to regulate and monitor food business in the province for provision of hygienic food items to the people.

He said the proposal also contains the appointment of a director general (DG) to head the Balochistan Food Authority for food safety and quality control.

He also said with the appointment of a DG, the authority will be able to check and monitor all the packed and unpacked food items as well as restaurants’ food standard.

Harifal said that the authority would be mandated to formulate standards, procedures and guidelines in relation to any aspect of food, including food business, food labelling and food additives, to specify appropriate enforcement systems.

The secretary said, “After the appointment of DG, the government has planned to endorse proper food laboratories enabled with methods of sampling, analysis of samples and report formation of results to take specific measures to curtail adulteration in food all over Balochistan with its headquarters in Quetta.”

He said it will specify licensing of the food outlets and prohibition orders, recall procedures, improve notices and prosecutions and will provide technical support by the government in matters related to food.

PASSCO TO INVITE FRESH BIDS FOR WHEAT EXPORTS

By Zafar Bhutta Published: February 24, 2019

ISLAMABAD: The government has allowed Pakistan Agricultural Storage and Services Corporation (Passco) additional export of 0.5 million tons of wheat in order to dispose of its surplus stock and fetch handsome revenue following increase in prices in the international market.

Passco has been granted permission to initiate a fresh bidding process for export of 0.5 million tons of wheat to clear the surplus stock. Earlier, the government had allowed export of one million tons of wheat and wheat products to Passco, Punjab and Sindh.

According to the Ministry of National Food Security and Research, Passco and food departments of Punjab and Sindh had procured 0.9 million tons of wheat with carryover stock at 5.942 million tons. Food year 2018 started with a considerable stock of 11.93 million tons.

At present, the stock level is 7.436 million tons, which depicts a considerable surplus. On the request of provincial governments of Punjab and Sindh as well as Passco, a summary was submitted to the Economic Coordination Committee (ECC) on November 16, 2018 with a request to allow export of 3.1 million tons of wheat and wheat products.

Of the total, two million tons would be exported from Punjab, 0.5 million tons from Sindh and 0.6 million tons by Passco.

However, after comprehensive discussions, the ECC decided to allow export of 0.6 million tons by Passco and 0.4 million tons by Punjab and Sindh. It was also decided that freight support for the export of wheat by Passco would be provided by the federal government while Punjab and Sindh governments may bear freight support charges for export from the two provinces.

TOXIC FOOD BEING BLAMED FOR DEATH OF FIVE SIBLINGS

Imtiaz Ali February 23, 2019

KARACHI: Five siblings, all less than 10 years of age and hailing from Balochis¬tan, died while their mother and aunt fell ill apparently due to food poisoning shor¬tly after arriving here at Qasr-i-Naz, a federal lodge near State Guest House, from Quetta on Thursday night.

The deaths prompted the authorities to seal the two restaurants that delivered the food as well as the guest room, kitchen and store of the official lodge on Friday when samples were collected for analysis to ascertain the possibility of food poisoning and to determine the exact cause of death. In all, 32 men were detained from the three places for questioning, according to officials.

After collection of samples and initial investigations, the bodies were flown to Quetta for burial, while their mother who was discharged from hospital after being given first aid left for the city along with her husband Faisal Kakar. The sister of Mr Kakar, Bina, was admitted to the Aga Khan University Hospital. The deceased were identified as 18-month-old Abdul Ali, Uzair, 4, Alia, 6, Tauheed, 7 and their eldest sister Salwa, 9.

DIG South Sharjeel Kharal told Dawn that the family of Mr Faisal comprising his wife, sister, two daughters and three sons had arrived from Quetta on Thursday night. On their way, he said, they had lunch at a friend’s house in Khuzdar. Later, he added, they purchased chips and packed juices from a shop in Hub.

After arriving at Qasr-i-Naz lodge where they had booked a room with the reference of a senior official of Pakistan Works Department in Quetta, they placed an order at a restaurant near the Passport Office in Saddar for biryani at 12.15am, the officer said. Hours after having biryani, Mr Faisal's wife Nida fell unconscious and she was taken to the hospital. She was discharged after being provided initial treatment. "As the couple returned, they saw their two children lying dead in the room and other children and their aunt terribly sick. The three children also died while being shifted to hospital, while their aunt was admitted," said SSP South Pir Mohammad Shah.

Talking to the media outside Qasr-i-Naz, SSP Shah was of the opinion that this was a clear case of food poisoning. However, DIG Kharal said, as investigation was under way, other aspects were also being looked into.

On Friday noon, the bodies of the five siblings were brought at Dr Ruth Pfau Civil Hospital Karachi to complete medico-legal formalities. Additional police surgeon Dr Qarar Ahmed told Dawn that they collected viscera and samples to be sent to the chemical examiner's lab to ascertain the possibility of poison in their body to determine the exact cause of death.

Sindh Minister for Local Bodies Saeed Ghani met the victims' relatives at the AKUH after which he confirmed to the media that the food authority officials had sealed the restaurant and opened investigations.

Police also sealed a famous eatery which supplied biryani to the restaurant, and detained 32 people from the two restaurants and Qasr-i-Naz where the family had stayed, DIG Kharal said. He further said CCTV footage of all three places had been obtained to investigate any foul play in the episode.

DIG Kharal said the body viscera of the deceased siblings would be sent to a laboratory in Lahore on Saturday (today) to ascertain exact cause of death. Dr Shakeel Ahmed of the HEJ Research Centre told Dawn that they collected 11 samples,which included vomit, clothes, powder, blankets and floor from their room in Qasr-i-Naz. Sindh Food Authority DG Amjad Leghari said they would send the food samples to official technical lab in Korangi.

The DIG said the police investigators were finding out whether fumigation had been carried out at the lodge and for how long the room in Qasr-i-Naz remained closed after it. He said he had approached police officers in Khuzdar and Lasbela for investigation.

Meanwhile, Balochistan Chief Minister Jam Kamal Khan expressed his grief over the death of the five children belonging to the Khanozai area of Pishin district.

PAKISTAN WARNED AGAINST DEADLY WHEAT PEST

Amin Ahmed Updated February 23, 2019

ISLAMABAD: The Internati¬onal Maize and Wheat Impro¬vement Centre (CIMMYT) has cautioned Pakistan to take steps to protect its crops from the 'fall armyworm' (FAW), a devastating pest that has been identified for the first time on the Indian subcontinent.

Director-General, CIMMYT, Dr Martin Kropff, now visiting Pakistan, held a meeting with Minister for National Food Security and Research Sahibzada Mehboob Sultan on Thursday and offered cooperation of the Mexico-based organisation in tackling the prevalent threat of FAW in Pakistan.

“We want that our future cooperation in this regard must continue, and Pakistan may not only ensure a prompt surveillance system but also bring more disease-resistant varieties of wheat and maize,” Dr Martin said.

Native to the Americas, the pest is known to eat over 80 plant species, with a particular preference for maize, a main staple crop around the world.

The fall armyworm was first officially reported in Nigeria in West Africa in 2016, and rapidly spread across 44 countries in sub-Saharan Africa. Sightings of damage to maize crops in India due to ‘fall armyworm’ mark the first report of the pest in Asia.

The pest has the potential to spread quickly not only within India, but also to other neighbouring countries in Asia, owing to suitable climatic conditions, according to a pest alert published by the National Bureau of Agricultural Research, part of the Indian Council of Agricultural Research.

Dr Martin said that CIMMYT is amazed at the remarkable success of wheat programme in Pakistan. Director CIMMYT’s Global Wheat Programme, Hans Braun emphasised the need to be cognisant of securing the targeted yield in wheat as the global climate change might pose a great challenge and one Celsius drop in temperature during the night time may decrease seven per cent of wheat yield, hence with combination of intelligent interventions and sensible subsidies, enormous results in food security could be achieved.

Mr Mehboob Sultan appreciated the contributions of CIMMYT in Pakistan since the green revolution and said that the present government was ambitious for the revival of agriculture and breakthrough in agro-research.

GROWERS` BODY PLANS SIT-IN FOR CANE PRICE NOTIFICATION

By Our Staff Correspondent | 2/23/2019 12:00:00 AM

HYDERABAD: Sindh Abadgar Ittehad (SAl) has announced that it will hold a sit-in outside the Mehran Sugar Mills in Tando Allahyar on Monday (Feb 25) to condemn the delay being caused in the issuance of a notification fixing the minimum sugar cane procurement price for the current season.

The decision was taken at a meeting of the organisation chaired by SAI president Nawab Zubair Talpur and attended by Mohammad Javed Riar, Abdul Raheem Dars, Saifullah Gul and Sharif Nizamani.

Speaking at the meeting, Nawab Talpur said that mill-owners had been exploiting cane growers in Sindh since 2014 but the provincial government remained silent and appeared to be helpless before the Pakistan Sugar Mills Association (PSMA).

The meeting noted that the agriculture department obtained the Sindh cabinet`s approval for the notification that fixed the season`s cane procurement rate at Rs182/40kg but instead of the notification, a circular was issued by the department which was not accepted by the PSMA.

The meeting regretted that from Dec 2018 to Jan 2019, millions of maunds of cane was crushed after millers continued to insist on their offered rate of Rs140/40kg to growers.

Millers wanted to stomach over Rs400 billion on the pretext of the notification not having been issued, the meeting observed.

Following the Feb 25 protest, more sit-ins outside various sugar mills would be organised, he said.

The meeting urged the federal government to ban import of all farm commodities from India in order to promote Pakistan`s agriculture sector.

FISHING POLICY BEING REVISED, NA BODY TOLD

RECORDER REPORT | FEB 23RD, 2019 | ISLAMABAD

A parliamentary panel was informed on Friday that fishing policy is being revised to address the issues of Karachi Port Trust, Port Qasim, Fisheries and Gwadar Port Authority. Federal Minister Syed Ali Haider Zaidi while briefing to National Assembly Standing Committee on Maritime Affairs said the federal government has decided to review the deep-sea fishing policy in consultation with all the stakeholders.

Zaidi said deep-sea fishing carries the status of an important industry in the country and new policy will ensure rights of fishermen.

The committee which met here with MNA Mir Amer Ali Khan Magsi in the chair was told by the minister that foreign investors are showing keen interest to invest in the fishing industry due to business-friendly policies of the government.

He said developing the fishing industry in line with international standards will not only help increasing foreign exchange inflow into the country, but will also help in generating employment opportunities.

The minister also said contracts of Port Qasim Authority and Karachi Port Trust are also being reviewed.

“Night navigation at port Qasim has been started and it is another achievement of the incumbent government that two [liquefied natural gas] LNG ships are being accommodated at one time,” he added.

The committee lauded the efforts of the minister and assured its support in resolving the issues.

The Public Sector Development Programme (PSDP) for the budget 2019-20 was presented.

The committee endorsed all the ongoing schemes and future schemes presented and gave its nod of approval to the sum of money required for the schemes.

The meeting was attended by MNAs Yaqoob Sahikh, Faheem Khan, Saifur Rehman, Abdul Shakoor, Mir Khan Jamali, Nuzhat Pathan, Lal Chand, Shahnaz Baloch, Aslam Bhootani, Qaiser Sheikh, Jam Karim Bijar, Abdul Qadir Patel, Kamaluddin and Syed Ali Haider Zaidi, besides senior officials of the ministry.

ALTERNATIVE METHODS OF WATERING CROPS

RECORDER REPORT | FEB 23RD, 2019 | EDITORIAL

One of the biggest hurdles in raising agricultural productivity in Pakistan is the shortage of irrigation water in the country. For instance, Pakistan faced considerable water shortages during monsoon, post-monsoon and winter seasons during 2017 and 2018. So far as long-term water strategy of the government is concerned, it centres around five important elements – water augmentation, water conservation, protection of infrastructure from water logging, salinity and floods, groundwater management and institutional reforms. The existing strategy, however, entails augmentation of surface resources to be done by construction of water storage dams, conservation of water to be undertaken through lining of canals and water courses and efficiency enhancement to be done by rehabilitation and better operation of existing system. An amount of Rs 36.8 billion was allocated for water sector's development during FY18 and major water sector projects under implementation were Bhasha Dam, Gomal Zam Dam, Kachhi Canal (Phase I), Darawat Dam, Nai Gaj Dam, Khurram Tangi Dam, Naulong Dam, Mohmand Dam and Right Bank Outfall Dam.

While the shortage of irrigation water is becoming acute with the passage of time, Pakistan has generally adopted a single-minded approach to tackling the problem by trying to increase the availability of water mainly by constructing more dams and conserving water through lining the canals and other water courses. Unfortunately, however, even the construction of dams has been held back due to political opposition in certain provinces and lack of funds while no attention has been paid for the optimum utilization of the existing scarce water resources by changing the methods of cultivation and use of available water supply. Poor water saving methods are obvious from the fact that while around 70 percent of water is used in agriculture sector all over the world, this percentage stands at 90 in Pakistan, with 20 percentage wastage due to deficient irrigation methods. Even the recent emphasis of Prime Minister Imran Khan and the then Chief Justice of Pakistan Saqib Nisar was on construction of more dams, with only a little hint on the need for saving available water through some known methods practiced in other countries.

However, there is some silver-lining on the horizon through the courtesy of Nestle Pakistan. Inaugurating a site near Sheikhupura under Nestle Pakistan's Agricultural Efficiency Project on 5th February, 2019, its senior vice president, Peter Hofmann, said that this project has the potential to help save 54 million litres of water annually and is a part of the company's "Care for Water" initiative. The present project is possible with the collaboration of the Punjab Government which would cover 40 percent of the farmers' cost. Pakistan's Agricultural Efficiency Project was initiated in 2017 and has so far covered 109 acres of land with an estimated 280 million litres of water saved. Water saving is possible by the installation of drip irrigation as opposed to flood irrigation which was the traditional way of irrigating agricultural fields in the country. Citizens as well as the government of Pakistan need to realize the essence of being water conscious not only for their own survival but for the overall well-being of global ecosystems and economies. Drip irrigation has undoubtedly a massive potential of saving water by taking a step out of conventional methods of farming.

While we appreciate the efforts of Nestle Pakistan and the collaboration of the Punjab Government in promoting drip farming to save water, it would be better if other provincial governments are also taken on the board and such an effort is extended to other parts of the country as well. At present, a tiny portion of country's agriculture land has been covered by drip irrigation due mainly to high cost of switching to this non-traditional method but such a shift is necessary because of constantly decreasing availability of water in the country, increasing migration of population from rural to urban areas and a highly questionable attitude of Indian government towards water-sharing with Pakistan. Another method of saving water could be tunnel farming which has been adopted in certain villages bordering India on a self-help basis and without any kind of support from the agricultural department. Obviously, this method of farming is also expensive as compared to traditional one but needs to be considered for wider adoption to save water. We are of the view that while such methods could be popularised in the country, other options also need to be explored by agricultural universities and other related research institutions to economise the use of water because water resources of the country are depleting fast and Pakistan could face acute shortage of water in the not-so-distant future. According to a World Bank report, poor water management is conservatively estimated to cost dollar 12 billion or 4.0 percent of GDP per annum and improving water use efficiency is the most pressing need of the country.

FAO'S FIRST-EVER REPORT ON BIODIVERSITY PRESENTS WORRYING EVIDENCE

ZAHID BAIG 2019/02/23

LAHORE: The first-ever Food and Agriculture Organization (FAO) report on biodiversity presents mounting and worrying evidence that the biodiversity that underpins our food systems is disappearing, putting the future of our food, livelihoods, health and environment under severe threat.

Once lost, warns FAO's State of the World's Biodiversity for Food and Agriculture report, biodiversity for food and agriculture – i.e. all the species that support our food systems and sustain the people who grow and/or provide our food – cannot be recovered.

Biodiversity for food and agriculture is all the plants and animals – wild and domesticated – that provide food, feed, fuel and fiber. It is also the myriad of organisms that support food production through ecosystem services – called "associated biodiversity".

The report, prepared by FAO under the guidance of the Commission on Genetic Resources for Food and Agriculture looks at all these elements. It is based on information provided specifically for this report by 91 countries, and the analysis of the latest global data. The foundation of our food systems is under severe threat. The report points to decreasing plant diversity in farmers' fields, rising numbers of livestock breeds at risk of extinction and increases in the proportion of over fished fish stocks.

Of some 6,000 plant species cultivated for food, fewer than 200 contribute substantially to global food output, and only nine accounts for 66 percent of total crop production. The world's livestock production is based on about 40 animal species, with only a handful providing the vast majority of meat, milk and eggs. Of the 7,745 local (occurring in one country) breeds of livestock reported globally, 26 percent are at risk of extinction.

Nearly a third of fish stocks are overfished, more than half have reached their sustainable limit. Information reveals that wild food species and many species that contribute to ecosystem services that are vital to food and agriculture, including pollinators, soil organisms and natural enemies of pests are rapidly disappearing. For example, the report said, countries report that 24 percent of nearly 4,000 wild food species – mainly plants, fish and mammals – are decreasing in abundance. But the proportion of wild foods in decline is likely to be even greater as the state of more than half of the reported wild food species is unknown.

The largest number of wild food species in decline appears in countries in Latin America and the Caribbean, followed by Asia-Pacific and Africa. This could be, however, a result of wild food species being more studied and/or reported on in these countries than in others.

Many associated biodiversity species are also under severe threat. These include birds, bats and insects that help control pests and diseases, soil biodiversity, and wild pollinators – such as bees, butterflies, bats and birds. Forests, rangelands, mangroves, sea grass meadows, coral reefs and wetlands in general – key ecosystems that deliver numerous services essential to food and agriculture and are home to countless species – are also rapidly declining.

The driver of biodiversity for food and agriculture loss cited by most reporting countries is: changes in land and water use and management, followed by pollution, overexploitation and over harvesting, climate change, and population growth and urbanization. In the case of associated biodiversity, while all regions report habitat alteration and loss as major threats, other key drivers vary across regions.

OLIVE FARMING GETS BOOST WITH ARRIVAL OF 100,000 PLANTS FROM SPAIN

Amin Ahmed Updated February 22, 2019

ISLAMABAD: Olive farming in Pakistan has received a strong boost with the arrival of 100,000 olive plants from Spain and Turkey.

The move is part of a project to promote cultivation of olive on commercial basis in the country.

A total of 550,000 plants will be imported under the project which is being implemented by the National Agricultural Centre.

Talking to Dawn, Project Director Dr Tariq Bari said on Wednesday that 150,000 more olive plants would reach the country next week while the remaining plants will be delivered later.

The project for the promotion of cultivation of olive on commercial basis has been approved under the Public Sector Development Programme (PSDP). A fresh PC-1 has been submitted to the Planning Commission to widen the scope of the project to include areas which are best suited for olive cultivation.

Since olive is a drought-tolerant plant, it has been decided to introduce olive farming in Waziristan, Fata agencies and various districts of Balochistan which have been affected by the drought spell over the past few years.

Dr Bari said that a survey of the potential areas had been completed and it was found that these areas were best suited for olive plantation.

The olive cultivation will not only offer an ‘olive branch’ to peace in Fata, but will also serve as a source for livelihood of farmers in the entire Waziristan belt and agencies of Fata.

It has been estimated that 45 per cent of Fata land is suitable for olive cultivation. The highest appetite for cultivation of olive has been found in Bajaur followed by Kurram, North Waziristan and South Waziristan.

According to Dr Bari, there are tremendous benefits for promoting commercial plantation of olive in Fata which include improvement in environment, development of village entrepreneurship, employment generation, improvement in livelihood and value-addition.

In Balochistan, the potential areas found suitable for olive cultivation were Zhob, Khuzdar, Loralai, Kila Saifullah and Musa Khel.

In some of these areas, results of growing olive crop have been encouraging that prompted project officials to include Balochistan in the programme.

It has been decided to install drip irrigation to olive plants on 400 acres of land in Khyber-Pakhtu¬nkhwa and Balochistan.

FARMERS URGE GOVERNMENT TO INCREASE ALLOCATIONS FOR AGRICULTURE RESEARCH

RECORDER REPORT | FEB 22ND, 2019 | ISLAMABAD

Farmers on Thursday urged the government to enhance allocations for agriculture research, decrease mark-up rates on agricultural loans and announce indicative prices for major crops.

“Mark-up rate on agriculture loans should not be more than 5 percent, which at present is 14 percent, while investment on agriculture research should be increased to 1 percent of the Gross Domestic Product (GDP), which is at the movement is 0.2 percent,” said president Pakistan Kissan Ittehad Khalid Mehmood Khokhar while addressing a consultative meeting.

He said that politics should not be played over the growing issues of farmers and the government must resolve the problems being faced by farmers. The prices of fertilizers and other input materials, especially pesticides, have gone up; therefore, these should be reduced to bring them at par with the Indian fertilizers prices, he said, adding that 30 percent subsidy should be given on import of pesticides.

Khokhar demanded the government to withdraw 5 percent sales tax on agriculture machinery and equipment. He said that agriculture export mechanism should be devised for wheat, potato, rice, mango, orange and vegetable crops. Major crops should be given support or indicative price, as India has announced it, he said.

Khokhar said that potato crisis should be resolved on immediate basis and about 500,000 tonnes mandate be given to PASSCO or food department to overcome the crisis.

Rabia Sultan, a progressive farmer said that the government has announced rebate on export of sugar but did not give the same protection to growers. She said that the government of Punjab needs to strictly implement agriculture policy announced by it recently. “Every government announces agriculture policy does not implement it,” she regretted, adding that the government needs to improve agriculture extension in provinces.

Sahibzada Muhammad Mehboob Sultan, Federal Minister for National Food Security and Research, said that previous government ignored agriculture sector. “No one properly raised voice in the Parliament to address the issues of agriculture sector, so we all are responsible for poor agriculture growth,” he said.

He said that the present government has special focus on agriculture sector and improving this sector is one of its top priorities. The government is taking various steps to improve agriculture research in order to increase per acre yield, he said.

The meeting was also attended by Federal Minister for Inter-Provincial Coordination Dr Fahmida Mirza, Federal Minister for Petroleum Ghulam Sarwar Khan and Members of National Assembly from different political parties.

GOVERNMENT PLANS TO FIX INDICATIVE PRICE OF COTTON

FAZAL SHER | FEB 22ND, 2019 | ISLAMABAD

The government is planning to fix indicative price of cotton crop in order to encourage cotton growers and control decline in area under cultivation of the crop. “The government is planning to fix indicative price of cotton like sugarcane and wheat,” said Secretary Ministry of National Food Security and Research (NFS&R) Dr Muhammad Hashim Popalzai.

Briefing the National Assembly Standing Committee on National Food Security and Research, Popalzai said that government is taking different steps to increase cotton production and area under cultivation but there are some issues which are not even under its control. To pursue growers to cultivate more sugarcane has resulted in a sharp decline in cotton acreage, particularly in Punjab, he said, adding, “Establishment of sugar mills in cotton growing areas by influential sugar industry owners is one of the main reasons behind decrease in cotton area,” he said.

Cotton Commissioner NFS&R, Dr Khalid Abdullah while briefing the committee said that main reason behind decrease in cotton sowing was the shifting of cotton area to sugarcane, lower prices of cotton in the past few years and market fluctuation.

He said that the country produces surplus wheat and sugar due to support price of wheat and indicative price of sugarcane; therefore, it is direly need to fix indicative price of cotton to provide protection to cotton growers.

He also suggested imposing regulatory duty on import of cotton like wheat and sugar. “The imposition of regulatory duty on import of cotton would provide protection to the domestic growers,” he said.

MNA Rao Muhammad Ajmal Khan, chairmen of the committee asked the ministry to take practical steps for improvement in cotton production in the country.

The committee also expressed concern over delay in procurement of potato through Pakistan Agriculture Storage and Services Corporation (Passco).

Ajmal Khan asked the government to procure potato through Passco and take step for export of the commodity on immediate basis; otherwise, farmers will start staging protest demonstrations. “If the government fails to resolve the issue till March 5, farmers would face severe loses,” he said.

Minister for NFS&R Sahibzada Muhammad Mehboob Sultan told the committee that he had informed Prime Minister Imran Khan that potato crisis would not be resolved without intervention of the government through PASSCO. The Prime Minister agreed to his proposal but agriculture minister of Punjab opposed his suggestion and told the Prime Minister that export of the commodity is the only solution to the crisis, he said.

Sultan said that he would again raise the issue of procurement of potato through Passco in the cabinet meeting and would try to convince the cabinet.

Popalzai told the committee that no tax is imposed on the export of potato by the government. “The issue of Afghan duty which is around 25 percent, which has been imposed by Afghan authorities since 2015, has been raised with Afghan government but they are not ready to lift it,” he said.

He said that China and South Korea have shown interest to import potato from Pakistan. Russia, Sri Lanka, Malaysia and Central Asian States import potatoes from Pakistan, he said.

While briefing the committee about the NFS&R proposed project of Public Sector Development Programme (PSDP) for financial year 2019-20, he said that ministry will demand Rs 19,587.62 million for 52 projects. He said that out of 52 projects, 13 are under Prime Minister’s Initiatives and their worth is Rs 14,795 million.

SUGAR MILLS ASKED TO PAY FARMERS’ DUES OR FACE ACTION

RECORDER REPORT | FEB 22ND, 2019 | FAISALABAD

Special assistant to CM Punjab Malik Umar Farooq has stressed upon the sugar mills management for the payment of sugarcane dues to the farmers immediately otherwise, legal action would be taken against the defaulters sugar mills in case of further delay.

He was presiding over a District Monitoring Committee meeting at DC Office Committee room to review the matters of sugarcane crushing season and up to date status of payments from sugar mills. The special assistant informed that special monitoring was being carried out by the Punjab government and entire administrative machinery had been mobilized to protect the interest of the growers till the completion of crushing season. He enquired from the ACs about the current payment status of the sugar mills at their respective areas and directed that the 100 percent payment should be made to the growers of the sugarcane supplied up to 31st January. He asked the sugar mills management to pay the remaining dues of sugarcane to the farmers within stipulated period in respectable manner. He stressed upon proper traffic management to avoid road accidents due to sugarcane loaded trolleys.

The special assistant also urged upon increasing the police patrolling for the safety and security of sugarcane growers. ADCR Tariq Niazi briefed about the measures taken by the district administration for the supervision of crushing season and informed about the action taken against the middlemen and illegal weigh bridges. He informed that action taken against 142 middlemen and during the crushing season 25 persons were arrested and 114 FIRs have been registered. Among others the meeting was also attended by ACs Syed Tanvir Murtaza, Aurangzeb, Nadeem Abbas, Khurram Shehzad Bhatti, SP Admn. Zubaida Parveen, DSP Traffic Zahida Parveen, Storage and Enforcement Officer Muhammad Taufiq, representatives of farmers and sugar mills.

PROCUREMENT REGIME NEVER HELPED FARMERS: BAKHT

Nasir Jamal Updated February 21, 2019

LAHORE: The Punjab government has accumulated debt of Rs447 billion on account of its commodity operations – wheat procurement, warehousing and sale – in the last 10 years, according to provincial finance minister Makhdum Hashim Jawan Bakht.

Speaking at a leadership convention on Wednesday, the minister said the entire commodity operation in food benefitted a maximum of one out of 10 people but the government had to pay a heavy price on refinancing the debt stocks and warehousing in addition to pilferages. He said the procurement had never helped the farmers. He nevertheless said the Pakistan Tehreek-i-Insaf (PTI) government had brought down the commodity-related debt by plugging the system inefficiencies.

Says commodity operation benefitted one out of 10 people but govt had to pay heavy price on refinancing debt stocks

“We believe in increasing the role of the private sector. We see government as a facilitator. So when we talk about ease of doing business it is not about a better position on the World Bank rankings; it is much more than that”, the minister said. “It is for the first time that the Punjab government is looking at each and every regulation with a view to facilitating the private business. Each provincial department has been tasked to look into each and every regulation, law and implement certain standardised measures to make them business friendly. It is necessary to simplify the laws, regulations and rules and reduce their number to support the private sector.”

Makhdum said the government was also looking at different venues for generating more resources for development. “Punjab has to unlock the potential of its cities for revenue generation.” He believed that the role of the private sector was to lead from the front to create jobs. He said Pakistan missed the early opportunity of industrialisation in which the world moved from agrarian society to industrialised society. However, now in the new age of digitisation both the government and the private sector should play their role for leapfrogging growth.

Nishat Group chairman Mian Mohammad Mansha earlier said every incumbent government heavily relied on loans instead of reviewing its assets and potential. But he appreciated the government for thinking out-of-box solution by adopting different approach to the problems facing the country.

GOVERNMENT GETS OFFERS IN TENDER TO EXPORT 250,000 TONNES OF WHEAT

RECORDER REPORT | FEB 21ST, 2019 | HAMBURG

A tender to sell and export 100,000 tonnes of wheat from a state agency in Pakistan attracted purchase offers equating to around $250 a tonne FOB, European traders said on Wednesday. The tender from the Punjab regional government is part of a new programme of state-backed exports in Pakistan. The price level is relatively high which means the wheat may be exported without subsidies, traders said.

Pakistan's government in November approved the export of up to 500,000 tonnes of wheat, possibly with subsidies, to reduce large local supplies. The decision has added more supplies to global markets.

IMPORTED FOOD ITEMS' LABELS MUST BE IN URDU & ENGLISH

ZAHID BAIG | FEB 21ST, 2019 | LAHORE

Ministry of Commerce & Textile amending the import policy has made it compulsory on the importers that the consumer packaging of the imported food items should have label printed both in Urdu & English languages giving details of the product including nutritional fact, usage instructions etc.

According to a notification SRO 237 (1)/2019 issued by the Ministry recently, it has also been asked the importers that their imported items should have logo of the Halal certification body on the consumer packaging and the labels should not be in the form of a sticker, overprinting, stamp or scratched labeling.

Under the new order, the imported shipment shall also accompanied by a 'Halal Certificate' issued by a Halal Certification Body, accredited with an Accrediting Body which is a member of International Halal Accreditation Forum (IHAF) or Standards Metrology Institute for Islamic Countries (SMIIC).

Reacting to these new instructions, Pakistan FMCG Importers Association (PFIA) Chairman Anjum Nisar, Senior Vice Chairman Muhammad Ejaz Tanveer, Nafees Ahmad Barry, Secretary General Ali Tariq Matto and others said that they have no objection to said notification but importers must be given some reasonable and fair time allowing all importers and foreign suppliers to adapt to new requirements.

"Thousands of containers (Full Container Load FCLs) are on their way to importing countries and thousands of others are in the pipeline so it is impossible to stop this process with immediate effect and print new labels, they added.

They said that the notification also requires certain clarifications such as why to print usage method on every product as water being imported does not need to tell the consumer usage method. Similarly, they said it should also be clarified that which products should have Halal logos. PFIA leadership urged the government to always consult the stakeholders before issuing any such order and also allow ample time before its implementation. They suggested that the importers should be given time till July 31, 2019, for implementation of the fresh notification.

RS90.57 MILLION TO BOOST OSTRICH FARMING

By Imran Adnan Published: February 21, 2019

LAHORE: The Punjab Provincial Development Working Party (PDWP) has approved a sum of Rs90.57 million for ostrich farming in Punjab. The aim is to ensure food security through sharing the load on meat and beef in the country and generate exportable and high valued surplus meat.

The PDWP approved five development schemes in various sectors at an estimated cost of over Rs14 billion. This was decided in in the 17th meeting of the PDWP on Wednesday, with Planning and Development (P&D) Chairman Habibur Rehman Gilani in the chair.

Besides SMEs and entrepreneur development schemes, the PDWP has given a go-ahead for the development of ostrich farming projects in Punjab. An amount of Rs90.57 million has been approved for the scheme.

Under the scheme, the government will provide a subsidy to livestock farmers for ostrich rearing and farming, besides building the capacity of livestock and ostrich farmers in Punjab. The government will also establish a model ostrich farm at the University of Veterinary, Animal and Sciences (UVAS), Pattoki, while doing experimentation at the university-level and on private ostrich farms. Under the scheme, avenues for ostrich meat and by-products exports will also be explored.

The official project proposal, made available to The Express Tribune, indicated ostrich farming was an emerging and innovative business. He said ostrich could provide meat 10 times faster compared to poultry and 15 times faster than traditional cattle farming.

For the moment, ostrich farming is a huge industry in the USA, Australia, Europe and some countries in the Middle East like Jordan and Lebanon. Over 30,000 ostrich farms, of different sizes, are fully functional globally. Due to the high nutritional value of its meat, as compared to other white and red meat and high Food Conversion Ratio (FCR) as compared to other animals and birds, it ensures faster and cheaper food security.

The proposal also highlighted that the basic concept of the project is to engage, educate, motivate and support local farmers for ostrich farming; an innovative livestock business, through technical assistance and subsidy in rearing of ostrich chicks. For the purpose, livestock and ostrich farmers from throughout Punjab will be selected and supported in this livestock business.

The selected farmers will purchase ostrich chicks from any source as per their convenience and rear them at their facility. Ostrich chicks at registered ostrich farms will be tagged. After three months, the registered ostrich farmers will be supported by an amount of Rs2,000 for each healthy and registered ostrich chick as first installment. The same procedure will be repeated after eight months (second installment) and after 12 months (third installment). The second and the third installments will be of Rs3,000 and Rs5,000 respectively for each registered healthy bird. In this way, registered ostrich farmers will get subsidy for rearing ostrich chicks for whole year. Initially, 5,000 birds will be supported under the proposed project.

The document showed that the government interventions under this project would lead to transformation of traditional meat sector to commercial one through development of all stakes viz, livestock owners, medicine, industry, tagging, feed ingredient industry, feed industry, meat process and meat exporters besides availability of quality meat and meat products for local consumption leading to human health safety.

The project will also ensure enhanced food security in the country, increased income of livestock farmers; utilisation of the abundant poultry farms for ostrich farming; engaging the youth from rural areas in awareness raising campaign; greater awareness of the livestock, ostrich farmers for the conversion of subsistence to more commercialised farming system; and higher social status due to improved awareness about value of ostrich, ostrich products, ostrich farming and increased income.

ECC ORDERS UNINTERRUPTED UREA SUPPLY

Amin Ahmed Updated February 20, 2019

ISLAMABAD: The Economic Coordination Committee (ECC) of the Cabinet on Tuesday directed the Ministry of National Food Security and Research for continued operation of two urea plants — Fatima Fertiliser and Agritech — beyond the current month till October to ensure sufficient supply of the fertiliser.

About the demand and supply situation of urea and DAP fertilisers, a review of stocks would be taken in August for necessary course of correction, if needed, it was decided.

The meeting was presided over by Finance Minister Asad Umar.

The Ministry of Overseas Pakistanis and Human Resource Development briefed the ECC about the current position of manpower export to different countries and its efforts for seeking employment opportunities in international labour market including the gulf countries.

The Ministry of Federal Education and Professional Training informed the ECC that it has developed a data bank of over 600,000 skilled manpower, who have graduated from the National Vocational and Technical Training Commission platform.

The ECC directed the constitution of an inter-ministerial task force with the Ministry of Overseas Pakistanis in the lead, for formulating concrete proposals with clear targets on development and export of manpower.

The ECC also approved amendments in the Import Policy Order 2016 to further beef up the existing labelling requirements for import of edible, especially 'halal' products. The step would ensure clarity on ingredients of imported products in Urdu for the benefit of consumers.

The Ministry of Industries and Production presented to the committee an update on the current status of National Accountability Bureau cases regarding Pakistan Steel Mills. On this, the ECC expressed concern on the slow progress of cases and directed that the cases be actively pursued. The committee further directed that a case be initiated for placement of personnel's names on the exit control list who are under investigation in different cases.

The Federal Board of Revenue (FBR) submitted a report to the committee, highlighting the current position of auction of abandoned containers/lots and also elaborated the procedures for clearance and disposal of consignments at ports, along with the challenges faced in the process.

The ECC, while laying emphasis on simplification of procedures and promotion of e-clearance, directed the formation of a committee headed by minister for Maritime Affairs to prepare proposals for prompt and efficient cargo clearance, both containers and vehicles, at the ports to reduce the port's congestion and improve ease of doing business. The committee would share its proposals with the ECC in two weeks.

ADB TO STEP UP FOOD SECURITY PLAN

The Newspaper's Reporter Updated February 20, 2019

ISLAMABAD: The Asian Development Bank (ADB) is preparing a new six-year operational plan for rural development and food security for 2019-24 to provide strategic guidance to its member countries on all aspects of agriculture, natural resources and rural development.

An evaluation document released by ADB on Tuesday says the refinement of the operational plan is currently underway as a broader corporate initiative.

During the 2005-17, the ADB provided $12.2 billion to its member countries in Asia and the Pacific region for sustainable agriculture.

Although, the bank is meeting its $2bn annual approval target for food security, an ADB approach is lacking, the report says.

In its recommendations, the evaluation report recommended the bank to replace the previous plan and revised corporate targets need to track both agricultural and non-agricultural contributions.

To track progress towards rural development and food security targets, the project classification system should be revisited. The current plan has 17 sub-sectors, some of which are only marginally related to agriculture. Specific operational guidance should be developed for areas of increasing importance, neglected sub-sectors and regions, the evaluation report recommends.

The ADB should promote more robust sector diagnostics, through technical assistance, to strengthen project pipelines and country partnership strategies that can deliver the ADB 'Strategy 2030' rural development and food security priority area objectives.

SIDA CHIEF CALLS FOR REFORMS IN IRRIGATION SECTOR

By Our Staff Correspondent | 2/20/2019 12:00:00 AM

HYDERABAD: Sindh Irrigation and Drainage Authority (Sida) chairman Abdul Basit Soomro has said that reforms in the irrigation sector are need of the hour and they should be promoted through every possible means.

Speaking to a delegation of growers from different areas in the main Sida secretariat here on Tuesday, the Sida chairman said Sindh was presently confronting severe water shortage and the main reason for this was low rainfall. He appreciated working of farmers` organisations.

Efforts were under way to improve performance of farmers` groups, he said, adding that he was trying to ensure timely availability of water to growers for which meetings were under way with area water boards (AWBs). He said the AWBs` managements had been directed to make sure that there should be no mismanagement in distribution of water as he would not tolerate it. He said he was also trying to ensure provision of irrigation water in all the tail-end areas and to control water theft.

A delegation of Farmers Organisation Council Ghotki led by Abdul Haq Solangi called on the Sida chairman. Mr Solangi said growers were facing different issues as far as water was concerned. He was assured by the chairman that all genuine grievances of the growers would be redressed.

AWB Nara Canal officers, including Abdul Rasheed Mahar and Sikandar Mangrio, met the Sida chairman and briefed him about works of the board.

COTTON MARKET: PRICES UP AMID MODEST BUSINESS

RECORDER REPORT | FEB 20TH, 2019 | KARACHI

Prices moved higher on the cotton market on Tuesday as mills lay hands on fine quality amid rising concerns about imports of cotton in the near future, dealers said. The official spot rate was unchanged at Rs 8,600, they added. In the ready session, about 2000 bales of cotton changed hands between Rs 7000 and Rs 9000, they said.

Prices of seed cotton in Sindh and Balochistan were at Rs 3000-3500 and in Punjab seed cotton prices at Rs 3000-3600, they said. Commenting on the latest developments in the market, dealers said that some mills showed interest in fresh buying of cotton to replenish their stock. They said that locally falling area of cultivation, use of poor quality cotton seed and pesticides caused decline in quantity and quality of cotton. So the government has to take necessary measures to keep a balance between demand and supply.

Cotton analyst, Naseem Usman said that cotton market is under pressure slightly due to prevailing negative developments the world over. According to rumours, India may impose duty on Pak imports and exports raised concerns on Pak spinners as Pak spinners were depending on cotton imports from India.

Adds Reuters: ICE cotton futures were closed on Monday due to President Day holiday. Cotton prices mostly higher in other international markets. The following deals reported: 1000 bales of cotton from Dherki at Rs 9000, 400 bales from Mianwali at Rs 7950, 500 bales from Kabirwala at Rs 7000 and 400 bales from Rajanpur at Rs 8500, they said.

SNGPL FAILS TO RESTORE GAS SUPPLY TO FERTILISER PLANTS

By Shahram Haq Published: February 20, 2019

LAHORE: Sui Northern Gas Pipelines Limited (SNGPL) has stopped gas supply to at least two fertiliser plants despite the injection of re-gasified liquefied natural gas (RLNG) into the system from Monday.

Industry officials revealed that Fatima Fertiliser and Agritech plants had been idle since February 14 as natural gas supply to the two plants had not been restored.

The closure of the two fertiliser plants, if prolonged, could lead to urea shortage in the Kharif and Rabi sowing seasons. The Economic Coordination Committee (ECC) has already said in its decision, dated January 1, that gas supply should be ensured to fertiliser plants from the SNGPL network till further orders.

The ECC also indicated that priority should be given to fertiliser plants over power producers as far as gas supply was concerned. “With a view to fulfilling this requirement (continuation of gas supply to fertiliser plants), the gas allocation for power sector may be reviewed,” the ECC remarked.

The country has faced a massive gas crisis in the current winter season primarily due to delayed LNG shipments as the government wanted to probe the LNG and terminal deals struck by the previous government. The crisis was not limited to Punjab as after many years Sindh too suffered from gas shortage.

As a result, the government allowed the transportation of LNG cargoes, so the issue of low gas pressure and volumes could be addressed.

The crisis worsened when Engro Elengy Terminal Pakistan Limited closed for annual maintenance, causing trouble for the industries, domestic and commercial consumers.

At present, gas supply to all consumer categories connected with the SNGPL network has been restored but not for the fertiliser plants. According to the Ministry of Industries, SNGPL must comply with the ECC’s decision on continued supply till further orders.

However, SNGPL argued that the company was getting a low quantity of gas, though RLNG had been injected into the system. “We at least need 1,000 million cubic feet of RLNG per day (mmcfd), but we are getting 800 mmcfd at present; we are restoring gas supply, however, it will be a gradual process,” said an SNGPL spokesman.

"Apart from the low gas volumes, we have some outstanding dues, which the fertiliser sector has to pay to SNGPL," the spokesman pointed out.

Agri experts said the closure of the two fertiliser plants may lead to urea shortage, which could create black market of the essential commodity.

Of the total urea production capacity of around six million tons per annum, the two plants manufacture around 0.8 million tons.

According to a report of the National Fertiliser Development Centre (NFDC), urea stocks at the start of 2019 stood at 180,000 tons. In January, the production was estimated at 435,000 tons and off-take was recorded at 550,000 to 560,000 tons, leaving only 60,000 to 70,000 tons as buffer stock, which is too low compared to the agreed 200,000 tons.

BALOCHISTAN CM WANTS PASNI FISH HARBOUR RELOCATED

Saleem Shahid Updated February 19, 2019

QUETTA: Balochistan Chief Minister Jam Kamal Khan Alyani has proposed reconstruction of Pasni Fish Harbour with all modern facilities at some other place in the area to protect rights of fishermen of the area as the present harbour cannot be made functional.

Presiding over a meeting to review performance of Pasni Fish Harbour, he said the government would definitely make all those government institutions functional which were at present not functioning.

The secretary of fisheries and the managing director of Pasni Fish Harbour, Ali Gul Kurd, briefed the meeting on the harbour. The meeting reviewed to use the grant of Japan for the development of Pasni Fish Harbour.

It also reviewed a plan to construct eight new jetties in coastal areas of Makran and directed the Board of Revenue to complete the process of providing land for the purpose.

Speaking on the occasion, the chief minister expressed anger over non-functioning of Pasni Fish Harbour for the last 10 years, but an amount of Rs1.5 billion was spent on payment of salary to employees and staff of the harbour.

He said heads of a majority of government departments and institutions were non-serious about running their departments and institutions and he had reached that conclusion after reviewing the performance of these departments and institutions over the last five months.

Mr Alyani said that fish harbours and jetties across the world not only provided jobs to people, but also strengthened local economies. But unfortunately in Balochistan the situation was different and these institutions and departments were not playing effective role in providing jobs to people and strengthening the economy of the province, he added.

The chief minister directed authorities concerned to consider running all harbours and jetties of coastal areas of the province under an authority and through public-private partnership and advertise the plan in newspapers to attract interested investors.

COTTON PRODUCTION SHORT BY 6.83PC

Parvaiz Ishfaq Rana Updated February 19, 2019

KARACHI: Badly hit by falling area under cultivation, use of poor quality seed and pesticides, cotton production up to Feb 15 stood short by 6.83 per cent at 10.7 million bales over the corresponding period last year.

This is the seventh consecutive year the country is faced with a short crop of around 4.8m bales from a record production of around 15m bales achieved in 2011-12.

In order to meet the shortfall, textile spinners are likely to import up to 3.5m to 4m bales, burdening foreign exchange reserves by around $1 to $1.2 billion.

According to cotton stakeholders, there is an urgent need to rectify the situation and check falling cotton production.

“The government has to take necessary measures on war footing basis for enhancing cotton production in the country,” said Chairman Pakistan Cotton Ginners Association (PCGA) and a grower from South Punjab Mian Mahmood Ahmed on Monday.

While appreciating the PTI government for taking keen interest in reviving the cotton crop, he said, “Next season’s sowing would start by March in lower Sindh. The government should immediately come up with a revival plan for enhancing cotton production.” “Most of the seed being used for cotton cultivation is not certified and of poor quality, so are the pesticides” he added while urging for improvement.

Cotton production figures released by the PCGA for the fortnight Feb 1-15, 2019 show an overall decline of 6.83 per cent in cotton production. During the abovementioned period, 10.7m bales were produced as against 11.4m bales in the same period last year – a short fall of 784,745 bales.

Punjab recorded a decline of 9.41pc decline at 6.552m bales as against 7.233m bales produced in the corresponding period last year – a shortfall of 680,812 bales.

Sindh, which suffered badly due to shortage of irrigation water at sowing stage, recouped as growers went for second sowing. As a result, a 2.44pc fall was observed in cotton production. Only 4.148m bales were produced in the abovementioned period compared to 4.252m bales in the same period last year.

In Balochistan – which is the only province that produces organic cotton – cotton production was up by 0.99pc and stood at 117,852 bales.

On the consumption side, spinning mills purchased 9.276m bales as against 10.439m bales in the corresponding period last year. Exporters lifted less cotton this season at 102,330 bales as against 216,615 bales in the same period last year.

POULTRY FARMING: SINDH GOVERNMENT MAY REJECT PM INITIATIVE: MINISTER

RECORDER REPORT | FEB 19TH, 2019 | KARACHI

Sindh cabinet might reject the PM initiative to promote poultry farming as it will not be viable for the province, said Sindh minister for livestock, fisheries & cooperative department. Speaking at an inaugural ceremony of ‘Marhaba Proteins Farms’ held at Dhabeji, Abdul Bari Pitafi, minister for livestock, fisheries & cooperative department, Sindh said that Prime Minister had announced to provide five hens and a rooster to the farmers under his initiative to promote poultry farming.

He said federal secretary during meeting with his counterparts in Sindh on the other day informed that federal government would give Rs97 subsidy while Sindh government have to pay Rs300 and rest of the Rs1100 would be collected from the farmer against each fowl. Moreover, he said that this initiative could not be materialised in Sindh as the provincial government was already providing 20 fowls free of cost to the farmers and hoped that PM initiative to promote poultry farming might also be opposed by Sindh cabinet.

Pitafi said that Sindh livestock, fisheries & cooperative department was planning to organise exhibitions at district level to take all stakeholders on board and apprised that LDFA would be held at Hyderabad this year. He said that Sindh government has set 5 percent as growth target by 2030 and for the purpose considerations were being made to streamline the affairs and added that poultry and agriculture sectors, which had been neglected for long, were now recognised as major potential sectors to achieve this growth target.

Mehboob-ul-Haq MD Sindh Enterprise Development Funds (SEDF) said that ‘Marhaba Protein Farms’, a private sector company, has invested Rs350 million for the establishment of a breeder farm and hatchery and SEDF would pay KIBOR part of interest on the loan provided by bank. He said that Sindh had a vast potential of profitable investment in poultry breeder farming and hatchery sector as the province was producing only 20 percent demand of breeding and hatchery while the rest of 80 percent demand would be fulfilled by Punjab.

He said that Frisian Eggs – Holland would start its egg processing unit by next month and added that egg processing in Pakistan was 30 percent cost effective as compared to other parts of the world. Saeed Ahmed, Joint Director, AC&M department SBP said that the central bank had set a target of agriculture credit to Rs1250 billion for current fiscal year and Rs527.3 billion were disbursed during first six months, of which Rs288.4 billion were lent from five top commercial banks. He said that agriculture credit amounting to Rs973 billion was disbursed as against the target of Rs1001 billion in FY17-18.

Azhar Ali Dahar, Dirctor General, TDAP termed poultry sector as vibrant segment of livestock sector in Pakistan, which provided over 1.5 million direct or indirect employment. He said that current investment in this was estimated to more than Rs700 billion and Pakistan was ranked at 10th in the world in poultry production; adding that poultry meat production for the year 2017-18 was to the tune of 1.39 million tonnes, which was 32.7 percent of the total meat production (4.3 million tonnes) in the country.

Furthermore, he said that the poultry sector had contributed 1.4 percent in GDP while the contribution of agriculture sector stood at 7.5 percent during 2017-18 and added that value added products of livestock created 12.7 percent impact on country's exports. He urged the investors to pour investments in this sector for Halal meat exports especially to Middle East. Dr Nazeer Hussain Kalhoro, Executive Director Sindh Poultry Vaccine Centre (SPVC) said that they had developed 64 types of poultry vaccine and four types of livestock vaccine and the centre was providing free medicine assistance to the farmers.

Aijaz Ahmed Mahesar, secretary Livestock, Fisheries and Cooperative department, Dr Muhammad Ilyas DG, Animal Quarantine department, Ghulam Khaliq, chairman Southern Zone Pakistan Poultry Association, Karachi and Kabool Muhammad Khatian President Sindh Chamber of Agriculture also spoke on the occasion. A large number of banks, investors and others attended the event.

PULSES IMPORT UP BY THREE PERCENT

RECORDER REPORT | FEB 19TH, 2019 | KARACHI

The country's import of pulses grew to $324.396 million in July-Jan 20181-9, up by 3 percent, official figures say. Increase in pulses import now stands at $8.948 million in July-Jan 2018-19 from $315.448 million in July-Jan 2017-18, Pakistan Bureau of Statistics shows.

In term of quantity, Pakistan imported 563,035 metric tons in July-Jan 2018-19 that is greater by 38 percent or 154060 metric tons from 408,975 metric tons in July-Jan 2017-18. The country's import of pulses, however, slumped to $36.569 million in Jan 2019 from $45.545 million in Jan 2018, showing a fall of 20 percent or $8.976 million. The pulses import volume scaled down by 18 percent or 12175 metric tons to 56,356 metric tons in Jan 2019 from 68,531 metric tons in Jan 2018.

RICE EXPORT PRICES FALL IN TOP ASIAN HUBS

RECORDER REPORT | FEB 19TH, 2019 | HANOI

Rice export prices fell in top Asian hubs this week on slow demand and rising supply following a quiet start to the year, while limited interest from the Philippines failed to spur a Vietnamese market reeling from Chinese import restrictions. In top exporter India, 5 percent broken parboiled variety eased to $380-$385 per tonne from $383-$388 last week as supply from the winter crop poured in. Demand from Asian and African buyers was subdued, an exporter based in Kakinada in the southern state of Andhra Pradesh said.

India's rice exports between April and December dropped 10.2 percent from a year earlier to 8.46 million tonnes, a government body said last week. In Thailand, benchmark 5 percent broken rice prices fell to $382-$398 a tonne, free on board Bangkok, from $390-$402 previously. “The market has been really quiet and new supply of rice is coming out now,” a Bangkok-based trader said.

A weaker domestic currency was adding further pressure to prices, traders said. “More supply will lower prices further but exporters are still looking for buyers because it has really been quiet since the start of the year,” another trader said. Thailand is the world’s second biggest rice exporter followed by Vietnam, where rates for benchmark 5 percent broken rice fell to $340 a tonne from $350 two weeks ago before the markets closed for the Lunar New Year holiday.

“Trade has resumed and we have seen more buyers from the Philippines placing orders,” a trader based in Ho Chi Minh City said, adding that private buyers from rice-scarce Philippines purchased about 20,000 tonnes this week. However, China has been imposing stricter conditions for rice imports from Vietnam, traders said. China will likely cut rice shipments from Vietnam to 500,000-600,000 tonnes this year from around 1.5-2 million tonnes a year in the past, another trader said.

“We think the government will likely buy rice this year for stockpiling, giving a support for domestic prices.” Export prices, however, will be under pressure as the major winter-spring harvest peaks by month-end, traders said. Elsewhere, Bangladesh, which saw imports surge in 2017 after floods wreaked havoc on local crops, will procure more rice locally as output has revived a food ministry official from the country said.

“We are getting good response in our local procurement drive and will continue it,” the official said. Bangladesh has procured nearly 1.4 million tonnes of rice locally so far in the current season to build state reserves.

CM INAUGURATES SINO-PAK BUFFALO RESEARCH CENTRE

By Our Correspondent Published: February 19, 2019

LAHORE: Punjab Chief Minister Sardar Usman Buzdar has said that the Pakistan Tehreek-e-Insaf government is striving for the development of the livestock sector on scientific and modern lines.

He was speaking after inaugurating the International Buffalo Congress-2019 which was organised on Monday by the University of Veterinary and Animal Sciences (UVAS) Lahore. The event was held in collaboration with the Livestock and Dairy Development Department Punjab.

The chief minister said the Punjab government has taken various initiatives for the promotion of livestock and poultry with a focus on the development of the commonly neglected rural population. The government wants every individual farmer to develop, learn and adopt the latest farming techniques and achieve the maximum production of milk and meat. He said this will consequently contribute to the development of the national economy.

Buzdar called for promoting the research culture to enhance milk and meat yield. He said that the buffalo, known as black gold, is an important component of livestock in terms of its milk and meat production. It is the right time to showcase its potential in the international market through the International Buffalo Congress and buffalo fair.

He hoped that scientists, researchers, and academicians attending the buffalo congress from across the world will finalise useful recommendations for the development of the buffalo and livestock sector. Buzdar was confident that the initiative would contribute to food security and poverty reduction.

The chief minister also inaugurated the Sino-Pak Buffalo Research Centre, which will work on the promotion of research on the buffalo in China and Pakistan.

Minister for Livestock and Dairy Development Punjab Sardar Hasnain Bahadar Daresha said that the government has taken effective steps to improve livestock in the province and to ensure a better quality of meat and dairy products. “The overall livestock development strategy revolves around fostering private sector-led development with the public sector, providing an enabling environment through policy interventions.”

UVAS Vice Chancellor Dr Talat Naseer Pasha spoke about the importance of the buffalo and said its development will significantly contribute to achieving sustainable development goals of food security, nutrition, poverty alleviation, economic growth, and employment. He said that despite the buffalo’s importance, institutional efforts, resource allocation, research and development are minimal. As a consequence, its potential contribution has not been fully realised.

More than 500 delegates from Pakistan, Australia, Bangladesh, Bulgaria, Canada, China, India, Iran, Iraq, Italy, Nepal, Pakistan, Philippines, Sri Lanka, Thailand, Turkey, UAE and the United States of America are attending the congress.

The minister said the congress is spread over one plenary and 14 technical sessions and a farmer-industry forum. Twelve business meetings, seven pre-congress workshops, 100 each poster and oral presentations on 10 different aspects of buffalo will be held during the congress.

About the national livestock show, buffalo fair at Buffalo Research Institute Pattoki, Dr Pasha said that about 1,000 of the best animals from all over the country have been registered for different competitions. A trade exhibition has also been organised at BRI, Pattoki.

Talking about the Sino-Pak Joint Research Centre for Buffalo, Dr Pasha said that this center will build a scientific platform for cooperative research and long-term development in the field of buffalo science.

GWADAR FISHERMEN WARN OF PROTEST RESUMPTION

Behram Baloch February 18, 2019

GWADAR: The Gwadar Fishermen Alliance has announced that it will resume its protest from March 1 to protect centuries-old livelihood of local fishermen if the government makes no decision in this regard by then.

Speaking at a press conference, the alliance leaders Khuda-i-Dad Wajo, Khuda Bakhsh and Ali Akbar Rais said for the development of Pakistan, the local fishermen had surrendered ownership of lands in their ancestral area Mullah Band. But after the government embarked on construction of Eastbay Expressway, they expressed their concern that it would block their access to the sea before officials of the federal and provincial governments. “Even Prime Minister Imran Khan is aware of our grievances and demands,” they said.

"Then we resorted to protest but later called it off on the assurance of the district administration and Gwadar port officials," the alliance leaders said. "During the last few months we have met a federal minister, Balochistan Chief Minister Jam Kamal Alyani, Senators and the commander of Southern Command. The representatives of the federal and the provincial government told us that they would convey our concerns to the authorities concerned," they said.

"We were told that additional funds would be approved for the construction of a new jetty and we have been waiting for the final decision by the Planning and Development Commission," the representatives of the fishermen community said.

They said that they had decided to wait till February 28 and, if nothing was done to meet their demand by then, they would resume their protest from March 1.

They said that their demands included the establishment of a passage at Baloch Ward to give the fishermen access to the sea, construction of a modern auction hall and scholarships for fishermen's children as well as provision of gas, electricity and water in their areas.

DIR FARMERS ASKED TO GROW OLIVE TREES

A Correspondent February 18, 2019

UPPER DIR: The agriculture department organised a daylong workshop to educate farmers about importance of olive tree plantation and use of modern technology to boost yield.

Upper Dir Deputy Commissioner Irfanullah Mehsud was the chief guest at the workshop. District nazim Sahibzada Faseehullah, director olive production project Dr Fayaz, agricultural experts and farmers were in attendance.

Dr Fayaz and agricultural experts told farmers that olive was very precious and beneficial product and that the soil and climate of the district were suitable to olive plantation. They said farmers could get a handsome earning from it.

The agricultural experts said apart from olive plantation the farmers should also grow various types of vegetables and crops. They said that as farmers did use modern farming methods they got lesser yield of their crops.

On the occasion, DC Irfanullah Mehsud said that the workshop was a good opportunity for the farmers to learn about modern techniques of farming. He said the district administration would provide facilities to farmers.

Mr Mehsud said the farmers should start focusing on olive plantation. The farmers thanked the agriculture department for organising the workshop for them.

ONLY OPTION IS TO LIMIT CANE CULTIVATION

Mohiuddin Aazim Updated February 18, 2019

Economic policymaking is all about trade-offs. A bad trade-off makes the economy suffer.

“Mushroom growth of sugar mills in the main cotton-growing areas of Southern Punjab and Sindh has placed the cotton crop in direct competition with sugar cane for area and resources,” says the State Bank of Pakistan (SBP) in its first quarterly report of the current fiscal year.

When a new sugar mill is set up in an area, it incentivises farmers to switch over from cotton or other crops to sugar cane.

Sugar mills are mostly owned by top politicians or their frontmen or financiers. That makes the formulation of a realistic policy on crop rationalisation more challenging

New sugar mills began springing up — and the government started focusing more on the cultivation of sugar cane — with the beginning of Asif Zardari’s era from 2008-09. The trend continued during the days of Nawaz Sharif, too. At the end of 2007-08, there were 78 sugar mills, according to the Pakistan Sugar Mills Association (PSMA). The number went up to 89 in 2017-18.

Had our policymakers been mindful of the fact that the area under cotton cultivation would shrink and adequate input resources would be unavailable for cotton as a result of mushroom growth of sugar mills, they would have made a different choice.

Apparently, they went for the negative impact on cotton with all anticipated benefits of growing more sugar cane. A bad trade-off indeed as cotton is the lifeline of our textile industry, the largest foreign exchange earner and the biggest job provider.

Our cotton production routinely falls short of the needs of the textile industry. An unusual shortage could hit the textile industry’s export performance and push up the total import bill with increased imports of cotton.

Imports of raw cotton increased from 450,000 tonnes in 2012-13 to 610,000 tonnes in 2017-18 as local production failed to meet the textile industry’s demand. In the outgoing fiscal year, the cotton output totalled a little less than 12 million bales against the target of 14m bales. Imports of the commodity consumed $1 billion-plus. Can we afford this at a time when the country is facing a foreign exchange crisis?

Sugar exports somewhat compensate the cost of cotton imports. In 2017-18, we earned half a billion dollars through exports of sugar. That could not have been possible without a surplus in sugar production, sugar millers argue.

According to the SBP, the sugar cane output totalled 82.1m tonnes in 2017-18 from $73.4m tonnes a year earlier — an increase of 11.8 per cent. Just how fast the sugar cane output has been growing can be gauged from the fact that if we compare the 2017-18 output with 62.8m tonnes of 2014-15, we see about 31pc growth in just three years.

An intriguing aspect of the excessive cultivation of sugar cane is that often the surplus cannot be exported without offering the millers some sort of subsidy. This happens due to delays in finalising sugar export plans, high cost of domestic production and international market conditions.

The SBP quarterly report points out that in the last fiscal year, the monthly average price of local sugar stood at $448 per tonne compared to the global average of about $330.

The government had to give a subsidy of Rs14bn on sugar exports. What is more intriguing is the fact that larger sugar cane outputs year after year are not even helping farmers. Millers pay them less than the indicative or support price of the commodity. Particularly, small growers suffer due to this anomaly. Yet the government continues to spend billions of rupees under commodity pricing subsidies. So technically, sugar exports are costing more to the government than the accrued benefits as a significant expenditure is incurred on facilitating these exports, according to the SBP's quarterly report.

According to a WWF Pakistan chapter report of 2012, growing sugar cane also consumes more water: 0.05m cubic meters per hectare against cotton (0.02mcm per hectare) and even rice (0.03mcm per hectare).

For several years, Pakistan's water woes have been growing. The scarcity of water continues to ruin the prospects of crop outputs in large parts of Sindh, Balochistan and some areas of Punjab. Can we afford to promote sugar cane at the cost of cotton knowing that the former consumes more than double quantity of water than the latter?

The answer is obvious. But the problem is that sugar mills are mostly owned by top politicians or their frontmen or financiers. That makes the formulation of a realistic policy on the rationalisation of major crops more challenging.

Perhaps the time has come to open a debate on this subject in parliament and set up a parliamentary panel to probe the issue. The task force on agriculture set up by Prime Minister Imran Khan can hardly do this. Its recommendations would likely be opposed fiercely by the top leadership of the opposition that has vast stakes in the sugar industry. "Even the politicians of the treasury benches with a vested interest might resist," says a senior official of the Ministry of National Food Security and Research.

"But if we don't limit sugar cane cultivation, the economy might continue to suffer due to the erratic output of cotton and rice. That, in turn, might keep net textile exports low and affect growth of rice exports."

Perhaps it's time to initiate a major crop rationalisation plan with the consent of the provinces, focusing on ensuring food adequacy, effective use of water, higher per-hectare yields and highest export value of the surplus output. But encouraging farmers to switch over from sugar cane to cotton, rice or any other crop will also require the introduction of solid provincial work plans with feedback from farmers' lobbies and local and international experts on agriculture. n

PADDY FIELDS CAN'T DO WITHOUT MECHANISED FARMING

Mohammad Hussain Khan February 18, 2019

Sindh's paddy sector has lately seen some interventions aimed at mechanising cultivation, increasing per-acre yields and improving the milling process. The provincial government's Sindh Enterprise Development Fund (SEDF) has supported several rice mills by absorbing most of the mark-up component of the loan subsidy.

In the forthcoming Kharif season starting in April-May, the SEDF plans to establish companies for the provision of laser land levellers, crop transplanters and harvesters on a rental basis. SEDF Managing Director Mahboob Kazi said the Sindh government was being approached in this regard keeping in view the encouraging trend among millers who availed the subsidy in the last two years.

A rice miller could avail a loan of Rs10m for an upgrade of their mill. The SEDF has tried to prevail upon the State Bank of Pakistan (SBP) to make sure that commercial bank liberalise their loan regimes for rice millers as well as farmers.

'The hybrid seed variety has increased paddy production, but the related infrastructure is still missing'

The SEDF absorbs six per cent of the mark-up while 2pc is borne by the borrower. Eight rice mill owners availed this facility between 2012 and 2016. However, 22 mills underwent the much-needed upgrade in the last two years, according to Mr Kazi. "New machinery has reduced the level of electricity consumption by the miller. It has also decreased the ratio of broken rice during milling," he said.

This trend is encouraging from the SEDF's point of view. Therefore, it aims to ensure the provision of laser land levellers, transplanters and harvesters for paddy growers through rental service-providers. Laser land levellers ensure uniformity in water distribution at the cultivation and post-cultivation stages as paddy remains a high-delta crop.

It helps save 30-40pc of water that is otherwise lost in any piece of uneven farmland. Similarly, transplanters and harvesters contribute to the overall increased farm productivity.

Manual transplantation of seedlings is labour-intensive, tedious and time-consuming. In contrast, mechanised transplantation substantially increases the plant population up to 100,000 per acre which, according to paddy grower Nabi Bux Sathio, varies around 50,000-70,000 plants per acre in the manual process. Mechanised transplantation increases productivity by 20 maunds an acre which is usually assessed at 50-60 maunds.

Harvesters substantially save grain losses at the harvesting stage. Keeping such losses within 15pc translates into revenue of half a billion dollars, according to Rice Exporters Association Pakistan (Reap) Chairman Safdar Mehkri. He said paddy growers in Pakistan produce 2.7 million tonnes of rice per hectare against 9.2m tonnes in the United States.

"We have a net potential of $5bn rice exports. But we are currently fetching $2bn because of gaps at the cultivation, harvesting, storage and milling stages," he remarked. He said Pakistan can increase its rice production to 12.5m tonnes from 7.4m tonnes by adopting mechanisation.

In 2018-19, paddy production in Sindh dropped to 2.5m tonnes against the target of 2.7m tonnes (the 2017-18 production estimate is 2.85m tonnes). The cropped area declined to 690,000 acres against the target of 770,000 acres.

The drop in the area and production was attributed to a water shortage at the peak of sowing in Kharif 2018 (April-June). Water flows, as per figures by the irrigation department, stood at 6.453MAF in April-June in 2018 against 11.22MAF in the corresponding period of 2017, showing an overall shortfall of 42.5pc in the last crop season.

Paddy is grown mainly in the right-bank areas of upper Sindh. In lower Sindh, it was cultivated in Badin, Thatta, Tando Mohammad Khan and Sujawal districts.

The quality of seeds also hampered overall growth in the paddy sector. Farmers prefer the imported hybrid variety that paddy growers like Nadeem Shah believe was hit by germination and fruit-setting issues. "It is basically weather conditions that vary between Sindh and countries like Australia, United States and China that produce these seeds," he observed.

The higher yield potential of hybrid seeds attracts growers. At the same time, this variety also demands vital inputs like zinc, magnesium, pesticides and fertiliser besides timely water flows for better productivity. This increases the overall cost of production.

According to Mr Shah, local varieties like DR-82, Shandar, Irri-6 and Irri-9 also give higher yields with better inputs. He levelled his land in the Sujawal district by laser levellers to overcome water losses and have uniform irrigation water distribution.

Post-harvest losses during milling reduce the overall production of refined rice. With outdated machinery, rice millers have to make do with losses in production. As a result, the ratio of broken rice increases. The SEDF's assessment showed upgraded machinery in a rice mill improves the production capacity, making a difference of four to five tonnes on average.

Mr Mehkri noted that the hybrid variety has indeed increased paddy production, but the related infrastructure is still missing. The crop was not dried, although driers are available. The tendency to use these driers is too little.

He added that equipment rental companies exist in Punjab, but the idea has not gained popularity here. "Commercial banks avoid offering loans to millers and farmers," he said.

He referred to rice production in Vietnam which attracted a price over and above the going rate of $110-$150 per tonne in the international market. "With upgraded mills and increased rice production, we can capture markets in the Middle East and other regions. Mechanised farming can offset the impact of the water shortage at the field level," he asserted.

RESOURCE CENTRE INAUGURATED AT SINDH AGRICULTURE UNIVERSITY

By Press Release Published: February 18, 2019

TANDO JAM: The FAO Resource Centre was inaugurated on Sunday at Sindh Agriculture University, Tando Jam, in collaboration with United Nations Food and Agriculture Organisation (FAO). It aims to promote the use of latest technology through the development of a strong relationship between farmer groups and research scholars.

FAO's representative in Pakistan, Mina Dowlatchahi, said, "This centre will improve delivery to agriculture sector and help encourage combined investment and strategies for sustainable agriculture development in the province."

To ensure food security and eradication of malnutrition, FAO is working to implement a land tenure system that can sustainably improve the equitable access to, and governance of, land and natural resources, allowing for improvements in agricultural production, food security and nutrition under the project 'Improved Land Tenancy in Sindh Province (ILTS)' with the financial assistance of the European Union in eight districts of Sindh.

Another project, to help small farmers in selected districts of Indus basin build resilience and adapt to climate change, has also been finalised which will directly benefit 1.5 million people in the area.

In addition, efforts are being made to reduce the risk of emergency in drought-like situations by improving resilience of crisis-affected communities through risk assessment, planning, mitigation, preparedness measures and emergency response. These initiatives are linked and integrated into the FAO programme in Sindh to provide a holistic service to the community.

'FRUIT FOR ALL' DRIVE COMES TO PESHAWAR

By Our Correspondent Published: February 16, 2019

PESHAWAR: Councillors of the city district government will take active part in planting fruit trees at public places as part of Fruit for All drive.

The K-P government has launched the drive to plant fruit trees at public places so that people may enjoy free fruits.

City District Nazim Mohammad Asim Khan assigned Agriculture Department officer Khalid Usman the task to contact district council members for promoting the drive. Besides, Asim assigned member district council Iftikhar Khalil as coordinator for the Fruit for All and directed for taking steps for the success of the project.

Officers of the Agriculture Department told the district nazim the soil of the concerned district would be tested to find the suitability of plants. The district nazim said that members of the district council will give signed recommendations to Fruit for All Farm which will provide fruit bearing plants to concerned union councils.

ARGENTINA SOYA CROP FORECAST AT 52 MILLION TONNES DESPITE LOSS DUE TO RAIN

RECORDER REPORT | FEB 15TH, 2019 | BUENOS AIRES

Argentina's soya crop is battling storms that have flooded some marginal growing regions while helping yields in prime farm areas, with one grains exchange increasing its harvest forecast while another warned it may cut its 2018/19 planting estimate.

The country's soya crop should reach 52 million tonnes this season, up from 50 million tonnes previously forecast, the Rosario Grains Exchange said late on Wednesday. The Buenos Aires Grains Exchange followed on Thursday with a report saying excessive rains may cause it to cut estimated planting area.

The Rosario exchange said the increase in its forecast for the size of the 2018/19 crop came despite the loss of 700,000 hectares of soya planting area due to excessive rainfall. The warning of a cut in estimated sowing area from the Buenos Aires exchange also cited harder than normal rain.

"The rains that accumulated during the last weekend in parts of the central and northern agricultural belt could provoke new losses of harvestable area," the Buenos Aires exchange said in its weekly crop report.

But it said most farm areas had been getting healthy levels of rain and crop conditions were mostly good to excellent. It kept its 2018/19 harvest forecast at 53 million tonnes. The harvest expected to start in March should nonetheless be 49 percent bigger than the previous season's drought-hit crop, the Rosario exchange said in a monthly report.

ONGOING RAINS: PM SEES BUMPER WHEAT CROP THIS YEAR

RECORDER REPORT | FEB 15TH, 2019 | ISLAMABAD

Prime Minister Imran Khan Thursday said the continuing winter rains were worth billions of rupees to the national economy besides replenishing the water table and glaciers.

"We should all thank Allah Almighty for the continuing winter rains that are worth billions to the economy apart from replenishing our water table and glaciers plus countering air pollution," he said in a tweet. "Insha Allah we will have a bumper wheat crop this year," he hoped.

PAKISTAN DECIDES TO EXPORT 500,000 TONS OF WHEAT

By Salman Siddiqui Published: February 15, 2019

KARACHI: After producing surplus wheat in the past two years, Pakistan has decided to export 500,000 tons of the grain ahead of the arrival of new stock from March-April 2019.

The government is expected to earn Rs16.4 billion (or $117 million) from the volume set aside for export as it has offered to sell the grain at Rs32,759 per ton.

"The ECC (Economic Coordination Committee) of the cabinet has decided to sell half a million tons of wheat, including 400,000 tons by sea and 100,000 tons by land at the already received rate ie Rs32,759 per ton," Pakistan Agriculture Storage and Services Corporation (Passco) said in a notification on Thursday.

An agricultural expert, however, believes the government has to award subsidy on export to make it commercially viable for cross-border traders keeping in view the comparatively low prices in the global market.

According to the Pakistan Bureau of Statistics (PBS), Pakistan has exported wheat at an average price of $210.5 per ton in the past six months (July-December 2018) compared to the offered price of $234 per ton (Rs32,759).

Passco – the state-owned agency responsible for maintaining stocks of wheat and other crops to avert shortage in the country and also responsible for conducting import and export operations for crops – achieved the Rs32,759 per ton price for wheat export in January through open bidding for 100,000 tons and wanted to sell another half a million tons at the same price.

"The highest rate ie Rs32,759 per ton was received through open bidding," the agency said. The price was higher than the procurement rate of Rs32,500 per ton, it was learnt.

"Parties/bidders, who participated in the tender opened on January 11, 2019 and have not withdrawn their earnest money, are required to submit their willingness for the purchase of wheat at the rate of Rs32,759 along with quantity details," it said.

"Besides, fresh applications are also invited on first-come-first-served basis from interested parties for the purchase of wheat (for export) at the already approved rate ie Rs32,759 per ton," it added.

Agri Forum Pakistan (AFP) Chairman Dr M Ibrahim Mughal estimated that Pakistan had a surplus stock of around 4.5 million tons of wheat. This included three million tons with the Punjab food department, 1.2 million tons with Passco and the remaining with the Sindh food department, he said.

The country established the surplus stock following it produced higher grains than the local requirements in the past two years.

"The country produced 25.5 million ton wheat alone in the last year (2017-18) against an estimated requirement of 24.4 million tons. This was in addition to the previous carryover stock of the grain at the beginning of the last wheat harvesting season," he said.

This year too, Pakistan is estimated to produce a total of 25.5 million tons wheat – around one million ton higher than the local requirement, he said. He said the government may have to give subsidy on export to make it commercially viable. Potential markets for Pakistan wheat include Afghanistan, UAE, Indonesia, Oman and Sri Lanka. Mughal added the other potential markets could include Iran and Malaysia.

PUNJAB AGRI POLICY TO INCLUDE 'INCENTIVES' FOR FARM RESEARCHERS

The Newspaper's Staff Reporter February 14, 2019

LAHORE: The Punjab government will announce its agriculture policy next week with a package of incentives for farm researchers and service structure for thousands of employees of research institutes.

Agriculture Minister Malik Nauman Langrial says the policy will be launched by the chief minister on Feb 20.

Talking to the media along with information minister Fayyazul Hassan Chohan here on Wednesday, he said that incentives for agriculture scientists like offering them half of the amount to be received through auction of the seed they would develop, would also be announced.

Responding to a query, he said restructuring of research was also being introduced within a week in which over 25,000 employees will be given better pay scales.

Mr Chohan told a questioner that the imbalance in agricultural trade with India was resulting in heavy losses to the exchequer. "Of around Rs52 billion mutual farm trade volume, Pakistan could export only 25 per cent of it because of heavily subsidised farming in India that led to losses to the local farming community. Therefore, revival of the trade is not feasible in the present circumstances."

Earlier, Mr Langrial talked about the steps the Punjab government had so far taken in the agriculture sector and its achievements. These included allocation of Rs36bn in the 2018-19 budget for agriculture growth, increase in the limit of interest-free loans for Rabi crops from Rs25,000 to Rs30,000 with total distribution worth Rs5 billion among 101,228 registered farmers. He also mentioned crop Insurance (Takkaful) in nine districts for 30,000 growers of rice, cotton and wheat crops, extending of Rs5,000 per acre subsidy to increase oil seed crop area, Rs500 per bag subsidy on DAP fertiliser, Rs200 subsidy on Nitrophos and Rs800 per bag subsidy on SOP.

The minister said the government would also provide Rs1,000 per bag subsidy on cotton seed to the registered farmers in Multan, Vehari, Khanewal, Rahim Yar Khan, DG Khan and Rajanpur districts for an area of 100,000 acres and hoped the federal government would extend similar relief to more areas.

He also talked about revamping agriculture marketing system to minimise the role of the middle man, establishing model market at a cost of Rs5 billion at Lakhudair in Lahore, ensuring payment of Rs180 per 40kg to sugarcane growers by the mills this year, improving 2,100 water courses, and installing drip and sprinkler irrigation systems on 12,000 acres.

In Potohar region, 160 ponds were being developed for saving water and 360 schemes were being operated in non-canal areas, he added.

12 HYBRID RICE VARIETIES TO BE AVAILABLE FROM JULY

The Newspaper's Reporter Updated February 14, 2019

ISLAMABAD: At least twelve new hybrid rice ¬varieties will be available to farmers for cultivation ¬during the next Kharif crop season starting in July.

The new varieties were approved by the Variety Evaluation Committee of Pakistan Agriculture Coun¬cil (Parc) in Islamabad on Wednesday after reviewing twenty-six proposals.

Research on these varieties was carried out at the rice research laboratory of National Agriculture Research Centre. A senior official of NARC told Dawn that following the approval by the committee, the new hybrids of rice can now be imported from China.

So far, 130 different varieties of rice have been developed of which at least twelve varieties are currently sown by farmers in rice growing areas of the country. Punjab is the largest in terms of the crop's production, followed by Sindh and then the remaining parts.

In addition to the 12 types, an open pollinated variety of rice for commercial cultivation was also approved by the committee. While farmers can keep seeds of pollinated rice variety, the hybrid has to be changed after every crop.

Parc chairman briefed the committee about the upcoming projects on rice under the Prime Minister's 'National Agriculture Emergency Programme'. Presiding over the variety evaluation committee meeting, Member Plant Sciences Division of PARC, Dr Abdul Ghafoor emphasised the role of quality seed for productivity and profitability of farmers.

Representatives of seed companies appreciated the role of Parc for setting new benchmarks for testing of rice varieties in Pakistan.

SEAFOOD EXPORT CONTINUES TO FALL

RECORDER REPORT | FEB 14TH, 2019 | KARACHI

Pakistan seafood export has fallen to $183.691 million in July-Dec 2018-19, down by 8.44 percent, according to official figures. Seafood export scaled down by $16.93 million in July-Dec 2018-19 from $200.621 million in July-Dec 2017-18, Pakistan Bureau of Statistics shows. In term of quantity, fisheries export went down to 80,608 metric tonnes in July-Dec 2018-19 from 83,590 metric tonnes in July-Dec 2017-18, down by 4 percent or 2,982 metric tonnes.

Although, seafood export volume increased to 19,064 metric tonnes in Dec 2018 from 17,386 metric tonnes in Dec 2017. In Dec 2018, the country earned $38.860 million from its seafood export.

BUZDAR TO ANNOUNCE FIRST AGRICULTURE POLICY FOR PUNJAB ON FEBRUARY 20

ZAHID BAIG | FEB 14TH, 2019 | LAHORE

Punjab Chief Minister Usman Buzdar will announce first-ever agriculture policy for Punjab on February 20. Draft of the policy has already been prepared and approved by the provincial cabinet on October 2018, said Minister Agriculture Punjab Malik Nauman Ahmad Langrial, Minister for Information & Culture Fayyaz-ul-Hasan Chohan and Chairman Taskforce for Pesticides and Fertilizers Malik Masood at a joint press conference on Wednesday.

They spoke at length about the government's initiatives regarding agriculture sector to boost the growth and said the agricultural policy will mainly focus on reforming agriculture sector and agro-industry to enhance its role in the national economy.

The government has allocated almost Rs 36 billion during 2018-19 for agriculture growth. It has increased the limit of Rabi interest free loans from Rs 25,000 to 30,000 and distributed interest-free loans among 1,01,228 registered farmers worth Rs 5 billion during Rabi 2018-19, they added.

The Agri minister also disclosed that the government has started crop insurance (Takkaful) for appeasement of farming community in nine districts and till date 30,000 farmers have been insured against rice, cotton and wheat crops.

The government has to import edible oil worth Rs 350 billion, so it has started campaign to increase oilseed crop area and production. A subsidy of Rs 5000 per acre will be provided on sunflower cultivation and in future Canola will also be added to this subsidy scheme so that import bills of edible oil could be lessened in future.

The minister further said that the government has decided to provide subsidy on DAP fertilizers at Rs 500 per bag, Nitrophos Rs 200 per bag and subsidy on potash fertilizers Sulphate of Potash (SOP) & Murat of Potash (MOP) at Rs 800 and Rs 500 respectively per bag.

The government will also provide subsidy of Rs 1000 per bag on cotton seed to the registered farmers in District Multan, Vehari, Khanewal, Rahim Yar Khan, DG Khan and Rajan Pur for an area of 1,00,000 acres and hopefully the federal government will also provide same subsidy for another hundred thousand acres.

The government is also revamping agriculture marketing system under Punjab Agriculture Marketing Regulatory Act (PAMRA) for betterment of farming community and to minimize the role of a middle man.

The government is also establishing model mandi at a cost of Rs 5 billion at Lakkho Derra. It also paid special heed to recovery of sugarcane farmers' pending liabilities to sugar mills. It appointed nine advisors to Chief Minister Punjab for resolving matter of sugarcane and this year the sugarcane crops of 46 million metric tons is expected. The government is swiftly handing this issue and all sugar mills are being operational during crushing season and there is no hue and cry of farming community over this issue.

The minister also briefed about water saving schemes and said this year 2100 water courses will be improved and drip and sprinkler irrigation system will be installed on 12,000 acres.

To promote horticultural crops, the Agriculture department also organized Pakistan Horti Expo 2019 on 21st and 22nd January, he added.

Minister for Information & Culture Fayyaz-ul-Hussan Chohan said the government aims to make agriculture sector a vibrant and profitable sector.

“We are fully aware that without boosting this sector, Pakistan cannot make a progressive state,” he added.

FAO RESOURCE CENTRE OPENED AT AGRICULTURE VARSITY

The Newspaper’s Staff Correspondent February 13, 2019

HYDERABAD: Food and Agriculture Organisation (FAO) representative and country head Ms Mina Dowlatchahi inaugurated UNFAO Resource Centre in Sindh Agriculture University (SAU) Tandojam on Tuesday.

Present on the occasion were SAU Vice Chancellor Prof Dr Mujeebuddin Memon Sahrai, researchers, academia, experts and faculty members, FAO’s policy consultant Genevieve Hussain, as well as Mohsin Soomro, Waheed Jamali, Mumtaz Mangi, Sada Shah and sectional heads.

Purpose for establishment of the centre was to build cooperation and ensure collaboration with stakeholders for development of the agriculture sector. It aims at improving livelihood of the farming community. The centre would support and facilitate the SAU internship programmes, job placement, joint events and research and development programmes in the agriculture sector.

Ms Dowlatchahi briefed about efforts of SAU for knowledge-building of stakeholders in water, food security, agriculture and livestock sectors and providing support to FAO interventions in Sindh. She added that the centre would ultimately build collaboration and support stakeholders, especially in issues at the policy level, and transfer technology through extension outreach programme.

The centre would facilitate internship and job placement to SAU graduates. The SAU faculty would conduct problem-oriented research for uplift of livelihood of small and landless farmers of Sindh.

The VC highlighted the role of SAU for agricultural economic development of the country. He said SAU was the hub of agricultural activities, producing quality manpower and conducting problem-oriented research.

Prof Dr Mohammad Ismail Kumbhar briefed the UNFAO mission regarding SAU’s interventions. He highlighted the role of the business incubation centre.

ECC DECIDES TO REVIVE COTTON CROP

ZAHEER ABBASI | FEB 13TH, 2019 | ISLAMABAD

A meeting of the Economic Coordination Committee (ECC) on Tue-sday approved measures to boost the cotton crop in the country and decided that Ministry of National Food Security will present a plan within 30 days for strengthening research and development services for different crops with particular focus on cotton. The ECC presided over by Finance Minister Asad Umar further decided that the ministry will also submit plan for revitalisation of federal institutions tasked with the responsibility of developing the cotton sector. The ministry was directed to expedite efforts for implementing PB Ropes technology to counter the pink bollworm which impedes cotton growth.

The meeting further directed that Ministry of Industries and Production would take measures for recovery of cotton cess from textile mills so as to give impetus to cotton promotion activities, which are to be funded through the cess.

Secretary Ministry of National food Security & Research gave a detailed presentation on issues and challenges in the cotton sector. Experts in the field of cotton growing, who were specially invited to the meeting, also gave their input for developing the cotton crop.

The ECC also decided to approve additional guarantees of Rs 5.6 billion to PIAC against the request of Rs 14.5 billion, and directed for working out medium to long term requirement of LNG before taking decision on setting up new LNG terminals.

Sources said that the Finance Minister was requested by Aviation Division for (i) additional guarantees of Rs 5.6 billion for repair and maintenance of engines and acquisition of related spare parts as explained and (ii) additional guarantees of Rs 8.4 billion for sustainable operations and cash grant of Rs 485 million. However, the ECC decided to approve Rs 5.6 billion additional guarantee and wanted details backed by data as to how much revenue would be generated if Rs 8.4 billion are provided.

The meeting was told that route rationalisation initiatives are being undertaken, however, grounded aircraft are limiting the capabilities. The airline is striving to operationalise the grounded aircraft on urgent basis. For recovery of these grounded aircraft, an additional guarantee to the extent of Rs 5.6 billion is required for the maintenance of engines and acquisition of related spare parts.

Additionally, the ECC was requested that PIACL is also faced with the challenges of accumulated liabilities, whereas on one hand, default notices are being served on by Aircraft Lessor, while on the oilier, pressure is being exerted by the vendors/service providers like General Authority of Civil Aviation (GACA), Saudi Ground Services (SGS) and international fuel suppliers regarding suspension of services. Owing to cash flow crisis, it is becoming difficult to run day-to-day operations of the airline. Hence, an additional guarantee is required to the tune of Rs 8.4 billion for payment to vendors/suppliers, and repair/acquisition of ground support equipment.

The Aviation Division also stated that in order to improve the passenger travel experience, it is intended that in-flight entertainment system (IFE) be repaired for which cash grant to the tune of Rs 485 million is required.

The ECC was given a briefing by the Ministry of Maritime Affairs about location of any new LNG terminals in the country as well as the assessment of requirement for relocation of the existing terminals. Subsequently, the ECC directed the relevant ministries to work out the medium to long term requirement of LNG in the country and present the same to the committee.

The Ministry of Maritime Affairs briefed the meeting about various concessions granted to the Gwadar Port and Gwadar Free Zone. The ECC directed the Board of Investment (BoI), Ministry of Planning, Ministry of Maritime Affairs, Law Division and FBR to review the proposals and revert to the committee.

FARMERS ADVISED TO SCHEDULE IRRIGATION PLANS

RECORDER REPORT | FEB 13TH, 2019 | KARACHI

The Met Office has asked the farmers to schedule irrigation plans for the Rabi crop keeping in view the rainy spell in the country. A rainy weather is expected across the country except Sindh in the next 10 days, so farmers should make irrigation plans for standing crops and should be cleaned from weeds that reduce agriculture output. “Measures may be taken to preserve the crops/nurseries from the damaging impacts of extreme cold conditions,” it added.

In the coming days: Weather in Punjab: Rain thunderstorm with snowfall over the hills is expected at isolated places of Lahore, Sargodha, Gujranwala, Rawalpindi Division and Islamabad. In Khyber Pakhtunkhwa: Rain thunderstorm with snowfall over the hills is expected in Peshawar, Malakand, Mardan, Hazara and Bannu divisions. In Sindh: Mainly cold and dry weather is expected. In Baluchistan: Rainfall is expected at scattered places in Quetta, Zhob and Kalat Divisions. In Gilgit-Baltistan: Rain thunderstorm with snowfall over the hills is expected.

In Kashmir: Rain-thunder storm is expected. In the next 24 hours: A cloudy weather is expected in upper and central parts of the country.

However, scattered rain thunderstorm with snowfall over the hills is likely in Quetta, Zhob, Kalat, Malakand, Hazara, Kohat, Bannu, D I Khan and Rawalpindi divisions, Kashmir and Gilgit-Baltistan, while isolated falls in Lahore, Gujranwala, Sargodha and Faisalabad divisions and Islamabad.

In the last 24 hours: Minimum temperature was recorded in Bagrote as minus 7 degrees Celsius, Skardu and Gupis minus 5 each, Astore and Kalam minus 4 each, Malamjabba and Hunza minus 3 each, and Mirkhani minus 1. Malamjabba received 8 mm of rainfall, Parachinar 5 mm, Kalam 4 mm, Dir and Skardu and Bagrote 3 mm, each. Malamjabba also received 2 inches of snowfall.

“A westerly wave is affecting western parts of the country and likely to persist in upper parts till Friday,” the Met said.

https://fp.brecorder.com/2019/02/20190213446688/

FOOD SAFETY ON THE TABLE AT WORLD CONFERENCE

RECORDER REPORT | FEB 13TH, 2019 | ADDIS ABABA

Food contaminated with bacteria, viruses, parasites and toxic chemicals is a mounting health hazard and a crippling economic burden, a global conference on food safety has been told.

The two-day forum is bringing together government officials and health experts from 125 countries to combat the peril of unsafe food, which kills more than 400,000 people each year, according to UN estimates.

“Today, the world produces enough food for everyone,” Jose Graziano Da Silva, director general of the UN’s Food and Agriculture Organisation (FAO), said at the opening of the conference on Monday.

But much of this food “is not safe”, he added

“We estimate that each year, nearly one person in 10 falls sick after eating contaminated food,” said Kazuaki Miyagishima, who heads the World Health Organization (WHO) food security department.

Of the 600 million people who fall sick from unsafe food, around 420,000 die, according to the UN’s estimate.

Children under five suffer most, comprising 40 percent of those who fall ill.

According to the WHO, contaminated food is to blame more than 200 diseases, ranging from diarrhoea to cancers – and the economic impact is huge but often overlooked.

The FAO estimates the cost for low and middle-income countries to be in the range of $95 billion (83.5 billion euros) per year.

The conference, attended by ministers and deputy ministers from some 20 countries, is expected to issue a call for better coordination and support.

“Food safety is a crucial issue for everyone on earth, but it is here in Africa that the impact of the scourge is felt most,” AU Commission chair Moussa Faki told the conference, adding that a third of those affected come from the continent.

Miyagishima said a multi-pronged approach was needed.

This includes stronger laws, better training and equipment and beefing up health systems to detect potential risks and swap information countries, he said.

The risks are very diverse, ranging from bacteria such as salmonella or listeria, to chemicals such as cancer-causing heavy metals and organic pollutants.

For countries facing drought or famine, the challenge is preventing the population from using water contaminated by cholera, or eating food unsuitable for consumption.

For countries trying to better respect international norms and export certain food products, Miyagishima warned of a “situation where exported food is of a better quality than products destined for the local market”.

WHO chief Tedros Adhanom Ghebreyesus said that “food safety is linked to many sustainable development goals”.

In Europe, Miyagishima said there was a need for faster exchange of information between health authorities, recalling the 2017 contamination of eggs in the Netherlands, which were distributed to numerous countries.

The conference comes at a time of swelling controversy over the use of chemical products in agriculture, including the controversial weed-killer Roundup. The UN in December announced the creation of a World Food Safety Day on June 7.

FARMERS DEMAND BETTER MARGIN, EXPORT MARKETS

By Our Correspondent Published: February 13, 2019

LAHORE: Pakistan's farmer community is urging the government to devise a strategy, which could help them find better margins and export markets of the crops they produce.

They claim that the vested interest groups, sitting at high positions, made policies in a manner that favour some crops or sectors, while leaving others at the mercy of international market prices. As per Pakistan Kissan Ittehad President Khalid Mehmood Khokhar, every government, unfortunately, has given least priority to the agriculture sector and its development.

"Seed Act and Plant Breeder Right Act took almost 12 years to pass through the Parliament, whereas similar acts were enacted 16 years ago in the neighbouring country. This is the root cause of Pakistan not being able to acquire modern seed technology and, eventually, relying on Rs2 billion worth of imported seeds," Khokhar said.

He said the seed companies today are reluctant to invest due to lack of legal protection and theft of their research and development.

According to farmer lobbies, agriculture contributes over 19.5% to the country's gross domestic product (GDP) and earns over 70% in foreign exchange from cotton and other agri-commodities.

It is also a source of livelihood for 48% of our country's labour force. According to Khokhar, over Rs100 billion are paid annually to cotton pickers as picking charges and, similarly, over Rs30 billion are paid to families who harvest sugarcane during the crushing season and much more in rice, wheat and other crops' production and harvest.

Arshad Ghaffar, a Multan-based farmer, said current policies are favouring very few crops. "Favouritism has resulted in development of some crops at much higher rates than international markets," he said.

Published in The Express Tribune, February 13th, 2019.

COTTON PRICE STEADY

The Newspaper's Staff Reporter Updated February 12, 2019

KARACHI: Prices stayed firm amid cautious trading on the cotton market on Monday following reports that the IMF is going to lend $6 billion to Pakistan.

A fresh wave of rupee depreciation against the dollar is being anticipated along with imposition of some new taxes.

Sluggish performance of the cotton yarn market also kept spinners away from the trading ring.

Unsold stocks lying with ginners are reported to be around 1.2 to 1.3 million bales while phutti (seed cotton) arrival has almost came to a standstill.

According to market estimates, there is a daily requirement of around 15,000 to 20,000 bales. However, many leading textile spinners are now focusing on imports to meet their demand.

The world leading cotton markets gave a mixed trend. Indian cotton prices were generally steady. The Chinese cotton market would open today after spending a new Lunar year long holidays from February 4 to 10.

The Karachi Cotton Association (KCA) spot rates were firm at weekend level at Rs8,600 per maund.

The following deals were reported to have changed hands on ready counter: 1,400 bales, station Hasilpur, at Rs8,000; 736 bales, Faqirwali, at Rs7,900; 200 bales, Kahror Pakka, at Rs8,100; and 400 bales, Pir Mehal, at Rs7,400.

GORANO POND BENEFICIAL FOR REARING FARM FISH: IUCN

RECORDER REPORT | FEB 12TH, 2019 | KARACHI

The Gorano pond is a unique newly created wetland as it has attracted birds and also proved beneficial for rearing various kinds of farm fish in addition to providing ecotourism opportunities in the area, observes International Union for Conservation of Nature (IUCN).

The Field Survey of Gorano Pond, located near Engro Energy's Thar coal mining area, was conducted by IUCN, which is considered a global authority on the status different ecosystems and the measures needed to safeguard them. The report prepared by the ecological watchdog reviews flora and fauna of Gorano reservoir that has started rejuvenating habitat amid largely lifeless sandy desert.

Prof Z B Mirza, author of the report, shares findings of field visit to newly formed water pond close to village Gorano. The report also suggests further ecological uplifting of this artificially created wetland to attract more water birds, particularly the wintering migratory waterfowl.

Gorano water pond was artificially created with the construction of two earth bunds on 1500 acres of interdunal land on both sides after pumping of subsoil water from the Thar Block II coal mine into the pond in April 2017. The water was confined between two parallel sand dune ranges, by creating earth bunds on both sides.

Later in the year 2017, various kinds of farm fish were introduced in the pond by Sindh Engro Coal Mining Company (SECMC) – a flagship mining company of Engro Energy – which has started giving yield. The fish species were also certified as fit for human consumption by independent, competent laboratories.

The availability of small fish has also attracted several beautiful fish-eating birds like Little Grebes, Cormorants, Pelicans and White-breasted Kingfishers to the pond. The presence of these birds has been physically witnessed at Gorano Reservoir.

This area has also great potential for ecotourism, through which funds can be generated for the maintenance of the area and for the local community welfare. Ecotourism is suited to this area as such activity involves visit to such area without spoiling its ecological setup. The IUCN suggested that crowd tourism should be discouraged and limited eco-tourism should be introduced.

There are persons who would like to visit the real Thar Desert and the newly created desert wetland ecosystem with its flora and fauna. The funds generated from ecotourism will be available for the benefit of the local communities as well as for the maintenance of the area.

The IUCN in its report also recommends measures for further enriching biodiversity of the Gorano Pond. It suggests bringing bottom mud and other living creatures of a roadside similar wetland situated near Thatta to Gorano Pond. This step is likely to be successful to enrichment of the aquatic biodiversity of the newly created pond, observes the IUCN.

According to SECMC, with a vision of developing Gorano Reservoir, the company plans to develop this area for generating healthy activities for locals as well visitors. Rising of fish on a large scale in Gorano Reservoir, for instance, is aimed at providing livelihood opportunities for local Thari people whilst also focusing on the aspect of community nutrition. The successful fish farming of various species with 60 percent average breeding ratio.

In addition to taking steps for enriching wildlife at Gorano pond, the company has also taken measures for promoting eco-cultural tourism at Gorano. A MoU has been signed in this connection with Hashoo Foundation to develop Gorano and Thar as an eco-cultural tourism spot for developing this area as part of company's vision of sustainable towns and communities. Hence, SECMC is optimistic about transforming newly created desert wetland into a vibrant addition in the ecosystem having flourishing flora and fauna.

DRIP IRRIGATION HAS MASSIVE POTENTIAL TO SAVE WATER

By Press Release Published: February 12, 2019

LAHORE: Nestlé Waters Senior Vice President and Head of Technical Peter Hagmann inaugurated a site near Sheikhupura under "Nestlé Pakistan's Agricultural Efficiency Project". The project has the potential to help save 54 million litres of water annually. It is part of the company's "Caring for Water" initiative which undertakes a collective approach to help address the water issue. The water saving will be made possible by the installation of a drip irrigation system as opposed to flood irrigation, which is the traditional way of irrigating fields in Pakistan. All over the world, around 70% of water is used in the agriculture sector. In Pakistan, the percentage stands at 90% with 50% wastage due to poor irrigation methods. In order to save water in agriculture and improve productivity, Nestlé Pakistan has fostered partnerships with the government and farmers to promote drip irrigation.

Published in The Express Tribune, February 12th, 2019.

CORPORATE FARMING HAS LITTLE CHARM FOR MOST FARMERS

Mohammad Hussain Khan Updated February 11, 2019

For Sarfaraz Ali Junejo, a progressive sugar cane grower based in Mirpurkhas, corporate farming is an entirely different ball game. He believes it is unviable for small and medium-sized farmers under the existing conventional farm practices and limited finances.

Mr Junejo is applying modern methods and has adopted good agricultural practices in corporate farming. After reducing the area under sugar cane cultivation to just 50 acres, he has started cultivating Rhodes grass — an exportable commodity to Arab states.

Corporate farming entails huge investment, expertise, qualified human resource, heavy machinery and mechanised farm practices.

The model entails huge investment, expertise, qualified human resource, heavy machinery and mechanised farm practices

Influential politician Jahangir Khan Tareen is growing sugar cane in line with the corporate farming model. Another famous political family, the Mahars of Ghotki, also owns a sugar factory and big landholdings where it cultivates sugar cane along modern lines.

However, the trend is not that widespread among farmers as 90 per cent of them are either small or medium-sized landholders. They can't benefit from corporate farming, thanks to their limited finances and expertise.

Some growers have handed over their land to the big landowners like Mr Junejo for corporate farming under different agreements. The Tareen family, which owns a few sugar mills in the upper parts of Sindh, is said to be cultivating sugar cane on 30,000 acres in Sindh's Ghotki and Punjab's Rahim Yar Khan districts.

The family has obtained land from landholders like Asad Khuhro, brother of a provincial leader of the PPP, Mir Abid Sundhrani and Ejaz Bughio on long-term contracts for this purpose.

Seasoned politician Ali Nawaz Shah was perhaps the first one to enter into a partnership with the Arabs several years back to cultivate Rhodes grass, which is used as animal feed.

"In view of limited finances, small farmers can't opt for this model of (corporate) agriculture," says Mr Khuhro from Larkana. He believes small and medium-sized growers can hardly afford machinery like a sugar cane harvester that costs them around Rs25 million. A cumbersome financing system discourages farmers from seeking bank loans even for the conventional model of agriculture.

Mr Junejo is all set to grow Rhodes grass on 1,000 acres now after obtaining additional land on a lease. He has hired a full-time, qualified manager with a master's degree in agriculture. In addition, there are labourers, including tractor drivers, from Punjab at work.

All of them are salaried and trained human resources. A manger under corporate farming is supposed to supervise every process from sowing to harvesting, assess market conditions and manage fertiliser application and watering etc.

"The tradition of share-cropping based agriculture takes a back seat in corporate farming. Technical staff handles all issues of major and minor nature," he says.

Land for hay grass production was obtained for an annual payment of Rs16,000-20,000 per acre in the lower parts of Sindh. Hay grass was a short-duration crop with its first harvest taking place within two months of sowing and subsequently after every 30 days. The crop sometimes faced issues like moisture content and quality that would affect its competitiveness in the international market.

In Mr Junejo's case, he manages a large landholding with 50 labourers who do all the work from sowing to harvest. In the traditional model where the landowner and the hari work together on a fifty-fifty basis, he would need around 100 haris along with their family members to manage 400 acres. But the manual labour has now been replaced with the lifter, baler, spreader, tractor and liner.

"The margin of profit in corporate farming is higher, although it can be less profitable in some years," he says. He believes the federal government must relax import conditions for heavy-duty tractors in view of foreign exchange earnings from Rhodes grass exports. The law bars the import of a tractor that is more than five years old. The lifting of the ban will help promote corporate agriculture, he says.

According to Mazhar Hussain, a corporate farm manager who served in Sudan until recently and now manages Hameed Dero Farms in Mirpurkhas, modernised farming has rich potential for increased profitability. "In the sugar cane crop, huge trolleys and mechanised harvesters harvest sugar cane on hundreds of acres in a day," he says.

Hameed Dero has also obtained lands of other landowners like Mir Atiqullah Talpur. Mr Talpur believes it is an opportunity for him to learn about mechanised farming.

Mr Hussain says diversifying into agriculture-dependent businesses such as milk production and livestock farming pays dividends to farm owners. If one crop doesn't perform well then the landowner has the option to offset losses in other businesses, he says.

Major crops like wheat, cotton and rice continue to be managed under the conventional model of farming. Even progressive growers have not invested much in terms of machinery or equipment, except better inputs.

According to Sindh Abadgar Board Vice President Mahmood Nawaz Shah, these crops see only a selective use of machinery. The use of heavy machinery has a limited scope considering the dynamics of small- and medium-scale farming, he added.

FOR SOME CROPS, RAIN SPELLS PROVIDE RELIEF

Ahmad Fraz Khan Updated February 11, 2019

FOR the shortage-stricken agriculture sector the third rain spell in the first 37 days of the New Year has come as a huge relief. According to the meteorological department officials, another substantial spell will visit Pakistan this week and February will have above normal rain and snowfall.

Riding these spells, the Indus River System Authority (Irsa) on Jan 29 revised water shortage downwards from the previously calculated 38 per cent to the current 33pc. The percentage maybe revised further down in days to come, depending on the next rain spells and improvement in river flows.

The five per cent drop in shortage, in quantified terms, means an additional availability of 1.7 million acre feet of water in the system.

The Irsa system now has additional 1.7maf water from the system. With more to come in the rest of February, savings are bound to go up

These rain spells have already benefitted the system in three ways: additional water, decrease in demand and extension in canal closure resulting in further savings.

The Irsa system now has additional 1.7maf water from the system already arrived and exhausted; with more to come in the rest of February, savings are bound to go up.

River flows became healthy as well: total river flows last Thursday were 49,000 cusecs against 35,000 cusecs on the corresponding day last year. Due to the additional availability, the storage position improved to 1.8maf — the same as it was on the corresponding day last year.

At one point, in the beginning of the year, the gap between current and the previous year's position was of 2maf, which now stands closed as a result of these spells.

Due to these happy signs, the Irsa thinks it may be able to substantially reduce early Kharif shortages, which historically run in the 40s.

Sindh will be particular beneficiary of early Kharif water.

Owing to the rains the provinces have been able to bring their water demand down: for example, Punjab had planned to run its canals at 21,000 cusecs on Feb 7, but the total demand it received for the day was 18,000 cusecs.

As far as extended canal closure is concerned, Punjab, which used to open its canals after Dec 25, now plans to start them on Feb 12. Currently, only 20pc of its irrigation system is running.

Wheat and gram crops are expected to be major beneficiaries. However potato and maize may potentially face some kind of trouble if rains turn torrential and their period extends beyond the current forecast.

For wheat, the current rains have been a boon. With water shortages running at around 40pc farmers were forced to supplement water through expensive tube well pumping, where subsoil water is sweet, and miss it where underground aquifer is brackish.

The other deficit was a shortage of application of Di-Ammonia Phosphate (DAP) due to price factor — its price has gone up by almost Rs1,400 per bag in the last two months. Rain water could meet both these critical requirements.

Gram is the next biggest crop that is totally dependent on rains owing to it being a barani (rain-fed) area crop.

Its statistics underline the importance of the crop: as far as acreage is concerned, gram is the fifth largest crop after wheat (22m acres), cotton (eight million acres), rice (six million acres) and maize (three million acres).

It is sown on 2.7m acres and constitutes 60pc of the cereal import bill. Experts think that rain is as critical for gram as it is for wheat at this stage. If wheat can take care of food security, gram can help reduce the import bill as well as provide the poor with a cheap source of protein.

The two crops, which may possibly face some kind of risk due to the rains, are maize (for sowing) and potato (for harvesting). Farmers are preparing for maize sowing but persistent rains have deterred the effort.

If, as predicted, it rains next week as well, the farmers would be forced to delay maize sowing, especially in Punjab, where the crop covers over 1.8m acres. Though its sowing can be delayed into March, doing so will reflect in the yield. Maize farmers are thus keeping their fingers crossed.

In trouble is the potato crop, which is still 60pc underground and needs to be dug now. If next week's rains cause water to remain standing in the field, it would block aeration and could damage the yield. Farmers are now de-capping the crop to keep it underground.

WHY WE SHOULD INVEST IN AGRICULTURE

Iftikhar Talpur Updated February 11, 2019

Agriculture is the mainstay of Pakistan's economy. It contributes 18.9 per cent to the GDP and employs 42.3pc of the labour force. The rural economy heavily depends on this sector.

The sub-sectors of agriculture, which include minor crops, livestock, fisheries and forestry, have the potential to increase farmers' earnings by ensuring the export of surplus stocks to neighbouring markets.

The demand for food in the international market is also increasing. This means farmers have an opportunity to make the economy vibrant by seizing international markets.

The world's population is 7.7 billion. It is expected to be more than 9bn by 2050. From 207 million, Pakistan's population is expected to increase to around 300m by 2050. In addition, the growing trend of urbanisation will continue at an accelerated pace, soon reaching 70pc of the world's population.

As per the 1981 census, 28pc of Pakistan's population was urban. But its share soared to almost 37pc in 2017. For the last couple of decades, Sindh has been one of the most urbanised provinces of Pakistan. Its urban population was 52pc as per the last census while those of Punjab, Khyber Pakhtunkhwa and Balochistan were 37pc, 19pc and 28pc, respectively.

If the pace of urbanisation remains constant, the food producer will turn into the food consumer, causing a huge decline in agricultural production and an increase in the country's dependency on imported food.

Data shows Pakistan's food imports are rising. In 2012-13, food exports were $4.76bn while food imports amounted to $4.19bn. This meant a food trade balance of $570m. But in 2016-17, food exports were $3.71bn against food imports of $6.14bn. In July-December 2018, foreign sales of food items declined to $1.93bn as opposed to the food imports of $3.24bn.

Unfortunately, many educated people believe that agriculture is old-fashioned. What they fail to understand is that agriculture-related businesses have a greater trickle-down effect and create more employment opportunities

Major imported food items are palm oil, soybean oil, tea, powdered milk, spices, dried fruits, soft drinks, flavoured water, juices, chocolate, biscuits and cheese. Pakistan now imports many food items that it once used to export, such as beef, mutton, chicken and eggs. In addition, Pakistan imports fruits and vegetables. These imported items are worth hundreds of millions of dollars every year.

It is tragic that local farmers are burning their crops because of low market rates.

Despite an abundance of agricultural and natural resources, the country is not meeting the demand for food items. This is intensifying food security challenges.

The demand for food is expected to rise in the international market. For instance, in 2016-17, 2.68bn tonnes of grain were produced worldwide. By 2050, additional 1.5bn tonnes will be required to feed the world's growing population. Simultaneously, meat production will increase from 200m tonnes to 500m tonnes.

Unfortunately, many educated young people believe that agriculture is an old-fashioned business. What they fail to understand is that agriculture-related businesses have a greater trickle-down effect and create more employment opportunities. Young people should invest their energies, knowledge and skills to achieve higher productivity in agriculture.

No well-rounded agriculture policy was devised in the last 72 years. Only short-term measures were taken without any regard for their long-term effect.

Successive governments promised agriculture reforms, but did not take any concrete action to improve the sector's performance.

Farmer organisations and alliances, which are expected to voice the concerns of growers, have been unable to do so. They are affiliated with the ruling political elites and protect the interests of a few individuals rather than the sector as a whole.

The market for cash crops is limited due to the absence of small industrial units. The government should encourage small industrial units to boost the rural agrarian economy.

PM'S PROGRAMME BOOST FOR PINDI'S POULTRY MARKET

By Imran Asghar Published: February 11, 2019

RAWALPINDI: Even though initial suggestions from Prime Minister Imran Khan last year had been met with bursts of dismissive laughter, the proposal of providing chickens and eggs to the poor to start their own poultry business has resulted in a boost for one market in Rawalpindi.

Three months on from that suggestion, which was made during a speech by Imran on his Pakistan Tehreek-e-Insaf (PTI)-led government's 100-day progress while citing the idea initially sprouted by Microsoft founder Bill Gates, the Dengi Khoyi market in Rawalpindi has seen the number of customers and sellers increase.

The traditional chicken market is quite old and attracts people from far and wide, including from Gujranwala, Rahim Yar Khan, Mianwali, Khushabad, Mian Chunno and other parts of Punjab.

They seek to bid on different species of hens and roosters and egg consignments. The different types of chicken available include 'Desi' — homegrown, Shaver, Aseel, starter and broiler.

The market is quite impromptu in nature and features a number of sellers who arrive at the market on their motorbikes with carts in tow while others put up small, temporary stalls.

Dilpazir Khan, a chicken trader at the market, said that before PM Imran's announcement last year, people tended to avoid the market.

But now, all sorts of people of varying ages have started to show up at the market.

It was now a common sight, he said, to see people purchase high-quality cockerels and roosters from the market and then even sell them in the very market at a profit.

"The chicken market has transformed itself into a profitable earning opportunity," he said.

The market, set up in a narrow lane, sees peak rush after Friday prayers.

"There is hardly any space left to walk even," Dilpazir says.

Tanvir Butt, who was visiting the market in hopes of procuring a cockerel of the Aseel breed.

Asked why he was visiting this particular market, Butt said that good species of cockerels are sold at the market at reasonable prices.

"A cockerel, which is normally sold for Rs10,000-Rs12,000, is sold at the Dingi Khoyi market for a mere Rs4,000-Rs6,000," he said, adding that chickens are sold at the market without weighing them, rather the price of any species depends on how beautiful it looks.

Sher Niazi, who brought his cockerels from Mianwali to sell in the market, explained that while he could have sold his poultry in his hometown, but the market in Rawalpindi offers a better profit rate.

He further said that working in the chicken market was extremely profitable.

"Some people start their business with as low as Rs2,000 and tend to earn a profit of Rs2,000 to Rs10,000 by the evening," Niazi said, adding that ever since PM Imran's announcement regarding the poultry business, the demand for chickens has increased exponentially.

"Even those who previously looked down upon the business are joining the trade," he stated.

Muhammad Azhar, who was looking for cockerels of Mianwali-origin, said that market has been witnessing an extraordinary rush since the day Prime Minister Imran highlighted the importance of breeding chicken to stave off poverty.

"The market also offers a variety of chickens which can be grown at home," he said.

Even though the market has been seeing an increase in the number of visitors, it is facing an acute dearth of basic facilities such as sufficient space for sitting apart from the provision of drinking water.

Niazi suggested that the market should be rebuilt so that more citizens can get an opportunity to do business.

PRICES OF COTTON REMAIN STABLE

NASEEM USMAN | FEB 11TH, 2019 | KARACHI

The prices of cotton remained stable. Trading volumes are decreasing because textile mills are not taking interest. One of the main reasons behind the slowdown is the ongoing China-US dispute. The rates of cotton are not increasing despite low production of this commodity in Pakistan and India.

Due to the cautious buying of textile and spinning mills in the cotton market last week the prices of cotton remained largely stable but the business volume remained relatively low. The production of cotton this year is 8 % lower than the last year. Textile mills are not taking interest in buying. The big textile groups have signed agreements on the import of cotton. According to some reports, textile mills have signed agreements on the import of three million bales of cotton from abroad.

The reason behind low trading volume is that the government has abolished sales tax and import duty on the import of cotton during February 1, to June 30 and mills and importers are paying for the delivery of cotton from abroad.

The prices of cotton in the Punjab and Sindh remained Rs7000 per maund to Rs 8800 per maund while Seed cotton (Kapas/Phutti) is available in small quantity from Rs 3000 to Rs 3500 per 40 Kgs in both Sindh and Punjab. Cotton in Balochistan is available at the rate of Rs 8000 to 8100 per maund while the rate of seed cotton was from Rs 3000 to 3500.

The Karachi Cotton Association (KAC) spot rate committee decreased the rate by Rs 100 per maund and closed it at Rs 8600 per maund. The Karachi Cotton Brokers Forum said that there are chances of minimizing the economic conflict between the China and USA. According to experts, there are chances of improvement in the China- USA economic ties in coming days. The China-US trade conflict is disturbing the economy of the world.

There is uncertainty in the international market. The price of New York cotton is linked with dollar. Due to fluctuations in the rates of dollar the price of New York cotton is fluctuating however for the last few days the rate of cotton is 72 to 73 American cent per maund. On the other hand, due to Chinese Lunar Festival holidays there is a slowdown in economic activities while a bearish trend was also seen in Indian cotton market.

The slowdown in international cotton and textile sector also affected the local textile sector. Few days back buyers started taking interest in cotton and textile sector but trade volume is low due to the Chinese Lunar Festival holidays. Cotton production in India has declined as compared to last year. The estimated cotton production in India was 380 million bales but due to the weather conditions the Cotton Association of India (CAI) revised the target from 380 million bales to 365 million bales reducing the target by 1.5 million bales.

The CAI has again reduced the estimate by 3.5 million bales and the new estimated target of cotton bales production is 330 million bales. The Indian textile industry is also witnessing economic slowdown like Pakistani textile industry as the demand and prices of products are showing a downward trend.

According to the estimates of weekly report released by United States Department of Agriculture the sale of American Cotton dropped by 39 percent but interestingly Pakistan is the biggest importer of American cotton.

Pakistan has signed agreements for the import of 52, 800 cotton bales. The government is giving incentives to textile industry; on the other hand, the representatives of textile industry are complaining of large import of cotton, cotton yarn, textile fabrics and comber through Duty and Tax Remission For Export (DTRE) from China and India which is affecting our industry and demanded that government should stop their import.

NEWS COVERAGE PERIOD FROM FEBRUARY 4th TO FEBRUARY 10th 2019

WORLD DAY TO ENHANCE AWARENESS OF BENEFITS OF EATING PULSES

Amin Ahmed February 10, 2019

ISLAMABAD: With a rapid increase in global food needs on the horizon, the role of pulses has become even more significant particularly with regard to dietary protein and micronutrients.

To enhance awareness of the nutrient benefits of eating pulses, the first observance of 'World Pulses Day' will take place on Sunday as proclaimed by the United Nations (UN) last month.

Pulses are more than just nutritious seeds. They contribute to sustainable food systems and a 'zero-hunger' world, according to the Food and Agriculture Organisation (FAO).

Supply of meat is not keeping pace with population growth and therefore production of pulses is required, report says

Consumption of protein is essential to maintain the health and vigour of people and pulses are the most important source of protein in Pakistan. The supply of meat is not keeping pace with the population growth and therefore the production of pulses is required, according to a report on the 'Status of pulses in Pakistan' which was presented to an international forum recently.

The production of pulses in Pakistan is stagnant and disturbing the nutritional balance of the population, especially of poor and weaker sections of society which cannot afford other expensive sources of proteins.

The major supply of food legumes depend on the production of chickpeas and mung beans. Failure of these crops results in a pulse debacle in the country. One of the main reasons for stagnation in production of pulses is inadequate investment resulting in non-adoption of the full package of improved production technology by farmers.

The report said mash was the least researched crop among pulses despite its high nutritive and economic value and as a result its area and production decreased continuously.

A working paper issued by the Ministry of National Food Security and Research says that the target for mash crop production could not be achieved during the 2018-19 season. Mash is one of the important kharif pulses in Pakistan and Punjab is the major contributor to its production.

The target for areas under mash was fixed at 21.9 thousand hectares and production estimated at 11.3 thousand tons and yield at 515kg per hectare. The target could not be achieved and the decrease was attributed to unavailability of high yielding varieties, lack of weeds control and mechanisation.

Mung is another important kharif pulses crop and grown on a large scale after chickpea. In the 2018-19 season, countrywide crop production was good and due to favouable weather conditions, the production target of 120.60 thousand tons was achieved.

Gram is the largest rabi pulse crop, accounting for 71.4 per cent of the total production of pulses in the country and it occupies about 81.6pc of the major pulse cropped area.

In 2018-19, gram was grown on 935.5 thousand hectares with a total production of 357.8 thousand tons.

Punjab produces more than 80pc of overall production. Gram is grown mainly in Thal area and contributes about 80pc of overall production in the country.

The import of pulses has increased tremendously and in 2017-18 fiscal year the import was 898 thousand tons worth Rs62 billion. In 2018-19, import of pulses exceeded 433 thousand tons with Rs39 billion in the first half of the year.

The ministry paper suggests that pulses production, especially gram and lentil, can be increased in Pakistan by provision of good quality, high-yielding certified varieties of seed to the farmers through a subsidised programme at national level.

AGRI CREDIT FALLS SHORT OF TARGET, GROWS OVER LAST YEAR

The Newspaper's Staff Reporter Updated February 10, 2019

KARACHI: The banks' disbursement for agricultural credit during the first half of this fiscal year remained below the target but surpassed the 1HFY18 level, said the State Bank of Pakistan (SBP) on Saturday.

In the first half of 2018-19, banks disbursed Rs527.3 billion, which is 42.2 per cent of the total target for FY19 and 22pc higher than the disbursement made during same period last year.

While presiding a review meeting of Agriculture Credit Advisory, SBP Governor Tariq Bajwa asked banks to enhance their efforts in order to reach the annual credit target. "I would urge the stakeholders including banks, federal and provincial governments to harness technology platforms for enhancing agriculture," said Bajwa on Saturday.

The outstanding portfolio of agriculture credit also increased to Rs521bn by end of December 2018, up 17.9pc, from Rs442bn last year. Meanwhile, the number of outstanding borrowers also rose to 3.9 million by end of 2018, from 3.46m last year, representing a growth of 12.8pc.

Bajwa also appreciated the efforts of microfinance banks and institutions in providing funding to small and marginalised farmers.

The governor pointed out that despite witnessing reasonable progress during FY19, the industry still faces various demand and supply-side challenges.

In particular, he highlighted the geographical disparities in provision of agriculture credit as the disbursements to KP, Balochistan and Gilgit Baltistan still remain far from their respective targets.

Likewise, banks were advised to pay special focus to production loans for small farmers. Bajwa also emphasised that banks should enhance their outreach in terms of agricultural infrastructure by hiring agricultural credit officers.

He appreciated the efforts of Islamic banks in achieving 80pc growth in disbursement during the July-Dec 2018, compared to same period last year. However, they still account 3pc of the total agricultural credit disbursement.

The governor urged banks to adopt a more focused approach especially towards the underserved areas for achieving Rs1,250bn agri credit target for FY19, while bringing a qualitative shift in agri financing.

Bajwa also asked Islamic banks and Islamic windows of commercial banks to play an active role in expanding outreach in potential areas, particularly to faith-sensitive farming community.

AGRI-CREDIT INCREASES 22PC TO RS527BLN IN JULY-DECEMBER

Our Correspondent February 10, 2019

KARACHI: Banks disbursed Rs527.3 billion in agriculture credit during the first half of 2018/19, which was 42.2 percent of the annual assigned target, and 22 percent higher than the disbursement made during the same period last year, the central bank governor said.

Governor Tariq Bajwa of the State Bank of Pakistan (SBP), however, advised banks to enhance their outreach to underserved areas and small farmers to achieve agriculture credit target of Rs1.25 trillion for the current fiscal year.

Bajwa said there are geographical disparities in provision of agriculture credit as the disbursements in Khyber Pakhtunkhwa, Balochistan and Gilgit Baltistan still remain far from their respective targets. "Despite witnessing reasonable progress during FY2019, the industry still faces various demand and supply side challenges," Bajwa said, presiding the mid-term review meeting of Agricultural Credit Advisory Committee (ACAC) in Hyderabad.

It was the first ACAC's meeting in Hyderabad, a statement said on Saturday. SBP governor appreciated the efforts of banks in promoting agricultural finance during the July-December period. He commended the efforts of microfinance banks and institutions in providing financing to small and marginalised farmers.

The outstanding portfolio of agriculture credit also increased to Rs521 billion by December-end from Rs442 billion last year, witnessing a growth of 17.9 percent. Moreover, the number of outstanding borrowers also increased to 3.90 million from 3.46 million, with a growth of 12.8 percent.

Banks were advised to pay special focus on production loans to small farmers. They were asked to enhance their outreach in terms of agricultural infrastructure by hiring agriculture credit officers. Banks were urged to adopt a more focused approach especially towards the underserved areas to achieve Rs1.250 trillion agriculture credit target for FY2019, while bringing a qualitative shift in agriculture financing. Bajwa said harnessing technology platforms is the way forward for enhancing agricultural productivity. "I would urge the stakeholders including banks, federal and provincial governments to harness technology platforms for enhancing agricultural productivity." SBP governor also highlighted the efforts of Islamic banks in achieving a growth of 80 percent in disbursement during July-December. "However, their share in total disbursement still remains less than three percent in overall agriculture credit." Bajwa urged Islamic banks and Islamic windows of banks to play an active role in expanding outreach in potential areas particularly to faith sensitive farming community.

Agriculture professionals and representatives of banks also called for various innovative initiatives in agriculture financing including adoption of land record management information system for agriculture financing in Punjab, promotion of high-value crops, development of e-platform for provision of quality agriculture inputs, and women empowerment through value chain financing for livestock/dairy in Gilgit Baltistan.

GOVT ISSUES WHEAT SOWING ADVISORY

The Newspaper's Staff Reporter November 02, 2018

LAHORE: The agriculture department has directed rain-fed area farmers to complete wheat sowing by Nov 15 for getting maximum yield.

A spokesperson for the department said on Thursday that wheat growers should use approved seed of the crop that include NARC-2009, Horse-2009, Dharabi-2011, Pakistan-2013, Fateh Jang-2016, Ehsan-2016, Barani-2017 and Chakwal-50, and complete the sowing by Nov 15 so that they reap a bumper crop.

Growers have also been recommended to use 40-50 kg seed per acre so that seed germination does not go below 85 percent. They have also been advised to consult local agriculture extension staff for fungicides and plowing of fields to eliminate weeds before sowing and adopting drill-sowing method.

The spokesperson says that the growers from low rainfall districts like Khushab, Mianwali, Bhakkar, Layyah, Muzaffargarh, Dera Ghazi Khan and Rajanpur, should use one bag of DAP, three-fourth bag of urea, and 1.2 bag of SoP or two bags of nitrophos before broadcasting the seed, while those from Chakwal, Attock, Rawalpindi, Jhelum, Gujrat, and Narowal should use two bags of DAP, 1-1/4 bags of urea, and a half bag of SoP before broadcasting the seed.

SBP GOVERNOR STRESSES HARNESSING TECHNOLOGY TO BOOST AGRICULTURE

By Our Correspondent Published: February 10, 2019

KARACHI: State Bank of Pakistan (SBP) Governor Tariq Bajwa has urged all the stakeholders, including banks and federal and provincial governments, to harness technology platforms in a bid enhance agricultural productivity.

He said this while presiding over the mid-term review meeting of Agricultural Credit Advisory Committee (ACAC) held in Hyderabad.

“Organising regular ACAC meetings at various locations displays our commitment towards promoting agricultural financing in all regions, especially the underserved areas,” reaffirmed the governor in his inaugural remarks. “While previous meetings were held in Balochistan and Azad Jammu and Kashmir, we are convening it for the first time in Hyderabad to provide impetus for agricultural financing in the region.”

While reviewing the progress on agricultural credit during July-December 2018, the governor appreciated the efforts of banks in promoting agricultural financing.

He shared that during the first half of FY19, banks disbursed Rs527.3 billion, which was 42.2% of total target assigned for FY19. This figure was 22% higher than the credit disbursed during the same period of the last fiscal year.

The outstanding portfolio of agriculture credit further widened to Rs521 billion at the end of December 2018 from Rs442 billion last year, a growth of 17.9%.

Moreover, the number of outstanding borrowers also rose to 3.9 million at the end of December 2018 from 3.46 million last year, with a growth of 12.8%.

The chair further acknowledged the efforts of microfinance banks and institutions in providing financing to small and marginalised farmers.

“Despite witnessing reasonable progress during FY19, the industry still faces various demand and supply side challenges,” Bajwa pointed out.

In particular, he highlighted the geographical disparities in provision of agriculture credit as the disbursements in Khyber-Paktunkhwa, Balochistan and Gilgit-Baltistan remained far from their respective targets.

Advising the banks to focus specifically on production loans for small farmers, he emphasised enhancing their outreach in terms of agricultural infrastructure by hiring agriculture credit officers.

Moreover, the governor highlighted the efforts of Islamic banks in achieving an 80% growth in disbursement during July-December 2018 compared to the same period of preceding year.

“However, their share in total disbursement still amounts to less than 3% in overall agriculture credit,” he shared.

Bajwa was of the view that banks should adopt a highly focused approach especially towards the underserved areas to achieve the Rs1,250 billion agriculture credit target for FY19 while bringing a qualitative shift in agriculture financing.

He also urged Islamic banks and Islamic windows of commercial banks to play an active role in expanding outreach in potential areas particularly to faith sensitive farming community.

The remarks of the governor were followed by a detailed presentation wherein the performance of banks on agriculture financing during the first half of FY 2018-19 was reviewed against their targets and potential areas of concerns were also highlighted.

FRUIT EXPORTERS FETCH $15M ORDERS AT BERLIN FAIR

The Newspaper’s Staff Reporter February 09, 2019

KARACHI: Pakistani exporters of fruits and vegetables have received export orders worth $15 million from foreign buyers during the Fruit Logistica 2019.

Patron in Chief of All Pakistan Fruit and Vegetable Exporters, Importers and Merchants Association (PFVA), Waheed Ahmed, in a statement, claimed that Pakistani

kinno, dates, value-added products of dates, fresh vegetables, mango and guava pulp and apple concentrate got overwhelming attention from the visitors.

Mr Ahmed said that Pakistan stands a bright chance to explore new international markets through this fair while the existing available markets would get further consolidated, adding that buyers from the UK, Italy, Germany, Russia, the UAE, China, Japan , Saudi Arabia, Belgium, Mauritius, Finland, African countries and other countries had expressed great interest in agri-produces of Pakistan.

‘HUNDREDS OF THOUSANDS’ OF CATTLE FEARED DEAD AFTER AUSTRALIA FLOODS

AFP Updated February 09, 2019

TOWNSVILLE: Hundreds of thousands of cattle weakened from a severe drought are feared to have died in record-breaking floods in northeastern Australia, authorities said on Friday, as they stepped up efforts to feed surviving livestock.

Incessant rains over an almost two-week period have flooded swathes of Queensland state, with the full scale of the devastation on drought-hit cattle stations becoming clearer as floodwaters recede. “We are expecting hundreds of thousands in terms of stock losses,” Prime Minister Scott Morrison told reporters in Sydney.

“This will be heartbreaking to these communities that have been experiencing years of drought, only to see that turn into a torrential inundation which threatens now their very livelihoods in the complete other direction.” Queensland Premier Annastacia Palaszczuk spoke of seeing a “sea of dead cattle” when she toured one region on Thursday.

“To see the cattle spread across these yards, not moving, it made you feel sick in the stomach,” she told national broadcaster ABC.

Bales of hay and fuel have been transported into towns near the disaster zones and are being distributed to farmers so they can carry out airdrops to their stock.

Farmer Rachael Anderson and her husband, who manage Eddington cattle station near Julia Creek township, said 800 of their 1500 cattle were still unaccounted for.

“The cattle didn’t have anywhere else to go… We’ve got a railway line close to us and the whole railway line is just tangled with dead cattle,” Anderson said.

“If the floodwater wasn’t enough to kill them, then those that got to higher areas were exposed to elements that were not conducive like rain hitting them at 60 kilometres an hour. They can’t survive them long term.” Anderson — who had been hand-feeding cattle over the past few months amid the crippling drought — said there were also many dead kangaroos as well as birds that were falling dead on the ground.

About half of Australia’s 25-million strong cattle herd is bred in Queensland state, and graziers say the floods — described as a once-a-century event — could devastate their industry.

FOOT-AND-MOUTH DISEASE OUTBREAKS HIT CITY’S DAIRY FARMS

Faiza Ilyas February 09, 2019

KARACHI: Foot-and-mouth disease has hit more than 100 dairy farms in the city, most of which are located in Bhains Colony and along the Superhighway, sources told Dawn on Friday.

Most infected animals severely weakened by the disease, they said, were being sold for slaughtering purposes by farmers to avoid losses.

The World Organisation for Health Animal, however, suggests humane destruction of all infected, recovered and FMD-susceptible contact animals and their safe disposal.

"We have recorded FMD outbreaks at 150 dairy farms in Karachi over the past three months. These farms were located in Bhains Colony and along the Superhighway," Dr Nasrullah Panhwar, National Field Officer of Food and Agriculture Organisation (FAO) for Control of FMD, confirmed the report.

Explaining further, he said even if one FMD case was detected, it was considered as an outbreak since it spread very quickly.

Responding to a question, he said that while FMD was a severe, highly contagious disease and had very serious implications for animal farming, virus transmission to humans through infected animals and their derivative products was rare.

According to him, FMD outbreaks strike city's dairy farms especially those located in Bhains Colony, an area considered a reservoir of foot-and-mouth disease, every winter. But, their intensity has been successfully reduced over the years through a FAO project.

"It wasn't so serious last year, though there were cases. The FAO project carried out from 2001 till 2017 helped us a lot in containing it," he explained, adding that the FAO project had now been renewed with limited funds from the Japanese government.

On project's operation, he said it had support from the Sindh government livestock department and farmers were provided with free vaccination service for 100 animals. The rest had to be taken care of by them.

"They need to ensure that animals receive a booster dose after a month followed by a dose after every six month," he said, adding that non-compliance with vaccination regime would make animals vulnerable to disease.

According to Dr Panhwar, treatment for FMD is available in the local market which costs around Rs10,000. Once treated, the animal is able to produce milk.

Animals suffering from FMD were found in pitiable condition at some affected farms in Bhains Colony. Speaking to Dawn, farmers blamed cattle sellers in Punjab from where they brought and purchased most of their animals for the disease outbreaks.

"They should have vaccinated their animals before selling to us. We can't vaccinate animals during transport as they are in stress," Abdullah, a dairy farmer, said, adding that often animals developed disease symptoms whey they were vaccinated in Karachi, indicating either the animal was already carrying the virus or got infected at Bhains Colony.

They claimed that the disease was having crippling effect on their businesses, forcing many of them to resort to what they described as 'emergency slaughtering'.

“The affected animal suffers severe weight loss and get so weakened that it’s no longer viable for milk production. Besides, farmers have to rely on costly imported vaccines as no local vaccine is available for the disease,” said Shakir Umar Gujjar represent Dairy and Cattle Farmers Association.

Shaukat Mukhtar representing Dairy Farmers Association said that the FAO project earlier launched greatly helped farmers who shared half of the vaccination cost with the organisation.

“But, now the FAO says that the government should come forward and bear half of the cost with us. If this support is provided to us, we can successfully control this disease again,” he said.

The 2014 FAO data shows that Karachi reported 954 outbreaks of the disease out of the total 1,119 and 2,591 outbreaks occurred from across Sindh and the rest of the country, respectively.

Karachi reported to have the highest viral load of foot-and-mouth disease (FMD) in the country.

Experts believed that this was mainly due to commercial dairy farming being practised on a large scale in unhygienic and cramped conditions in the city.

During the same year, 362 outbreaks of FMD were recorded in Punjab, while 294 and 151 outbreaks of the disease were recorded in Khyber Pakhtunkhwa and Balochistan provinces, respectively.

According to experts, movement of animals is the primary source of transmission, but people can also transmit the virus from one place to another if they visit an infected area and do not change clothes.

It is estimated that round 30,000 to 40,000 animals are transported monthly from other parts of the country to the Landhi Cattle Colony which has the largest number of commercial dairy farms in Pakistan.

The FMD virus mutates very quickly and any change in its structure makes the vaccine ineffective. Therefore, it is very important to monitor the virus and know its exact sub-serotype.

The FMD, at times fatal, affects cloven-hoofed animals, including domestic and wild bovids. The virus causes a high fever for between two and six days, followed by blisters inside the mouth and on the feet that may rupture and cause lameness.

It can spread by infected animals comparatively easily through contact with contaminated farming equipment, vehicles, clothing, feed and by domestic and wild predators.

GRAM PRODUCTION MAY EXCEED ESTIMATES

By Our Correspondent Published: February 9, 2019

LAHORE: Considering the sufficient rains this season, stakeholders expect the production of chickpeas, known as gram, to surpass earlier estimates.

The higher harvest is likely despite cultivation over a lower area this year.

“Rain spells are considered sufficient and are likely to help harvest 0.4 to 0.5 million tons of gram, despite a one-fifth reduction in the sowing area this year, mainly due to restrictions on planting the crop on government land," said Pulses Importer and Exporter Association Punjab Secretary Danial Ahmad on Friday.

Last year, owing to scarce rainfall, only 0.3 million tons of gram was produced. The most severe drought was witnessed over the last 10 years in 2012 when no considerable amount of rain came in the gram crop area in Punjab, pushing down production to a mere 0.18 million tons.

The price outlook of gram crop looks good as far as the consumers are concerned. Restrictions imposed by India, the biggest consumer of pulses in the world, by slapping duty and taxes has led to a glut-like situation globally, so the pulses market is broadly very much depressed.

Referring to the domestic demand for gram, Ahmad said, the consumption of chickpeas in the country was estimated at 0.55 million tons in the current year. "We are hoping that the production of 0.4 to 0.5 million tons with carryover stock will be sufficient to meet local demand. Hence, no sizeable imports are being anticipated at this point in time, especially when compared with the trend of last year," he said.

In the preceding year, he recalled, nearly 8,000 containers of chickpeas had been imported since March 2018, bringing 180,000 tons of the commodity.

SIBI GROWERS ASSURED OF 'QUICK REVIVAL' OF FARM SECTOR

Ali Jan Mangi Updated February 08, 2019

DERA MURAD JAMALI: Provincial Minister for Agriculture Engineer Zamrak Khan Piralizai on Thursday assured members of the market committee Sibi that the issues being faced by farmers would be resolved on a priority basis.

"Sibi division has a significant importance regarding agricultural development and the government is helping in research," he said during a visit to Sibi.

Regarding effects of drought on agriculture sector, the minister said the government will utilise all available resources to provide relief to drought-stricken farmers for rehabilitation of farming sector which serves as the backbone of the provincial economy.

"The government of Balochistan has given importance to development of Agriculture Department and the establishment of Market Committee so as to help farmers sell their products," Engr Zamrak said.

"Experts are sharing their research work with the government for utilisation of provincial land for agriculture while the Water Management Department too is helping farmers in saving water," he added.

He pledged support to the staff of Agricultural Dep¬artment with an assurance to address all their problems.

JAPAN WANTS BAN ON IMPORT OF POULTRY PRODUCTS BE LIFTED

MUSHTAQ GHUMMAN | FEB 8TH, 2019 | ISLAMABAD

Japan embassy has sought help of Abdul Razak Dawood, Prime Minister's Advisor on Commerce, Textile, Industries and Investment for lifting of ban on import of Japan's poultry/products and Ajinomoto salt. On Thursday, Charge d' Affaires Embassy of Japan called on Abdul Razak Dawood and raised both issues with him.

The Commerce Division in its Import Policy Order of April 18, 2016 had restricted poultry and poultry products from Japan on account of Avian Influenza H5N1 strain. According to the Japanese embassy in Islamabad, Japan has declared to the World Organisation for Animal Health (OIE) that it is totally free from HJPAI (highly pathogenic avian influenza) on April 15, 2018.

According to Japan embassy, the issue was technically examined by the livestock department of the Ministry of National Food Security and Research (MNFS&R) which has concluded that Japan can export poultry and poultry products to Pakistan, sources added. The Japanese embassy further stated that MNFS&R has requested Commerce Division through letter No.F.8.5/2015 (Japan)/IC-II on July 2, 2018 to issue an SRO of import policy for lifting of the restriction on the importation of poultry meat and poultry products from Japan. However, Commerce Division has not yet lifted restrictions on Japanese poultry and poultry products.

In September last year, Japan had expressed serious reservations against Pakistan for imposing a ban on the import of Ajinomoto salt, which may impact on its export to other countries.

According to an official statement, the issues pertaining to bilateral trade and investment were discussed. The options of technology up-gradation fund that could be used for up-gradation of textile machinery in Pakistan also came under discussion. Adviser to the Prime Minister on Commerce emphasized the need to improve the existing infrastructure of the fisheries sector of Pakistan including improvement of fish harbor at Karachi.

Both sides explored the option of establishing technology up-gradation fund that can be important in strengthening the manufacturing base of the country. The progress on the decisions of Pak-Japan Business Dialogue held in December 2018 in Japan was also reviewed. The modalities and agenda of the upcoming session of the business dialogue also came under discussion, the statement added.

REAP URGES GOVERNMENT TO ENCOURAGE MECHANISATION IN RICE SECTOR

ZAHID BAIG | FEB 8TH, 2019 | LAHORE

Rice Exporters Association of Pakistan (REAP) has urged the federal government to devise a national level policy for encouraging mechanization in the rice sector especially promotion of harvesting with rice harvesters instead of wheat harvesters.

The Association also urged the government to promote rice transplanters and dryers for paddy to save the precious foreign exchange earning commodity from wastage.

The proposal was floated by the REAP Chairman Safder Hussain Mekhri and Senior Vice Chairman Ali Hussam Asghar during a meeting with the Prime Minister's Advisor on Commerce Abdul Razak Dawood and the Federal Secretary Commerce Muhammad Younus Dagha.

REAP leadership apprised the government representatives that use of wheat harvesters for rice result in increased broken percentage in the paddy.

They were of the view that if Ministry of Commerce (MinCom) facilitates promotion of rice harvesters it could save at least 2 percent broken which will have a financial impact of US 100 million dollars in saving to exporters because of enhanced quality of the end products due to the less broken percentage.

REAP Senior Vice Chairman Ali Hussam Asghar while talking to Business Recorder here on Thursday said that the Association also urged the Ministry of Commerce to facilitate usage of rice transplanters at the time of paddy sowing as it would increase the number of plants sown thus leading to more per acre yield.

Both the sides also agreed for the promotion of local industry for manufacturing of rice transplanters and harvesters in the country, Ali added.

He expressed his optimism that the proposed changes if brought in with the help of the Commerce Ministry can help the exporters to take the rice exports from the present $2 billion to $5 billion in next few years.

REAP eyes promising future for Rice Exports in the years to come thanks to a proactive Team lead by the advisor to PM on commerce, Ali Hussam said.

He termed the interactions as extremely productive with all relevant areas especially the negotiations on bilateral trade with Government focus on promoting agriculture based exports and rice as the only crop grown for export as more than 60 percent is exported to over a 100 plus countries, received all-out support.

Specific countries are being focused where potential is to capture bigger share for Pakistan rice and the operational issues in the whole value chain of rice is also being taken up to encourage exporters in investing in the much need backwards integration and farm mechanization to attend to Gaps existing in the rice value chain, Ali Hussam Asghar concluded.

FOOT & MOUTH DISEASE PLAN NOT YET ENDORSED BY WORLD BODY

Amin Ahmed February 07, 2019

ISLAMABAD: The government's national programme for the control of foot and mouth disease (FMD) at a cost of Rs664 million covering seven-year period (2018-2024), is yet to be endorsed by the Paris-based World Organisation for Animal Health (OIE).

The programme is currently under consideration of the organisation, and it needs to be continuously followed up until mid of next year. The programme aims at improving food security and will increase the resilience livelihood of livestock farmers to animal disease threats.

The country's meat exports are currently limited to Gulf and to expand into markets like China, Indonesia, Malaysia and Russia, it needs an OIE endorsed FMD control programme and FMD free zone compartments. This endorsement will expand meat export market to a number of countries.

Currently, the country is not among the 68 countries which are FMD free where vaccination is not practiced. Only six countries – China, India, Mongolia, Morocco, Namibia and Thailand have the endorsed official control programme for FMD, according to the organisation.

The USAID-funded Agricultural Market Development (AMD) is supporting the government in getting the FMD control programme endorsed by OIE and the federating units in establishing their notified FMR free zones in order to enhance the scope of meat export markets. In this regard, the animal husbandry commissioner will need sufficient support to follow up the process of access to new markets in order to reap benefits of the project.

These efforts are expected to increase meat exports manifold, especially through entering into new markets. It will add pliability to meat processors and producers in their businesses and will also support in linking profit with the farming activity thus adding resilience of livelihood of livestock farmers in the country.

On livestock development, the ongoing US-Pakistan Partnership is being catered through "Creating New Frontiers in Agriculture" (CNFA) under its programme on FMD, which is supporting Pakistan's commercial agriculture, particularly through improving the ability of the country's agriculture and livestock sectors to meet both international and domestic demands.

The government is seriously eng¬a¬ged in prevention and control of FMD through its own resources and technical assistance and support from its development partners.

'GOVERNMENT COMMITTED TO DEVELOPING LIVESTOCK SECTOR ON MODERN LINES'

RECORDER REPORT | FEB 7TH, 2019 | ISLAMABAD

The government of Pakistan is committed to developing and promoting livestock sector on modern lines to meet local and global Halal meat demand. This was stated by Federal Minister for National Food Security and Research Sahibzada Muhammad Mehboob Sultan as a chief guest while addressing "National Workshop on Sustainable Prevention of Foot and Mouth Disease (FMD)" here on Wednesday.

The workshop was organised by USAID under US-Pakistan partnership programme for Agricultural Market Development (AMD) aimed at bringing concerned stakeholders and beneficiaries together to share recent development in FMD control in Pakistan and way forward for sustainable prevention for enhanced meat trade in high demand market.

The minister said Pakistan has a huge potential for livestock production and processing with national herd comprises an estimated population of 190 million large and small ruminants and 87 million rural and one billion commercial poultry.

He said that the Agriculture Market Development is supporting Pakistan's commercial agriculture through improving the ability of sector to meet both international and domestic demand in fruits, off-season vegetables and meat.

The minister said that the enormity of large livestock resource base makes Pakistan amongst the first ten nations in the world in respect of many livestock commodities and species; however, diseases causing economic losses are one of the few stumbling blocks in Pakistani rural socioeconomic development.

The minister said that the present government has placed livestock on its national development agenda. This sector is being focused as a tool for economic growth and rural development.

Sultan said that the government of Pakistan is seriously engaged in prevention and control of FMD through its own resources and technical assistance from its development partners.

He said that based on successful demonstration of development of technical framework for control of FMD, Pakistan moved to stage two of global progressive control pathway (PCP) in 2015. He said that Pakistan in 2018 has launched National FMD Control Programme titled "Risk Based Control of Foot and Mouth Disease in Pakistan 2018-2024" at a cost $6.598 million.

The programme aims at improving food security and will increase the resilience livelihood of livestock farmers to animal disease threats. This programme is countrywide and is expected to move Pakistan's FMD control efforts from stage two to stage three.

Director/ EGA USAID Pakistan, Jeff Geoble said that Pakistan is agro economy and livestock sector comprises 58% of agro sector and it produces 5% of Halal meat of the world. Through consecutive efforts and FMD control Pakistan could contribute immensely to the world's Halal meat needs which is $600 billion worth.

The workshop was informed that livestock sector is the largest sub-sector of agriculture in Pakistan which plays a vital role in the economy. Despite the enormity of animal number, animal health and production are compromised due to presence of FMD, which is a highly contagious viral disease of animals and biggest trade barrier for animals and animal products. The animal losses run into billion of rupees annually apart from stocks unable to compete in the export market.

Pakistan's meat exports are currently limited to Gulf countries and in order to expand into other markets like China, Indonesia, Malaysia and Russia, Pakistan needs to have an OIE endorsed FMD control programme and FMD free zone compartments. This endorsement will expand Pakistan's meat export market to number of countries along with new markets.

The event was attended by the representatives of the development partners, provincial governments and national meat production and processing companies, and lead technical experts to deliberate and put forth a way forward on control and prevention of foot and mouth disease (FMD) in Pakistan, leading to enhanced export of meat.

PFMA KP DEMANDS SUPPLY OF WHEAT TO FLOUR MILLS AS PER QUOTA

RECORDER REPORT | FEB 7TH, 2019 | PESHAWAR

Pakistan Flour Mills Association Khyber Pakhtunkhwa (PFMA-KP) has demanded of the provincial government to ensure supply of wheat to flour mills as per their quota to fulfill the requirement of commodity in the province. The demand was made by PFMA KP chairman, Hajji Mohammad Tariq while chairing an executive body meeting of the association here on Wednesday. The meeting was attended by PFMA Central chairman, Naeem Butt, along with flour millers. The meeting discussed that the current situation of wheat in the province.

Naeem Butt while addressing on the occasion criticized that the incumbent KP Minister for Food, Qalandar Lodhi in his statements, claimed that the corruption had been eliminated and the provincial food department is self-sufficient in wheat, but the situation is completely against it.

PFMA central chairman said that it doesn't make different to become self-sufficient by supplying less wheat to flour mills in Khyber Pakhtunkhwa. He added that many flour mills had closed down due to non-provision of wheat as per their fixed quota. He said that the subsidy money on wheat is being misused, which inflicted huge financial losses to provincial exchequer.

The meeting has urged the Khyber Pakhtunkhwa Chief Minister Mahmood Khan to ensure supply of wheat to flour mills as per their quota. It feared that the all flour mills of KP will be shut down, if the situation was persisted. The meeting further said that flour millers are being faced huge financial losses in the current circumstances.

On the occasion, the PFMA KP chairman, Hajji Mohammad Tariq has urged the provincial food department to immediate supply wheat to flour mills as per quota. He said the flour mills in Swat and Malakand are already being faced crisis due to less supply of wheat to them. He said that flour millers were compelled to procure wheat from Punjab.

HIGH EFFICIENCY IRRIGATION SYSTEM LAUNCHED IN PUNJAB

RECORDER REPORT | FEB 7TH, 2019 | SIALKOT

Under the directives of the Punjab government, Agriculture department has initiated a high efficiency irrigation system for introducing new modes of irrigation among the farmer community aimed at averting the possibilities of wastage irrigation water in Punjab.

Under the programme efforts would be made for motivating farmers to adopt new techniques to save the irrigation water from wastage and to create awareness about the importance of drip sprinkler system among the growers of the Punjab.

Sources in Agriculture department told Business Recorder on Wednesday that the adoption of new irrigation techniques will make agriculture sector more profitable, to enhance productivity and save the irrigation water from wastage across the Punjab. The agriculture sector was facing serious treats of shortage of irrigation water that was posing threats to overall production of the crops.

The adoption of drip sprinkler system would enable the growers and cultivators to save 50 percent irrigation water from wastage, increase the standard of productivity. Sources further told that 25 percent canal water, 30 percent watercourses and 35 percent water waste in fields that reduced availability of irrigation water for agriculture.

Agriculture experts foresee that agriculture sector of Pakistan will facing serious shortage of irrigation water in future. Under the prevailing circumstances the experts had suggested that government should adopt preventive measures to cope with the wastage of irrigation water. They further suggested that government should also take effective steps for bringing revolutionary changes in agriculture sector by adopting modern irrigation system a gross roots level.

In Sialkot district, the drip sprinkler irrigation system was gaining popularity among the farmers for better and effective utilization of available irrigation water. Drip sprinkler system had been installed on 161 acres in various parts of Sialkot, Daska, Pasrur and Sambrial tehsils of Sialkot district. The provincial government was providing 60 percent subsidy to the farmers of the installation of drip sprinkler system while farmers will contribute 40 percent the installation.

WHEAT PROCUREMENT FROM MARCH 1 URGED

The Newspaper’s Staff Correspondent February 06, 2019

HYDERABAD: Sindh Abadgar Board (SAB) president Abdul Majeed Nizam¬ani has demanded of the Sindh government to set up wheat procurement centres in the province by March 1, to ensure distribution of gunny bags.

Addressing a meeting of the board here on Tuesday, the SAB president called for an inquiry regarding financial irregularity of Rs220 million of the Sindh food department. He regretted that opening of wheat procurement centres was dela¬yed every year intentionally. He said gunny bags were not distributed among growers and they were mostly given to political figures.

He said Rs220m-Rs222m were allocated for procurement and preservation of wheat crop in godowns, but the amount was misappropriated and not spent. It caused losses to the national exchequer and failure to preserve wheat crop, he said, adding that the crop was destroyed resultantly due to improper arrangements. He claimed that it also led to huge financial losses and food department officials were directly involved in it. He called for convening a meeting of the food department to announce opening of wheat procurement centres by March 1.

The meeting was attended by Mehmood Nawaz Shah, Nadeem Shah, Zulfiqar Yousfani, Aslam Mari and others.

PASSCO TENDERS TO SELL 0.25M TONNES OF WHEAT

Reuters Updated February 05, 2019

HAMBURG: Pakistan Agri¬cultural Storage and Services Corp (Passco) has issued a tender to export 250,000 tonnes of wheat, European traders said on Monday.

The federal government in November 2018 approved export of up to 500,000 tonnes of wheat, possibly with subsidies, to reduce hefty local supplies.

The tender is expected to close on Feb 18.

A previous tender to export 100,000 tonnes of wheat was closed in January.

"Demand was so brisk for the Passco tender that prices offered were above the level at which export subsidies were required," one Euro¬pean trader said. "I suspect this could also happen with the new tender."

The latest tender for wheat grown in Punjab offers export by sea only, which would exclude sales to neighbouring countries such as Afghanistan.

Importers such as Sri Lanka, Bangladesh, the Middle East Gulf and other Asian countries are expected to be export targets, a trader said.

Punjab is offering bagged wheat in fair to average quality, the trader added.

Meanwhile, Bangladesh government has cancelled an international tender to import 50,000 tonnes of wheat as the lowest bidder did not agree to a time extension amid rising global prices, two officials from the state-run grains procurement agency said on Monday in Dhaka.

TCP INVITES BIDS FOR SALE OF 415 MTS SWEEPING CARGO OF UREA

RECORDER REPORT | FEB 5TH, 2019 | KARACHI

The Trading Corporation of Pakistan has invited fresh bids for disposal of some 415 metric tons sweeping cargo of urea. In the previous tender opened on January 16, only one bid was received and it was declared non-responsive. Therefore, the TCP has issued fresh tender for the sale of sweeping urea.

According to fresh tender, interested parties may submit their bids up to February 18, 2019 which will be opened the same day at 11:30 am in the TCP's Board Room in presence of bidders or their authorized representatives. However, the individuals/sole proprietorships/firms/companies who have defaulted with the TCP will not be eligible to participate in the tender.

Further, those individuals/sole proprietorships/firms/companies who have not fulfilled their contractual obligations with the TCP will also not be eligible to participate in the bids, unless they clear their dues along with penalties or fulfill their contractual obligations with the TCP, as the case may be, before the tender opening date.

Interest bidder will be required to submit bids with the Earnest Money equivalent to at least 5 percent of the quoted value in the form of Bank Pay Order/Demand Draft in favor of TCP. Bids not accompanied with the required Earnest Money shall not be considered.

Bids have been invited for the sale of approximately 415.240 metric tons sweeping cargo of urea presently stored at TCP's Landhi godown. The urea is laying in three lost of 387.780 metric tons, 13.180 metric tons, 14.280 metric tons. The bids will remain valid for 30 (thirty) working days from the day on which the tender is opened excluding the opening day.

OVER 10 MILLION COTTON BALES ISSUED TO GINNERS

RECORDER REPORT | FEB 4TH, 2019 | MULTAN

Seed cotton (Phutti) equivalent to 10.6 million bales have reached ginneries across Pakistan till February 1, registering a shortfall by 7.23 per cent compared to corresponding period of last year. Out of total arrivals, 10,546,192 bales have undergone the ginning process, says a fortnightly report of Pakistan Cotton Ginners Association (PCGA) issued here Sunday.

Arrivals in Punjab were recorded at over 6.461 million bales showing a 10.03 per cent shortfall and over 4 million or 4,251,721 bales in Sindh registering 2.52 per cent shortfall compared to corresponding period of last year.

Total sold out bales were recorded at over 9.1 million or 9,115,798 bales, including over 9 million or 9,014,898 bales bought by textile mills and another 100,900 bales purchased by exporters.

Around 1.4 million or 1,430,394 bales were still lying with the ginneries as unsold stock.

FOOD GROUP TRADE DEFICIT SHRINKS BY 25.6%

04/02/2019

ISLAMABAD: The country's food group trade deficit shrank by 25.6% to $972.068 million during first half of current fiscal year compared to deficit of $1.3 billion recorded during same period of previous year.

The food group import during July-December (2018-19) recorded a decline of 8.49% as it fell to $2.967 billion as compared to the import of $3.242 billion during same period of previous year, latest data issued by Pakistan Bureau of Statistics (PBS) said.

Similarly, the export of food group from the country recorded an increase of 3.09% as it rose to $1.995 billion against the export of $1.935 billion during July-December (2017-18).

The export of fruits surged to $222.164 million in the corresponding period of current fiscal year from $180.146 million during same period of last year, showing an increase of 23.32%.

Similarly export of vegetables also recorded a sharp increase of 42.55% as it rose to $90.823 million from $63.712 million in Jul-Dec (2017-18).

The wheat export also increased sharply to $97.237 million during the period under review as compared to the export of only $45,000.

The spices export increased by 10.15 percent to $40.198 million from $36.492 million, whereas export of oil, seeds, nuts, and kernels posted an increase of 157.91 percent as it increased from $22.005 million to $56.7 million in Jul-Dec (2018-19).

The export of rice however decreased by 2.43 percent to $828.968 million against the export of $849.634 million in same period of last year, while export of fish and fish preparations also fell to $183.691 million compared to export of $200.621 million, showing a decline of 8.44 percent, the data revealed. NEWS COVERAGE PERIOD FROM JANUARY 28th TO FEBRUARY 3rd 2019

PM URGED TO WAIVE FARMERS' LOANS

The Newspaper's Staff Reporter February 03, 2019

KARACHI: The Sindh government has urged the federal government to waive the agriculture loans extended to farmers in the eight calamity-hit districts of the province.

Sindh Minister for Agriculture Ismail Rahu told reporters in his office on Saturday that he personally delivered a letter from the provincial government to Prime Minister Imran Khan requesting him to waive the loans. He said the letter mentioned the eight districts as Badin, Thatta, Tharparkar, Umerkot, Dadu, Jamshoro, Sanghar and Qambar-Shahdadkot.

Besides, he added, the provincial government had also requested that payment of arrears pertaining to the older loans obtained by the farmers also be deferred to the next year and the interest thereof be waived.

MINISTER SLAMS CENTRE FOR ERODING SINDH'S AUTHORITY ON DEEP SEA FISHING

The Newspaper's Staff Correspondent Updated February 03, 2019

HYDERABAD: Sindh Minister for Livestock and Fisheries Abdul Bari Pitafi on Saturday expressed his reservations over federal government's act of continuing to issue licences for deep sea fishing and also tenders pertaining to Sindh's fisheries' monitoring system.

Speaking to reporters at the directorate of his department, while briefing them about the 'grand livestock exhibition' to be held next month off Hyderabad bypass, he argued that before introduction of the 18th Constitutional Amendment, fishing was restricted to a 12-nautical mile area and beyond this limit up to 20 nautical miles was a buffer zone.

According to him, under the 18th Amendment the subject of fisheries stands devolved to provinces and as such Sindh has also been able to issue deep sea fishing licences as well.

However, he said the federal government was still issuing tenders for Sindh's fisheries' monitoring system. "Eleven boats with 300 fishermen on board have been caught and sent to Balochistan prison for indulging in deep sea fishing in this area. This is great injustice with the fishing community of Sindh," he said. For the release of the boats and fishermen, the Balochistan government had been approached and a committee with representation of Sindh government formed to pursue the case, he added.

Describing the federal government's policy on fishing as "step-motherly treatment being meted out to Sindh", the minister said his department would introduce its own policing and the provincial assembly would enact the required laws in this regard.

Speaking about his department's measures for the promotion of fisheries and livestock sector as well as welfare of the local communities, Mr Pitafi said that four million livestock had been vaccinated against various diseases while fodder was being distributed among livestock owners in Tharparkar.

He pledged that 600,000 seedlings would be thrown into Keenjhar Lake and 800,000 into Manchhar Lake. Iceboxes and other goods would be distributed among fishermen. He regretted that saline water of the Right Bank Outfall Drain (RBOD) was being released into the Manchhar Lake and drain water into the Keenjhar Lake. He called for a halt to this practice and also stressed on timely completion of the drain.

The minister noted that in Tharparkar, 60pc cattle heads migrated to the barrage areas while locals did not move their goats and sheep from Thar. He said that Sindh government had already released Rs50m for fodder distribution in Tharparkar and the chief minister approved another Rs250m for the purpose.

CHINESE EAGER TO INVEST IN PUNJAB'S AGRICULTURE, HOUSING SECTORS

By APP Published: February 3, 2019

LAHORE: A 12-member delegation of China Engineering Corporation and Henan DR Construction Group in a meeting with Punjab Chief Minister Sardar Usman Buzdar on Saturday showed interest to invest in the agriculture and housing sectors.

They said they were also interested in investing to make the barren land useful for agriculture purpose through modern technology and would also transfer the technology to Punjab for the construction of low-cost houses.

The delegates said they wanted to start the project of housing industrial park and the Chinese group would make investment for the purpose.

On the occasion, CM Buzdar said, “Pakistan and China have an everlasting friendship and this relationship has now gotten a new dimension during the PTI government under the leadership of Imran Khan.”

He said foreign investors had been given immense opportunities in Punjab and “we welcome the interest of Chinese investors in the housing and agriculture sectors”.

The Chinese investors would be given every possible facility, he assured, adding that there was huge potential in the agriculture and housing sectors.

The agriculture sector of Punjab was the backbone of economy and it could be strengthened with the use of modern technology.

The CM said the construction of low-cost houses was the part of PTI manifesto and the New Pakistan Housing Scheme was a revolutionary programme to provide houses to the common man.

He said new facilities and favours had been given to foreign investors in new Pakistan and “we want to benefit from Chinese technology in agriculture and housing sectors”.

The officials of China Engineering Corporation also briefed the CM on the progress on the 1,263 megawatts power project in Jhang.

The delegation also included China Engineering Corporation Chairman Zhang Chun and Vice President Fang Yanshui; and Henan DR Construction Group Chairman Huang Dao Yuan and Deputy Chairman Cheng Cunpan.

Senior Provincial Minister Abdul Aleem Khan, Punjab Irrigation Minister Mohsin Leghari, Punjab Agriculture Minister Malik Nouman Ahmed Langrial, Housing Minister Mian Mehmoodur Rasheed, Punjab chief secretary, Punjab Planning and Development Department chairman, secretaries of concerned departments and senior officials were also present.

PFMA CONCERNED OVER WHEAT EXPORT BY SEA

By Mohammad Zafar Published: February 3, 2019

QUETTA : The Pakistan Flour Mills Association (PFMA) on Saturday expressed concerns over the Punjab food department’s decision to invite bids for wheat export by sea, saying that such a move would destroy the related industry of Balochistan.

In a joint statement, PFMA Chairman Naeem Butt and Badruddin Kakar said the Punjab government’s move to export 250,000 tonnes of wheat had put at risk the future of flour mills in Balochistan and Khyber Pakhtunkhwa.

“The food department on Punjab has invited bids to export wheat through the sea route, which has sparked concerns among people working in the flour industry in Balochistan and K-P,” the statement said. “Thousands of jobs may end because of this decision,” it added.

The statement said that Punjab's decision was a clear violation of the Economic Coordination Committee's (ECC) directive for export of 30 percent wheat and its products through the land routes.

"For decades Pakistan has been exporting wheat to Central Asia and Afghanistan through the land routes that has boosted the country's economy. But the recent decision of Punjab food department would devastate the flour Industries in the two smaller provinces."

"The decision indicates that the Punjab government seeks to benefit a group of people. We have sent a letter to the federal secretary for national food security regarding our concerns," the association added.

US-CHINA TRADE WAR: PAKISTAN GETS CHANCE TO BOOST EXPORTS OF FOOD PRODUCTS

By Salman Siddiqui Published: February 3, 2019

KARACHI: Pakistan, which is struggling to achieve a dramatic turnaround by reining in excessive imports and boosting sluggish exports to fix the faltering economy, is likely to partially achieve the goal in the wake of opportunities emerging due to the US-China trade war.

The two biggest economies of the world have made 62% ($360 billion) of bilateral trade expensive by slapping additional tariffs on thousands of each other's goods since July 2018 and have caused a slowdown in the global economy, according to the State Bank of Pakistan (SBP).

"For Pakistan, the imposition of these cross-tariffs offers some interesting opportunities as well as challenges. On a positive note, key food items, such as rice, seafood and soybean (both seeds and oil), have come in the crosshairs, which offer an opportunity to Pakistan to reduce its trade deficit," the SBP said in its first-quarter report on the state of economy for fiscal year 2018-19.

Among the thousands of goods on which additional tariffs have been imposed by the two countries, three product categories may provide benefit to Pakistan's exports which are seafood, rice and cotton (raw cotton, fabric and yarn). "Specifically, American seafood exports to China are now much costlier as a result of the tariffs, as are Chinese exports of rice and cotton items to the US," the central bank said.

China is a major global importer of seafood products and imported 16.3% of its overall seafood imports from the US in 2017 (worth $1.3 billion).

"It mainly imports lobsters, oysters, flatfish and sardines, all of which are now attracting additional tariffs, and all of which are also exported by Pakistan," it said.

Pakistan's global exports of these products amounted to $338.9 million in FY18 and constituted 75.1% of the country's overall seafood exports. "As the US seafood exports to China have now become much costlier, Pakistani exporters might increase their presence in the Chinese market," the SBP said.

China is the world's largest importer of soybean and the US is the second largest producer and exporter of the commodity, after Brazil. Importantly, soybean is the largest export product from the US to China.

Soybean was among the first items targeted by China when the first round of retaliatory tariffs went into effect in July 2018. China then shifted its demand for soybean to Brazil and Argentina. As a result, soybean export prices of Brazil and Argentina have spiked whereas those of the US have plunged.

“This presents an opportunity for edible oil mills in Pakistan to reduce their imports of soybean oil and seed in value terms by diverting their purchases to the US, where the prices are falling,” the SBP pointed out.

Encouragingly, there are indications that this switch is already taking place. Brazil’s share in Pakistan’s overall soybean imports (both seeds and oil) fell to 49.5% in FY18 from 58.4% in FY17 whereas the share of the US rose to 45.4% from 32.1%.

“Further enhancing soybean imports from the US will yield more FX (foreign exchange) savings for Pakistan,” it said.

On the other hand, the volatility in iron and steel prices in recent months after the imposition of tariffs by the US presents a challenge from Pakistan’s perspective.

In September 2018, with anti-trade measures in full swing, the US targeted the bulk (49.1%) of iron and steel products that it imported from China and imposed additional tariffs on them. Steel prices in China were falling during the first half of 2018 as uncertainty loomed about the extent of the protectionist measures that would be adopted by the US. Further downward pressure came from a cooling off in China’s economy this year, which has impacted its demand for steel.

However, Chinese steel prices have been rising since August 2018, partly as a result of an expected drop in steel production in winter months as the country tries to limit harmful emissions and control smog.

“All of this uncertainty has created challenges for Pakistan as the unit value of the country’s iron and steel imports (both scrap and finished products) has been rising, though with significant fluctuations. Even though Pakistan imports most of its steel from China, the unit value of its steel imports has not dipped.”

Nonetheless, a slowdown in broader economic activity, as Pakistan tries to stabilise its economy, has already stalled the demand for imported iron and steel products. “In Q1-FY19, quantum imports of these items have already dropped 10.1% on a year-on-year basis,” the SBP said.

JAPAN LODGES PROTEST AGAINST BAN ON ITS POULTRY

MUSHTAQ GHUMMAN | FEB 3RD, 2019 | ISLAMABAD

The Japanese government has reportedly protested with the government of Pakistan for not allowing import of its poultry and poultry products, well-informed sources told Business Recorder. The Commerce Division in its Import Policy Order of April 18, 2016 had restricted poultry and poultry products from Japan on account of Avian Influenza H5N1 strain. According to the Japanese embassy in Islamabad, Japan has declared to the World Organisation for Animal Health (OIE) that it is totally free from HJPAI (highly pathogenic avian influenza) on April 15, 2018.

"The issue was technically examined by the livestock department of the Ministry of National Food Security and Research (MNFS& R) which has concluded that Japan can export poultry and poultry products to Pakistan," the sources added. The Japanese embassy has further stated that MNFS&R has requested Commerce Division through letter No.F.8.5/2015(Japan)/IC-II on July 2, 2018 to issue an SRO of import policy for lifting of the restriction on the importation of poultry meat and poultry products from Japan. However, Commerce Division has yet not lifted restrictions on Japanese poultry and poultry products.

The embassy of Japan has requested Commerce Division to lift the restriction on the importation of poultry meat and poultry products from Japan to Pakistan through an immediate amendment of the Import Policy by the ministry based on the fact that practical permission was already given by the competent authority of MNFSR. In September, Japan had expressed serious reservations over Pakistan for imposing a ban on the import of Ajinomoto salt, which may impact on its export to other countries. The recently transferred Japanese ambassador to Pakistan Takashi Kurai met with Prime Minister's Advisor on Commerce, Textile, Industries and Production and Investment, Abdul Razzak Dawood and sought his help to resolve this issue as early as possible.

Japan maintained if Pakistan's ban is prolonged, the world may question why the ban was imposed and that may hurt export of Ajinomoto salt to other countries. On February 10, 2018, the Supreme Court of Pakistan ordered that Ajinomoto salt would neither be manufactured nor imported or distributed in Pakistan. On March 2, 2018, then Chief Justice Mian Saqib Nisar banned the sale of Chinese salt Ajinomoto, observing that it is hazardous for health. Hearing a suo motu case on the sale of Ajinomoto and used cooking oil, in Lahore, the Chief Justice inquired from the advocate general as to the whereabouts of Mustafa Ramday, the head of a court-appointed commission tasked to probe the issue.

On January 15, the Punjab Food Authority (PFA) banned Ajinomoto after the authority found it hazardous for health. According to the PFA, the salt contains monosodium glutamate (MSG), a flavour enhancer said to cause asthma, headaches, and even brain damage. On February 21, according to media reports, the governments of Khyber Pakhtunkhwa and Sindh also banned the sale of Ajinomoto. The Embassy of Japan in Islamabad has also approached Ministry of Commerce expressing concerns at the ban. Simultaneously, Japanese delegation to the WTO on SPS committee in Geneva has inquired from Pakistan's Mission at WTO about recent measures taken against import of Ajinomoto salt.

In December 2018, Abdul Razzak Dawood during his visit to Japan deliberated on possibility of a Preferential Trade Agreement (PTA), multiple entry visas for Pakistani businessmen and cooperation in ICT (Information & Communication Technology).

CHINESE HELP SOUGHT FOR EXPORTS, AGRICULTURE GROWTH: RAZZAK

RECORDER REPORT | FEB 3RD, 2019 | KARACHI

Prime Minister"s Advisor on Commerce, Textile, Industries, Production and Investment, Abdul Razzak Dawood Saturday said Pakistan seeks Chinese support for exports and agricultural growth instead of power and road infrastructure projects under the China Pakistan Economic Corridor (CPEC).

Addressing a gathering of businessmen and rice exporters hosted by Rice Exporters Association of Pakistan (REAP), Razzak said as the challenges of all commodities are almost the same, we are seeking support from friendly countries to improve the crop yield. Japan has already agreed to extend support for increase in crop yield, particularly rice.

"We don"t want more power plants and road infrastructure projects under the CPEC. What we need from China is support for agricultural and export sector," he added. He said Pakistan"s rice export posted a healthy growth during last few years reaching $ 2 billion up from $300 million and this is because of the visionary leadership of the REAP people. "I believe that with a visionary leadership and the government support, Pakistan"s rice export can hit $5 billion mark," he maintained.

Razzak assured REAP to incorporate rice sector in zero-rated sectors to facilitate exporters. "We will try to add rice into the basket of zero rated sectors so that exporters of rice could get more benefits," he said. He said Pakistani companies have great potential and can perform much better than international companies, but there is need for encouraging and supporting these companies. "We must introduce our brands across the world to promote Pakistani products and increase exports," he added.

He assured REAP of full support for promotion of rice exports, adding that there is need for coordinated efforts to increase the country"s exports and bring more foreign inflows into the country. Earlier, Safdar Hussain Mehkari, Chairman REAP and Arif Nadeem, Chief Executive Officer, Pakistan Agricultural Coalition (PAC) briefed Razzak about rice exports and presented recommendations for their promotion.

They said Pakistan"s rice exports posted a phenomenal growth during last many years and after achieving $2 billion exports, now we are eying $5 billion exports. Former chairmen of REAP, Rafique Suleman, Abdul Rahim Janoo and others also spoke on the occasion.

AGRICULTURE MARKET ON EDGE OVER RESUMPTION OF US GOVERNMENT DATA

RECORDER REPORT | FEB 3RD, 2019 | FORT COLLINS

The agriculture market data blackout has finally ended as US government workers returned to work on Monday, though it may take some time to fill in all the missing items, and it is uncertain how traders will respond to the sudden flood of information. After a record 35-day shutdown, Congress finally agreed to a three-week spending deal on Friday to reopen the government while lawmakers discuss how to address security along the US-Mexican border.

Markets have gone without major reports, as well as weekly and daily updates from the US Department of Agriculture, since Dec. 22. The timing has been especially inconvenient as traders have been trying to track US exports to China as the two countries work toward a trade deal. USDA and other government data will get back on schedule in the coming days and weeks, but the shutdown could resume on Feb. 15 if the dispute over US President Donald Trump's demand for border wall funding is unresolved. The data flow would once again be choked off, and it may happen before some previously delayed data is published.

The funding lapse forced USDA to postpone a slew of reports due on Jan. 11. USDA officials on Monday confirmed that some of those will be published on Feb. 8, the original release date for the February world supply and demand report, due at noon EST (1700 GMT). The additional Feb. 8 reports will include quarterly grain stocks, final US corn and soyabean production and winter wheat seedings, but the January world supply and demand report has been canceled.

Reuters had collected trade estimates for all the pertinent Jan. 11 items, and it is unlikely that analysts will be re-polled. However, new polls will be available in the coming days for the February world supply and demand report. Some of the key expectations from last month include reduced US corn and soyabean harvests, the fewest US winter wheat acres in over a century, a year-on-year drawdown in Dec. 1 US corn stocks, and the trimming of Brazil's soyabean crop.

Although USDA has already rescheduled the major reports, market participants have yet to hear about how some other data sets will resume and be backfilled. This includes items such as export sales and monthly US wheat conditions. The 2013 government shutdown lasted 16 days and canceled the October world supply and demand report. Offices reopened on Thursday, Oct. 17, 2013.

USDA issued export sales that Friday and the following Thursday morning at the normal time, but those two reports only covered the two weeks ended Oct. 3. It was not until Oct. 31 that export sales information caught up to the normal pace, and that release contained three weeks of data all at once. The last set of official export sales from USDA covered the week ended Dec. 13. However, the agency flashed a corn sale to South Korea on Tuesday morning, the first such announcement since the shutdown ended.

USDA's export sales office on Tuesday afternoon told Reuters that it will have a release schedule "as soon as possible." As of late Tuesday there were rumblings in the market that it will be similar to the 2013 process, and that it may not be until later in February that data is fully caught up. The US Commodity Futures Trading Commission (CFTC) has not published its Commitment of Traders report since before the year-end holidays, as the latest data covers the week ended Dec. 18. Industry participants closely watch this for information on both commercial and noncommercial traders' positions in Chicago Board of Trade futures and options.

CFTC on Tuesday announced plans to fill in missing weeks of COT data, which would have the first missing week published this Friday, and then every Tuesday and Friday until the data is current. Extrapolating that out would suggest that the COT data will not be fully updated until March 8, assuming the government does not shut down again. In 2013, CFTC spent nearly three weeks clearing the backlog. The pace did not return to normal until Nov. 8 that year.

Official November export data from the US Census Bureau was also missed at the beginning of January, and a new release date has yet to be announced. The website was restored as of early Monday, and it showed a note that the December data will be available Feb. 5. The absence of routine USDA information may have supported crop prices, especially in a relatively well-supplied market. The United States has a soyabean glut though futures prices do not reflect that.

Commodity funds likely remain firmly optimistic in corn and are flirting with bullish bets in both soyabeans and wheat. CBOT corn, wheat and soya futures have also been trading in a historically tight range for January. It has probably been helpful that the USDA has been unable to remind traders since early November just how inundated the United States is with soyabeans. The agency's latest peg for 2018-19 bean carryout is 955 million bushels, towering over the previous record of 574 million.

Industry estimates of the Brazilian soyabean crop have moved well below USDA's last target of 122 million tonnes, which has also helped bolster soyabean futures. However, expectations remain lofty for the country's second corn crop, and Argentina is poised to sharply rebound from 2018's drought-stricken corn and bean harvests. CBOT futures, particularly for soyabeans, have been supported by the idea that a permanent US-China trade deal is imminent. However, some handshakes and signatures will not immediately vaporize several million bushels of soyabeans from the US balance sheet.

The most-active 2019 soyabean spreads (March-May, May-July, July-November) are at the lowest, most negative levels in at least a decade. This suggests the current oversupply is priced in to the market, but uncertainty persists over how the scenario will play out throughout the year. New-crop November beans have risen 2.5 percent so far this year and prices are similar to those of 2015 and well above the same period in 2016.

FOOD MINISTRY TO AUCTION 15 AIRCRAFT ACQUIRED FOR PEST CONTROL

By Zafar Bhutta Published: February 3, 2019

ISLAMABAD: The government has allowed the Ministry of National Food Security and Research the auction of 15 aircraft acquired to control pest attack on different crops.

According to ministry officials, the aerial wing of the Department of Plant Protection (DPP), which comes under the Ministry of National Food Security, had a fleet of 20 vintage aircraft. However, past governments ignored these airplanes, of which 15 became dead as their engines had expired.

The DPP's aerial wing had been set up in 1950 primarily as an emergency response agency to counter the threat of desert locust against vital crops. Apart from its primary function, the aerial wing was always on standby to cope with pest epidemic and responded to requests of provincial agricultural departments.

However, after the 18th Constitutional Amendment, the subject of agriculture went to the provincial governments, therefore, the role of the aerial wing was reduced to just locust monitoring and control.

Officials said the cabinet in its recent meeting was informed that the DPP's aerial wing had a fleet of 20 vintage aircraft which included five Beaver, eight Cessna and seven Fletcher planes parked at two bases in Karachi and Lahore.

Of these, they said, only the five Beavers were operational. The seven Fletcher and eight Cessna aircraft were beyond economical repair as their manufacturers said the life of the aircraft engines and propellers had expired.

The Civil Aviation Authority (CAA) has also cancelled the registration of all these Fletcher and Cessna aircraft.

The cabinet was informed that the DPP had consulted Pakistan Air Force, Pakistan International Airlines (PIA) and the director general of defence purchase, seeking the procedure for the aircraft auction, but no response had been received so far. In light of the situation, the Ministry of National Food Security suggested that the entire fleet of 15 Cessna and Fletcher aircraft along with spare parts may be auctioned.

In the absence of standard operating procedures for the disposal of such aircraft, the ministry requested the cabinet to allow the sale of the airplanes through an auction.

In the cabinet meeting, its members noted that since there appeared to be a huge stock of dead capital with many ministries in the federal government, they should ensure their proper and quick disposal.

It was also pointed out that though the Privatisation Division was the relevant division for undertaking the disposal of dead capital, all ministries also had the standard official protocols which, if allowed, could be followed for the disposal of unserviceable goods.

The cabinet considered a summary submitted by the National Food Security and Research Division for disposal of the unserviceable DPP aircraft and accorded approval for their auction.

AGRICULTURE IS GOVT'S FIRST PRIORITY, SAYS PM IMRAN

By Our Correspondent Published: February 2, 2019

ISLAMABAD: Prime Minister Imran Khan has said promotion of agriculture is the first priority of his government which will provide all possible support to provincial governments in order to realise the country's potential in the sector.

Imran Khan said this on Friday while chairing a high-level meeting on agriculture and food processing. Federal minister of food security, provincial ministers of agriculture, federal and provincial secretaries and the heads of agriculture-related departments attended the meeting.

The PM also sought recommendations from the provinces to fully utilise technology and other assistances from friendly countries including China in order to strengthen the agriculture department and to promote agriculture in the country.

The provinces were also instructed to submit their recommendations within a week.

The PM said provincial governments should identify the obstacles and difficulties faced in promoting agriculture especially increasing exports. "Khyber Pakhtunkhwa has immensely potential for tourism. Promoting tourism will not only benefit the province but the country's economy as well," he said.

The PTI lawmakers from Kohat and Dera Ismail Khan also met the PM. Minister for Kashmir Affairs Ali Amin Gandapur, MNA Shahid Ahmed, Noorain Farooq Ibrahim, Shandana Gulzar, Yaqoob Sheikh, Naeemul Haq, Nadeem Afzal Chan and the PTI Secretary General Arshad Dad also attended the meeting.

The MNAs informed the prime minister about the issues related to their respective constituencies. Khan said it is part of the PTI manifesto to bring a real and visible change in lives of people.

Measures taken by the previous government for betterment of the K-P people would be carried forward for further improvement so that the process of change in education, health and other departments can be continued and the living standards of people can be changed, the PM said.

He called for resolving problems of member on a priority basis and ordered to make a plan to solve the issue of drinking water in Dera Ismail Khan.

TEXTILE INDUSTRY GETS RS29B RELIEF IN DUTIES, TAXES

By Zafar Bhutta Published: February 2, 2019

ISLAMABAD: The Pakistan Tehreek-e-Insaf (PTI) government has given another bailout package worth Rs29 billion to the textile tycoons by waiving taxes and duties on the import of cotton – a vital input in textile manufacturing.

The PTI government, like the previous Pakistan Muslim League-Nawaz administration, is offering support to the industrial barons, who have got billions of rupees worth of incentive packages. They are now receiving gas and electricity at discounted tariffs.

The government has also recently approved a Rs25-billion gas subsidy for five zero-rated export-focused industries where textile giants are the major beneficiaries.

"The government has come up with another support package for the textile manufacturers by waiving 50% of the outstanding gas infrastructure development cess (GIDC), which amounts to Rs40 billion," an official said. The textile industry is to pay a total of Rs80 billion in GIDC arrears.

With the scrapping of taxes and duties on cotton import, the government would lose Rs14.6 billion in customs duty, Rs6.9 billion in additional customs duty and Rs7.7 billion in sales tax, the official projected.

"The major beneficiaries are Pakistani textile barons and farmers of cotton-exporting countries," he said.

Despite getting such incentive packages, textile exports from Pakistan to the global market have not increased significantly as Bangladesh exporters are eating into the share of their Pakistani counterparts.

According to a senior government official, the textile industry consumes around 12 to 15 million bales of cotton per year and it needs to import cotton to bridge the shortfall because domestic output was far below the demand.

Pakistan is expected to produce 10.78 million bales of cotton in the ongoing financial year, a decrease of 9.7% compared to the previous year and down 24% from the initial target of 14.37 million bales.

The textile ministry says around 10.78 million bales have already reached cotton ginning factories from farms by the beginning of January 2019.

Farmers argue the pro-industry policies of successive governments have destroyed the agriculture sector of Pakistan. The PML-N government's 2013-18 tenure also proved damaging for the agriculture sector when it posted negative growth and cotton harvest touched its lowest in recent history.

During that five-year period, the focus had mainly been on the textile tycoons while farmers were at the mercy of such businessmen.

In 2015-16, the agriculture sector recorded a negative growth of 0.19% against growth projection of 3.9%, which indicated the lack of attention paid to the farm sector.

Cotton production in Pakistan has been virtually stagnant since 1991-92, fluctuating in a range of 10 to 12 million bales annually. The harvest fell to 9.9 million bales in 2015-16 compared to average consumption of 15 million bales, turning Pakistan a net importer of cotton.

"The current PTI government also seems to be following the same line as it is doling out support packages to the industrialists whereas the farmers are at the receiving end," the official said.

SINDH TO HOLD LIVESTOCK EXPO IN MARCH TO PROMOTE INDIGENOUS BREEDS

Dawn Report February 01, 2019

HYDERABAD: Sindh Minis¬ter for Live¬stock and Fisheries Abdul Bari Pitafi has said that the department will organise a national-level livestock expo in the first week of March to help promote indigenous breeds of cattle.

The minister said at a meeting held at Shahbaz Hall on Thursday to review arrangements for the expo that all the companies manufacturing different machineries for livestock and agriculture sectors were being invited to the expo so that farmers could learn about use of latest technology to help modernise and mechanise farming.

He said that agriculture and livestock sectors generated 23 per cent of the GDP but unfortunately both the sectors did not get the attention they deserved. He had formed a committee headed by Hyderabad divisional commissioner to oversee arrangements for the livestock expo, he said.

The minister said that the department was committed to conservation of all the local breeds as it believed the development of the livestock sector could ensure food security and fight other challenges. Breeders and livestock owners from other provinces would also attend this expo, which would hopefully serve as a linkage between people from different provinces, he said.

Sindh secretary for livestock Aijaz Mahesar said that the department would do its best to make the grand expo a success. The minister along with Hyder¬abad commissioner and Deputy Commissioner Aijaz Ali Shah visited a ground off Hyderabad byp¬ass where the expo would be held.

MITHI: With an objective to combat the persisting drought situation in Tharparkar district, the government of Sindh has announced a grant of Rs250 million for fodder distribution among deserving livestock owners.

The grant would be distributed under the Thar Fodder Distribu¬tion Project through the Thar Foundation, operating in four union councils of Islamkot taluka.

This was announced by Sindh Minister for Livestock and Fisheries Abdul Bari Pitafi at a ceremony held in Katan village near Islamkot on Wednesday evening.

The minister said the department was seriously taking care of the 7.5 million livestock of Thar in the hard times of drought.

The ceremony was held by the Thar Foundation where 229 deserving livestock owners received fodder. They were also presented the fish reared in Gorano pond of coalmine water.

Mr Pitafi said the Sindh government always came forward to support the people of Thar in difficult times and the federal government should also support them.

“We are working to make Thar a disease-free region because it produces organic meat,” he said.

“This region can provide quality meat, which can be exported and earn the country foreign exch¬ange,” he added. MPA Faqir Sher Mohammad Bilalani told the audience that the government was working on providing submersible pumps to Tharis to give a boost to farming.

“The chief minister has approved provision of 200 submersible pumps, which will be distributed among local farmers enabling them to use underground water in crop cultivation,” he added.

FAKE PESTICIDES: GROWERS URGED TO COOPERATE WITH GOVERNMENT

RECORDER REPORT | FEB 1ST, 2019 | LAHORE

Agricultural Task Force has urged the growers to cooperate with the government in its crusade against fake and substandard pesticides and immediately report to the Pest Warning & Quality Control of Pesticides wing of the provincial Ariculture department if found any body involved in this heinous crime.

A spokesman of the department said here on Thursday that a campaign has been launched by the government under the special directives of the Chief Minister Punjab Usman Buzdar to curb the nefarious business of fake and substandard pesticides.

The spokesman concluded that the pesticide task force had taken strong action against fake pesticide mafia in Multan, Sialkot and Lodhran. Chairman Agricultural Task Force Mian Alamdar Abbas Qureshi said that zero tolerance policy has been adopted against those involved in fake pesticide business. He said those found involved in it would be given exemplary punishment according to the law.

FRUIT FOR ALL: K-P OFFERS FREE FRUIT THROUGH PUBLIC TREES

By Our Correspondent Published: February 1, 2019

PESHAWAR: Governor Shah Farman Thursday inaugurated Fruit For All drive here at Hayatabad by planting an orange plant at a public space.

Under the drive as many as 250 plants of orange would be planted at public places and along roads in Hayatabad while five million would be planted across the province in collaboration with National Bank of Pakistan. People could enjoy the fruits for free.

The governor after inaugurating the drive directed department of Agriculture to ensure plantation of quality seeds as per the requirement of local weather. He also directed to plants at the places which were directly accessible by the general public so that the common man could be benefited from it.

He said the project was aimed to make KP province self-sufficient in fruit production and to meet food requirements of children, adding that under the programme the masses would get free of cost fruit.

PAKISTAN CERTIFIES FIRST ORGANIC COTTON BALE

Irfan-ul-Haq Malik Updated January 31, 2019

RAHIM YAR KHAN: Balochistan on Wednesday marked the certification of Pakistan's first organic cotton bale at a ceremony held at Kot Sabzal.

Balochistan's Minster for Agriculture Engineer Zamrak Khan said the provincial government was committed to promoting organic agriculture throughout the province.

He further said that Balochistan would be developing an organic agriculture policy soon.

WWF-Pakistan Director General Hamad Naqi Khan said, "We have made a major breakthrough in the cotton sector of the country that will benefit stakeholders and the overall economy of Pakistan."

In his remarks, Secretary Agriculture Balochistan Khaleeq Nazar Kiyani appreciated the efforts of WWF-Pakistan and the Agriculture Extension team.

"The certification is a step towards a more sustainable Pakistan. Production of organic cotton will propel the cotton sector into a new direction," he said.

Later, a consultative workshop was conducted in which representatives from ginners, spinners, textiles, brokers and brands participated and presented their concerns regarding development of a tenable supply chain of organic cotton in Pakistan.

WWF-Pakistan's Director Sustainable Agriculture and Food Programme Arif Hamid Makhdum conducted the introductory session.

In 2015, WWF-Pakistan secured financial support from the C&A Foundation, and in collaboration with Balochistan's Directorate of Agriculture Extension started work on a project titled 'Organic Cotton Cultivation Promotion with Small and Marginal Tribal Farmers in Pakistan'.

The project is helping improve livelihoods of smallholder cotton farmers by promoting organic cotton cultivation and development of its supply chain.

Organic cotton is grown without using any chemical fertilisers or pesticides and is cultivated on land that is detoxified from residues of chemical fertilisers and pesticides over a period of at least three years.

Seeds used to grow organic cotton are not genetically modified and are kept clean from chemical impurities during processing and packaging.

If the cotton crop produced adheres to the standards of organic cotton farming in its initial two years, it is called in conversion cotton. By the third year, the yield is certified as organic cotton.

Pakistan is the fifth largest producer of cotton in the world and the third largest exporter of raw cotton.

Cotton and its products contribute about 10 per cent to gross domestic product and 55pc to the foreign exchange earnings of the country.

VEC MEETING PUT OFF AT THE 11TH HOUR

RECORDER REPORT | JAN 31ST, 2019 | ISLAMABAD

A meeting of the Variety Evaluation Committee (VEC) of the Ministry of National Food Security & Research, which was to discuss the next generation biotech maize hybrid seeds of leading multinational companies, was cancelled at the eleventh hour here on Wednesday. The VEC, one of several such forums, reviews new seed varieties for cultivation, including maize hybrid seeds.

The meeting is a routine forum held periodically; however, a small faction of local seed and grain industry, which is threatened by the superior seed technology, apparently attempts to block approvals of much-needed new seed technology for maize hybrids.

Sources privy to the matter confirmed that the next generation biotech maize hybrid seeds of leading multinational companies under review at the said meeting had demonstrated significant yield advantage in the government-mandated National Uniformity and Yield Trials (NUYT) and had fully complied with all requirements of national seed regulations.

Industry experts are of the view that the introduction of biotech maize hybrid seeds will provide significant cost and yield advantage to the Pakistani farmers, providing the impetus for much needed gain in crop productivity necessary to meet growing demand for maize grain in the country.

The past 20 years have seen the maize crop show phenomenal growth, owing mostly to the introduction of latest high-yield hybrids by leading multinational seed companies. According to data published by the government of Pakistan, the average yields for maize crop have almost tripled and productivity has grown to nearly 6 million tonnes, as opposed to mere 1.5 million tonnes in 1995. Presently, more than 65% of maize grain seeds produced in the country are sourced by the poultry feed industry, another 10% is consumed for silage, whereas the remaining grain feeds into various other processing businesses.

However, with a growing poultry industry and advent of new demand segments, such as silage, further increase in productivity and improvement in cop economics will be a key to meet future needs. There is consensus in the industry that technology adoption is the only viable solution to address the growing demand for maize grain.

REAP HAILS DAWOOD FOR GETTING BAN ON RICE LIFTED BY QATAR

RECORDER REPORT | JAN 29TH, 2019 | ISLAMABAD

Rice Exporters Association of Pakistan (REAP) has appreciated Prime Minister’s Advisor on Commerce, Textile, Industries and Production and Investment, Abdul Razzak Dawood for his efforts towards lifting ban on rice imports from Pakistan by Qatar State Company. In a letter to the Advisor, Chairman REAP Safdar Hussain Mekhri said that rice exporters are indebted to Dawood and the Commerce Division’s team for their focus and commitment towards rice export sector.

During the visit of Prime Minister Imran Khan on January 21-22, the Qatari government agreed to include Pakistan origin rice in the tender documents of the Central Trading Committee which falls directly under the purview of Qatar’s Ministry of Economy and Commerce. As a viable solution, a third-party inspection for supply of rice through CTC tenders will be offered to take strict action against those found involved in supplying substandard rice and ensure that quality rice are being exported to Qatar in future.

The lifting of ban is expected to provide additional $ 40-50 million rice exports to Qatar if quality is maintained. Qatar annually imports 200,000 tonnes of rice.

SBP TO ASSIST PUNJAB GOVERNMENT IN DIGITIZATION OF AGRI PROJECTS

SAFDAR RASHEED | JAN 29TH, 2019 | LAHORE

State Bank of Pakistan (SBP) Governor Tariq Bajwa has said that the Bank will provide all kind of financial as well as technical support to the Punjab government for digitization of agriculture projects across the province.

The SBP Governor was talking to Chief Secretary Punjab Yousaf Naseem Khokhar on Monday at the Civil Secretariat. He said initially the digitization would be completed in two tehsils of Punjab as a pilot project and later it will be replicated in other districts.

He said the State Bank and Punjab Land Record Authority are working on availability of 'Fard' at 15 banks to facilitate people, especially those associated with agriculture sector.

Speaking on the occasion, the Chief Secretary assured him to prepare a comprehensive plan for the digitization in a short span of time. He said improvement of agriculture sector is priority of the government, adding that concrete steps would be taken for wellbeing of farmers. The Secretary Agriculture and the Director General of Punjab Land Records Authority were also present on the occasion.

FAMILY FALLS SICK AFTER CONSUMING 'TAINTED FOOD'

By Our Correspondent Published: January 29, 2019

KARACHI: A family of 15 fell sick on Monday after allegedly consuming tainted food near SITE Super Highway in Hingora Goth. Police shifted them to a private hospital near Toll Plaza where they were declared to be out of danger.

According to Malir SSP Irfan Ali Bahadur, the affected family had purchased rice and yellow food colour from a local shop on Sunday evening. The consumption of these items is believed to have caused the family's health to deteriorate. The food colour and rice samples have been sent to a laboratory for testing. Further action will be taken out based on the findings of the report. The police have arrested the shopkeeper in the meantime.

FISHERMEN REJECT INITIAL MODEL OF GWADAR EXPRESSWAY

By Mohammad Zafar Published: January 29, 2019

QUETTA : The authorities concerned have informed Chinese officials about demands for ensuring a 200 feet passage for boats at Gwadar Eastbay Expressway and other reservations after the local community rejected the initial model of the project.

"As promised by the federal and provincial governments and Chinese officials, passage for boats at Gwadar Eastbay Expressway should have been 200 feet but the proposed model couldn't meet with our demands," local fishermen said after visiting the site of the project on Sunday.

Federal Minister for Defence Production Zubaida Jalal, Senator Kauda Babar, Chinese officials and representatives of the Gwadar Development Authority (GDA) were present on the occasion.

The officials and the senator briefed the community regarding the boats' passage. But the fishermen community termed it too narrow. It was highlighted that through the designed path the fishermen cannot gain easy access to the sea.

"If the government has decided to follow the narrow passage then they have decided to destroy the jobs of local fishing community of Gwadar," they said and urged the government to build the passage proposed by them.

The federal minister, senator and GDA officials informed the Chinese officials regarding the fishermen community's reservations and stressed the need for a 200-foot passage at the expressway.

Zubaida said, "We would convince the federal government to address the reservations of local fishermen community for the sake of their profession."

She pledged to ensure the implementation of local fishermen's demands.

Babar said that being a representative of the people of Gwadar he has raised their issues in the upper house of parliament.

"We are standing shoulder to shoulder with the local population and want to assure them that we won't let anyone to exploit the rights of the people of Gwadar," said Babar.

FISHERMEN REJECT GWADAR'S EASTBAY EXPRESSWAY MODEL

The Newspaper's Correspondent Updated January 28, 2019

GWADAR: Local fishermen have rejected the initial model of Gwadar's Eastbay Expressway project.

"As promised by the federal and provincial governments and Chinese officials, the passage for boats at Gwadar Eastbay Expressway should have been 200 feet but the proposed model couldn't meet our demands," said the fishermen after visiting the expressway's site.

Federal Minister for Defence Production Zubeda Jalal, Senator Khuda Babar, Chinese officials and members of the Gwadar Development Authority were present on the occasion.

Senator Babar and other officials briefed the fishermen regarding passage of boats from the expressway who rejected the model, saying they can't gain easy access to the sea from this narrow passage.

"If the government has decided to follow the narrow-size passage then it has decided to destroy the jobs of fishermen of Gwadar," they said and urged the government to build the passage proposed by them.

Federal Minister Zubeda Jalal, Senator Khuda Babar and officials of the Gwadar Development Authority informed the Chinese officials about fishermen community's reservation and stressed upon to build 200 feet passage at Gwadar Eastbay Expressway.

GROWERS SLAM DELAY IN REISSUANCE OF SUGAR CANE RATE NOTIFICATION

The Newspaper's Staff Correspondent January 28, 2019

HYDERABAD: Sindh Abadgar Ittehad (SAI) has urged the provincial government to immediately reissue notification for sugar cane price for crushing season 2018-19 after approval of provincial cabinet so that small growers could get official price of Rs182 per 40kg of sugar cane.

The SAI members who met here on Sunday with its president Nawab Zubair Talpur in the chair expressed concern over undue delay in the reissuance of the notification and said that Pakistan Sugar Mills Association (PSMA) had objected to the notification during a hearing in court last year and asserted that the notification had no sanctity unless it was approved by the cabinet before its issuance by the agriculture department.

The meeting deplored that in the absence of the notification the mills were paying Rs130-140 per 40kg cane to growers which was a great injustice and urged Sindh government to reissue the notification with the cabinet's approval so that small growers could get the official price of Rs182 per 40kg.

The meeting condemned registration of what it saw as false cases against the growers who were demanding Digri sugar mills pay them their last year's dues, and slammed issuance of indents to fake agriculture farms instead of genuine growers.

It claimed that Dadu, Ranipur, Digri, Khairpur mills and Omni Group's sugar factories were not ready to clear farmers' dues. Mills were issuing brokers indents of Rs170 per 40kg cane while procuring sugar cane from growers at Rs140 per 40kg to their great disadvantage, it said.

The meeting criticised the 'mini budget' announced by the federal government as it did not have anything for agriculture sector in it. In addition, prices of urea had jumped to Rs1,800 from Rs1,300 over the past six months, said the meeting and called for release of water to save wheat crop.

Meanwhile, Sindh Chamber of Agriculture (SCA) rejected the economic package announced by federal finance minister in its meeting held here on Sunday and termed the cut of Rs200 in the price of a bag of urea as insufficient.

The meeting chaired by SCA president Kabool Kathian said that the economic package was not beneficial for agriculture sector. Before the installation of Pakistan Tehreek-i-Insaf government, a bag of urea was being sold at Rs1,380 and DAP at Rs2,800 which were now being sold at Rs1,850 and Rs3,800, respectively, he said.

The meeting said the Rs200 cut was in fact a joke with growers and other stakeholders in agriculture sector and urged the federal government to maintain the old prices of urea and DAP.

It said that production of wheat was affected by water shortage in Mirpurkhas, Umerkot and Badin districts and observed that price of wheat in open market was Rs1,350 to Rs1,400 per 40 kg, the government, therefore, should raise the support price to Rs1,500 per 40kg.

The meeting noted that if the government did not increase support price of wheat then it could not meet procurement target in lower Sindh region.

The meeting expressed serious concern over availability of water flows at Sukkur and Kotri barrages and expressed the fear that the situation might lead to food security issues and create problems for people linked to agriculture sector.

The meeting was attended by Zahid Bhurgari, Mir Karim Talpur, Mohammad Khan Sarejo and others.

DISAPPOINTED FARMERS

Amjad Mahmood January 28, 2019

THE farmers' community seems to be dissatisfied with the measures announced in the second mini-budget of the fiscal year.

In his speech, Finance Minister Asad Umar announced a few steps to help the agriculture sector. He incentivised banks to offer agricultural loans by reducing the tax rate from 39 per cent to 20pc on their interest income. The proposed measures include reducing the Gas Infrastructure Development Cess (GIDC) for fertiliser units by half and the duty-free import of diesel engines for irrigation purposes.

The farming community believes the mini-budget will not benefit small landholders and that the "economic reforms agenda" is bereft of measures needed for a turnaround in the sector.

"The sector needs a reduction in the cost of production and an increase in the small farmers' access to financing in the short run. The government should subsidise farm mechanisation as well as fix support prices at least for major crops in the long run," says Khalid Mahmood Khokhar, president of the Pakistan Kissan Ittehad, the representative body of small landholders.

The agriculture sector requires policy-level interventions, like aggressive diplomacy to find new international markets'

Quoting a document of the Punjab government, he says the cost of production for basmati rice in Pakistan is 34pc higher than India. It is 37pc, 57pc, 44pc and 34pc higher in the cases of wheat, cotton, onion and gram.

Mr Khokhar argues that the country needs to allocate at least 1pc of the agricultural GDP against the present 0.2pc for research because the sector is prone to natural disasters and requires continuous research to improve farm yield and ensure protection from pests and diseases.

He notes that the two commodities that enjoy the support price facility — wheat and sugar cane — are in surplus.

His point is endorsed by Ebadur Rehman Khan of the Farmers Associates Pakistan. He says the growers need a better price for their produce more than they need subsidies on inputs. "Reducing the farm inputs' cost is a good but temporary step. The sector requires policy-level interventions, like aggressive diplomacy to find new markets along with the revival of old ones on the external front and ensuring a fair and better price to the farmers on the internal front," he says.

He says that even a reduction of Rs500 in the price of a bag of fertiliser will bring the small farmer a relief of only Rs1,000-1,500 per acre. But if the government ensures a stable market through a support price-like mechanism, the same farmer may increase his per-acre earnings by around Rs10,000.

Despite being uncompetitive internationally because of its higher production cost, some of the local produce may still find clients in the world market because of the unavailability of alternatives, he insists.

In reference to the lifting of ban on Pakistani rice by Qatar and China agreeing to import our rice and potato, Mr Khan says the government should continue its aggressive diplomacy to open new markets and revive the lost ones. "Our produce like basmati rice, kinno and mango are unmatched in the world because of their taste," he says.

The Kissan Board Pakistan (KBP) believes a fair and just agriculture marketing system along with the timely payment of official rates to the growers is essential for the agriculture sector's development. "Eliminate the role of the middleman by allowing the growers to directly sell their produce in the market. But no such step was taken in the two mini-budgets," says KBP Punjab President Amanullah Chathha.

He says the authorities expect the farmers to turn to high-value crops like oilseeds without extending any guarantee about the procurement/marketing of the yield. At the same time, the government is allowing unchecked imports of poor-quality palm oil, he adds. "The government needs to revisit its palm oil and dry milk import policies to help the overstressed oilseed growers and livestock farmers."

Some observers challenge the veracity of the projected relief to the farmers' community.

"The tax incentive for banks won't improve the farmers' access to finance. Loans for agriculture production and agriculture processing units have been brought under one head since Dr Ishrat Husain's stint as governor of the State Bank of Pakistan (SBP). In the name of agriculture, loans are now being offered to feed mills, hatcheries and other processing units," says Kissan Rabita Committee Pakistan General Secretary Farooq Tariq. The duty-free import of diesel engines will likely be misused because such engines are already being manufactured locally, he adds.

PUNJAB GOVERNMENT TO PROMOTE AND DEVELOP ROSE FARMS

RECORDER REPORT | JAN 28TH, 2019 | SIALKOT

The Punjab government is finalising necessary arrangement for lunching a well-knitted plan for the promotion and developing of rose farms for producing of top quality of grafted especially roses across the Punjab. The Punjab and other parts of the country naturally possesses a great potential for producing quality roses due to rich resource local soil provides ideal agronomic conditions for the production of flowers.

Official sources told Business Recorder on Sunday that currently low quality of roses were being cultivated and sold in domestic market as well as exported to Middle East countries from Pakistan. The concept of this proposed plan was to promote floriculture and to produce high quality grafted roses for enhancing the radius of export to European countries. Under the plan special attention would be focused on cultivating red roses keeping in view the global demand especially European countries.

AGP DETECTS RS 292.72 MILLION LOSSES IN KP IRRIGATION DEPARTMENT

RECORDER REPORT | JAN 28TH, 2019 | PESHAWAR

The Auditor General of Pakistan (AGP) has detected financial losses worth Rs 292.72 million in the accounts of KP Irrigation Department and had referred the matter for recovery to the Public Accounts Committee (PAC) of Khyber Pakhtunkhwa Assembly. This has been revealed in the Audit Report on the accounts of KP Departments Year 2015-16. The report has been presented in the provincial assembly and the Speaker Mushtaq Ghani had referred it to the Public Accounts Committee (PAC) of the house. The KP Assembly PAC is headed by the Speaker, Mushtaq Ahmad Ghani.

In first case, a loss to the tone of Rs 156.19 million was noticed during the financial year 2013-14, in the office of Executive Engineer (XEN), Flood Irrigation Division D I Khan that local office used to procure and dump huge quantity of stones every year for throwing into Indus River during flood season with the contention to protect local Abadies, spurs and guide bund from destruction. The review of the monthly accounts from June 2009 to June 2015 (only six years) shows that stones valuing Rs 156.19 million were procured through various contractors, dumped on the river banks for further use. This state of affairs clearly depicts that the quantity would be 10 times more than shown in the statement because these pertains to one month per year based information.

The recurring expenditure on yearly basis termed as recurring loss to the public exchequer on the one hand while on the other it is not the final solution during flood 2010 damages were again occurred. The audit held that the procurement and use of stone is just the wastage of public resources and cannot be termed as the only solution to protect the locals from the flood. There might be more scientific systems and procedures and by adopting the same once for all the issue cane be resolved.

The issue was pointed out in November 2015 and the management replied that final reply will be furnished after verification of the relevant record. The audit requested the department repeatedly for holding Departmental Accounts Committee (DAC) meeting however, it was not convened till finalization of the audit report. The audit has recommended that the matter needs to be looked into for amicable solution of the issue.

In second a case of the loss of Rs 80.90 million noticed due to consolidation of two items from Composite Scheduled Rates (CSR) 2012 in the office of Executive Engineer, Peshawar Canal Irrigation Division Peshawar during the financial year 2013-14. In the case it was noticed that improvement and restoration of Bara River and revamping of Budni Nullah was awarded to different contractors. In the BOQ (Bill of Quantities) of the scheme as well as TS (Technical Sanction) an item of work @ Rs 151.08 pm on the basis of combination of two items of CSR 2012 was provided and accordingly paid.

But, the inclusion of an irrelevant item 'extra for wet earth work' after dressing was neither relevant nor required at site because after carrying out the dressing in dry channel/drains the adding of extra for wet was not possible. This clearly indicated that the inclusion and combination of an irrelevant rate of Rs 45.98 pm meant extra for wet earth work in the already completed rate of Rs 105.10 pm, which was undue favour to the contractor and the government was put to sustain a loss of Rs 80.90 million. The loss occurred due to undue favour to the contractor and violation of provisions of CSR 2012. The loss was pointed out in August 2014 and the management stated detailed reply will be submitted after consulting the record.

The audit requested the department repeatedly for holding of the DAC meeting, however DAC meeting was not convened till finalization of audit report. The audit has recommended conducting inquiry, fix responsibility and recovery of loss from the persons at fault. In third case a loss of Rs 17.07 million was noticed in the office of Executive Engineer Flood Irrigation Division D.I. Khan during the financial year 2014-15.

In the case it was noticed that various contractors were paid including payments on account of Barrow pit excavation undressed lead upto 50 meter, extra for wet earth work and supply and dumping/stacking of stones at site. However, the deduction of voids was not made, despite the facts that in certain cases voids from the earth work was deducted and converted into solid. Non-deduction of voids resulted into loss of Rs 17.07 million to the public exchequer.

The audit had held that quantities of work done were required to have been measured and allowed after applying multiplication factor for converting loose measurement into solid as required under the provision of rules and standard contract agreement of the department which was not done.

The audit had attributed the occurrence of loss due to non-adherence to provision of rules and standard contract agreement of the department. However, when pointed out in November 2015, the management replied that final reply will be furnished after verification of the relevant record.

The Audit repeatedly called for holding of the DAC meeting, which was not convened till finalization of this report. The audit has recommended investigation into the matter, fixing of responsibility and recovery of from those responsible.

In another case a loss of Rs 15.26 million had been noticed during the financial year 2013-14, in the office of Executive Engineer Peshawar Canal Irrigation Division Peshawar wherein an amount of Rs 15.26 million was paid to contractors on account of silt clearance of the different RDs of Hazar Khani and Kabul River Canal in the KRC Sub-Division of the local office. The record showed that tender was floated for the said work in December 2013.

Similar nature was also carried in the same Sub Division on the basis of tender floated in the month of June 2013 for the same year 2013-14. The contractors executed agreements and started work in the same canals and they were accordingly paid @ 43% below, which indicates that KRC Sub Division on work in the same RDs was carried out twicely which resulted into a loss of Rs 15.26 million.

The record further revealed that in the first instance only excavation of silt was paid while in the second instance excavation alongwith transportation was paid. Audit held that in the first instance the lower rate of the contractor was ignored due to extending favour to him.

The loss occurred as the contractor quoted unreasonably lower rate and the local office extended undue favour to him. When pointed out in August 2014, the management stated that detailed reply will be submitted after consulting the record.

Audit repeatedly directed the convening of the DAC meeting, but it was not convened. Therefore, the audit had recommended conducting inquiry, fixing responsibility apart from recovery of the loss from the concerned persons.

FARMERS IN SINDH REJECT MINI-BUDGET RELIEF AS INSUFFICIENT

By Our Correspondent Published: January 28, 2019

HYDERABAD: The Finance Minister Asad Umar's announcement in Finance Supplementary Bill, 2019, of 50% reduction in the overall rate of Gas Infrastructure Development Cess (GIDC) for the fertiliser sector seems to have failed to provide the desired relief to the farmers.

While the fertiliser industry has already indicated that they cannot pass on the entire impact of the concession to the farmers, the agriculturists have squarely rejected the proposed relief as insufficient.

The Sindh Chamber of Agriculture (SCA), a farmers' lobbying group, said on Sunday that the bill has completely failed to provide respite to the agro economy which is reeling from water shortage, expensive inputs and low crop rates.

Qabool Muhammad Khatian, SCA's President, who chaired the chamber's meeting in Hyderabad, demanded that the federal government reduce the rates of fertiliser to what existed before Pakistan Tehreek-e-Insaf (PTI) came to power. The farmers' representatives from Karachi, Sukkur, Sanghar and other districts attended through video link.

According to Khatian, a urea bag was being sold for Rs1,380 and a Diammonium Phosphate (DAP) fertiliser bag at Rs2,800 prior to July, 2018 elections. The prices suddenly swelled to Rs1,850 of urea and Rs3,800 of DAP fertiliser in the months following the elections, he added.

"Even if the rate is reduced by Rs200 per bag as announced by the finance minister, the farmers will still be getting fertiliser at very expensive rates," he said. Umar, while announcing the mini budget, had expressed hope that the 50% concession would enable the industry to reduce the price of fertilizer by Rs200 per bag.

The SCA also reiterated its dissatisfaction over the Rs1,300 per 40 kilogrammes wheat procurement rate as fixed by the Sindh government and demanded its revision to Rs1,500.

The farmers were also apprehensive that the persistent shortage of water at the Sukkur and Kotri barrages can entail a food crisis for the country, particularly for Sindh.

IGC SEES GLOBAL GRAINS STOCKS FALLING IN 2019-20

RECORDER REPORT | MAR 31ST, 2019 | LONDON

The International Grains Council (IGC) on Thursday forecast that grains stocks would fall further in the 2019/20 season with an anticipated rise in both wheat and corn production insufficient to satisfy record demand. The inter-governmental body, issuing its first full set of supply and demand projections for 2019/20, saw total stocks of grain falling by 29 million tonnes in the season to 575 million tonnes following a 44 million tonne drawdown in 2018/19.

Total grains production in 2019/20 was seen rising by 50 million tonnes to 2.175 billion tonnes while consumption was projected at a record 2.204 billion. The global corn crop in 2019/20 was seen 10 million tonnes higher at 1.124 billion tonnes, reflecting a rise in expected production in the United States, China and Brazil partially offset by declines in the European Union and Ukraine.

'IT IS SAFE TO CONSUME BROILER CHICKEN, CHINESE SALT'

By Our Correspondent Published: March 31, 2019

KARACHI: Medical experts at a conference 'Common Food Controversy,' organised by Pakistan Nutrition and Dietetic Society (PNDS), said that broiler chicken and monosodium glutamate (Chinese salt) is a mystery. Research shows that they can be consumed and that the broiler chicken's meat does help in meeting the nutritional needs, they should not be made a regular part of a diet, said the experts adding that the excessive use of anything was dangerous.

The panel 'For locals, the broiler chicken is a mystery,' included Dr Syed Muhammad Ghufran Saeed, Dr Zafar and Sabeen Gul.

Dr Syed said that 'desi' chickens are usually thought of as healthy, nutritional and tasty meals. When we talk about giving a patient soup it should be made using desi chicken as that is healthy. This is because the 'desi' chicken and broiler chicken are different. While desi chickens take around six months to mature, broiler chickens are ready to be consumed in six to eight weeks. There are genetic differences between the two as well, added Dr Syed.

Dr Zafar said that broiler chicken is given specific foods, unlike the desi chicken. He added that broiler chickens fulfil the protein needs of people around the world and without it, fulfilling the nutritional needs of humans was impossible. Broiler chickens are given antibiotics, some of which are filtered out through their liver and some filtered out through their stomach. Research has shown, however, that arsenic is found in broiler chickens, he added.

According to Gul, there is no truth in the rumours that broiler chicken is given steroids or hormones. She said that the chicken is bought from the market, they are tested and while preparing their feed, nutrition is a high priority. She added the information that chickens are fed antibiotics was false. If a chicken is ill only then it is given an antibiotic but otherwise a balanced diet is provided to chickens, she said.

PNDS President Rabia Anwar said that monosodium glutamate (msg), commonly known as Chinese salt, is used to heighten the taste of food. Glutamic acid is naturally found in tomato, grapes, paneer (cottage cheese), mushrooms and other food products. She said that its use, however, has become controversial, which is why food and drug administration issued directives that the products containing msg should clearly mention its use on their labels. She further said that scientifically it hasn't yet been proven that msg is injurious to health and so people can consume it.

FARMERS REAP WHEAT AMID POOR GOVT RESPONSE ON SETTING PRICE

Jan Khaskheli March 31, 2019

HYDERABAD: Punhal Palari's migrant herder family has harvested six acres of wheat and collected around 15 maund grain for the children through their collective labour.

Punhal is now looking for more fields to reap the golden crop for scoring grain stocks against his work. The whole family, including his wife and two younger sons, works together for the harvesting.

Originally, he comes from the drought-stricken arid-zone Kohistan, Jamshoro district. Now, they live in union council Hatri in the suburbs of Hyderabad city.

They have been following this age-old sharecropping method for generations. Under this method, the cost of the wheat harvesting is received in the shape of grain, depending on the rate and situation of the particular area. Punhal, who receives 2.5 maund per acre after harvesting, said other areas had better returns. "In some areas workers can get three-four maund per acre for similar work," he added.

Hundreds of families, who migrated from the drought-hit Kohistan, harvest wheat and collect enough grain stock to feed families. This helps them avoid any food crisis during the time they stay away from their homeland.

Sachal Palari, another member of a migrant family living within the same cluster, said, "We travel long distance – three to four kilometres – to harvest wheat in the forest areas."

They move with women and children on a daily basis to work together from dawn to dusk for earning a little for their families survival.

"We cannot decide or bargain over the wages of this kind of work. It depends on landlords to fix labour wages and give us after thresher," Sachal said.

Wheat harvesting goes on for a month, starting from early March till the first week of April. All workers usually collect enough stock through their work to feed their children for the whole the year.

About their livestock, Sachal said they travel with their herds, which are tended by younger children near vacant fields.

He told that their grandparents had seen better days. They harvested the golden crop too, but on their own land, which has turned barren. Now, he said they were lucky to even feed their children after the painstaking labour.

Some of these families have a history of migrating from their rain-dependent mountainous areas for 20 years. Whenever the families feel difficulties in life and livelihoods due to delay in rainfall, they take their animals and migrate to barrage areas for animal rearing and labour.

They spend six-eight months away from their native villages and return whenever they receive news of pouring rains during monsoon. These herder families have pieces of land in their villages that they cultivate during monsoon rains. But for many years, they have been experiencing low rainfall, resulting in dryness and drought-like conditions in Kohistan.

Each family has a different story. Some of them migrate to union council Hatri, Hyderabad district that once had forest villages with thick tree cover and rich economy. These herder families live under makeshift abodes along roadsides and barren lands with animals. Women and children also work to ease difficulties.

During the wheat harvest season, each family member collects grains for the year. Otherwise, they sell milk in the local market for survival. On rare occasions, like when they are faced with expenses for some illness, they sell their animals to bear the cost. Reports gathered from different areas show that only lower parts of the province, which leads in the cultivation of all the crops, have started wheat harvest. But upper parts of the province are yet to start harvest.

Badin, Thatta, Sujawal and parts of other districts being located at tail-end areas did not receive irrigation water to produce wheat this year.

Qabool Muhammad Khatian, president, Sindh Chamber of Agriculture (SCA), was optimistic for a bumper crop in all districts of the province, except Badin, Thatta, Sujawal, and parts of Mirpurkhas and Tando Muhammad Khan districts.

These areas did not receive timely water to produce wheat.

He said pleasant weather during the season has also benefited the wheat crop, and farmers were receiving 40-45 maund per acre average as compared to 30 maund per acre they used to receive during the previous years. “It is good sign because of weather phenomenon,” he added.

About the procurement process, he said the provincial government has yet not declared any procurement centres in the entire province to receive wheat. “Farmers are demanding to start the process of procurement, so they can sell their products on time,” he informed.

Qabool said the provincial government does not have a clear policy to promote agriculture sector, which benefits the people associated with farming. “The rate of Rs1,300 per maund was fixed by the government 10 years back, which still continues. Farmers are compelled to sell their product at this rate,” he lamented, urging the government to announce at least Rs200 raise in wheat prices, so the famers could recover the input cost.

He said that the government wanted to sell wheat at low rates to urban areas, mainly Karachi. “In this situation, only producers will suffer due to the low prices they receive for their valuable food product,” he added.

Reports from Dadu district show that farmers were preparing to harvest wheat. Some influential farmers preferred to hire combined harvesters and bear the machinery cost. Combined harvesters get Rs1,400 per acre of wheat harvest.

Grower leaders, keeping an eye over the situation, fear that water scarcity might create problems for agriculture and farmers in the current year, as water scarcity also meant that the farmers could not produce grass fodder. In the absence of grass fodder, people relied on wheat straw, which was also in low supply, increasing problems for herders. Currently, livestock farmers were forced to pay high prices for wheat straw in tail-end areas.

‘LIVELIHOOD GIFTS’ DISTRIBUTED AMONG FISHERMEN

The Newspaper’s Correspondent March 30, 2019

THATTA: Over 400 fishermen having licences for fishing in the Keenjhar Lake were given free-of-cost motorboat engines, nets, iceboxes and bicycles through a lucky draw held here on Friday.

Sindh Minister for Fisheries, Livestock and Cooperative Societies Abdul Bari Pitafi gave away the livelihood articles to the winners.

The minister also released over 450,000 seedlings of various fish species in the lake.

Later, addressing the ceremony, the minister said the provincial government was making all-out efforts to promote fishing and improve the lot of fishermen. He pledged that 260,000 more seedlings of various fish species would be dropped into the lake in June.

Mr Pitafi said the government was making every possible effort to fully revive Keenjhar, Manchhar, Chotiaryoon and other wetlands of Sindh to the benefit of the fisherman community.

Fishermen and local residents among the audience complained to the minister that the police under patronage of influential figures of area and officials of the lake administration had routinely been extorting them and visitors, mainly coming from Karachi and Hyderabad. The minister assured them of appropriate action in this regard.

GOVERNMENT URGED TO WAIVE AGRICULTURE LOANS OF FATA, PATA FARMERS

ALI HUSSAIN | MAR 30TH, 2019 | ISLAMABAD

A parliamentary panel on Friday recommended the government to waive off the agriculture loans of small farmers of the erstwhile Federally Administered Tribal Areas (FATA), as they have suffered a lot due to militancy over the past several years.

Senate Standing Committee on States and Frontier Regions (SAFRON), which met here with Senator Hidayat Ullah in the chair, was given briefings by senior officials of Ministry of SAFRON, Zarai Taraqiati Bank Limited (ZTBL) and State Bank of Pakistan (SBP), Member IR Policy Wing, CEO Tribal Areas Electricity Company (TESCO) and others.

The ZTBL officials told the committee that till 2009 all the outstanding loans amounting to Rs 431 million of the small farmers of the erstwhile FATA and PATA have been waived off due to the damages caused to the agriculture in the areas because of the militancy.

They told that the total amount of outstanding loans given to people from FATA between 2009 and 2012 is Rs 471 million, out of which only Rs 30 million are agricultural loans.

On this, the committee recommended that the agricultural loans should be write-off to give relief to small farmers as the area has been under civil war and no agricultural produce has been obtained.

Briefing the panel, SAFRON Secretary Mohammad Aslam said after the 25th Constitutional Amendment, the FATA and PATA were merged into Khyber Pakhtunkhwa and therefore, the President or the Federation cannot make regulations for erstwhile FATA and PATA anymore. He said all the functions performed by the erstwhile FATA Secretariat, its secretaries and directorates also transferred to the concerned departments of the government of Khyber Pakhtunkhwa.

About Levies and Khasadar Force, he said after repealing the Regulation of 2012, the Khyber Pakhtunkhwa government promulgated two ordinances on March 12, 2019 (Khyber Pakhtunkhwa ORD.NO.I of 2019) and the Khyber Pakhtunkhwa Khasadar Force (Maintenance, Regulation and Protection of Service) (Transition) Ordinance ORD. No. II of 2019 and therefore the two forces stand provincial and the Ministry of SAFRON has no role anymore in respect of the two said forces.

The committee was also given update on the status of non-payment of salaries and pension to the Levies and Khassadar personnel working in Kurram and Orakzai districts.

The committee also directed the deputy commissioners of all seven tribal districts to complete work on proposed and recommended projects for the year and submit details to the committee with mention of the agency or parliamentarian who has recommended the project.

The committee was told that according to Planning and Development Department of Khyber Pakhtunkhwa, law enforcement agencies, MNAs, senators and tribal elders have to be consulted before proposing any project in the area.

The committee discussed in detail the matter of tax exemption to the erstwhile FATA and it was informed that due to the economic backwardness of the former FATA and PATA, the federal government on July 23, 2018 granted income tax exemption on profits and gains derived from any source in the areas.

The officials of the FBR told the committee that exemption from income tax was conferred upon the profit and gains derived by association of persons (AOPs) and companies from existing businesses set up in the areas comprising the ex-FATA and ex-PATA.

They said exemption from all withholding taxes (except advance tax on imports) was made available in cases where both the payer and the recipient were residents of the territories constituting the erstwhile FATA and PATA. Additionally, there are exemptions of taxes on setting up new industries, supply of electricity to domestic, commercial and industrial consumers, on supply of goods by retailers located in the areas, and on the goods produced and supplied by industrial units located in the ex-FATA and ex-PATA.

The committee was told that the SROs 1212 and 1213 relating to sales tax and income tax are not in force now and the tax situation is the same as was applicable before 25th amendment. The committee decided to call chairman FBR, secretary finance and secretary law and justice in the next meeting to discuss the matter.

DAIRY PRODUCTS IMPORT SCALES DOWN TO $158.143M

RECORDER REPORT 2019/03/30

KARACHI: Pakistan's import of dairy products scaled down to $158.143 million in July-Feb 2018-19, down by 6 percent, official figures say.

Fall in the import bill of dairy products now stands in $9.984 million in July-Feb 2018-19 from $168.127 million in July-Feb 2017-18, Pakistan Bureau of Statistics indicates.

Import volume of dairy products also fell by 6 percent or 3,408 metric tonnes to 55,384 metric tonnes in July-Feb 2018-19 from 58,792 metric tonnes in July-Feb 2017-18.

In Feb 2019, the country imported $20.436 million of dairy products, which is higher by 29.39 percent or $4.642 million from $15.794 million in Feb 2018.

In term of quantity, Pakistan's import of dairy products grew by 10 percent or 625 metric tonnes to 6,867 metric tonnes in Feb 2019 from 6,242 metric tonnes in Feb 2018.

COTTON JUMPS OVER 2 PERCENT AS 2019 CROP AREA SEEN DOWN

RECORDER REPORT | MAR 30TH, 2019 | NEW YORK

ICE cotton futures rose more than 2 percent on Friday as a report from the US Department of Agriculture (USDA) showed a drop in acreage for the natural fibre in 2019. The front-month cotton contract on ICE Futures US, rose 1.78 cent, or 2.35 percent, at 77.65 cents per lb. as of 1:29 p.m. ET (1729 GMT).

The front-month contract has gained more than 1.2 percent for the week and is set to post its sixth consecutive weekly gain. "The USDA planting intentions came out less (than expected), the market is up strongly. That was certainly an unanticipated number," said Keith Brown, principal at cotton brokers Keith Brown and Co in Moultrie, Georgia.

The USDA estimates all cotton planted area for 2019 at 13.8 million acres, less than analyst's average forecast of 14.498 million acres and down 2 percent compared to last year. Meanwhile, the May contract rose above the 100-day moving average at around 76.18 cents. Speculators who trade on technical signals regard a break above the 100-day moving average as a bullish sign.

"There are fairly sizeable short positions held by the speculators, they may be soon convinced they are wrong and they could start to buy the market," Brown said. The United States and China said they made progress in trade talks that concluded on Friday in Beijing, with a Chinese delegation led by Vice Premier Liu He expected to visit Washington next week.

Total futures market volume fell by 1,668 to 28,605 lots. Data showed total open interest gained 2,011 to 228,436 contracts in the previous session. Certificated cotton stocks deliverable as of March 28 totalled 46,544 480-lb bales, unchanged from 46,544 in the previous session.

6,361 LITRES OF CONTAMINATED MILK DESTROYED

Our Correspondent March 30, 2019

LAHORE: Over 6,361 litres of contaminated milk was disposed of by the dairy food safety teams of the Punjab Food Authority while carrying out a province-wide crackdown to curb the sale of tainted milk.

The crackdown was initiated on the directions of PFA Director General Capt (R) Muhammad Usman. The teams have inspected 289,829 litres milk by placing screening pickets early morning at the entry and exit points of 36 districts of Punjab.

According to details, PFA's dairy teams have taken milk samples for screening test on the spot and took action against milk sellers over found results not to be up to the mark. Sharing the statistics, Usman said the PFA teams inspected 1,025 milk vehicles in Lahore zone, 591 in Rawalpindi, 357 in Multan and 82 in Muzaffargarh zone. He said the teams disposed of milk over proved contamination of harmful chemicals, powder, urea and water which used for increasing the thickness and quantity of milk. "The execution of pasteurisation law was the only solution to ensure the provision of milk free from any contamination in Punjab," he said.

The DG PFA said the authority was fully committed to getting fruitful results whereas doing work on the project to make Lahore adulteration free food city. He said we were trying hard to make strict rules as punishment against the violators especially adulterators. He said the sale of unpacked/ loose milk would be banned after enacting pasteurisation law by 2022.

Eight judicial officers appointed: The Lahore High Court on Friday posted eight district & sessions judges as presiding officers of as many banking courts of Punjab lying vacant for a considerable time.

As per a notification issued by the LHC registrar, Abid Hussain has been transferred and posted from Lahore to Banking Court-I Multan, Safdar Saleem Shahid from Lahore to Banking Court-III Multan, Abdul Ghaffar from Consumer Court Multan to Banking Court-III Lahore, Muhammad Azam (OSD) from Lahore to Banking Court-IV Lahore, Ziaul Qamar (OSD) from Lahore to Banking Court-V Lahore, Ms Shahida Saeed from Kasur to Banking Court-VI Lahore, Ali Nawaz from Ahmadpur East to Banking Court Sahiwal, and Pervez Iqbal Sipra from Consumer Court Faisalabad to Special Court (Offences in Banks) Multan.

Through another notification, the LHC promoted two Additional District & Sessions Judges, including Muhammad Iram Ayaz and Javed Iqbal Sheikh as district & sessions judges and posted them at Consumer Court Multan and Consumer Court Faisalabad respectively.

SENATE PANEL SEEKS WAIVER OF AGRI LOANS FOR EX-FATA FARMERS

By Our Correspondent Published: March 30, 2019

ISLAMABAD: Senate Standing Committee on States and Frontier Regions (SAFRON) on Friday recommended to waive off the agricultural loans in order to provide relief to small farmers, an official statement said.

Regarding agricultural loans to small farmers from erstwhile FATA (Federal Administrated Tribal Areas), the Committee was told that the total amount of outstanding loans given to people from ex-FATA between 2009 and 2012 was Rs471 million, out of which only Rs30 million was agricultural loan.

The meeting was held under the Chairmanship of Senator Hidayatullah and was attended among others Senators Hilalur Rehman, Sajjad Hussain Turi, Shamim Afridi, Najma Hameed, Secretary SAFRON, Member IR Policy Wing, CEO TESCO and officials from State Bank and relevant ministries.

The committee was also given update on the status of non-payment of salaries and pension to the personnel of Levies and Khassadar working in Kurram and Orakzai Agencies.

The committee directed the DCs of merged districts to complete work on proposed and recommended ADP projects for the year.

PUNJAB FOOD DEPARTMENT FACING ACUTE DEARTH OF WHEAT STORAGE SILOS

By Rizwan Asif Published: March 30, 2019

LAHORE: Owing to an acute dearth of warehouses at the food department, the Punjab government is currently undergoing a crisis in term of wheat storage. At present, the department – on average – needs to stock 320,000 tons of wheat but it only has a capacity to store 220,000 tons.

According to research conducted by international institutions, if the current situation persists, by 2025, the food department will not be able to stock around 270,000 tons of wheat. Therefore, it is necessary for the Punjab government to create a capacity for storing 200,000 tons of wheat on the state level and build silos by offering concessions to the private sector to stock 100,000 tons of wheat. A plan for constructing new silos for storing the surplus 100,000 tons of wheat was devised in 2004, however, due to a shortage of funds, management issues, and a general lack of interest among various governments, the plan could not be fully materialised.

Over a period of 15 years, silos with a capacity to store 30,000 tons of wheat had been built in Rawalpindi, but because of neglect, they have been non-functional for over a year. Although the shortage of silos has caused a lot of trouble to the department, a major segment of the food department employees and officers oppose the construction of silos owing to the belief that it will be difficult to keep them operational due to power crisis. The employees, therefore, are of the view that it will be appropriate to construct them in big cities, adding that new warehouses – similar to houses – should be built in rural areas, specifically Southern Punjab, where there is plenty of state-owned land available.

Per the details provided by the Punjab food department, it annually procures 350,000 – 400,000 tons of wheat, while each year, the department is left with 100,000 to 150,000 tons of old carry-forward stocks of wheat. In 2019, however, the department was left with 360,000 tons of wheat in carry-forward stock while an equal amount of new wheat was procured. As a result, with 720,000 tons of wheat, the department was only left with storage space for 210,000 tons of wheat. The rest was either stocked in private warehouses or in open fields as cereal grass.

Apart from the lack of storage capacity, the food department also has numerous weaknesses in terms of its operations. Owners of different flour mills complain that the department's field staff mixes sand and pebbles to wheat sacks in order to increase their weight up to three to four kilograms.

The officers and field staff of the Department told The Express Tribune that for the past 20 years, they have been hearing that silos will be built by the government but so far the plan has not been materialised. "Since there is a serious energy crisis in Pakistan, the operational cost of silos is will be very high," one of the officers said. "Per an average cost estimate, the dumping and taking out of each wheat sack in silos will cost up to Rs4-6.

Stocking wheat in the form of cereal grain or in a house-style warehouse is easy and cost-effective," he said. According to the documents and records obtained by The Express Tribune, after becoming the Chief Minister of Punjab in 2002, Chaudhry Pervez Elahi, directed the food department to construct silos to stock government wheat in Punjab.

The food department, however, showed progress on the directive for two years. In 2007, some silos were constructed in Rawalpindi but the Punjab Communication & Works Department suddenly raised objections on technical grounds. Finally, in 2010, the silos were made operational again. Within two years, however, they became non-functional.

During his tenure, former PM Nawaz Sharif also promised to construct new silos, after which the food department started work on the project again with the assistance of International Finance Corporation. In 2012, with the help of studies conducted by foreign experts, the government decided to construct silos with a capacity of 50,000 tons in Lahore, Rajanpur, Bahawalnagar, Bahawalpur, Multan, Sahiwal and Muzzafargarh – which means silos with a total of 350,000 tons of storage capacity were planned to be constructed. Moreover, through the construction, the private sector would have been given a subsidy of Rs2,700 every year for wheat storage.

The government officials estimated the cost of silos per site at Rs1 billion. The department summoned a tender but no company came forward to with a proposal. In April 2015, the food department summoned a tender for the construction of silos once again but the effort went in vain once again.

As a result, the then-provincial government asked the World Food Programme for assistance and as a result, a Dutch company accepted the project. In its recommendations, the company wrote that the government should immediately construct storehouses with a storage capacity of one million tons, while the private sector must be directed to construct silos with a storage capacity of two million tons.

Furthermore, the Dutch company proposed to build steel silos at 200 locations in the province, each having a storage capacity of 10,000 tons at an estimated cost of Rs110 million. The company also suggested that the cost of procuring local and foreign machinery will be estimated at Rs150 million, while the price per ton of wheat storage for a year was recommended at Rs2710. In 2017, biding for the silos was carried out at 40 spots but firms only came forward in two places – Bhakkar and Layyah. Currently, these silos are under construction.

The current PTI government is also in favour of constructing these silos and, for the purpose, CM Punjab Sardar Usman Buzdar has constituted a technical committee. However, the project of constructing silos is undergoing delays due to the continuous fluctuation in the value of US dollars against Pakistani Rupees, as well as the absence of stable government policies and uncertainty regarding wheat.]

Another reason for the undue delay is that the food department – which is already facing a shortage of storage houses – will have to sacrifice two houses. This is because, during his tenure, when former CM of Punjab Shehbaz Sharif toured Lahore's Gulberg and Badami Bagh, he ordered to take away the warehouse projects from the food department to initiate other projects.

At the time, the provincial government had promised the food department that for the construction of new warehouses, 205 kanals will be allotted in Lahore. The promise was, however, has not been fulfilled to date. Moreover, the department's old silos in Multan and Faisalabad have been non-functional for a long time.

When approached, the food minister of Punjab, Samiullah Chaudhry, said that it is the government's responsibility to ensure the protection of public's food and it is also important to provide quality food to people.

"The public consumes a reasonable amount of flour and, for quality flour, we require high-quality wheat," he explained. "It is true that the food department's own warehouses have a low storage capacity and we have to rent private warehouses or store wheat in open spots, but the government is working on a project for the construction of silos under Public-Private partnership and funds will be allocated for this purpose in the coming budget.

Chaudhry, however, added that it is a long-term project and will be completed in different phases.

Speaking on the matter, the central leader of the Pakistan Flour Mills Association, Asim Ahmed Raza, said that since the creation of Pakistan, the standards established at an international level for the purchase of wheat from farmers could not be implemented by our governments and the food department.

DELHI DETAINS ECONOMIST FOR ATTENDING FOOD SECURITY CONFERENCE

Reuters Updated March 29, 2019

NEW DELHI: Police in the eastern Indian state of Jharkhand detained Belgian-born economist and social activist Jean Dreze for participating in a public meeting on food security organised by a village self-help group, Dreze and authorities said on Thursday.

Local authorities said Dreze and two other activists were detained because they didn't have the permission to organise the meeting.

"Dreze and others were released after some initial questioning," Harsh Mangla, deputy commissioner of Jharkhand's Garhwa district, said.

Dreze, who has co-authored books on hunger with Nobel laureate Amartya Sen, said the organisers had put in a request 10 days ago but authorities neither denied nor granted permission for the meeting.

The meeting was organised to help guide the poor access subsidised food supplied by the government.

"The meetings organised by various village self-help groups and other voluntary bodies play a crucial role in ensuring food security for Jharkhand's poor people," Dreze said.

Late last year, it was reported that at least 14 people had died of starvation in Jharkhand, one of the most underdeveloped and poverty-stricken states of India.

Activists said the deaths had occurred since authorities cancelled old handwritten government ration cards and replaced them with the biometric Aadhaar card to weed out bogus beneficiaries.

Opposition parties have highlighted the issue of starvation deaths in Jharkhand, a predominantly tribal state, ruled by Prime Minister Narendra Modi's Bharatiya Janata Party.

Opposition politicians and social activists, who often accuse Modi's government of trying to muzzle free speech and cracking down on dissent, took to Twitter to criticise the detention of Dreze.

In Jharkhand, subsidised grains and old-age pensions can be the difference between life and death, said Dreze, who currently lives and teaches at a university in Ranchi, the state capital.

RAMAZAN BAZAAR: 19 ITEMS TO BE PROVIDED AT SUBSIDISED RATES

RECORDER REPORT | MAR 29TH, 2019 | LAHORE

The Cabinet Committee for Price Control decided to provide 19 items at subsidized rate at fare price sshops setup in Ramazan Bazar. The meeting presided over by Provincial Minister for Industries and Trade Mian Aslam Iqbal on Thursday also discussed a proposal for utilizing 20 percent utility stores as Ramazan Bazar. Mian Aslam Iqbal has said that Ramazan Package will be finalized soon with the consultation of traders association. He said former rulers wasted Rs 12 billion in the name of subsidy but we will provide real benefit of subsidies to the poor families.

The Minister directed to deal with exploiters of people with iron hand and perform their duties honestly. He said that the poorest families will be given relief during Ramazan by providing quality items at subsidized rates. He directed to activate market committees and improve it mechanism. He said that additional Ramazan Bazars will also be setup for the conveyance of consumers. Provincial Ministers Hussain Bahadur Drashak, Sami Ullah Chaudhary, Noman Akhtar Langrial, spokesman Punjab government D. Shehbaz Gil, MD Utility Stores and concerned secretaries attended the meeting.

SEED-COTTON: PKI URGES GOVERNMENT TO FIX SUPPORT PRICE AT RS 4000/40KG

RECORDER REPORT | MAR 29TH, 2019 | LAHORE

Pakistan Kissan Ittehad (PKI) has strongly urged the government to give cotton grower a confidence by announcing support price for seed-cotton at Rs 4000/- per 40 kg in order to achieve 15 million bales target well ahead of cotton sowing season. Prime Minister, Imran Khan should hold the hands of the farmers and grower will make the Pakistan prosper and green with their sweat and blood,' said PKI President Khalid Khokhar in a statement issued here on Thursday.

Higher input cost of cotton production in Pakistan comparing to other countries of the world, lenient import policy without duty and from the land routs putting lots of pressure of local cotton prices. Even International Cotton Advisory Committee (ICAC) declared cost of production in Pakistan higher than India, Turkey, Tanzania, Argentina, Australia Brazil etc, he added.

Import from such countries without duty hurts the local prices and reduce growers profitability, which ultimately influence the growers' choice for planting other crops instead of cotton. Secondly since Textile Industry is the only buyer of cotton in Pakistan, it monopolize the market and suppress the prices far below than international prices. In these circumstances, it is very imperative to pay the support prices of cotton in order to secure grower profitability, which is widely practiced in the neighbour country for over 27 crops including cotton, very effectively.

Pro-industry policies of the past Government about cotton import, illegal import from the land route and non-provision of support price, resulted in over 30pc reduction of cotton area.

PAKISTAN MOVES TO RECAPTURE AFGHANISTAN'S WHEAT MARKET

By Rizwan Asif Published: March 29, 2019

LAHORE: Pakistan is making efforts to open up a potential 2-million-ton wheat export market in Afghanistan and has begun taking special measures based on demands of exporters.

The move comes after Pakistan Tehreek-e-Insaf (PTI) leader Jehangir Tareen met with Khyber-Pakhtunkhwa (K-P) Chief Minister Mahmood Khan, senior Federal Board of Revenue (FBR) officials and representatives of security forces.

In the first phase, the duration for which goods trucks will be allowed to pass through the Torkham border has been increased to 10 hours and plans are afoot to open the border 24 hours a day for exports by August this year.

Sources said this could save exporters Rs90,000 per truck in transportation expenses. Apart from this, at the suggestion of Karachi exporters, work has begun on a project to reserve high protein and gluten wheat from Punjab and Sindh for export only.

According to exporters, the high protein and gluten wheat from Pakistan can sell for $8 to $10 more per ton in international markets. In the past, Pakistani exporters used to send 1 to 1.2 million tons of wheat to Afghanistan, but due to the government's uncertain export policies, Pakistan gradually lost the wheat market in Afghanistan and Russian wheat and grain took its place.

Prime Minister Imran Khan has handed over the task of resolution of agricultural issues and adopting measures for agricultural development to his close aide Tareen. In the past few days, Tareen has held high-level meetings with wheat exporters in Punjab, Sindh and K-P in which various suggestions to increase Pakistan's share in the 2-million-ton Afghan wheat market were considered.

Exporters sending wheat to Afghanistan informed Tareen that currently goods trucks have an eight-hour window to cross the border and in this duration around 250 trucks cross. They said if the border is opened for a longer period, all exports including wheat will increase. Similarly, Karachi exporters told Tareen that they export low protein and gluten wheat, which fetches lower prices in global markets.

Nawabshah, Mirpurkhas, Hala, Bahawalpur, Bahawalnagar, Rahim Yar Khan and other areas in Sindh and Punjab produce wheat with higher protein and gluten, which they said could be stored and exported for higher profits.

When contacted by The Express Tribune, Tareen said he had examined the suggestions in his meeting with K-P's political leadership and security services, after which in the first phase, the duration for goods carriers passing through the Torkham border has been extended from eight hours to 10 hours.

In April, this duration will be increased to 12 hours, and by August, the Torkham border will be opened for 24 hours a day for exports. "On the demand of Sindh exporters, lab tests of wheat from various Punjab districts have started, so that the percentage of protein and gluten can be determined. After this, we will select the districts producing high protein and gluten wheat and will reserve them for export purposes," Tareen added.

He said there is a huge wheat market in Afghanistan, which would not only be a source of foreign exchange, but would also benefit Pakistan farmers with higher prices and domestic flour mills due to increased wheat crushing activity.

Speaking to The Express Tribune, Flour Mills Association leader and wheat exporter Hafiz Ahmed said Afghanistan had been a big market for Pakistan in the past, however, uncertain government policies let it slip out of its hands.

"Currently, there is a great demand for Pakistani wheat and grain in Afghanistan because it is much cheaper than Russian wheat, but Afghan traders don't have trust in Pakistan because they believe we cannot deliver on time."

PUNJAB SETS NO WHEAT PROCUREMENT TARGET

The Newspaper's Staff Reporter March 28, 2019

LAHORE: The Punjab government on Wednesday approved wheat procurement policy for the harvesting season starting from April 10 but without setting any procurement target.

Chief Minister Usman Buzdar presided over a high-level meeting at Civil Secretariat here which approved the wheat procurement policy for the current year.

The [procurement] price will remain unchanged at Rs1,300 per 40 kg as the chief minister gave the 'vague' statement that each and every grain will be purchased from the growers.

The meeting decided that receiving of applications for the distribution of gunny bags will start from April 8 while April 15 will be the deadline for the purpose. Distribution of gunny bags will commence from April 21.

The chief minister pledged to protect interests of wheat growers especially the small landholders. He said provision of fixed wheat rate to farmers must be ensured and distribution of gunny bags should be transparent.

Similarly, all necessary facilities will be provided to the farmers at wheat procurement centres and complaint cells will be established at provincial, divisional, district and tehsil levels.

He directed the provincial ministers, advisers and special assistants to visit wheat procurement centres to personally campaign.

Punjab has sown wheat on around 6.35 million acres of land. Almost each year small landholders complain that only 'influential' growers obtain gunny bags as well as get their produce procured by the food department, leaving the poor farmers high and dry.

Most of the wheat, between three and four million tons, is procured by the Punjab food department, while the federal government's agency Pakistan Agricultural Storage and Services Corporation (Passco) also buys between 1.2 and 1.5 million tons of grains as part of maintaining strategic reserves and stabilising market prices.

WHAT'S GOING ON IN PUNJAB'S FERTILE CRESCENT?

BR Research March 28, 2019

Shrinking area under cotton cultivation has everyone worried, except like all things Pakistani, the concern seems to be lacking in research.

Zoom in on Punjab, province with Pakistan's over 70 percent cotton output, and one finds peculiar trends in cotton growing and yields. Over the five-year period since FY13, area under cotton cultivation has declined in 22 out of 23 cotton growing districts in south and central Punjab.

At 36 percent, the rate of decline has been more pronounced in central Punjab region; however, reduction in acreage has been more visible in southern districts due to the sheer size of the figure; almost 200 hectares.

Now that the reader has been sufficiently scared, one last peculiar nugget: Punjab's most fertile cotton growing areas (by yield in kilos per hectare) were never the largest cotton growing areas to begin with.

While the myth peddled by most analysts and agri-experts suggests that erstwhile cotton belt has been taken over by a sugarcane 'revolution' in recent years, there is little evidence to back this notion.

Take Rajanpur. The district secures top position in the province with an unparalleled cotton yield close to 800 kg per hectares (last 5-year olympic average) and is also the only district where area under cultivation has recorded a decent growth of 26 percent over last five years.

Rajanpur also has the highest yield for sugarcane, which at 93,339 kg per hectares is more than 50 percent higher than national average. Yet Rajanpur features nowhere in the top 10 sugarcane growing districts of the province, lest the country. Nevertheless, in terms of total area and output, Rajanpur remains mostly irrelevant with less than five and ten percent share in the respective provincial pies.

In contrast, Punjab's top cotton producing districts remain in Bahawalpur division (Bahawalpur, Bahawalnagar and RY Khan districts), with a respectable but below national average yield of close to 720 kilos per hectare (5-year olympic average).

In contrast, while Bahawalpur division has consistently recorded highest cane yield in the province, it's the central Punjab districts that dominates sugarcane cultivation, with over 56 percent share in cultivation. These include Faisalabad, Sargodha, Jhang and Chiniot regions, which feature no where in high cane yield regions of the province.

The only exception to this story is Rahim Yar Khan, which has a modest share in both sugarcane acreage and yield. However, that exception is mostly a JDW-miracle, which has invested in heavy mechanised and corporate farming due to proximity of group's mills in the region.

With both cotton and sugarcane losing popularity in other southern districts, it remains a mystery as to what exactly is going on in Punjab's districts? Answering these questions would require a closer look at on ground developments by researchers rather than simply being swayed by hysteria.

WHEAT SUPPORT PRICE FIXED AT RS 1,300 PER MAUND IN PUNJAB

RECOREDER REPORT | MAR 28TH, 2019 | LAHORE

The Punjab government has set the wheat support price at Rs 1300 per maund for procurement from farmers. Moreover, receiving of applications for the distribution of gunny bags will start from April 8 to April 15 and the distribution of gunny bags will commence from April 21. This was decided in meeting held here on Wednesday in which wheat procurement policy for the current year was approved.

While chairing the meeting, Punjab Chief Minister Sardar Usman Buzdar told the meeting that interest of wheat growers will be protected, especially the rights of small-scale farmers at every cost. “Provision of fixed wheat rate to the farmers will be ensured and the distribution of gunny bags will be transparent. Similarly, all necessary facilities will be provided to the farmers at wheat procurement centers and complaint cells will be established at provincial, divisional, district and tehsil levels,” he added. He disclosed that the provincial ministers, advisors and special assistants will also visit wheat procurement centers and he will also personally monitor the wheat procurement campaign.

On the occasion, Punjab Food Secretary Shaukat Ali briefed the meeting about the salient features of wheat procurement policy. Provincial ministers Makhdoom Hashim Jawan Bakht, Malik Nauman Ahmad Langhrial, Samiullah Chaudhry, concerned secretaries, head of special monitoring unit and high officials attended the meeting.

RS 113 BILLION DUES OF PUNJAB’S SUGARCANE GROWERS PAID: CM

MUHAMMAD SALEEM | MAR 27TH, 2019 | LAHORE

The Punjab government has paid a sum of Rs113 billion to the sugarcane growers in the province while remaining dues will also be paid to the farmers soon. The Punjab chief minister Sardar Usman Buzdar in a tweet said: “About 99.7 percent dues of previous years have been paid to the farmers. Sugarcane crop worth Rs133 billion has been procured in the current season in Punjab while Sugar mills mafia ruled Punjab for many decades and sugarcane farmers were not paid their payments for many years.”

Moreover, the CM, while chairing a high-level meeting reviewed steps taken for providing better services to the people as well as ensuring good governance. Addressing the meeting, the CM maintained that setting up of new districts is being reviewed across the province on administrative grounds and in this regard, a special committee has also been constituted under the chairmanship of Chief Secretary.

He vowed that marked improvements in good governance and public service delivery mechanism will be introduced. He said that police and administration should ensure a strong liaison with the people and public representatives for providing better services, ensuring good governance and solution of problems.

He reiterated that improving the public sector hospitals is the top priority of the government and made it clear that a real change will be ensured by making police, healthcare and education sectors better than the best.

"Service delivery will start improving conspicuously with better public dealing. DCs and DPOs are part of my team and I will be standing with the officers serving the people," he added. He said that DC and DPO should be on the same page and non-cooperative attitude will never be tolerated.

He said that Punjab will be transformed as a model province with regard to good governance. He said that he will personally monitor the service delivery standards by visiting the whole of the province without prior information and latest IT system will also be utilized to understand problems of the people and to maintain a direct liaison with them.

Chief Secretary gave a detailed briefing to the CM about different steps taken for improved good governance and public service delivery. He also directed the officers to have better access to the people. He said that DCs, DPOs and departmental heads should regularly hold open-courts in the districts while Commissioners and RPOs will also attend the open-courts of their respective districts.

IG police maintained that a good civil servant always remains neutral and concerted efforts of police and administration yields positive results. Only those societies achieve success where police perform according to law.

Commissioners, RPOs, DCs and DPOs also presented various proposals for bringing improvements in good governance and public service delivery. The Chief Minister assured to implement the feasible proposals.

FOOD AUTHORITY RAIDS MILK SHOPS

By Our Correspondent Published: March 28, 2019

QUETTA: Balochistan Food Authority Director General Major (retd) Bashir Ahmed on Wednesday raided various shops in a move against the sale of substandard dry milk in the city and found substandard Chinese salt and other commodities being used.

The food authority has sent samples of these items to a laboratory for examination.

The DG said no one would be allowed to sell smuggled substandard dry milk and other illegal commodities, adding that some people indulged in the business of substandard and harmful commodities for their own benefit.

He said stern action would be taken against those found involved in selling these commodities, adding that such people would not only be jailed but their shops would also be sealed.

He encouraged the public as well as the business community to discourage such practices and report them to the authorities.

GOVT BLAMED FOR MASSIVE WASTAGE OF WHEAT IN FLOODS

By APP Published: March 28, 2019

ISLAMABAD: Balochistan Member of Provincial Assembly Sanaullah Baloch has claimed that 900,000 sacks of wheat were wasted in the recent flash floods in the province's Naseerabad division as the commodity had not been purchased by the Pakistan Agricultural Storage and Supplies Corporation (PASSCO).

Talking to APP, he said the non-purchase of wheat had also created serious problems in the disposal of the commodity. He said there was a shortage of wheat in Balochistan which depended on Sindh and Punjab to meet its annual requirement of two million tons of the commodity for its population of almost 13 million.

Sanaullah Baloch also disclosed that the provincial food department had set an annual wheat procurement target of 800,000 to 900,000 metric tons.

He lamented that this was not the first time that the essential commodity had been wasted but rather that the criminal practice had tragically been occurring for the last three years in a province where 66 percent of the population was malnourished.

Baloch bemoaned the performance of the provincial food department, saying that the procurement of wheat was the department's responsibility which it had failed to fulfill by its inability to provide the staple food item to the people.

The member of the Balochistan assembly further said that the province had been suffering from drought and the resultant food insecurity for a long time now but, despite the dire situation and the fact that billions of rupees had been spent on the provision of food to the people, the food department had not provided a single sack of wheat to them.

Provincial Minister for Food and Population Welfare Sardar Abdul Rehman, when contacted, stated that the provincial government did not have a single sack of wheat available.

He claimed that the government had already cleared most of its godowns of wheat stocks and intimation letters to that effect had already been sent to the relevant district officials.

Regional PASSCO officer Shoukat Ali Shah, however, rejected Sanaullah Baloch's claim regarding the wastage of the 900,000 sacks of wheat in Balochistan and stated that the commodity had not been wasted but sold to exporters.

PAKISTAN'S WHEAT PRODUCTION LIKELY TO HIT FIVE-YEAR LOW

By Salman Siddiqui Published: March 28, 2019

KARACHI: Pakistan is anticipated to miss the wheat production target of 25.6 million tons in the current crop year as farmers have planted the staple crop over a lower area because of water scarcity amid drop in fertiliser consumption.

The country is likely to produce 24.8 million tons of wheat in the current crop year, which is a five-year low, if farmers manage to take per-acre production to the level of 2,885 kg they achieved in the previous year, according to the State Bank of Pakistan's (SBP) second quarterly report on the state of economy.

The chances of matching last year's per-acre production are low for the reasons that Sindh, which has the highest per-acre production in the country, has cultivated the crop over a lower area and the farmers reduced the quantity of essential di-ammonium phosphate (DAP) fertiliser and other nutrients during sowing.

Accordingly, this will be the second successive year in which wheat production in the country is set to be lower than the preceding year. More importantly, the anticipated production is most likely to drop to a five-year low.

The low production is, however, not a threat to food security as the county has a notable carryover stock of wheat following surplus crops in the past two successive years, according to the central bank.

The low wheat production will, however, contribute to a slowdown in the real economic growth in the country. Apart from this, the low harvests of all three major summer crops, including cotton, rice and sugarcane, have already impacted the gross domestic product (GDP) growth.

The SBP said second estimates of major Kharif (summer) crops reinforced the earlier assessment of lower production levels for all the three major crops in FY19 compared to FY18 – cotton harvest will go down by 9.2%, rice 3.9% and sugarcane 15.9%.

"While rice and sugarcane surpassed the targets set in the Annual Plan FY19, the fall from last year's level will weigh heavily on growth of the crop sector," it said.

"After Kharif, when farmers faced water shortage, the situation became more acute in initial months of the Rabi (winter) season. In addition to water scarcity, fertiliser offtake declined and credit flow decelerated during the wheat sowing months."

Area under wheat cultivation is estimated to shrink 2.9%. "Most of this fall in area has been recorded in Sindh, which has the highest average yield among provinces," the central bank said.

Challenges regarding canal water availability persisted in the sowing months of Rabi (winter) season as irrigation flows stood at 16 million acre feet (MAF) in the second quarter of FY19, not only 6.3% lower than the previous year but also lower than the Q2 average over the last five years, it said.

"The decline in fertiliser usage is more pronounced than the reduction in area under wheat cultivation. It is mainly explained by an increase of 16.7% in fertiliser prices. Furthermore, the fall in DAP offtake, the essential imported fertiliser used during sowing, was more pronounced as its price increase (around 30% in Q2) was due to a combination of rise in international prices and rupee depreciation," the report said.

"In the presence of significant carryover stocks, the government had reduced the target for the planted area."

WHEAT CHALLENGE

Editorial March 27, 2019

WITH the next wheat harvest just a few weeks away, the largest cash crop in several districts of Punjab is facing quite a widespread disease attack. At least a fifth of the crop is estimated by the provincial agriculture department officials to have been infected by yellow rust disease. However, experts say, the disease is unlikely to cause a major dent in the overall yield unless weather conditions enable it to return over the next few days, with daylight temperatures dropping below 20°C. The more-than-usual humid weather accompanied by lower temperatures because of excessive rains in the province has been one of the main reasons for the emergence of yellow rust in the wheat-growing areas. Nevertheless, the disease has affected the crop mostly in areas where farmers used either unapproved wheat seed varieties — primarily to save money and cut the cost of production — or the ones approved only for Sindh's climate conditions. The reuse of the same seed variety for more than two years could also be another factor for the return of the pest infestation. The latter was first spotted in the third week of last month, but the provincial agriculture department's failure to take appropriate measures let it spread to cover 20pc of the total area under wheat cultivation. That was not all. The department also failed to educate the worried growers who had started spraying insecticides directly on the maturing grains to control infestation in a bid to avert crop losses. It is feared that this practice could have rendered the cereal from the disease-affected areas unfit for human consumption.

The attack, however undamaging it may be for the overall crop size, should be taken by the authorities as a warning from nature. Experts have been cautioning successive governments about the potential impact on agriculture of shifting weather patterns owing to climate change in the region. The situation calls for strengthening the agriculture research institutes so that they can carry out a comprehensive study on the changes in weather and their effects on crops, as well as suggest actions that are required to adjust our existing agricultural practices to new conditions. At the same time, the government should also invest in the development of new seed varieties that are strong enough to withstand the impact of changing climate for all major and minor crops, and encourage the use of new technologies to prevent pest infestation and disease attacks and increase yields. These actions will mean nothing unless farmers are also informed and educated on the changes that threaten their livelihoods and the country's food security.

GOVT ASKED TO PROBE EXPIRED INDIAN MANGO PULP IMPORT

The Newspaper's Staff Reporter Updated March 27, 2019

KARACHI: The Ministry of National Food Security and Research (MNFSR) has been asked to take notice of illegal import of expired Indian mango pulp, which is highly dangerous for human consumption.

In a letter to the ministry, All Pakistan Fruits and Vegetables Exporters, Im¬¬por¬¬ters and Merchants Asso-ciation (PFVA) Patron-in-Chief Waheed Ahmed stated that some officials in the Import Clearance Depart¬ment of Customs had allowed import of Indian mango pulp from Oman. “And the same is now being supplied to various cities in Punjab via trucks,” he cautioned.

Around 200-250 tonnes of Indian mango pulp packed in blue-coloured drums had expiry dates of Dec 12, 2018 and Jan 2019, he said.

Waheed said the illegal import of Indian product is also a threat to local industry which has invested heavily besides hurting the commodity exports.

He asked the ministry to conduct a thorough investigation as to how expired Indian mango pulp found its way into Pakistan and res¬ponsible must be taken to task.

UREA PRICES RISE

The Newspaper's Staff Reporter Updated March 27, 2019

LAHORE: In contrast to government's plans of providing relief to farmers, urea fertiliser prices have gone upwards thrice during the first eight months due to factors like gas price increase, withdrawal of subsidy, change in dollar-rupee parity, inflation and other related costs.

According to manufacturers, the price of urea was Rs1,790 per bag in June 2016. In the 2016-17 budget, the government, with support from local fertiliser industry, reduced urea price by Rs390 and capped it at Rs1,400 per bag. The downward adjustment in price was made through reduction in General Sales Tax by Rs184, Rs156 subsidy, and voluntary contribution of Rs50 by the industry.

However, in 2017-18 budget, the government reduced its subsidy contribution from Rs156 to Rs100 per bag, forcing the local industry to bear the additional burden of Rs56 per bag. In total, the industry's contribution stood at Rs106 per bag.

The subsidy was totally withdrawn in 2018-19 budget and the GST was adjusted from 5 per cent to 2pc, which translated into net negative impact of Rs61 per bag on urea pricing.

Industry sources said the government also increased the gas prices with effect from September 2018, which raised cost of production by Rs129 per bag and the total 'negative' impact of subsidy withdrawal, downward adjustment of GST, increase in gas price and industry contribution added up to Rs296 per bag.

They claim that the cost of production also went up as the industry was made to install compressors worth billions of rupees to maintain gas pressure, depleting at well heads.

PAKISTANI FISHERMAN BEATEN TO DEATH IN INDIAN JAIL

The Newspaper's Staff Reporter Updated March 27, 2019

KARACHI: A Pakistani octogenarian fisherman languishing in an Indian jail and hailing from 100 Quarters in Ali Akbar Shah Goth of Korangi was beaten to death by the jail staff of the Indian prison, according to reports reaching here from India on Tuesday.

The Fishermen Cooperative Society (FCS), said the fisherman named Noor-ul-Amin succumbed to his injuries inflicted on him by the Indian jail staff.

The fisherman was arrested at sea by the Indian coastguard on September 30, 2017 during a fishing trip along with six other fishermen when their trawler drifted to the Indian side by mistake.

He had been languishing in the Indian jail for the past one-and-a-half years.

Leaving behind a widow and three children, the fisherman, according to the Pakistan Fisherfolk Forum (PFF), was an elderly person hailing from the Rohingya community settled here.

“We were approached by the FCS to let his family know about his sad demise,” said Kamal Shah, a spokesman for the PFF.

“Three different names were given to us as his father’s name and it took us a while to locate his family,” he said.

“We got word that Noor-ul-Amin, son of Amin Chowdhry, had died in an Indian jail. Then his father’s name was given as Ameer Hamza. Finally, they said that his father was named Mufajal Ahmed, which helped us locate his family,” the PFF spokesman said.

Sharing his shock and grief with the media over the passing of the elderly Pakistani fisherman, FCS chairman Abdul Berr said that while in Pakistani jails the Indian fishermen, who mistakenly entered Pakistani waters, were treated well and extended all kinds of facilities, the Pakistani fishermen caught in India were treated very badly.

“It is extremely shameful and sad that Pakistani fishermen are ill treated in Indian jails, which is a grave violation of human rights,” he said.

He raised concern over the poor Pakistani fishermen languishing in Indian jails for years without being given proper medical facilities.

MINISTER JOINS DRIVE AGAINST BANNED FISHING NETS

By Our Staff Reporter | 3/27/2019 12:00:00 AM

KARACHI: The Sindh government on Tuesday said it would seek assistance from the Pakistan Coastguards and Maritime Security Agency to ensure that prohibited nets were not used in nshing in its waters, a minister said.

`We are going to seek help from the PCG and the MSA to ensure that prohibited nets such as bulo, gujo and katra, which have been banned, are not used during fishing,` said Abdul Bari Pitafi, Sindh minister for livestock and fisheries, after visiting the Korangi Fish Harbour Authority.

He said an operation against use of such nets was already ongoing, which would be further intensified through certain effective measures to ensure that such nets that irreparably harmed marine life in the waters of Sindh remained effectively banned for good.

`Our effort to get support of the PCG and the MSA is part of the same effort,` said Minister Pitafi.

He expressed his displeasure over continued use of such nets despite a ban put in place years ago and action against the violators was also being taken.

`These types of nets are designed to kill various fish species and they have harmed marine life a great deal,` said the minister.

He appealed to the fishing community that they should not use those killer nets only to reap petty profits.

Mr Pitafi said during the operation licences of boats and permits for fishing were being checked.

`Only those who abide by the law of the land would be allowed to fish, he remarked.

He asked the officials of the fisheries ministry to intensify their efforts to discourage those who were violating the law blatantly.

The minister later also joined the teams of his ministry and oversaw the initial part of the operation in which a number of boats were checked and those that were using or carrying the prohibited nets were fined in addition to the seizure of the banned stuff.

BONDED PEASANT FAMILIES SET FREE

The Newspaper's Correspondent March 27, 2019

MIRPURKHAS: The district and sessions court of Mirpurkhas on Tuesday set free 21 men, women and children rescued in a raid on a specified place in the Saeen Phatak area of Naokot town a day earlier.

The court had ordered the raid on an application filed by a peasant, Gomo Kolhi, stating that several families including his own had been held in bonded labour on the farms owned by an agriculturist, Bhagwandas.

Before setting them free, the court recorded statements of the heads of the families.

COTTON FUTURES HIT 2019 HIGH

RECORDER REPORT | MAR 27TH, 2019 | NEW YORK

ICE cotton futures hit their highest level in 2019 on Tuesday due to unfavourable weather conditions in West Texas, the biggest cotton-growing region in the United States, amid hopes of progress in US-China trade talks. The front-month cotton contract on ICE Futures US, settled up 0.16 cent, or 0.21 percent, at 77.89 cents per lb. after hitting the highest price for the year, at 77.98 cents, earlier in the session.

It traded within a range of 77.42 and 77.98 cents per lb. "It has been less than favorable weather for getting planting under the way, including in West Texas where it has been cold and wet. This seems to be supporting the market," said Jack Scoville, vice president at Price Futures Group in Chicago.

Prices broke through the key 100-day moving average last week. Speculators who trade on technical signals regard a break above the 100-day moving average as a bullish sign. Investors were watching for the latest round of China-US trade negotiations, scheduled for Thursday in Beijing, after US President Donald Trump said on Friday the negotiations were progressing and a final agreement seemed probable.

Total futures market volume fell by 8,616 to 24,990 lots. Data showed total open interest fell 258 to 224,778 contracts in the previous session. Certificated cotton stocks deliverable as of March 25 totalled 50,547 480-lb bales, unchanged from 50,547 in the previous session.

SINDH GOVT URGED TO OPEN WHEAT PROCUREMENT CENTRES, RAISE TARGET

By Our Staff Correspondent | 3/25/2019 12:00:00 AM

HYDERABAD: Sindh Abadgar Ittehad (SAI) has urged the Sindh government to immediately open wheat procurement centres and revise the procurement target because of expected bumper crop of five million tonnes this year.

SAI president Nawab Zubair Talpur told a news conference at the local press club on Sunday that Prime Minister Imran Khan and the Pakistan Agriculture and Storage Corporation (Pasco) should revise the procurement target.

He urged the Sindh government to open procurement centres to benefit poor growers. He warned that if the government did nothing to cope with theaggravating water shortage, growers would stage a big protest outside the ofhce of the Sindh Irrigation and Drainage Authority (Sida) managing director this week.

He said growers of Naudero had been staging sit-in for the last 20 days in protest against Naudero Sugar Mill`s failure to clear their dues but their protest had not borne anyfruitsofar.

SAI general secretary Mohammad Anwer Kamboh said that wheat crop was almost ready for sale in Sindh as 90 per cent harvest had been completed in lower region of the province and the crop was ready for harvest in the upper region but the government had not opened even a single procurement centre so far.

The centres should have been setup in the first week of March, he said.

`Sindh may produce a bumper wheat crop of five million tonnes this season but it seems the Sindh government is reluctant to set up procurement centres in order to benefit brokers and middlemen instead of growers,` he said.

He said that growers were incurring huge losses by selling wheat for Rs1,100 per 40kg and demanded the government open procurement centres immediately to minimise losses.

He said the Sindh government had been retaining the wheat support price at Rs1,300 per 40kg for the past six years. Pasco must raise wheat target set for this year from 35.7 million tonnes throughout the country, he said.

Mr Kamboh said that Pascowould procure around two million tonnes of wheat from Sindh, while it should get more because of the bumper crop this year and the 800,000 tonnes carry-over stock ofthelastyear.

He said that Sindh government bought 1.4 million tonnes last year and now it must procure two million tonnes. Sindh already owed Rs90 billion to the State Bank and the World Bank which it had obtained to procure wheat last year but was unable to pay back the debt,he said.

He criticised the Sindh government for its failure to issue notification for sugar cane price and demanded the government should fix the cane price at Rs182 per 40kg immediately in compliance with clear-cut directives of the Sindh High Court.would procure around two million tonnes of wheat from Sindh, while it should get more because of the bumper crop this year and the 800,000 tonnes carry-over stock ofthelastyear.

He said that Sindh government bought 1.4 million tonnes last year and now it must procure two million tonnes. Sindh already owed Rs90 billion to the State Bank and the World Bank which it had obtained to procure wheat last year but was unable to pay back the debt,he said.

He criticised the Sindh government for its failure to issue notification for sugar cane price and demanded the government should fix the cane price at Rs182 per 40kg immediately in compliance with clear-cut directives of the Sindh High Court.He said that cane growers had already suf fered billions of rupees losses in this year`s crushing season, which had deliberately been delayed to benefit one particular business group. The SHC directed Sindh chief minister on March 5 to issue the notification till March 20, otherwise he would be issued a contempt notice, he said.

He said that Sindh irrigation department had already informed growers about 40 per cent water shortage in the province during this Rabi season but the province faceda44percentshortage.Badin and many other districts of lower Sindh were the worst hit, he said.

SAI finance secretary Mohammad Javed Riar, Naudero grower Syed Ghulam Qadir Shah and others were also present at the news conference.

WHEAT UNDER YELLOW RUST ATTACK

Amjad Mahmood Updated March 25, 2019

Wheat, cultivated on around 8.7 million hectares in 2017-18, remains the largest crop sown. However, the crop is currently under attack by the Yellow Rust disease in Punjab.

This year not only was the cash crop sown on time but the weather also remained favourable for most part of the season.

Unusual rain spells at reasonable intervals kept the temperature on the lower side as well as helped overcome water shortages normally faced during the Rabi season because of low river inflows. All these factors facilitated the maturing of the grain.

The use of insecticides has led to a debate among those who favour the use of agriculture poison and its opponents

However, the rare weather conditions — higher humidity with low temperatures — witnessed after decades has also created an atmosphere conducive for pest infestation. The Yellow Rust disease has been reported from almost all wheat growing districts.

First spotted in the third week of February, the disease had affected 20 per cent of the crop within a month, reveals the Punjab Pest Control directorate's latest (March 19) field survey.

Punjab's Director General Pest Warning and Quality Control of Pesticides Dr Zafar Yab Haider said most of the crop varieties affected were either unapproved, or approved for sowing in Sindh rather than Punjab.

He continued that new wheat varieties like FD-8 and Johar remained safe from the fungus attack, and hoped that the disease would not drastically impact the overall yield since the grain has been able to fully develop in time for sowing. It only needs high temperatures to harden.

Commenting on the use of old seeds, Dr Javed Ahmad, director wheat research institute at Ayub Agriculture Research Institute, stressed that wheat growers should sow a new seed variety after a couple of years. This is important as repeated sowing allows the Yellow Rust to overcome the plant's resistance to the disease.

He pointed out that as weather conditions remained unfavourable for pest infestation during the last two decades or so, farmers continued to reuse old wheat varieties (like FD-2000, Sehar, Punjab-2011 and Galaxy) contrary to the advice of agriculture experts.

Dr Ahmad opined that the loss in yield because of Yellow Rust will remain insignificant as long as the disease did not affect Flag Leaves — the leaves responsible for preparing food for the plant during the last four weeks of its lifespan.

At this stage in the crop's development the situation can only deteriorate if the daylight temperature drops more than 20 degrees Celsius for a week or so.

Nervous at the outbreak of the Yellow Rust, farmers in some areas have resorted to spraying fungicides to protect their crop from the disease. Pakistan Kisan Ittehad President Khalid Mahmood Khokhar said he had gotten his crop, in Khanewal district, sprayed as well soon after spotting the disease.

The use of insecticides has led to a debate among those who favour the use of agriculture poison and its opponents.

Experts recommend the use of fungicides at least on the patches where the disease is found. They say any of the three fungicides — Nativo, Tilt and Electis Super — is equally useful for controlling the disease.

But Dr Ahmad warned against the use of pesticides, keeping in view the fact that wheat in the country is used in its raw form and residual effects of the agriculture poison may affect human health. It will also add to the already high costs of wheat production: "Our wheat crop meets all international quality standards but because of its higher production costs we are failing to export the commodity."

He advised wheat growers to avoid further irrigating their fields and applying fertilisers as it will aggravate the situation by adding to the humidity. The present soil humidity is sufficient for the crop to mature.

Strong winds after a light rain last Wednesday in some central Punjab districts have flattened the crop which may lead to a 50pc fall in yield.

On the other hand, to the anxiety of the farming community, the government has neither framed its wheat procurement policy nor fixed the procurement target yet even though harvest time is just three weeks away.

FERTILIZER PRICES TESTING FARMERS' ECONOMY

BR Research March 25, 2019

Urea off-take refuses to break the shackles. The nitrogenous fertilizer off-take during February 2019 at 0.38 million tons, registered a 5 percent year-on-year increase. This takes the cumulative 2MCY19 urea off-take increase also to 5 percent year-on-year. Heartening numbers that at least there is positive growth, some would say. Only when reminded that the fertilizer off-take in the past six years has averaged a cumulative growth of zero percent.

The Rabi season is about to be over by the end of this month, and the numbers reflect five out of six Rabi months. The Rabi urea off-take growth is virtually zero, as the dip in urea off-take was earlier expected to be covered in the dying months of Rabi. But that has not been the case, despite continuation of subsidy on urea.

The urea price during the Rabi season thus far has averaged 27 percent higher than the previous Rabi season. The international prices have cooled down considerably from previous months, averaging almost similar to previous Rabi season. The bigger dent seems to have been caused by the sharp currency adjustment, disturbing the import parity, sending the local prices up. The 27 percent season over season increase in urea pries is the highest ever in recallable memory.

To get things in context – farmers have so far spent 28 percent more money than last year on exactly similar amount of urea as last year. The Rs93 billion spent on urea with Rabi just one month away from ending, is comfortably higher than the previous 4-year average of Rs78 billion.

The impact of considerably higher spending need on urea has fallen directly on the use of phosphate fertilizer, as the DAP off-take has come down by 12.4 percent year-on-year, versus the previous Rabi season till February. The total DAP spending at Rs78 billion is 13 percent higher year-on-year, but well within the 5-year average Rabi spend of Rs78 billion. The resultant urea: DAP application ratio at 2.4 is the highest in four years – having improved to as low as 1.7 two years ago. Farmers have time and again shown that when the going gets tough – the axe falls on DAP.

WEEKLY COTTON REVIEW: PRICES OF COTTON REMAIN STABLE

NASEEM USMAN | MAR 25TH, 2019 | KARACHI

The prices of cotton remained stable. The trading volume decreased in the local market due to the delivery of imported cotton to the big textile and spinning groups. The sowing of cotton started in lower Sindh. The concerned departments were active regarding increasing the production of cotton. Pakistani Cotton and Ginners Association were active for the recovery of billions of rupees of ginners blocked by millers.

In the local cotton market prices of cotton remained stable. Although the trading volume remained low due to the cautious buying of textile and spinning mills, ginners demanded higher prices of good quality cotton due to which millers are buying the commodity according to their needs. The delivery of imported cotton of many spinning and textile mills has started which is the reason of low trading volume.

Many ginners are facing problems due to low trading volumes. At present, traders are doing their business on borrowing while the ginners are waiting for the increase in the prices. Overall the trading volume is low. The new season will start in three to four months. Ginners have the stock of 1.05 million bales out of which only half are of good quality.

The prices of cotton in both Sindh and Punjab remained Rs 7000 to Rs 9000 per maund while the price of Seed cotton (Kapas/Phutti) is from Rs 3000 to Rs 3600 per 40Kgs in both Sindh and Punjab. Cotton in Balochistan is available at the rate of Rs 7800 to 8100 per maund while the ginning factories were almost closed in Balochistan.

The Karachi Cotton Association (KCA) spot rate committee decreased the spot rate by Rs 100 to Rs 8600 per maund. Karachi Cotton Brokers Forum said that a mixed trend was seen in the international market. According to experts, the US-China trade conflict has a negative impact on the world business. China is importing cotton from India due to this conflict. Due to import of cotton by China from India the prices of cotton remained stable in India which the prices of this commodity show an upward trend in the USA.

Moreover, due to the rains there is a delay in harvesting of wheat while according to the information received from Interior Sindh the sowing of cotton has partially started while the partial sowing season in Punjab is expected to begin next month.

Prime Minister Imran Khan has shown his resolve of increasing the production of cotton by 15 million bales due to which the relevant departments have started their efforts. Punjab Agriculture minister Malik Noman Ahmad Langrial while speaking at Agriculture House last Wednesday expressed his optimism about cotton output. In his statement Noman said that relevant departments should utilize all their resources to increase the cultivation land of cotton in order to increase the cotton production. He said that the federal government should announce the support price of cotton as early as possible and cotton should be bought through Trading Corporation of Pakistan so that the cotton farmers should get reasonable amount of their crop.

Advisor to Prime Minister on Commerce Abdul Razak Dawood said that China will import rice, sugar and cotton yarn from Pakistan of worth 1 billion dollars under Pakistan China Free Trade Agreement. The export of rice from Pakistan has already started. The Cotton Yarn Exporters said that China is importing yarn of 10, 16 and 21 count from Pakistan. It is hoped that China will import more cotton from Pakistan under PCFTA.

Earlier, Pakistan Cotton Ginners Association chairman Mian Mahmood Ahmad said that millers are not paying the outstanding amount to ginners; due to which ginners-millers relationship came under severe strains.

The PCGA has asked ginners to send the list of millers so that association should contact the millers. Mahmood said that ginners have sent the claim of Rs 700 million to the association. More ginners are in contact. It is expected that outstanding amount may increase. Some ginners and millers are in contact and talks are underway between them so they don't approach the PCGA.

PRICES OF FOOD ITEMS CONTINUE TO RISE

AMJAD ALI SHAH | MAR 25TH, 2019 | PESHAWAR

The prices of the essential kitchen items especially vegetables, pulses, live chicken/chicken meat, flour and sugar witnessed continuous upward trend in the retail market. A survey carried out by Business Recorder in local market on Sunday showed that prices of most of the essential kitchen items including tomatoes, onions, ginger, garlic, lemon, live chicken/chicken meat, cauliflower, cabbage and wheat flour registered increase as compared to last week.

The survey witnessed Rs2 per kilogramme increase in price of live chicken/meat. Last week live chicken was available at Rs166 per kg, which this week is being sold at Rs168 per kg. Farm eggs are being sold at Rs100 per dozen which was selling at Rs110 and Rs120 last week.

Butchers are openly defying the official price of beef in local market. The survey showed that cow meat is being sold Rs400 per kilogramme against the official rate of Rs300 per kilogramme in local market. Mutton is available at Rs800 per kilogramme.

The prices of vegetable 'sky-rocketed' in retail market, the survey noticed. Apple, round gourds are being sold at Rs80 per kilogramme against the price of Rs50 per kilogramme in local market. Capsicum is available at Rs100 and Rs120 per kilogramme against the price of Rs80 per kg, while Arvi priced at Rs80 per kilogramme and peas are being sold at Rs80 and Rs100 per kilogramme.

However, a slight decrease in the price of tomatoes is being witnessed as it is available at Rs60 and Rs70 per kilogramme which was selling at Rs100 per kilogramme last week, while the price of onion is still on the high-side as being sold at Rs40 and Rs50 per kilogramme in open market.

Similarly, price of green chili also fell in retail market as available at Rs250 per kilogramme which was selling at Rs350 per kilogramme last week. Lemon is being sold at Rs100 per kilogramme. Chinese garlic is being sold at Rs120 and Rs150 per kilogramme while locally produced garlic available at Rs80 per kilogramme. Cucumber is being sold at Rs50 per kilogramme.

The survey further noticed that ladyfinger is being sold at Rs80 and Rs100 per kilogramme, cauliflower priced at Rs50 per kilogramme, cabbage at Rs40 per kilogramme. Potatoes are being sold at Rs20 per kilogramme, turnip at Rs25 per kilogramme.

Carrots are available at Rs50 and Rs60 per kilogramme. A bundle of radish is being sold at Rs20 and Rs30. Bitter ground (Karela) is being sold at Rs80 and Rs100 per kilogramme, the survey showed.

The retailers in different parts of the provincial metropolis Peshawar were charging different prices for the same items, it has been witnessed in the survey. For instance, good quality rice (sela) is being sold at Rs150 per kilogramme, while the same quality rice available at Rs140 per kilogramme in local market. Toota rice is being sold at Rs70 and Rs80 per kilogramme.

The survey noticed that big size white channa is available at Rs140 per kilogramme, while some shopkeepers are selling the same quality white channa at Rs120 per kilogramme. Similarly, there is visible difference in prices of dal mash as some vendors charging Rs120 per kilogramme, while other Rs140 per kilogramme in local market.

It further witnessed that Dal masoor is being sold at Rs90 per kilogramme while some shopkeepers are charging Rs110 per kilogramme. Likewise, dal channa is being sold at Rs120 per kg while some charging Rs140 per kilogramme for the same item. Dal chilka (green) is being sold at Rs130 per kilogramme, while dal chilka (black) is available at Rs140-150 per kilogramme in retail market.

A visible variation in prices of white lobiya was noticed as some shopkeepers are charging Rs120 per kilogramme while other selling at Rs100 per kilogramme. Dhoti dal priced at Rs 110 per kilogramme and Rs120 per kilogramme. Moonge is being sold at Rs100 per kilogramme, while others are selling them at Rs110 and Rs120 per kilogramme.

Gram flour (baisen) is being sold at Rs120 and Rs130 per kilogramme. Sugar is being sold at Rs60 and Rs65 per kilogramme. According to the survey, prices of cooking/ghee remained unchanged in retail market as they were available within range of Rs150, Rs180 and Rs200 per kilogramme/litre.

Fruits are being sold at high rates in the provincial capital Peshawar. Apples are being sold at Rs120 and Rs150 per kilogramme. Pomegranate is being sold at Rs100 per kilogramme, orange at Rs80 per dozen, kinnow at Rs60 per kilogramme. Guava is being sold at Rs100 per kilogramme in local market.

PARTHENIUM – THE SILENT KILLER OF PAKISTAN'S AGRICULTURAL YIELD

By DR ABID MAHMOOD / MUHAMMAD ASHIQ

Published: March 25, 2019

FAISALABAD: Invasive species are threatening biological diversity and globally pose a huge threat to economic activities, such as agriculture, development and tourism.

More than half of the world's food comes from three crops – wheat, maize and rice. According to the Centre for Agriculture and Biosciences International (CABI), it is estimated that these crops alone suffer yield losses of 16% due to invasive weeds, costing approximately $96 billion annually.

Research has revealed that there are about 480,000 invasive species in different ecosystems across the world. Each year, the damage caused by invasive species costs in excess of $1.4 trillion worldwide, representing almost 5% of the global economy.

Unfortunately, the geographic spread and impact of invasive species is growing rapidly due to climate change, tourism and trade. Africa has recently suffered the menace of one particularly damaging invasive species – the Fall Armyworm, which attacks maize and other crops.

With over 200 million people in Africa relying on maize as their staple crop, the high yield losses recorded have had a clear impact on food security.

A recent CABI evidence note stated that this year Ghana reported 26.6% and Zambia 35% yield losses. The recent arrival of Fall Armyworm in India and its predicted rapid spread across parts of Asia poses a risk to yields here too. Right now, in Pakistan we are being affected by an invasive species called Parthenium – a weed commonly known as 'Gajar Booti' and now recognised as a major threat with impact on human health, biodiversity, agriculture, livestock and food security.

Parthenium is native to South and Central America, but over decades it has spread to over 40 countries – including Pakistan, India, Sri Lanka, Australia, South Africa, Swaziland and Ethiopia. It has achieved major weed status in all these countries.

Parthenium is almost 1-2-metre tall, branched plant emerging as a threat weed having potential to deter the germination of native flora and ability to displace existing weeds. It causes skin rashes, watery eyes, swelling, itching of membranes of mouth and nose, constant coughing, especially at night and respiratory problems have also been reported.

It was an important weed in Lahore, Sialkot and northern Punjab in the previous decade, but now it has invaded most of the canal-irrigated districts in the command areas of Ravi and Chenab rivers. Northeastern districts are more prone to this menace. However, with the exceptions of a few, the command areas of Jhelum and Indus rivers are still mainly free of this weed.

In recent years, it has spread all over Punjab and Khyber-Pakhtunkhwa (K-P) with variable degree of infestation in sugarcane, cotton, gardens, vegetables and other crops, especially of spring and summer.

However, somewhat surprisingly, the general public remains oblivious to its dangers. Nestled within its small white flowers, the Parthenium plant can look quite beautiful, especially in flower bouquets and decorations (a practice that is contributing to its countrywide seed dispersal).

Parthenium is an extremely prolific seed producer as it has the capacity to produce up to 25,000 seeds per plant in isolated cases. Moreover, given suitable moisture levels, seeds can germinate at any time of the year and can remain viable for a long time, surviving even under very harsh environmental conditions. Pakistan's climate is suitable for Parthenium throughout the year – making the weed prolific.

Parthenium manipulates the ecology of fields, affects the yield of crops and invades forests through its aggressive nature and gigantic allelopathic potential. Allelopathic plants release chemical compounds from their roots into the soil, which suppress or even kill surrounding plants.

In addition, Parthenium is highly allergenic; its pollen can cause asthma, eye irritation, throat infections and eczema. In livestock, it causes mouth ulcers in animals that consume the weed, which can result in deteriorating milk quality and tainting of meat.

Invasive species disproportionately affect vulnerable communities in rural areas, especially in developing countries, which mainly depend on a healthy ecosystem, natural resources, agriculture, tourism and trade. For a country like Pakistan, with 60% of the economy dependent on agriculture, this issue is incredibly serious and requires serious action.

Presently, Parthenium is not only affecting crop fields and reducing yields, it is also invading green belts within towns and cities and outcompeting native fauna. However, for now at least, the problem is still within the bounds of control.

Organisations like CABI have been active in working with Pakistan's agriculture departments, reaching out to both rural and urban communities by organising workshops for farmers and conducting awareness campaigns. These activities provide information about the identification and management of Parthenium as well as knowledge on the dangers of this weed.

The aim is to change the perception of Parthenium and control the weed. Additionally, CABI has been researching options for the biological control of Parthenium using its natural enemies, without the need for herbicides.

The research is currently looking at a beetle, Zygogramma bicolorata, which feeds on the leaves of Parthenium as well as a range of other species. The beetle is already being used to control Parthenium in Australia, South Africa, Ethiopia and Tanzania and studies have revealed that Zygogramma is already present in northern Punjab, K-P and Kashmir.

Researchers from the University of Manchester have also collaborated with CABI using space technology to tackle Parthenium with remote sensing in Pakistan.

By monitoring Parthenium in crops using satellite imaging, the project aims to quantify the spread on a large scale, particularly in remote areas, in order to create evidence-based control strategies. The project works with local stakeholders including Comsats University, the National University of Sciences and Technology, Ayub Agricultural Research Institute, Pakistan Agricultural Research Council, PMAS Arid Agriculture University, Institute of Space Technology and agriculture extension and regional crop departments of Punjab and K-P.

Bringing together key decision-makers from various sectors, creates a more universal approach, increasing the likelihood of controlling other invasive species in future.

Researchers fear that Parthenium could have a similarly devastating impact in Pakistan as that of the Fall Armyworm in Africa and stress that government bodies must take appropriate initiatives to control this weed.

Instant initiatives must be taken to educate farmers and the general public on the methods of controlling Parthenium. With support from the government, CABI's programme can facilitate better and sustainable management of invasive species, ultimately helping Pakistan prosper.

Tackling invasive species like Parthenium is critical for achieving widespread economic prosperity and combating poverty, therefore, governments must commit to reducing the economic impact of invasive species.

Abid Mahmood is the Director General Agriculture (Research), Ayub Agricultural Research Institute (AARI), Faisalabad whereas Muhammad Ashiq is the Assistant Agronomist, Plant Physiology Section, Agronomic Research Institute, AARI

ESL DEVELOPS TWO RICE HYBRIDS FOR RESISTING BLB, LB DISEASES

ZAHID BAIG | MAR 24TH, 2019 | LAHORE

Emkay Seed Limited (ESL) has developed two rice hybrids having resistance against Bacterial Leaf Blight (BLB) and Leaf Blast (LB), which are the main damaging factors in the rice production.

“We are this year all set to launch multi-location testing of hybrids with BLB resistant parental material. Initially, we have planned to sow these seeds at three sites in Punjab and two sites in Sindh. In Punjab, we will be re-evaluating these seeds at Sheikhupura and Gujranwala and at one other place while in Sindh it will be tested in Larkana districts,” said ESL CEO Sajjad Malik while talking to Business Recorder here on Saturday.

The company was conducting research to develop hybrids having resistance against diseases and development of a hybrid of ‘Super Basmati’ at its Farooqabad research centre since May 2001. Both the varieties are ready to hit the market after re-evaluation through different tests to help rice farmers fight against these diseases and get maximum per acre yield adding to more surplus production for export or domestic usage.

The company has developed 20 medium grain CMS lines, four Basmati Lines including the famous ‘Super Basmati’ having excellent eating and cooking quality have been converted into CMS lines, about 400 Restorer and Maintainer Lines. Moreover, two basmati hybrids have also been developed with yield potential of around 8 tons per hectare.

Dr Mohammad Bashir Cheema, head of the research programme, started the research programme in collaboration with Chinese counterpart but continued to develop parental lines and hybrids after Chinese left in 2005. The new hybrids developed are the result of indigenous result carried out by the Pakistani scientists, said Sajjad Malik.

Sajjad Malik and Dr Cheema in a recent visit of selected journalists to their Farooqabad Farm while talking to journalists said that a very big achievement at this research farm was the establishment of ‘Shuttle Breeding Programme’ at the research site for increasing the pace of development of rice hybrids and parental lines within the country. “This was the first rice shuttle breeding programme in Pakistan’s plant breeding history and since then two generations of breeding material are being produced each year as opposed to normal breeding programmes wherein only a single generation is produced annually. Till date Emkay Agricultural Research Center is the only organisation in the country which has the expertise of this rice shuttle breeding either in the private or public sector,” Dr Cheema proudly added.

The research programme of Emkay, also, is unique in the manner that the foreign companies working in Pakistan with local partners do not provide with the complete three-line system of hybrid rice. So, a disturbing fact is that whenever the foreign companies want, they can effectively stop their Pakistani partners from hybrid rice seed production, Sajjad Malik concluded.

REAP DELEGATION OFF TO SAUDI ARABIA FOR RICE PROMOTION

RECORDER REPORT | MAR 24TH, 2019 | KARACHI

A 17-member delegation of Rice Exporters Association of Pakistan (REAP) left for Saudi Arabia for promotion of Pakistani rice in the Kingdom. REAP senior vice chairman Ali Hussam Asghar is leading the delegation that will hold a number of events and business-to-business meetings (B2B) with rice importers during the 5-day visit to increase the share of Pakistani rice in that country.

Saudi Arabia was one of the leading importing country of Pakistani rice; however, during the last few years, Pakistan's share in the Kingdom's rice market has drastically declined. Therefore, REAP has sent the delegation for promotion of Pakistani rice, which is much better than Indian rice.

The delegation will visit several cities of Saudi Arabia, including Dammam, Riyadh and Jeddah. A mega Biryani festival will be arranged in Jeddah where top rice importers have been invited to attend and taste some 15 different varieties of Biryani like Mutton Sindhi Biryani, Fish Bombay Biryani, Chicken Biryani, White Biryani, etc.

REAP chairman Safder Hussain Mehkri informed that Pakistan's rice share in Saudi market declined to 20 percent and now REAP want to increase share up to 80 percent. The higher rice export will also help earn more foreign exchange for the country, which is facing a balance of payment crisis and need massive foreign inflows, he said, adding that currently, Pakistan's rice export are about $2 billion annually and REAP is closely working with the federal and provincial governments to increase rice exports to $5 billion by 2023.

He said REAP has focused Research and Development (R&D) to get a better crop yield and as a part of these efforts, REAP organised a Rice Conference in Larkana, one of the major rice cultivation area, to discuss the issues being faced by farmers. Proposal and recommendation of this conference has already been sent to federal government for implementation, he said.

CBOT WHEAT FUTURES END FIRMER

RECORDER REPORT | MAR 24TH, 2019 | CHICAGO

Chicago Board of Trade (CBOT) wheat futures traded lower most of the day on Thursday but closed firmer, lifted by technical buying and late-session short-covering, traders said. Futures were buoyed by spillover support from higher corn, which rose on worries about flood-delayed spring planting. CBOT May soft red winter wheat settled up 1-3/4 cents at $4.66-1/2 per bushel. The contract held chart support at its 20-day moving average.

K.C. May hard red winter wheat ended up 3 cents at $4.47 a bushel, while MGEX May spring wheat shed 1/4 cent to close at $5.71-1/4. Commodity funds hold a sizable net short position in CBOT wheat futures, leaving the market vulnerable to bouts of short-covering.

Heavy snow and the anticipation of floods in the northern Plains spring wheat belt, particularly in top producer North Dakota, have raised the risk of delays in planting the 2019 crop. Seeding normally begins in April.

The US Agriculture Department reported weekly wheat export sales of 437,300 tonnes, in line with forecasts that ranged from 300,000 to 675,000 tonnes.

FARMERS TO BRAVE 5-10PC WATER SHORTAGE IN SUMMER CROPS

Munawar Hasan March 24, 2019

LAHORE: Farmers are likely to brave five to 10 percent water shortage against average uses in upcoming summer crops despite an estimated 15 million acre feet (MAF) of surplus river water escaping Kotri barrage into the sea, an official assessment revealed.

Water deficiency's phenomenon and excessive flows will be observed in the kharif crop season 2019, starting from April 1, according to preliminary assessment of river water availability. The shortage will be due to lack of ample water storage at the main rivers.

Early months of summer crops may face shortage of water due to negligible carryover supplies and late snow melting in the mountains. There is, however, a strong indication of high flows in the rivers, potentially leading to catastrophic floods in the remaining part of the season, which ends as of September 30.

Agriculture sector will be inflicted with losses in either of the scenarios. Low water availability entails low production of crops whereas floods tend to damage standing crops in addition to bring about human and property losses.

Outflow of staggering 15 MAF water from Indus river system in a season means a lot, especially if this is compared with the total water storage capacity of two existing major reservoirs.

An official said the water holding volume of Mangla and Tarbela dams stands at around 13 MAF. "We should be able to expand water storage capacity by another six to seven million acres feet to impound at least half of the escaping volume of water," the official added. "In such a scenario where water storage capacity develops to 20 MAF, menace of water shortage could effectively become a thing of the past."

Nevertheless, relatively better water supplies on greater snowfall in catchment area may help in yielding good production of kharif cash crops, including cotton, rice and sugarcane. Last year, summer crops witnessed severe paucity of canal water, particularly during early months of the season.

Indus River System Authority (Irsa) revised up water shortage estimates for early kharif period to 42 percent from an earlier anticipated level of 31 percent. An Irsa Advisory Committee Emergency meeting was informed that water inflow remained 15 percent below than anticipation.

The State Bank of Pakistan (SBP) said water shortage adversely affected outputs of key kharif crops last year. Dismal performance of kharif crops was mainly due to less water availability during the July-September quarter last year, the SBP said in a report. Main crops of the season, cotton and rice, remained less productive on the back of shrinking area under cultivation. Cotton, rice, sugarcane and maize show subdued performance mainly because of considerable decline in the area under cultivation especially in Sindh.

The central bank warned that the situation would become more dangerous in the years to come due to persistent water shortages. It suggested construction of reservoirs and adaptation of water conservation measures, including imposition of higher prices of irrigation water for more consuming crops, especially, sugarcane.

COTTON FUTURES EASE ON PROFIT-TAKING AFTER WEATHER-DRIVEN RALLY

RECORDER REPORT | MAR 23RD, 2019 | NEW YORK

ICE cotton futures slipped on Friday as investors booked profits from the previous session's rally to three-month highs, which helped prices mark their fifth straight weekly gain.

The front-month cotton contract on ICE Futures US, settled down 0.6 cent, or 0.8 percent, at 76.58 cents per lb.

"This is what normally happens with short-covering rallies, especially when specs are short," said Louis Rose, director of research and analytics at Tennessee-based Rose Commodity Group.

"May open interest has been falling like a rock as prices have moved higher, which signal that they are not being replaced by new longs." However, the contract notched a weekly gain of 1.4 percent, its fifth consecutive weekly gain, having jumped more than 2 percent in the previous session on concerns of crop damage due to adverse weather in the US Midwest.

On the technical front, resistance lay around the 82 cents level, while 72 cents offered support, said Jon Marcus, president of the Lakefront Futures and Options brokerage firm in Chicago, adding prices could climb further from current levels going forward. Market participants are continuing to keep a close eye on developments on the trade front, with a fresh round of trade talks between the United States and China scheduled next week.

Total futures market volume fell by 10,304 to 32,984 lots. Data showed total open interest fell 154 to 223,307 contracts in the previous session.

Certificated cotton stocks deliverable as of March 21 totalled 59,070 480-lb bales, down from 106,796 in the previous session.

Meanwhile, speculators trimmed their net short positions in cotton by 10,210 contracts to 11,769 contracts in the week to March 19, US Commodity Futures Trading Commission data showed.

ADVISORY FOR FARMERS

RECORDER REPORT | MAR 23RD, 2019 | KARACHI

The Met Office has asked the farmers to make plans to protect standing crops and nurseries from cold weather impacts, saying the irrigation plans should be in place as dry weather is expected in the next 10 days.

It said that the growers should schedule their irrigation plans for the Rabi crop during the next 10 days keeping in view the dry weather spell. It also asked them to remove weeds from their standing crops to help attain a maximum yield.

It warned that weeds cost a considerable yield loss to the farmers annually, saying that measures should be taken to preserve crops and nurseries from damaging impacts of the extreme cold weather.

In the next 10 days: mainly a cold and dry weather is expected in Punjab, Sindh, Khyber Pakhtunkhwa, Balochistan, Gilgit-Baltistan and Kashmir with an isolated rain-thunderstorm in Kohat, Bannu and D I Khan Division, besides parts of Kashmir on Saturday. The isolated falls may also hit Quetta, Zhob, Kalat and Makran Divisions. In the next 24 hours: widely a dry weather is expected in the most parts of the country with an isolated light rain-thunderstorm and gusty winds in Quetta, Zhob, Kalat, Bannu, D. I. Khan, Gujranwala, Lahore, Sargodha and D. G. Khan Divisions and Kashmir. “Continental air is prevailing over most parts of the country. However, a shallow westerly wave is affecting north-eastern parts of Balochistan & its adjoining areas and may persist during next 24 to 48 hours,” it said.

PAKISTAN GETS $1BN CHINESE MARKET ACCESS FOR RICE, SUGAR, YARN

Mubarak Zeb Khan Updated March 22, 2019

ISLAMABAD: The Chinese government has finally offered Pakistan market access for three commodities — rice, sugar and yarn — worth $1 billion for the current calendar year, an official in the Commerce Division confirmed to Dawn on Thursday.

The official said rice shipments to China have already begun as part of the deal which was agreed during Prime Minister Imran Khan’s four-day visit to Beijing and Shanghai in the first week of November last year.

Under the agreement, exporters have been allowed to ship 200,000 tonnes of rice and 300,000 tonnes of sugar — total value of $300 million — to China in the ongoing calendar year.

Moreover, the agreement also includes preferential market access for around $700m worth of yarn but it seems highly unlikely that Pakistan will have adequate surplus quantity of yarn to export to China as cotton production remains lacklustre.

The Chinese authorities were unwilling to increase the total quantity of these items despite multiple requests, the official added.

Another Commerce Division official said exporters will only have nine months to avail the facility as it will expire by Dec 31, adding that the government is working to get access for wheat and other agriculture commodities as well.

Moreover, this agreement will also be extended to calendar 2020. Pakistan's exports to China are expected to reach $2.2bn in the ongoing calendar year and $3.2bn in the next.

The official also said that a major breakthrough is expected in the stalled negotiations between Beijing and Islamabad on the second phase of Pak-China Free Trade Agreement (PCFTA) and the outcome will be announced on April 2.

He said a delegation led by the secretary commerce will leave for China later this month.

Sharing the progress made in PCFTA negotiations, he informed that Islamabad will get market access for 301 tariff lines, which will cover most of its exports and allow export of commodities which are currently negligible.

The PCFTA covers nearly 7,000 tariff lines at the eight-digit level of the HS code. Both sides reduced tariffs on almost 36 per cent of the tariff lines to zero during first three years of PCFTA's Phase-1.

Moreover, second phase was supposed to commence from the sixth year of the agreement ie 2013, but was delayed as officials from both countries failed to reach an agreement despite meeting for more than 11 times.

As per the initial agreement, at the end of PCFTA's second phase, both sides were to reduce tariffs on 90pc of the tariff lines to zero.

The negotiations on the Phase-II of PCFTA began in 2011.

PAKISTAN'S AGRI-COMMITTEE TO SET CROP TARGETS IN MID-APRIL

By APP Published: March 22, 2019

ISLAMABAD: The Federal Committee on Agriculture (FCA) is set to meet on April 17 to review the production of Rabi crops and set targets for the Kharif 2020 season, revealed Deputy Food Security Commissioner Dr Wasimul Hassan.

Talking to APP on Thursday, he shared that the purpose of the meeting was to meet domestic food requirements and achieve export targets.

During the meeting, provincial ministers and other prominent stakeholders will apprise participants of the arrangements made to ensure smooth availability of all agricultural inputs including water, certified seeds and fertiliser.

"Representatives of the State Bank of Pakistan, Zarai Taraqiati Bank Limited and private-sector banks will brief the committee on credit allocation and disbursement during the sowing season," Hassan revealed. "On the other hand, the Indus River System Authority (Irsa) will discuss water situation for irrigation purposes."

He added that officials of the Pakistan Meteorological Department would present weather forecast and propose measures to reap maximum benefit by sowing crops at an appropriate time. In addition to that, the Seed Certification and Registration Department will provide data of seed stock during the period.

The FCA will set the cotton sowing target as the government is determined to produce 15 million bales to meet domestic requirements as well as make exports.

“To achieve the desired production target, the federal government is taking concrete steps in close coordination with provincial governments to enhance the cultivated area for raising output,” said Ministry of National Food Security and Research Cotton Commissioner Dr Khalid Abdullah.

BMP CHIEF URGES MALAYSIA TO ENHANCE RICE EXPORT QUOTA

N H ZUBERI | MAR 21ST, 2019 | KARACHI

Chairman of Businessmen Panel (BMP), Mian Anjum Nisar has urged the Malaysian government to enhance the quota of Pakistani rice export to Malaysia, at competitive prices, adding that Malaysia has also imposed 5 to 7% duties on import of mango and kinnows, which need to be reviewed.

He said Pakistan is a big supplier of IRRI and basmati rice and the Malaysian requirement is of 1,000,000 M Tons annually for domestic consumption. The share of Pakistan is not more than 200,000 Tons.

He said that throughout the six decades, Malaysia and Pakistan enjoyed very close and fraternal relations as both shared many commonalities and hoped that visit of Malaysian Prime Minister Dr Mahathir Muhammad to Islamabad on march 21st will give a new trade push to Pakistan in Association of Southeast Asian Nations (ASEAN).

Nisar said although Pakistan and Malaysia have signed FTA but not much momentum in trade has been witnessed which also requires special attention and efforts from both sides.

He emphasized on regular exchange of trade delegations and participation in trade promotional activities in both countries to boost the economic relations between both countries, regardless Malaysia-Pakistan Closer Economic Partnership Agreement (MPCEPA) also signed on 8 November 2007 in Kuala Lumpur which entered into force on 1 January 2008, Malaysia and Pakistan recognised the importance of regular discussions to strengthen the trade relationship in key sectors and addressing bilateral trade imbalance which needs to be taken up as Pakistani businesses eagerly need Malaysian market and ASEAN region to diversify its exports, particularly in horticulture, sports surgical and textile sectors.

BMP Secretary General and Former President FPCCI, Senator Ghulam Ali said Malaysia and Pakistan had enjoyed warm and friendly relations since the establishment of diplomatic ties in 1957.

Both the countries shared a similar position on regional and international issues through their membership in the Non-Aligned Movement (NAM), Organisation for Islamic Conference (OIC) and G77. In addition to these, Pakistan is also a dialogue partner of the ASEAN and a member of the ASEAN Regional Forum.

The exchange of trade delegations is direly needed to boost the bilateral trade ties and volumes, he said and added that on the visit of Malaysian PM, we are looking forward to sign a MOU between the National Chamber of Commerce and Industry of Malaysia (NCCIM) and Federation of Pakistan Chambers of Commerce and Industry (FPCCI) in order to strengthen business to business interactions which further helps to remove the government obstacles time to time.

The BMP officials also viewed the future Pakistan will need to manage its economy in a completely different way.

"Today, Pakistan's growth story is one of boom and bust. A few years of strong growth are always followed by crisis. We are in the middle of such a crisis.

To avoid such crises in the future, both the state's revenue collection and its private sector must be strengthened. Efforts to broaden the tax net and bolster tax administration will permanently increase tax revenues without continuing to increase the burden on those already paying taxes. The country's private sector needs to be made more competitive through an improved business environment, increased openness to trade and investment, and reforms in the energy sector."

PUNJAB WILL SURPASS WHEAT PRODUCTION TARGET: MINISTER

RECORDER REPORT | MAR 21ST, 2019 | LAHORE

Punjab Agriculture Minister Malik Noman Ahmad Langrial has expressed the hope that the province will surpass wheat production target this year keeping in view the favorable weather conditions and overall health of the crop. Speaking at a meeting held at the Agriculture House here on Wednesday, the Minister said that overall crop situation is satisfactory and farmers need not to worry about it.

He also spoke to the agriculture officers of all the wheat sowing areas on video link. He stressed the need for taking steps to protect the wheat crop affected by rust in some areas. He said that rust attack had been witnessed because of heavy rains in some areas but its severity is low.

The meeting was informed that rust attack was not more than 10 percent anywhere in the crop area. The Minister said that growers need not to worry about this situation as rust attack would diminish with increase in temperature. He also directed the departmental officers to utilize all resources for bringing maximum area of land under cotton sowing and to push its production upward. He said that the federal government will announce cotton's support price and also thinking to buy it through Trading Corporation of Pakistan (TCP) to stabilize the prices. The meeting was attended by the provincial agriculture secretary Wasif Khursheed, DG Agriculture (Extension and Adaptive Research) Dr. Anjum Ali and other high ups.

GWADAR FISHERMEN REFUSE TO END PROTEST

By Mohammad Zafar Published: March 22, 2019

QUETTA : The fishermen of Gwadar, who resumed their protests earlier this week, have refused to give more time to authorities for resolving their issue of redesigning of Eastbay Expressway in Gwadar, on Wednesday.

Commissioner Makran Division Captain (Retd) Tariq Zehri visited the fishermen at their protest camp for negotiations with leaders of the Fishermen Alliance Committee and asked them to give a month's time to the government for resolving the issue.

Zehri said Prime Minister Imran Khan has taken notice of their protest and demands. He has also directed the authorities concerned to resolve their issue. The commissioner asked the fishermen to call off their protest for a month during which steps would be taken to find solution to the problem.

However, the alliance chief said they cannot give more time to the government and would not call off their strike until acceptance of their demands.

GOVT PLANS TO PROCURE WHEAT WORTH RS100 BILLION

By Our Correspondent Published: March 21, 2019

LAHORE: Punjab Chief Minister Sardar Usman Buzdar has sought report pertaining to the credibility of field officers for appointing more than 800 field staffs on 382 market places of the Punjab Food Department to buy wheat worth Rs100 billion in the next month.

All 36 districts of Punjab have been divided into three categories. Reviewing the past performance and seniority, district food controllers will be deployed in these districts. Punjab chief minister lifted a ban imposed on the appointment and transfer in the food department for a specific period and in the next 72 hours and appointments and transfers on a bigger level are expected.

The Punjab Food Department established 384 market places in the province last year but this time, 382 market places will be set up. Two market centres, which were set up by the influence of an assembly member in Sahiwal in PML-N regime, are being removed. In Multan 48 market centres, 44 in DG Khan, 40 in Faisalabad, 70 in Bahawalpur Division, 43 in Sahiwal Division, 43 in Gujranwala Division, 36 in Sargodha Division and 42 market places in Lahore Division have been set up.

There is a lack of staff for deployment in market centres of South Punjab especially in Bahawalpur Division and DG Khan. The chief minister has sought immediate reports from special police branch and the Intelligence Bureau regarding the honesty of around 800 assistant food controllers (AFCs), food supervisors and food inspectors for deployment on these centres.

ADVICE TO WHEAT GROWERS

The Newspaper's Staff Reporter March 20, 2019

LAHORE: A spokesman for the agriculture department has urged growers to approach extension staff in their respective areas for advice to control Yellow Rust disease that has attacked wheat crop because of recent rainy spells in the province.

The growers have been advised to make arrangements for draining rainwater from the fields and spray the affected plants with the poison recommended by agriculture experts.

The spokesman says, in a press release, that extension and pest warning staff have been directed to check wheat fields in their respective areas for protecting the crop from yellow rust and other diseases.

CLEARANCE OF FOOD SHIPMENTS ORDERED

The Newspaper's Staff Reporter Updated March 20, 2019

ISLAMABAD: The Ministry of Commerce on Tuesday announced that the shipments of food products in the pipeline will be cleared without the requirements of labelling in Urdu.

This order came in the wake of demands from many importers who were facing problems in getting their shipments cleared after issuance of SRO237 on Feb 19 making it mandatory for food products to have halal certification and labelling in Urdu.

The ministry said under paragraph 4 of the Import Policy Order (IPO) 2016 "…an amending order/SRO will not operate against the imports where bill of lading or letter of credit is issued before the issuance of such an order/SRO."

In view of this, the ministry directed the Customs authorities to facilitate the clearance of shipments which qualify under the existing import policy order.

However, all imports will be subject to new regulations as prescribed under the SRO237, it added.

ATTA CHAKKI OWNERS SEEK WHEAT AT EXPORT RATE

The Newspaper's Staff Correspondent March 20, 2019

HYDERABAD: The Atta Chakki Owners Association has urged the federal government to release wheat to chakkis (flour mills) at the rate it was being exported under approval of the Economic Coordination Committee (ECC).

The association made the demand on Tuesday in a letter addressed to the prime minister, federal finance minister, provincial and federal food ministers, provincial chief ministers, governors, chief secretary and the finance secretary of Sindh.

In the letter written for the second time, it has been stated that due to "flawed" policies of past federal and provincial governments, consumers bought expensive wheat which only benefited a few thousand families.

The letter said that when 100kg bag of wheat was being sold between Rs2,000 and Rs2,200 in the international market, the government purchased wheat for Rs3,250 from their “favourite” landowners without providing them gunny bags and added that the government bore additional expenses of transport and labour.

It said the same wheat was then sold to consumers for Rs3,315 in the country in general and Sindh in particular.

On the contrary, millions of tonnes of wheat was sold to different countries in 2018 and this point vindicates association’s claim.

The letter said the national exchequer had to bear losses and then the ECC approved export of 500,000 tonnes each of wheat from Punjab and Sindh.

Association president Mohammad Hafeez Khanzada said this year a bumper wheat crop was expected in Sindh and despite the passage of half of March, wheat procurement centres were not opened.

He said this caused unrest among small- and medium-sized growers.

He said that currently 100kg of wheat was being sold between Rs2,900 and Rs2,950 in the open market, therefore, considering this price, the government should establish wheat procurement centres to procure the crop.

Procurement would help consumers, he said, fearing that the government might be planning to purchase wheat from its favourite landowners at the rate of Rs3,250 by delaying establishment of wheat procurement centres.

COUNTRY TO HAVE BUMPER WHEAT CROP THIS YEAR: CAP CHIEF

RECORDER REPORT | MAR 20TH, 2019 | KARACHI

Cereal Association of Pakistan (CAP) has said that exports of wheat products are allowed freely without any restrictions through sea route. Muzzammil R Chappal, chairman CAP, has said that Pakistan will have a bumper wheat crop this year and Prime Minister Imran Khan has already confirmed this last month. Therefore, exports of wheat and wheat products will continue to offload carryover commodity stocks.

He informed that wheat harvesting has already begun across the country and initial estimates expecting an increase of 5-10 mounds per acre in wheat yields in Sindh supported by timely winter rains and beneficial weather.

As per ministry of commerce export policy order currently in force, export of wheat and wheat flour is allowed and already being exported without any subsidy and/or freight rebate from the government.

He informed that during the month of February 2019 alone, 53,128 metric tons wheat and 53,727 metric tons wheat flour was exported from the government and private/open market stocks. These volumes are expected to grow substantially in the next few months, he added.

In order to facilitate and encourage the private sector to play its role in enhancing exports without any undue burden on the national exchequer in the shape of subsidies or freight rebate, exports of wheat and wheat products are allowed freely without any restrictions through sea route from Karachi port and Port Qasim.

Chappal said that with International Monetary Fund (IMF) settlement and devaluation imminent and a bumper wheat crop, commercial exports of surplus wheat and wheat products will continue to become more viable and private sector wish to play its role to achieve the highest exports target end of this year.

COTTON PRODUCTION FALLS 7PC

Parvaiz Ishfaq Rana Updated March 19, 2019

KARACHI: The overall cotton production fell 6.84 per cent to 10.762 million bales as of March 15 from 11.5m in the corresponding period last year, according to latest figures released by the Pakistan Cotton Ginners Association (PCGA) on Monday.

Slow phutti arrivals is a strong indicator that the crop is unlikely to exceed the 10.8m-bale-mark when the season ends in April.

The fortnightly figures for March 1-15 showed that only 21,263 bales were produced as against 27,671 in the same period last season recording a shortfall of 6,408 bales.

Prime Minister Imran Khan has directed concerned government departments to ensure higher production at 15m bales but so far, no incentives have been announced to encourage cultivation.

Moreover, the government has failed to notify indicative price for phutti and fix quota for procurement by Trading Corporation of Pakistan.

Punjab's production, the country's largest producer, has declined to 6.613m bales down 9.39pc during the same period last year when total production stood at 7.298m. Sindh, on the other hand, produced 4.149 million bales down 2.45pc from the same period last year. Balochistan has produced 117,852 bales.

The textile spinning industry purchased 9.641m bales as against 10.954m in the corresponding period last season. Similarly, exporters booked 102,330 bales compared to 216,615 bales last season.

The ginners are still holding substantial quantity of unsold cotton at 1.019m bales compared to 597,847 held in the corresponding period last season. Currently, 24 ginning units are operating in Punjab and only one is operating in Sindh.

SEAFOOD EXPORT CONTINUES TO DWINDLE

ANWAR KHAN | MAR 19TH, 2019 | KARACHI

Pakistan’s seafood export continues to dwindle ‘due to the federal government’s deep sea fishing policy’ that widely caused the main trading fisheries to scale down over the past eight months of the current fiscal year.

Talking to Business Recorder on Monday, the fisheries stakeholders termed the deep sea fishing policy that "the last federal government had evolved" but put in place by the incumbent government made the ailing fisheries sector suffer more from the restrictions on the hunt in the country's seas.

The policy is thought to have rather scaled back the country seafood export by over 6 percent or $16.226 million to $247.991 million in July-Feb 2018-19, which stands lower from $264.217 million in July-Feb 2017-18, according to the fishermen. The Pakistan Bureau of Statistics says: Pakistan exported less seafood by 2 percent or 1890 metric tons to 111,640 metric tons in July-Feb 2018-19 from 113,530 metric tons in July-Feb 20171-8.

"The deep sea fishing policy was too sudden for the fishermen to get acclimatized to it, which has widely proven counterproductive damaging the country's fisheries export by over 6 percent," President Sindh Trawlers Owners and Fishermen Association (Stofa), Habibullah Khan Niazi told Business Recorder, saying that "the country's fishermen suffered more from the policy over the past four months than anything else." He asked the federal authorities to revisit the policy at once to help the country earn maximum out of the business.

In Feb 2019, Pakistan managed to export $30.737 million of seafood to the world markets, which is lower by over 11 percent or $3.826 million from $34.563 million exported in Feb 2018. In term of quantity, the seafood export slumped by 9 percent or 1506 metric tons to 15,449 metric tons in Feb 2019 from 16,955 metric tons in Feb 2019. "The policy that bans the ordinary fishermen from going beyond 12 nautical miles into deep sea for fishing in fact reduced the catch in the last four months," Habibullah said.

As a result, he said, the country suffered a sudden fall in the seafood export, while the fishermen and fisheries stakeholders went into a dormant phase with no businesses at hand. "Fishermen actually suffered big unemployment over the ban period, which now on the court order has been suspended till a policy is reframed in consultations with the stakeholders," the Stofa President said, adding that a meeting between the parliamentary committee and fisheries stakeholders is going to take place on Mar 22, 2019 to end the impasse emerged from the policy.

Export to China suffered more that was a main revenue chunk from the country's exchequer, as the entire squid family fisheries are found beyond the red-marked belt of 12 nautical miles, where unlicensed fisheries is banned by the policy. Now, fishing in the deep sea belt has begun with help of the court, hoping catch of the key export fisheries will grow from the past, he said, adding that "the government should also placed a permanent ban on shrimp hunts in creeks" to help improve the country's fisheries export as well. Creeks are considered the main hatcheries for reproduction of shrimp, he said.

INDH TO HELP FARMERS 'WORM' THEIR WAY INTO ORGANIC GOODS MARKET

By Abdul Razzaq Abro Published: March 19, 2019

KARACHI: With organic food and products all the rage the world over, the Sindh government has decided to help local farmers 'worm' their way into that market.

The Sindh agriculture department is taking steps to introduce vermicomposting – the use of worms to convert organic waste into fertiliser – as a more sustainable and eco-friendly alternative to the existing practice of using chemical fertilisers to grow crops.

Fertiliser obtained using vermicomposting processes is believed to help enrich soil, increase crop yields and suppress plant disease. The Sindh agriculture department hopes the move will not only create greater business opportunities for small-scale farmers but will also benefit consumers by providing agricultural products free of chemical fertilisers.

Flagged under the Sindh Benazir Hari Programme, the new project will not only reduce the impact of chemical fertilisers on agricultural products but will also control the amount of chemical fertilisers seeping into underground water.

The project will also offer abundant quantities of herbal products to consumers, including aloe vera paste, grape vinegar, bottle-gourd juice, and bitter gourd juice, to name a few.

Talking to The Express Tribune, Director General Agriculture Extension Sindh Hidayatullah Chhajro, said that the Sindh Agriculture Department will launch the programme soon, adding that Sindh Chief Minister Syed Murad Ali Shah has also been briefed about the project.

Initially, the project will be initiated in two districts of Sindh before expanding to other districts of the province.

The government has allocated Rs500 million to the project, which will run for two years and will mainly serve two purposes. First, it will help promote agriculture-based household factories in rural Sindh, and secondly, it will offer pure agricultural products to consumers dwelling in urban areas. That apart, the project will create more job opportunities in Sindh.

Under the project, the Sindh government will also build solar-powered cold storage where farmers will be able to preserve fresh fruits and vegetables.

In addition to that, the government will also ensure the provision of machinery required by farmers for the preparation of agricultural products.

Similarly, marketing and advertising campaigns will also be launched to promote the products.

The Sindh Agriculture Department will also organise weekly markets on a district level to help farmers sell their products.

STEPS TO PROMOTE AGRICULTURE UNDER WAY: GOVERNOR

3/18/2019 12:00:00 AM

LAHORE: Punjab Governor Chaudhry Sarwar has said that the government is taking steps to promote agriculture in Punjab and added that all relief and needed subsidies be provided to the farmers.

`Without making farmer prosperous, no country can prosper,` he said.

Speaking at an agriculture conference here on Sunday, the governor said the federal and Punjab governments were taking steps to introduce latest technology in agriculture field to make the country prosper.

He said the government was also introducing publicprivate partnership in agriculture field. `The Punjab government is taking measures to provide cheap and advanced seeds to farmers by bearing the burden ofcost,` he said and warned that crackdown be launched against substandard replicated seeds. Referring to the Christchurch terrorism, the governor said the notion had again been reinforced that terrorism had nothing to do with any religion. `We all have to stand united against terrorism.

Mr Sarwar said Pakistan had once again exposed Indian aggression before the world by shooting down Indian drone.

He said the Pakistan`s armed forces had made tremendous sacrifices against terrorism. `The whole nation salutes and pays tribute to martyrs,` he said and added that Pakistan had always condemned terrorism and tried to play its role in uprooting terrorism across the world.-Staff Reporter

PRICES OF VEGETABLES, PULSES CONTINUE TO SOAR

Aamir Shafaat Khan Updated March 18, 2019

KARACHI: Barring potato, prices of various vegetables witnessed substantial jump followed by crawling up of some pulses and sugar rates.

The most notable increase was recorded in green chillies to Rs140 per kg in wholesale market from Rs12-15 a kilo. As a result, retailers are charging Rs240-320 per kg. Many retailers are avoiding giving free green chillies to the consumers with the purchase of various vegetables.

The price of turrai (ridge gourd) and tinda (apple gourd) soared to Rs120 per kg from Rs80 and Rs50-60 per kg while gobi (cauliflower) rate went up to Rs60-80 from Rs40-50 per kg. Lokki (bottle gourd) sells at Rs80 per kg which was earlier Rs60 per kg. Peas are now being sold at Rs70-80 per kg as compared to Rs40-50 per kg.

Tomato prices have been under pressure for the last one month, hovering between Rs 120 and 140 per kg. Good quality onion is now tagged at Rs40 per kg versus Rs30 per kg.

No more free green chillies with vegetable purchases

Abundant supplies of potato from Punjab’s cold storage resulted in a major drop in price to Rs20 per kg from Rs30 per kg while some pushcart owners are offering five to six kilos of potato at Rs100.

Gajjar (carrot) price went up to Rs40 per kg from Rs30 per kg, while baigan (brinjal) rate climbed to Rs50-60 per kg from Rs40 per kg.

President of the Falahi Anjuman Wholesale Vegetable Market Superhighway Haji Shahjehan said the recent flooding and rains in Balochistan had slowed down the arrival of vegetables to Karachi.

He said tomato rates had never gone up in February and March but this year the trend had changed, taking its wholesale price to Rs90-100 per kg.

Shahjehan said tomato growers in Sindh had faced serious problems after using fake and substandard seed provided by various companies and their dealers to the red fruit growers. As a result, the crop could not ripe fully.

Onion's wholesale rate jumped to Rs25 per kg from Rs15 per kg following end of Sindh crop and delay in arrival of Balochistan crop.

Potato's wholesale price now hovers at Rs8 to Rs10 per kg owing to bumper crop this year.

In pulses, the wholesale price of mung and maash has risen by Rs25-30 per kg and Rs15 per kg. The new wholesale price of mung hovers between Rs 135 and 140 against Rs110 a few days back while the maash rate is now tagged at Rs110-115 as compared to Rs100 per kg.

After persistent rise in sugar's wholesale rates for the last two month, the sweetener now costs Rs58 per kg as compared to Rs56 two weeks back while in January it was available at Rs54 per kg.

A wholesaler attributed price hike in maash to a slight rise in world price coupled with the rupee devaluation against the dollar, making imports costlier.

In mung, some big market players of Punjab are piling stocks as the new crop would arrive in the next two months. These traders are not releasing the stocks resulting in a shortage at Karachi's wholesale market, he said.

However, the wholesale rates of gram pulse and masoor had been intact at Rs100-105 per kg and Rs76-82 per kg.

At the retail side, consumers are paying Rs140-160 per kg for mung, up by Rs20 per kg. The retail price of maash ranges between Rs 130-140, showing a jump of Rs10-15 per kg.

Gram pulse sells at Rs115-140 per kg depending on the quality while masoor is available at Rs 100-120 per kg. Sugar price hovers between Rs60-65 per kg at retail markets.

Patron in Chief of the Karachi Wholesalers Grocers Association (KWGA) Anis Majeed proposed that imported pulses could be transformed into an export sector by value addition on which the adviser to prime minister on trade, textile, industry, production and investment, Abdul Razak Dawood, had agreed to the association's proposal.

He said Pakistan consumes 1.4-1.5 million tonnes of pulses annually while local production stands at about 500,000-600,000 tonnes while 700,000 tonnes are imported from Canada, Australia, the USA, Russia, Ukraine, Myanmar and African countries to meet the local demand.

From these imported pulses, after meeting our local demand, we can value add on them and export to nearby markets. It would open a new export sector for Pakistan besides helping in earning foreign exchange, Mr Majeed said.

GROWERS NEED SUPPORT PRICE TO SWITCH BACK TO COTTON

Amjad Mahmood Updated March 18, 2019

Following a year-on-year decline in the acreage and output of the cotton crop, the government is taking immediate measures to arrest the trend and enhance the production of the silver lint.

The cash crop is witnessing a gradual decline in production since 2005 due to a fall in the acreage, water shortage, poor-quality seed and spurious pesticides.

Last year, its output remained 11 million bales against the target of 12.6m bales. But in the ongoing season, the harvest will hardly be 10.5m bales as per the estimates of analysts. Pakistan is the fourth largest cotton producer in the world. Its cotton industry saw its “magic years” in the early 1990s when the crop output exceeded 20m bales.

The cotton plantation area has shrunk in the last couple of decades as sugar mills were set up in the cotton zone of south Punjab and Sindh. The absence of a support price has also pushed cotton farmers towards wheat and sugar cane for which the government announces support prices every year to ensure a fair return to growers.

Farmers prefer growing sugar cane and wheat only because these crops enjoy support prices, which ensure that they recover at least their cost of production

For a return to the golden era, Prime Minister Imran Khan at a recent meeting sought plans for achieving the production target of 15m bales in the 2019-20 season. Punjab has forwarded to the federal authorities a 20-point activity plan with responsibilities assigned to each relevant department/agency for funding and other necessary action, according to an official who was part the planning process.

The plan fixes the sowing target of 5.7m acres for harvesting 11m bales of cotton in the province. It also suggests the zoning of the province’s cotton belt for specific seed varieties and sowing window (period) purposes.

To obtain the required crop yield, it recommends that both the federal and Punjab governments ensure the provision of quality certified seeds at Rs4,000 per 40-kilogram bag or Rs100 per kg to cotton growers. At 8kg per acre, the province will need 45,600 tonnes of seeds for the 5.7m acre sowing target. The provincial government has already approved a subsidy of Rs700 per acre, but it is for only 100,000 acres of land in south Punjab under a World Bank-funded project.

The plan also demands a pilot project of Rs3,000-per-acre subsidy for at least four cotton-producing districts — Bahawalnagar, Bahawalpur, Rahim Yar Khan and Vehari — as an incentive for cultivators who are inclined towards cash crops, particularly sugar cane.

For reducing the cost of production, it seeks the launch of an integrated pest management (IPM) programme, which will include seed treatment, use of PB ropes to control pink bollworm and botanical plant extracts.

Besides recommending a ban on the cultivation of the maize crop in Bahawalpur and DG Khan divisions, it makes an important but controversial recommendation: diverting upper Punjab's water to the cotton belt, particularly during the sowing season from March 15 to May 31.

Some stakeholders argue that farmers keep two factors in mind before sowing a crop: which crop will bring them a reasonable livelihood and which one is easier to cultivate. They prefer growing sugar cane and wheat only because these crops enjoy the minimum support price and guarantee the farmers that they will at least recover their cost of production.

Cotton Research and Development Board Chairman Suhail Mehmood Harral said the government should extend cotton-specific incentives instead of relying on general proposals for the whole agriculture sector to increase the area under cotton crop.

The most important step, he says, is the announcement of a support price for cotton just like wheat and sugar cane crops. "What cotton grower needs is the restoration of his confidence that has been shattered because of an uncertain price regime in which he sometimes fails to recover even his cost of production. His confidence will be restored only through offering him a support price of at least Rs4,000 per 40kg for his produce," he says.

A few weeks ago, the federal minister of food security and research hinted at introducing a support price of Rs3,500 per 40kg phutti (raw cotton) to encourage cotton growers.

Mr Harral, who is also a former chief of the Pakistan Cotton Ginners Association (PCGA), urged the government to come up with a package that includes a support price as well as the provision of affordable and good quality pesticides and fertilisers. Offering subsidised seeds won't work wonders that the government is looking aiming for, he adds.

Some experts underscore the importance of improving crop management for enhancing output. "Better crop management contributes 80pc in achieving higher cotton production," says Dr Zahid Mahmood, a researcher.

AGRI-FINANCE: ARE BANKS MISSING OUT ON A BIG OPPORTUNITY?

Younus Sandeela Updated March 18, 2019

Informal credit and the ease with which it is available are the biggest menace prevalent in the agricultural sector since it has kept farmers hostage to money lenders from pre-partition era. Referred to as aarti in domestic lingo, the phenomenon of borrowing for the middleman is common not just in the subcontinent but in many third world countries.

Subsequent to partition and migration of Hindu money lenders, informal credit in the agriculture sector is now almost fully dominated by aartis, the basis of which is usually personal relations. Normally, no interest is charged, no documents are signed (except for aarti unilaterally noting it down in a register maintained by him) and no collateral is required. Most importantly, no questions are asked regarding the purpose of the borrowed amount or the schedule for release of funds to match with crop production stages.

The only condition imposed on the borrower is that he has to bring his produce for auctioning at the lender's shop and pay commission on the value fetched. Failure to fulfill this condition makes the borrower liable to pay interest in proportion to the shortfall in the quantity the farmer was supposed to auction. In an event of complete crop failure, farmer is usually extended credit again to enable him to grow the next crop and repay the combined outstanding loan amount. However, in this case farmer pays interest on the unpaid loan.

The borrowing cost of informal credit significantly surpasses the interest charged by commercial banks

On the face of it this interest free, uncollateralised and undocumented informal running finance facility should have been a blessing for poor farmers. However, unlimited greed has turned these financial messiahs into blood sucking moneylenders. Being perpetual borrowers, poor farmers are never in a position to question their financiers about the fairness or transparency with which their produce is auctioned. It is very common for aartis to manipulate the auction process to disadvantage the farmer who is almost never present when the auction is taking place.

Similarly, aartis have a free hand with respect to weighing the shipment normally sent by farmers on shared cargo vehicle. Any quantity can be declared substandard and categorised as wastage. The cost of borrowing paid by farmers in the form of losses incurred due to these unfair practices, plus the commission paid, significantly surpasses the interest charged by commercial banks.

The main reason that farmers are unable to borrow from commercial banks is the cultural practice of keeping family assets in joint names. In many areas it is considered improper to transfer inherited property, particularly the agricultural land, into the names of individual heirs' even years after the original owner has passed away. Sometimes the property is not only in the name of siblings but also first cousins. Therefore, it is not the unavailability of collateral but the manner in which its title and possession is held that limits farmers' ability to offer agricultural land as collateral against commercial borrowing.

Secondly, farmers are highly uncomfortable dealing with banks. Bankers appear to be people different in terms of dressing, language, and environment, offering products that farmers do not fully understand. The invariably lengthy documentation process necessary to avail bank borrowing further scares away farmers as they often lack the ability to read papers that they are required to sign.

Religion also plays a huge role. One of the major reasons why farmers do not opt for formal financing is the interest factor. Many farmers do not want to pay interest and willingly prefer to be fleeced by aartis.

Lastly, the unstable and unpredictable wholesale market hugely limits farmers ability to predict revenues and hence their capacity to repay the loans. The crop insurance products that are currently available, and are made mandatory for farmers to avail if they opt for bank credit, are quite ineffective. Their protection is limited as a claim is only entertained when a farmer's entire land has been declared calamity hit by the relevant government authorities.

Banks are also reluctant to increase exposure into this highly lucrative but semi documented market. Farmers are prone to high default rates due to volatile wholesale markets that limit farmers' ability to have consistent revenue streams.

Another problem faced by banks is their limited ability to understand the farming sector. Officers dealing with agri credit are mostly business graduates who lack in-depth understanding of agriculture. It's a pity that agriculture economics or agriculture marketing is not part of any major MBA program offered by numerous business schools in the country.

In order for banks to effectively penetrate the agri credit market they must completely overhaul their strategy. Agriculture extension services have failed to provide the required support to farmers. Banks must assist farmer's earning capability by playing a role in educating them and introduce better paying crops. This in turn will help them attain a more stable revenue stream.

State Bank must step in to remove the mismatch between value of collateral and loan amount in agriculture lending. Farmers are required to place their pass books (ownership document for agricultural holding) as collateral with the bank when they borrow, which pledges their entire holding. This is especially painful when per acre value of land is more than ten times the State Bank's approved per acre credit ceiling for different crops.

Working with select group of farmers and forming them into cooperatives will slowly develop entities in the agriculture sector that could borrow from banks based on the strength of their balance sheets.

Financing viable projects in downstream agro processing will create alternate marketing channels for farmers. This will eventually stabilize wholesale prices and enable farmers to better predict their revenue cash flows. Also, a vibrant Islamic Banking arm will aid banks into exploiting lending potential in the agri sector.

However, these shifts in approach will take place only when banks genuinely want to explore new avenues for increasing their profitability. This will remain a far cry as long as government borrowing continues to crowd out the private borrower.

The writer is a banker-turned-agribusiness specialist

LIVESTOCK LIVES MATTER!

BR Research March 18, 2019

Dairy and packaged meat industries have been getting some attention of late. Earlier this month, Commerce Minister Razak Dawood said the government is working on a plan to rationalise taxes on milk supply chain. Meanwhile, news flow relating to unhygienic milk & meat, food poisoning, as well as the controversy over UHT milk has also become quite too frequent in recent years.

The latter may be bad news for the restaurants and corporations caught in such controversy. But it seems good news for livestock sector, because these controversies have somewhat put the spotlight on livestock, which is where the roots of many of these problems emerge from. The sector has now caught the attention of Prime Minister Imran Khan who reportedly also wants to focus on its growth and development – it is another thing though that the ill-managed poultry episode left him with more criticism than support.

For many urbanites, livestock lives do not matter. They couldn't care less about livestock or the people involved as long as they are getting milk and meat at lowest possible prices. Some futuristic economists on the other hand brush off livestock as irrelevant since in 10-20 years, the world would likely move on to lab grown meat and test tube milk.

There is little doubt that at some point in the foreseeable future, Pakistan will eventually have to take a stance on futuristic trends in meat and milk industry. But that should not prevent the state or the society from recognising the importance of this sector, whether seen from the lens of contribution to GDP, employment, female empowerment, poverty, or basic human health.

The sector is nearly 60 percent of agricultural GDP (where cattle and buffalo combined have the biggest share), 28 percent of total commodity producing GDP, and about 11 percent of the total size of economy. Although there are some serious question marks over the estimation of livestock GDP, which will be covered later in this space, suffice to say the sector contributes significantly to the country's economy.

In terms of jobs, 11 percent of total employment in the country is in livestock and related sectors, where livestock and dairy producers offer the biggest chunk of that employment. For some regions, such as Khyber Pakhtunkhwa it is even more important; according to KP's Livestock Policy 2018, the sector employs 46 percent of direct labour force in the province.

Even more important is the fact that the sector is arguably the biggest employer of women. According to the latest Labour Force Survey 2017-2018, nearly 34 percent of total female employment is in various livestock sectors, as against nearly 5 percent in the case of total male employment. In the 'subsistence livestock farmers' category, women are about 81 percent of total sectoral employment. These facts have serious implications for those working on women empowerment and gender issues at large.

The sector also needs attention from those working on poverty reduction. A wide majority of livestock owners are landless farmers – 80 to 90 percent of total livestock (cattle & buffaloes) is estimated to be owned by landless farmers, according to industry sources.

These animals are not only a source of their income but also a cashable asset which they sell, for example, when they have to prepare for dowry for their daughters' wedding or when they fall into debt after being sick and jobless. In Imran Basharat's words, General Secretary, Sahiwal Cattle Breeders Association, "livestock is one of the biggest reservoirs of unemployment; especially unemployed landless farmers".

Then there is of course the health and hygiene concerns for citizens at large. At the one end, there is stunting, an issue that has caught public attention since PM Khan flagged it in his speech. And at the other, there is a growing frequency of news reports about people dying or falling sick because of bad quality of meat; or about adulterated loose milk as against the UHT milk which too has not been exempt from real and perceived controversy. In great part, the solution to many of these problems lies in the fixing of livestock sector.

Industry sources say the government is keen to fix the livestock industry; they have had a couple of meetings with industry stakeholders as well. But what exactly is the nature of the problem, the trade-offs in question and potential solutions on the table. These will be the subject of discussion in this space in the ensuing weeks. Stay tuned!

COUNTRY'S PER ACRE SUGARCANE PRODUCTION LAGS BEHIND DEVELOPED NATIONS

KHALID ABBAS SAIF | MAR 18TH, 2019 | FAISALABAD

Although Pakistan is considered the 5th largest sugarcane producing country in term of area worldwide but its average per acre sugarcane production is far behind the developed nations. This concern was shown at the graduation ceremony of advanced certificate in sugarcane agronomy arranged by the Department of Agronomy, University of Agriculture Faisalabad in collaboration with Punjab Sugarcane Research and Development Board at the New Senate Hall, UAF.

Talking to participants, UAF Vice Chancellor Dr Zafar Iqbal Randhawa said that it is the need of hour to adopt mechanisations and latest agricultural practices in our field in order to increase per acre productivity. He stressed upon researchers and agricultural experts to focus on crops that will not only enhance productivity but also ensure food security.

He said that in the west researcher who started his work on a specific crop continued his working on the same crop throughout his life and his focused efforts helped brought tangible results in term of enhanced productivity. He expressed his grave concern that despite of being an agrarian country, Pakistan is importing agricultural goods.

Punjab Sugarcane Research and Development Board CEO Dr Shaid Afghan said that they were aiming at increasing cane and sugar yields per unit area, improved efficiency of inputs (water, fertilisers, agrochemicals, diesel, labour/manpower) and sustainable production system (including environment friendly approach, soil fertility & health, socio-economic aspects).

They were exploring potential of bi-products & energy production from sugarcane biomass, preparing for mechanisation in future, application of new technologies and effective technology transfer and capacity building of young researchers/technicians/farmers.

Chairman Dr Asif Tanvir said adoption of modern agri methods at par with modern world, varieties, timely sowing of crops, balanced usage of fertiliser as per agricultural experts' recommendation are prerequisite to increase agricultural yield and ensure food security. He said that the latest practices of agricultural, timely sowing and best breeds will be imperative to improve the productivity.

PUNJAB TO PROMOTE KITCHEN GARDENING CULTURE

RECORDER REPORT | MAR 18TH, 2019 | SIALKOT

Provincial agriculture department has formulated a comprehensive plan for the promotion of kitchen gardening culture across the Punjab. Sources in agriculture department told Business Recorder on Sunday that under the plan the department will be sold 50,000 summer (Kharif) seed kits on inexpensive rates across the province. The government was very keen to promote kitchen gardening to enable people to get fresh home grown vegetables.

The step has been taken for the promotion of kitchen gardening culture and to create awareness about the importance and utility of home grown fresh vegetables across the Province. In Sialkot district, Kitchen gardening has gained popularity among people especially the women folk belonging to urban and rural parts and obtaining guidance from agriculture department regarding kitchen gardening regularly.

The kitchen gardening is actively attaching highest importance in the wake of upsurge in prices, malnutrition, poverty alleviation and consumption of fresh and home grown vegetables sources added.

Under the programme, 1300 seed kits would be sold in Sialkot district out of which 500 in Sialkot tehsil, 300 in tehsil Daska 300, 300 Pasrur tehsil and 200 in tehsil Sambrial would be sold on subsidized rates to facilitate the people and ensure the promotion of kitchen gardening culture at gross roots level.

WEEKLY REVIEW: COTTON PRICES WITNESS UPWARD TREND

NASEEM USMAN | MAR 18TH, 2019 | KARACHI

The upward trend was seen in the prices of cotton. Textile mills were active and involved in buying due to which buying was increased. The market trend shows that prices of cotton may increase in the coming days. The new season is about to start and government should take immediate steps to increase the production of cotton.

During the last week textile and spinning mills increase the buying while the ginners also started selling cotton in the stock due to which trading volume increase to some extent due to which prices of cotton shows upward trend.

The prices of cotton in both Sindh and Punjab remained Rs 7000 to Rs 9000 per maund while the price of Seed cotton (Kapas/Phutti) is from Rs 2800 to Rs 3600 per 40 Kgs in both Sindh and Punjab. The cotton in Balochistan is available at the rate of Rs 7800 to 8100 per maund while the price of seed cotton which is available in very small quantity is from Rs 3200 to Rs 3600.

The Karachi Cotton Association (KAC) spot rate committee increased the spot rate price by Rs 100 and closed the rate at Rs 8700 per maund.

In the local market the demand of textile products and cotton yarn has increased but due to delay in payments there is financial crisis in the market. On the other hand the import of cotton which was stopped from India has started to some extent. The ginners have the stock of 1 million bales which will be sold in coming days.

Chairman Karachi Cotton Brokers Forum Naseem Usman said that over all bullish trend was seen in international cotton market. According to the analysis of local and international market upward trend will be seen in the prices of cotton in the coming days. The fluctuation was witnessed in New York

Cotton Rate of Promise (Waday Ka Bhao) due to which the prices of cotton shows upward trend while the prices of cotton in China shows positive trend.

Naseem Usman said that during the last 10 to 15 years the production of cotton continuously increased in India. The production of cotton reached 4 crore bales three to four years ago and India has become the second largest cotton producer in the world after America but due to defect in the cotton seed Gulabi Sundi attacked the crop and as a result cotton production decreased.

Last year cotton production of India was 3 crore 65 lac bales but during the current year it is expected that that cotton production of India will be between 3 crore 25 lac to 28 lac bales which is 40 lac bales less as compared to the previous year. The Indian government has asked the international company Monsanto to provide seeds of cotton which will increase the production while the Indian government has also asked the Monsanto to pay the damages which was done due to the supply of low quality cotton seed.

The Pakistani organizations related to cotton business has asked the Pakistani government to buy good quality seeds from Monsanto. Several meetings were held in this regard but no agreement was signed yet. The government of Pakistan should take steps for the production of good quality seeds locally as well as good quality seeds should be imported.

Indian Cotton Association organized a conference on 6th and 7th March in Mumbai which was attended by 249 cotton experts of international markets, traders and importers.

President Indian Cotton Association Atul S. Ganatra told during the meeting that last year cotton production of India was 3 crore 65 lac bales but during the current year it is expected that cotton production of India will be between 3 crore 25 lac to 28 lac bales which is 40 lac bales less as compared to the previous year. The reason of low production of cotton is weather conditions and low rains. He said that expected consumptions of local mills this year wills will be 3 crore 15 lac bales. At the end of the year stock will be 17 lac bales as compared to the last year stock of 26 lac bales

Atul S. Ganatra further said that this year in June and July the rate of cotton which is Per Candi (356 kg) is from Rs 42000 to Rs 43000 is expected to be from Rs 47,500 to 48000. He said that government will increase support price from 10 % to 15 % in the next season while the government has increased the support price by 26 % during the current year.

The delegates of the conference said that New York Cotton Rate of Promise (Waday Ka Bhao) which is between 75 to 76 American cent is 80 cent till July.

The reason of giving reference of international conference held in Mumbai is that India is our neighboring country the government of India is active and taking practical steps for the increase in production of cotton while in our country government only make promises while the implementation is very slow.

Prime Minister Imran Khan has shown his resolve of increasing the production of cotton by 15 million bales. The Ministry of National Food Security and Research Pakistan Central Cotton Committee has asked the government to announce the support price or Indicative Price of Cotton Seed Rs 3500 per 40 kg while the Ministry also gave the proposal to buy 5 lac bales of cotton through TCP. If practical steps like India will be taken to increase the production of cotton then there is no doubt that target of cotton production given by Prime Minister will be achieved. The country will be self sufficient in cotton and we can save our foreign exchange which is spent on import of cotton.

After the harvesting of wheat sowing season of cotton is going to start and from now on steps would be taken to increase the production of cotton then our country will be sufficient and there will be no need of importing cotton. This year water will be available in ample amount while the farmers got reasonable price of cotton seed.

There is a need to sow cotton on the land on which sugar cane was grown. Chinese agriculture experts and scientists are already helping Pakistan in order to increase the production of agriculture products.

Cotton Cooperation of India bought 11 lac bales of cotton from ginners and in coming days, 4 to 5 lac bales will be bought by CCI. The Cooperation will sell cotton bales from April. In this way CCI helps ginners and farmers. Pakistan should also work on the same grounds and departments like TCP should buy and sell cotton bales to help farmers. In our country for the last four to six years world's largest company Louis Dreyfus Company was involved in the trading of cotton and sold the cotton bales to textile mills in advance. In a way there are doing Hedge Trading but the government has imposed ban on Hedge Trading locally.

Moreover, the experts are of the view that in the coming days, prices of cotton will be increased. Up till now the ginners has limited stock of 1 million bales while the new crop will be expected to come in four to five months.

FARMERS DEMAND OF CENTRE TO DECREASE PRICE OF UREA

By Our Correspondent Published: March 18, 2019

HYDERABAD: The Sindh Chamber of Agriculture (SCA), a farmers' lobbying group, has decried that the price of urea has jacked up manifold since the Pakistan Tehreek-e-Insaf (PTI) came to power. The SCA, whose office bearers and members from different cities of Sindh met in Hyderabad on Sunday, asked the federal government to intervene by decreasing the price to what it was eight months ago.

According to SCA Vice President Nabi Bux Sathio, who chaired the meeting, a urea bag's price was Rs1,350 around eight months ago against the existing price of Rs1,850. "If it keeps increasing at this rate, the price will cross Rs2,000 per bag in a couple of months".

The SCA deplored that on the one hand, the rate is going up unchecked and on the other the dealers are black marketing the product because of lack of enforcement of anti-hoarding laws. The chamber asked the federal government to ensure that the fertiliser companies supplied the required amount of urea in the market and if the industry is unable to meet the demand it should timely convey to the government to allow import.

The farmers also expressed alarm on the sale of spurious seeds of rice and cotton crops in Sindh as the provincial government fails to take action against the sellers of unregistered and substandard seeds. The SCA demanded from the Sindh government to fix Rs5,000 per 40 kilogrammes rate for the cotton crop for the year 2019 and to double its wheat procurement target.

The provincial government has also been requested to approach the centre for opening of Pakistan Agricultural Storage and Services Corporation's (PASSCO) wheat procurement centres in Sindh. The chamber called for purchase of at least 500,000 tons of wheat by PASSCO from the province.

Zahid Hussain Bhurgari, Mir Abdul Kareem Talpur, Haji Nisar Memon, Muhammad Khan Sarejo, Agha Khadim Hussain Shah, Mir Sikandar Talpur, Nawaz Ali Samejo and other office bearers and members of the SCA attended.

GWADAR FISHERMEN PLAN PROTEST CAMP

By Mohammad Zafar Published: March 18, 2019

QUETTA : Fishermen of the port city of Gwadar have announced their plan to re-launch their postponed protest from Monday, saying that the government has failed to resolve the issue of changing the design of the East-Bay Expressway.

The President of the Fishermen Alliance Committee, Khuda-i-Dad Wajo, announced this during a press conference on Saturday.

He said the committee had postponed the protest three months ago after assurance of provincial Minister of Information Mir Zahoor Ahmed Buledi and officials of port authorities, however, despite passage of the period no work had started for redesigning the project and protection of the rights of fishermen.

He added that fishermen of the area were happy after construction of Gwadar Port and the China-Pakistan Economic Corridor (CPEC) with hopes that people of the city would benefit from the initiatives.

"Instead of providing better facilities to the fishermen for continuing their centuries-old profession, they were deprived of their way to reach the sea in Gwadar for fishing," complained Wajo.

He further said that the fishermen would set up a protest camp at Musa Corner from Monday and hold a protest rally on March 21.

"Almost all political parties have already announced their support for our protest," he concluded.

STRAWBERRY CULTIVATION AT ITS PEAK

By Asif Mehmood Published: March 18, 2019

LAHORE: Strawberry cultivation has increased across province. Agricultural experts estimate that strawberry cultivation has increased by 22% in the past few years and is expected to rise in the coming years.

Strawberries are loved by citizens of all ages. Apart from tantalising taste buds, strawberries are also an excellent source of vitamin C; 100 grammes of strawberries contain 52 milligrammes of vitamin C which is higher when compared with other fruits.

Strawberries can also be used to make various jams, jellies and preserves. The increase in production will not only increase exports but will also have a positive impact on businesses selling jams, jellies and preserves. All 36 districts in the province are suitable for cultivating strawberries. However, districts such as Sialkot, Gujranwala, Lahore, Khushab, Sargodha, Faisalabad, Jhang, Sahiwal, Multan, Bahawalpur, Rahim Yar Khan and their adjoining areas are ideal for cultivating the crop.

Chaudhry Ejaz, who was the first person to start cultivating strawberries at Lahore's borders on five acres of land around four years ago, says that he started by asking his friend to bring saplings from Khyber-Pakhtunkhwa (K-P). Two farmers were also brought to cultivate the crop.

During the first year, the harvest was larger than Ejaz expected. As a result, he started to expand the cultivatable land. Now, Ejaz is cultivating strawberries on around 25 acres of land.

"Following my example, many farmers have now started cultivating strawberries as opposed to traditional crops and vegetables," says Ejaz. Border areas are ideal for cultivating strawberries because wide open expanses of land are easily available and the temperature is lower compared to the main city, he reveals.

Rana Mubashir Hasan, another farmer, says that strawberries are cultivated in October but the crop starts to bear fruit around January. Currently, strawberry production is at its peak, he says.

Approximately 8,000 small packs of strawberries are obtained from a single acre while cultivation can cost up to Rs0.2 million which includes the cost of seeds, fertiliser, water and labour," he explains.

Promoting strawberry cultivation can help in developing our rural economy, he says. He reveals that a single plant provides 0.5 kilogrammes of fruit. Similarly, approximately 800 maunds of produce are obtained from one acre. However, some farmers are able to boost production and are able to harvest 1,200 maunds per acre, he says.

Punjab Agriculture Department Fruit and Vegetable Director Mohammad Sajid says that in order to cultivate strawberries, the land should not be waterlogged. When prepping the land, add five trollies of animal fertiliser per acre, explains.

Chandler strawberries are very successful in Pakistan. Some people also call them shander, he states. If an adequate amount of fertilizer is given to the plant, the harvest will be sweet, he says.

Even though strawberries have been successfully cultivated in Punjab and Singh, the saplings can only be found in specific areas in K-P province which include Swat, Dir and Gilgit.

GWADAR FISHERMEN TO RESUME PROTEST TOMORROW

Behram Baloch Updated March 17, 2019

GWADAR: Fishermen in the port city of Gwadar will resume their protest on Monday (tomorrow) as the government has failed to resolve the issue of changing the design of Eastbay Expressway.

This was announced by Fishermen Alliance Committee president Khuda-i-Dad Wajo at a press conference here on Saturday. Local leaders of different political parties were present on the occasion to show their solidarity with the fishermen.

Mr Wajo said that the committee had postponed its protest three months ago on the assurance of Balochistan Information Minister Mir Zahoor Ahmed Buledi and officials of the port authorities that Eastbay Expressway would be redesigned to protect the livelihood of the fishermen of Gwadar.

The fishermen fear that the under-construction road will block their access to the sea.

However, Mr Wajo said, despite passage of three months no work had been started for redesigning of the project and protection of the fishermen's rights.

He said that the fishermen of Gwadar were happy after construction of Gwadar Port and the launching of the China-Pakistan Economic Corridor with the hope that the people of the port city would benefit from these projects which would provide job opportunities to them.

He said that local people were not being provided jobs and other facilities, adding that the fishermen of the area were being deprived of their ancestral source of livelihood as the road project would block their access to the sea.

Mr Wajo said that the fishermen would set up a protest camp at Musa Corner from March 18 and observe strike on March 21, besides organising a rally.

He said that almost all political parties of Balochistan had announced their support to the protest of the fishermen.

FARMERS ASKED TO PLACE IRRIGATION PLANS FOR RABI CROPS

Anwar Khan March 16, 2019

KARACHI: The Met Office has asked the farmers to evolve irrigation plans for Rabi crops keeping in view the continuing rains in the country.

It said that the farmers should also root out weeds from their standing crops to help the yield grow. It warned that weeds cost a considerable loss to farmers in term of agriculture productions every year.

"Removing weeds from the standing crops is very important as weeds utilize moisture and food which are to be utilized by the crop," it added, asking the growers to take steps to preserve susceptible crops and nurseries from extreme cold weather.

In the next 24 hours: Mainly cold and dry weather is expected in the most parts of the country with a light rain at few places in Quetta Division. "Continental air is prevailing over most parts of the country," the Met said.

In the past 24 hours: Weather remained cold and dry in the country with a light rain in Hazara and Larkana Divisions. Temperature in Kalam was minus 6 degrees Celsius, Astore minus 4, Malamjabba minus 2, Parachinar, Hunza, Gupis and Bagrote minus 1, each.

PRICES OF ESSENTIAL KITCHEN ITEMS CONTINUE TO RISE

ABDUL RASHEED AZAD

ISLAMABAD: Prices of essential kitchen items remained on high side during this past week as compared to preceding week, a survey conducted by Business Recorder revealed here on Saturday.

The survey observed that prices of vegetables and fruits went up, chicken and eggs prices came down and no change was witnessed in the prices of non-perishable items including ghee/cooking oil, pulses, liquefied petroleum gas (LPG) and rice.

Chicken price went down from Rs6,000 per 40kg to Rs5,500 per 40kg which in retail market it was being sold at Rs160 per kg against Rs180 per kg, while chicken meat was being sold at Rs280 per kg against Rs320 per kg. Egg prices witnessed a further reduction from Rs95 per dozen to Rs92 per dozen in wholesales market while in retail market eggs were being sold at Rs100 per dozen.

Tomatoes price went down from Rs530 per 5kg to Rs400 per 5kg which in retail market were being sold at Rs90-100 per kg against Rs135 per kg. Onion price went up from Rs160 per 5kg to Rs180 per 5kg which in retail market was being sold at Rs45 per kg against Rs40 per kg, and potatoes price also went up from Rs80 per 5kg to Rs90 per 5kg which in retail market were being sold at Rs25 per kg against Rs20 per kg.

Local garlic price went down from Rs600-650 per 5kg to Rs550-600 per 5kg, which in retail market was being sold at Rs140-150 per kg against Rs150-160 per kg, Chinese garlic price remained stable at Rs600 per 5kg which in retail market was being sold at Rs160 per kg. Local ginger price further went up from Rs650 per 5kg to Rs700 per 5kg, which in retail market was being sold at Rs170 per kg against Rs160 per kg.

Capsicum price went up from Rs400 per 5kg to Rs440 per 5kg which in retail market was being sold at Rs120 per kg against Rs100 per kg; yam (arvi) price went up from Rs270 per 5kg to Rs350 per 5kg which in retail market was being sold at Rs85 per kg against Rs65 per kg; carrot price remained stable at Rs150 per 5kg which in retail market was being sold at Rs35 per kg; radish price went up from Rs100 per 8kg pack to Rs180 per 8kg pack which in retail market, it was being sold at Rs35 per kg against Rs20 per kg, and peas price remained stable at Rs200 per 5kg which in retail market were being sold at Rs50-55 per kg.

Cucumber price went down from Rs150 per 5kg to Rs120 per 5kg which in retail market was being sold at Rs35 per kg against Rs40 per kg; cauliflower price went up from 160 per 5kg to Rs180 per 5kg which in retail market was being sold at Rs45 per kg against Rs40 per kg; and cabbage price went up from Rs80 to Rs100 per 5kg which in retail is being sold at Rs25 per kg against Rs20 per kg.

Okra price remained stable at Rs450 per 5kg which in retail market was still being sold at Rs120 per kg; brinjal price went up from Rs200 per 5 kg to Rs250 which in retail market was being sold at Rs65 per kg against Rs55-60 per kg; and ridge gourd (tori) price went up from Rs400 per 5kg to Rs450 per 5kg which in retail market was being sold at Rs110 per kg against Rs100 per kg. Pumpkin price went up from Rs350 per 5kg to Rs375 per 5kg which in retail market was being sold at Rs95-85 per kg against Rs85-75 per kg. Tinda price went up from Rs230 per 5kg to Rs280 per 5kg which in retail market was being sold at Rs65 per kg against Rs55-60 per kg. Beans price went up from Rs300 per 5kg to Rs400 per 5kg which in retail market was being sold at Rs110-95 per kg against Rs80 per kg. Bitter gourd (kareela) price went up from Rs600 per 5kg to Rs700 per 5kg which in retail market was being sold at Rs175 per kg against Rs160 per kg.

Prices of all the major pulses also witnessed no change as fine quality white lentil (Maash) was being sold at Rs170 per kg while its normal quality at Rs135 per kg, good quality grams at Rs170 per kg and normal quality grams at Rs130 per kg, kidney bean (Lobia) in the range of Rs130-170 per kg, green gram (Moong) at Rs120 per kg and red lentil (Masoor) was available at Rs130 per kg. Wheat flour price remained stable at Rs785 per 20kg bag.

Ghee/cooking oil prices also witnessed no change as normal quality ghee/cooking oil was being sold at Rs150 per kg/litre pack, while best quality ghee/cooking oil was being sold at Rs1,030 per 5 kg/litre tin. Likewise, prices of sugar, formula milk Nido/Everyday and packed spices also remained stable.

Fruit prices witnessed an increase as Iranian Kala Kolo apple price went up from Rs150 per kg to Rs175 per kg, golden apple from Rs110 per kg to Rs115 per kg, white apple from Rs85 per kg to Rs90 per kg, Ambri apple from Rs75 per kg to Rs90 per kg and Pakistani Kala Kolo apple price increased from Rs150 per kg to Rs160 per kg.

Good quality local banana was being sold at Rs90 per dozen and normal quality banana in the range of Rs50-60 per dozen, while Indian banana was being sold at Rs210 per dozen against Rs190-200 per dozen. Good quality guava was available at Rs75 per kg against Rs70 per kg and normal quality guava at Rs45-60 per kg against Rs40-50 per kg.

Best quality oranges (red-blood Malta) were being sold at Rs175 per dozen against Rs160 per dozen and normal kinnow in the range of Rs60-90 per dozen against Rs45-75 per dozen. Pomegranate was available at Rs225 per kg against Rs190 per kg and sapodilla (chikoo) at Rs130 per kg against Rs120 per kg. Papaya was being sold at Rs90 per kg against Rs100 per kg and best quality strawberry at Rs220 per kg against Rs250 per kg while normal quality strawberry was available at in the range of Rs130-200 per kg.

AGRICULTURE DEPARTMENT: ADVISER CALLS FOR IMPARTING TRAINING TO OFFICIALS

RECORDER REPORT | MAR 16TH, 2019 | LAHORE

Punjab Chief Minister's Advisor on Agriculture, Abdul Hayee Dasti has called for the training and capacity building of the new officers and officials of the provincial agriculture department as it can help improving the performance of the department and resolving the issues faced by the growers. Dasti was speaking at a ceremony arranged here on Friday to distribute certificates among the new officers of the Punjab Institute of Agriculture Marketing who passed training management course.

Special Secretary Agriculture (Marketing), Ihsan Bhutta, Liaquat Ali Raza Director (Economics & Marketing), Muhammad Ajmal and other high officers were also present on this occasion. The advisor said that new generation would play the basic role in bringing about revolutionary changes in the system as per the vision of the Prime Minister, Imran Khan. He said our new generation is our asset and its better training would help improving the working of the department and reducing the hardships being faced by the farmers.

Director Punjab Institute of Agriculture Marketing, Muhammad Ajmal briefing the advisor on this occasion said that new recruited officers have been given awareness about office management, PIDA act, Punjab Civil Services Rules and the Punjab Agriculture Marketing Regulatory Authority Act. He hoped that the training would help enhancing the working capacity of the officers.

PAKISTAN LAGGING BEHIND IN SUGARCANE PRODUCTIVITY

By Imran Rana Published: March 16, 2019

FAISALABAD: Although Pakistan is considered the fifth largest sugarcane producer in terms of cultivated area, the average per-acre yield of the crop is far behind developed nations.

Speaking to students at the University of Agriculture Faisalabad (UAF) on Friday, Vice Chancellor Dr Zafar Iqbal Randhawa stressed the need for mechanising the agriculture sector and adopting modern agricultural practices to raise productivity.

He directed researchers and agricultural experts to implement a scheme to ensure food security besides enhancing crop productivity.

“In the West, the researchers who start work on a specific crop continue working on the same crop throughout their life,” he pointed out. “Their dedicated efforts are reflected in enhanced productivity.”

The vice chancellor lamented that despite being an agrarian economy, Pakistan imported agricultural goods worth billions of rupees.

Speaking on the occasion, Punjab Sugarcane Research and Development Board CEO Dr Shahid Afghan stressed that his organisation was working to raise sugarcane yield, improve efficiency of inputs and promote sustainable production. The board was exploring the potential of byproducts and undertaking energy production from sugarcane residue, he said.

In addition to that, it is working towards mechanisation and in this regard, effective technology transfer coupled with capacity building of young researchers, technicians and farmers is being considered.

UAF Chairman Dr Asif Tanveer pointed out that adoption of modern agricultural practices on a par with global standards, timely seed sowing and fair usage of fertiliser were prerequisites to enhancing the agricultural yield. He added that these measures were imperative to enhance the productivity.

Another UAF official Dr Ashfaq Chatha highlighted that climate change posed a serious threat to the agriculture sector and “we have to make combined efforts to address the issue.”

Dr Hassan Munir outlined that the university had imparted training covering all aspects of sugarcane production ranging from sowing to disease management and harvesting.

Stating figures, Dr Fahad Rasul revealed that average world sugarcane production stood at 70 tons per hectare whereas in Pakistan it was 56 tons per hectare.

THOUSANDS OF CHICKENS DEAD OF RANIKHET DISEASE IN HASSANABDAL'S POULTRY FARMS

Amjad Iqbal Updated March 14, 2019

TAXILA: Thousands of chickens have died of the contagious Ranikhet (Newcastle) virus at poultry farms in Hassanabdal's Jallo locality.

Several poultry farms in different parts of Hassanabdal, Jallo in particular, have been affected by the disease in the last few weeks.

Ranikhet disease is a contagious viral disease that affects chickens and birds of all ages.

The owners of affected farms told the media that three viruses – infection bronchitis, influenza H-9 and Newcastle disease – have resulted in the deaths of thousands of chickens in just a month. They feared that the current situation would lead to a shortage of chicken in local markets, and some farmers said their stocks had disappeared overnight.

Poultry farm owner Wajid Raza told Dawn that local farm owners have halted chicken farming due to the spread of infections.

"We have to bear the loss of millions of rupees, as chickens are dying due to the spread of these viruses," he said. Mr Raza said he had vaccinated his birds, but they died anyway.

"At least 10,000 chickens died in one night. The situation is similar at other farms," he added. He said the mortality rate in many farms was more than 60pc, while some farms had lost 90pc of their birds.

"The concerned authorities have not taken any steps to stop or cure the outbreak of such disease in local poultry farms," Mr Raza said.

Another farm owner, Sajid, said farm owners have lost millions of rupees to the spread of the disease, claiming that the virus had developed immunity that made it impossible for farmers to prevent the deaths.

He also said that thousands of birds have died of the Ranikhet disease in the Jallo area, adding: "The average age of a healthy chicken is around six to eight weeks. However, with this disease, the bird dies in the third or fourth week."

Sajid also alleged that the vaccine available in the market was substandard and had failed to cure chicks, putting an additional burden on farm owners.

Newcastle or Ranikhet disease is a serious paramyxovirus disease that affects poultry and other birds, veterinarian Dr Mushtaq Ahmed told Dawn. Clinical signs include coughing, gasping, sneezing, diarrhoea, petechiae, twisted neck and paresis of legs and wings.

Dr Ahmed said while vaccines and their schedules are available from various manufacturers worldwide, the disease remains a threat to the poultry industry. Once affected, chickens and other avian species – pigeons, parakeets, backyard chickens, crows, kites, sparrows, doves and so on – act as a continuous source of infection for healthy chickens.

Dr Ahmed suggested training for farmers and the introduction of modern technology in the poultry sector.

According to Dr Asif Rafeeq, an additional director at the livestock department, Hassanabdal falls in a disease control zone where vaccinations are carried out on schedule by respective poultry farm owners, as commercial vaccinations do not fall within the government's domain.

He said farm owners have not yet contacted the livestock department for post-mortem examinations of the birds to ascertain the cause of death. He added that the department would ensure the bio-security of all farms so that the dead chickens can be buried according to standard operating procedure.

In response to a question, Dr Rafeeq said the Newcastle virus has spread across the province recently, killing thousands of chickens, and the livestock department is providing guidance and awareness to poultry farm owners.

PALIJO SAYS PPP LEFT 'NO STONE UNTURNED' TO DESTROY SINDH'S AGRARIAN ECONOMY

A Correspondent March 14, 2019

BADIN: Qaumi Awami Tehreek (QAT) chairman Ayaz Latif Palijo has said that Pakistan Peoples Party government has left "no stone unturned" to destroy the province's agrarian economy over the past 11 years of their rule instead of bringing in new technology to give a boost to farm sector.

"Sindh rulers and PPP leaders are forcing small landowners to sell their property to them by stopping supply of water to their areas or paving the way for land mafias to purchase fertile land at cheaper rates," said Mr Palijo while talking to this reporter here on Wednesday.

He said that instead of providing some relief to farmers over the years, Asif Ali Zardari and his cronies were now snatching even daily subsistence from people by turning their fertile land into wasteland.

He expressed solidarity with farmers protesting against nagging water crisis in Badin district and asked the functionaries concerned to save the district from turning into a desert. Despite continuous protest by farmers and their supporters PPP rulers were aloof to their plight even though water flow in the Indus had greatly improved now, he said.

He said that landlords affiliated with PPP were forcibly taking away water of over 90 per cent of farming community in Badin and some other districts through diversions and illegal watercourses fed by Akram Wah and Phuleli Canal near Matli town.

He demanded removal of all illegal outlets and blockages erected by officials of irrigation department and Sindh Irrigation and Drainage Authority to “steal water and sell it to the highest bidders”.

Mr Palijo demanded just distribution of water and deplored that people living in coastal belt in tail-end areas of canals were leading miserable lives due to callous and indifferent attitude of rulers.

He lambasted Sindh government for failing to set up centres for procurement of wheat from farmers in the areas where wheat harvest had already begun. It was height of inefficiency and callousness that rulers were doing nothing to address genuine issues of farmers, he said.

He criticised federal bodies for not ensuring provision of due share in water to federating units. Some “naive and incompetent” ministers and aides of PTI chief and Prime Minister Imran Khan were creating problems and embarrassment for the federal government, he said.

SAU TO PRODUCE CERTIFIED SEEDS TO ENHANCE YIELD, SAYS VC

The Newspaper’s Staff Correspondent March 14, 2019

HYDERABAD: Sindh Agricul¬ture University (SAU) Tandojam Vice Chancellor Prof Dr Mujee¬buddin Memon has said the varsity is striving to produce certified and quality seeds to enhance per-acre productivity in Sindh.

Addressing a seminar on seed production and development on Wednesday, he highlighted the importance of certified seeds for productivity enhancement, saying that quality of seeds always played a vital role in production of crops.

He urged scientists, researchers, experts and scholars to develop disease-resistant, salt-tolerant and drought-resistant seed varieties to cope with challenges of climate change and food security. Calling for focusing on different zones, he said seeds should be produced as per farmers’ demand. Variety of high-quality seeds in cotton, wheat, rice and vegetables must get preference, he added.

Syed Nadeem Shah Jamote, senior vice president of the Sindh Abadgar Board, underscored the need for seed development in agriculture sector. He said that rust-resistant varieties in wheat crop should be focused on. Farmers were not getting certified seeds at their doorstep, he said, adding that results of research on seeds and crops should be shared with growers.

Mohammad Yousuf Memon said that diversification of varieties in crops was the need of the hour and farmers should adopt new varieties for quality production of crops at field level. Farmers should adopt good agriculture practices, production technology and use balanced fertiliser in crops to get benefit in per-acre yield, he added.

Manzoor Ahmed Khuhro, a senior scientist and SAU director of Seed Production and Development Centre, presented achievements and production of seeds of commercially approved varieties of wheat, cotton and rice. He added the SAU produced pre-basic seeds of various varieties.

CHILLI, TOMATO NOT HEALTHY OPTIONS FOR CONSUMERS' POCKET

The Newspaper's Staff Reporter Updated March 13, 2019

LAHORE: Prices of tomato and chilli have gone up manifold in the city in the last couple of months.

Tomatoes were available on an average rate of Rs24 per kg in the corresponding period in the last year but the vegetable fruit is being sold from Rs100 to Rs200 per kg now.

Similarly, the prices of green chilli hardly crossed Rs100 in the year 2018. Now, its prices have gone up in the last one month to Rs400 per kg in the local market.

The two vegetables, particularly green chilies, are seldom seen on vendors' carts.

The administration fined many vendors in Sunday Bazaars for not bringing green chilies for sale at their stalls.

Yasin, who runs a vegetable shop in a posh locality, passes the buck for skyrocketing prices of vegetables, including tomato and green chilies, on to the auction system in mandis (wholesale markets).

He said that in the absence of a price ceiling in the markets, arhtis or commission agents and middlemen were free to sell the commodities at the rates of their own choice without any let or hindrance, while poor retailers were forced by various government departments to sell the merchandize at fixed rates, even below than their purchase prices.

"How can we sell a thing bought at Rs100 per kg at Rs80 or even at the purchase price as we have to pay transportation charges, shop rent, electricity charges, etc? Don't we have families to feed by earning some profit from our day long labour?" he questions.

An official of the agriculture department, which is responsible for ensuring supplies to Sunday bazaars, says that since Punjab does not produce tomato and green chili crops at this time of the year, these are supplied from Sindh and Balochistan provinces and thus are sold at comparatively high rates here.

Rain in the last four weeks damaged crops and cut off supply routes which led to an unusual increase in the prices, he added.

He said that the prices would not go unusually higher in the past because there was the option of importing them from India through Wagah border. Since the imposition of non-tariff barriers by both sides, and tensions prevailing in the wake of India's Balakot aggression, supplies from India have become a matter of the past and the end-sufferer is the consumer.

NA PANEL TO DISCUSS POTATO CRISIS WITH PM

The Newspaper's Staff Reporter Updated March 13, 2019

ISLAMABAD: The Natio¬nal Assembly's Standing Com¬mittee on National Food and Security on Tues¬day decided to take up the issue of potato crisis with the prime minister because potato growers in central Punjab have been facing a situation that may force them to switch over to other crops in the next season.

A committee meeting held at the National Agricul¬ture Research Centre under the chairmanship of Rao Ajmal Khan was of the view that the prime minister would be briefed on the current potato crisis and proposals would be submitted for resolution of the issue.

Minister for National Food Security and Research Mehboob Sultan attended the meeting and expressed the hope that in a short meeting with the prime minister, the issue would be resolved.

He said that potato growers were not getting the cost of inputs and "we request the prime minister to give some time to committee members for the resolution of the crisis".

Secretary of National Food Security Mohammad Hashim Popalzai informed the meeting that 160,000 tons of potatoes would be exported in March for which export orders had been received.

The meeting was further informed that potato growers in central Punjab, particularly in Khanewal, Sahiwal, Pakpattan and Okara being the largest areas of potato cultivation, were badly affected and there is need to solve the issue on priority basis.

The Managing Director of Pakistan Agricultural Storages and Services Corporation, Mohammad Khan Khichi, informed the meeting that PASSCO had built 20 storage depots over the past three years while 37 others were under construction. He said that PASSCO is operating 229 purchase centres in 15 zones.

He said that at present PASSCO had 1,456,000 tons of wheat stock which was being replenished at a fast pace. The wheat procurement target set for the next season is 1.1 million tons, he said.

FAO TO PREPARE REPORT ON FOOD SECURITY IN PAKISTAN

By Amin Ahmed | 3/13/2019 12:00:00 AM

ISLAMABAD: The Food and Agriculture Organisation (FAO) of the United Nations would prepare a report on the state of food security and nutrition in Pakistan, the UN agency announced on Tuesday.

This would be the first national level report to be prepared along the lines of the annual report on global and regional situation prepared by the FAO.The Swiss Agency for Development and

Cooperation (SDC) has joined the FAO in developing the report. For this purpose, an agreement was signed here on Tuesday.

The report will provide timely and accurate data to the government to enable it to make informed and evidence-based decisions by monitoring food supply, demand and otherkeyindicatorsforassessing the overallfood security situation.

Thanking the SDC for its support,FAO representative in Pakistan Mina Dowlatchahi said the strategic partnership between FAO and SDC would strengthen national capacities for managing and utilising food security-related information.

She said that the national SOFI report was in line with the government of Pakistan`s development agenda and it would support decision and policy makers in their efforts to reduce poverty and improve food security and nutrition in Pakistan.Speaking on the occasion, Head of Cooperation of SDC Daniel Valenghi highlighted the importance of implementation of effective policies to improve food security in Pakistan.

The agriculture sector contributes 19.8 per cent of Pakistan`s GDP and employs 42 per cent of the workforce. However, the country`s growing population and adverse climatic conditions have placed an increasing pressure on national food production in the country.

NA SPEAKER FORMS SPECIAL BODY ON AGRICULTURAL PRODUCTS

RECORDER REPORT | MAR 13TH, 2019 | ISLAMABAD

Speaker National Assembly Asad Qaiser has constituted a 20-member Special Committee on Agricultural Products particularly tobacco in the country. Besides NA Speaker, the committee will comprise of MNAs Syed Fakhar Imam, Riaz Fatyana, Engr Usman Khan Tarakai, Sher Akbar Khan, Imran Khattak, Muhammad Sana Ullah Khan MastiKhel, Malik Muhammad Ehsan Ullah Tiwana, Muhammad Farooq Azam Malik, FaizUllah, Mr. Mujahid Ali, Fazal Muhammad Khan, Mir Khan Muhammad Jamali, ShandanaGulzar Khan, Khalid HussainMagsi, Rao Muhammad Ajmal Khan, Sajid Mehdi, Syed Naveed Qamar, Nawab Muhammad Yousuf Talpur and Syed Javed Ali Shah Jillani.

The Speaker has constituted the committee in pursuance of Motion adopted by the National Assembly on 6th March, 2019, under Rule 244 (B) of the Rules of Procedure and Conduct of Business in the National Assembly, 2007.

The terms of the reference of the committee will be to examine the matters relating to Agricultural Products Particularly tobacco in the country. The committee will present its report to the House. The Speaker is authorized to make changes in the composition of the committee as and when required.

The members of the National Assembly had been drawing the attention of the Speaker towards the difficulties faced by the farmers, particularly about the timely availability of water, urea, quality seeds etc during the previous sessions of the House. It was also brought to the Chair’s notice that despite the agreed support price, the farmers were not being paid in time, which had gravely affected them.

The Speaker said that the National Assembly will pay comprehensive attention to the issues that afflicts the farmers and agricultural sector. He said that Pakistan's future in terms of food security and economic growth lies in a modern, sustainable and scientific farming that maximizes agricultural production in Pakistan.

The Speaker said that the formation of the Special Committee on Agricultural Products expresses the National Assembly's resolve to transform the agricultural landscape in Pakistan by paying particular attention to the scientific farming, agricultural exports and protection to the local farmers.

NEW FOOD LABELLING RULES LIKELY TO BE AMENDED

MUSHTAQ GHUMMAN | MAR 13TH, 2019 | ISLAMABAD

The federal government is likely to amend its decision about new food labelling rules and making it mandatory to write "Halal" on imported edible items as international and national companies' are seeking an adjustment, well informed sources told Business Recorder. The embassies of different countries and private sector have approached the government, raising concerns on the decision taken in haste by the Economic Coordination Committee (ECC) of the Cabinet aimed at discouraging imports to contain or reduce import bill.

In addition, Lahore Chamber of Commerce and Industry (LCCI) in collaboration with FMCG Importers Association have also appealed to Finance Minister Asad Umer and Advisor to Prime Minister on Commerce, Textile, Industries and Production and Investment to a make a number of amendments.

A delegation of Pakistani importers also met Prime Minister's Advisor, Abdul Razak Dawood headed by presidents of RCCI and ICCI.

The delegation apprised the Advisor about the issues importers are facing due to recent decision of the ECC about provision of Halal certification.

Australian Company, Goldman Fielder, has sent its representation on the implementation of Pakistan's new food labelling rules (SRO 237 of February 19, 2019).

Goldman Fielder has requested the following for consideration by the Government of Pakistan, in order to minimize the impact on trade: (i) Government of Pakistan introduce the changes over a period of 12-24 months so exporters have sufficient time to make the required adjustments to labeling; (ii) the Government of Pakistan allows levelling by sticker before products are presented for sale; and (iii) the requirement may be better defined so that importers can clearly understand what details must appear in Urdu.

The Australian Company maintains that its requests would allow implementation of Pakistan's requirements to occur without adverse impact on the level of trade between the two countries.

"I expect other companies from Australia as well from other countries would have similar concerns," said Margaret Adamson, High Commissioner of Australia.

The ECC in its decision on February 19, 2019 approved the addition of following conditions to the existing requirements in the Import Policy Order, for import of edible products: (i) products have at least (2/3rd of the remaining shelf life; (ii) the ingredients and details of the product (e.g. nutritional facts, usage instructions etc) of food products are required to be printed in Urdu and English languages on the consumer packaging; (iii) the logo of the Halal certification body is printed on the consumer packaging; (iv) the labelling under conditions will not be in the form of sticker, overprinting, stamp or scratched labelling; (v) the shipment is accompanied by a "Halal certificate" issued by a Halal certification body, accredited with the Accrediting Body (AB), which is a member of International Halal Accreditation Forum (IHAF) Standard Methodology Institute for Islamic Countries (SMIIC); and (vi) in order to comply with WTO negotiation, similar conditions shall apply to edible products manufactured locally from July 1, 2019 for necessary instructions to be issued to PSQCA and provincial food regulatory authorities.

'GOVERNMENT TO PROVIDE SUBSIDY TO GROWERS'

RECORDER REPORT | MAR 13TH, 2019 | LAHORE

The Punjab government will provide subsidy to the growers hailing from South Punjab on purchase of approved varieties of cotton seed under the recently announced agricultural policy for the current season.

Growers from Multan, Khanewal, Lodhran, Vehari, Bahawalnagar, Bahawalpur, Rahim Yar Khan, Dera Ghazi Khan, Layyah, Muzaffargarh and Rajanpur will be eligible for this subsidy, said a departmental spokesman here on Tuesday.

He said subsidy of millions of rupees will be extended on approved cotton seed varieties such as UB-2013, FH Lalazar, FH-142, BS-15 and MNH-886. Growers have to buy seed bags containing subsidy vouchers from the Punjab Seed Corporation, Baba Fareed Corporation, Neelum Seeds, Jullandhar Pvt Limited and Herl Seed Corporation. The amount of subsidy will be provided same month of purchase through voucher present in the seed bag and growers have to SMS the voucher number and his CNIC on 80709 for claiming subsidy.

'IMPORTED PULSES CAN BE TRANSFORMED INTO EXPORT SECTOR'

RECORDER REPORT | MAR 13TH, 2019 | KARACHI

Karachi Wholesale Grocers Association (KWGA) has suggested that the imported pulses can be transformed into export sector by value addition. KWGA's Patron in Chief, Anis Majeed and Chairman, Malik Zulfiqar sent a letter to Razak Dawood, Advisor to Prime Minister on Trade, Textile, Industry, Production and Investment, inviting him to visit Karachi and hold a meeting with them and members of the association to discuss the issue of value addition.

He said that Dawood showed his interest in the proposal and assured that he will visit Karachi soon to have a detailed discussion.

SINDH TO HAVE LIVESTOCK BREEDING SERVICES AUTHORITY: MINISTER

RECORDER REPORT | MAR 13TH, 2019 | HYDERABAD

Sindh Minister for Livestock and Fisheries Abdul Bari Pitafi has said that his department was working on establishing Livestock Breeding Services Authority. He said that the aim of establishing authority was to make breeding laws and to discuss other related issues. He informed that a research laboratory would also be established under the authority where different breeds of animals would be kept and the local breeders would have the facility to get the breeds of their choice by insemination.

He was talking to the media after inaugurating Poultry Diagnostic Surveillance Sub-centre at the office of Director General Livestock Hyderabad.

Pitafi said that birds' diseases would be diagnosed in the Poultry Diagnostic Surveillance Sub-centre Hyderabad and after diagnostic procedure vaccines would be prepared as well.

He informed that a lab had already been established in Karachi while Surveillance Centres were established in Sukkur and Larkana by the Livestock Department, Sindh.

Replying to a question about wrong policies for the protection of fishermen rights, he said that Sindh government defending the rights and jobs of fishermen and due to efforts of Sindh chief minister the anti-fishermen policies of federal government had not yet implemented.

Replying another question about drought affected areas, the minister said that the funds for livestock in drought affected areas of Thar had been spent and added that with the collaboration of Thar Foundation, Livestock department was working to overcome food shortage in Thar.

TAXING AGRICULTURE

Pervez Tahir Updated March 12, 2019

IN the seventh NFC award, the federal government was asked to raise the tax-to-GDP ratio to 15 per cent and the provinces were expected to effectively tax agricultural incomes. This would have enlarged the divisible pie and the provincial kitty. While the centre failed to reform the tax structure, the provincial governments paid no attention to mopping up the potential of agricultural incomes. The eighth NFC failed to give an award, leaving these issues — and more — to the ninth NFC.

The Constitution limits income tax to non-agricultural incomes, a federal subject. Agricultural income falls in the provincial domain and is subjected effectively to a tax on land. This distinction is unfair as it violates the principle of taxing equal incomes equally (the so-called horizontal equity). It is also against the principle of ability to pay, as a large number of earners are not taxed at all (the so-called vertical equity).

Worse, it provides a convenient route to non-agricultural income earners to evade federal income tax by declaring vast amounts as agricultural income. All the provinces together do not collect more than Rs2 billion. According to the latest annual report of the State Bank, this is 0.03pc of the agricultural GDP.

Today's argument is that agriculture is already overtaxed.

Here's the rub. Dominated by the large landholders, the provincial governments do not make the required effort to collect what is due under the existing tax laws. The attitude goes back to colonial times. With a view to creating and protecting the loyalty of feudals, the agriculturist/non-agriculturist distinction was encouraged not only in incomes, but also with regard to jobs and admissions to educational institutions.

When first introduced in 1860, income tax included income from agriculture in the definition of income. Writing in 1920, Shankar Madhav Pagar observed: "For the first time in the history of the world it was demonstrated that India, an oriental country was ready to meet with equanimity and courage the greatest engine of Western finance — a modern income tax."

By 1886, agricultural income had been exempted, as the landed class termed it a violation of the Permanent Settlement agreement. Today's argument, that agriculture is already overtaxed, also goes back to those days. The exemption continued after Independence. In 1977, Zulfikar Ali Bhutto's attempt to levy a presumptive agricultural income tax in place of land revenue was aborted by Gen Zia to appease the feudal lords.

Land reform was also declared un-Islamic. This opposition continues, although agriculture's share in total tax collection is a measly 0.6pc against its share of 19.2pc in GDP. The low share is the result of the elimination of taxation implicit in support prices and exchange rate, besides negligible explicit taxation. To confuse the issue, this is the argument sold by the large farmers to small farmers. Even today, there is little awareness among the small farmers that a vast majority of them will be exempted under any income tax formula.

The ninth NFC presents an opportunity to finally end the distinction between agricultural and non-agricultural incomes. Neither the PPP nor the PML-N had any interest in alienating the feudal support. The MQM represents middle-class opportunism more than the middle class. In 2011, one of its senators moved a private bill to include agricultural income in the definition of income. Despite being in the government, the move was to support the opposition, the PML-N, to thwart the imposition of the 'anti-urban' value-added tax.

For the first time, a nationwide party claiming the support of the middle class is in the saddle at the federal level and in three provinces. It has its share of landlords.

That is perhaps why the party manifesto is silent on the issue of agricultural income tax. But the party also has Jahangir Tareen, who has said many a time that he had to make special efforts to pay his due against whatever exists in the name of agricultural income tax. The authorities did not seem keen to collect it, as it would set a 'bad' precedent for the powerful farm lobby.

Be that as it may, championing a "shift towards direct taxation as the primary source of tax revenue" is the broader objective of the PTI manifesto. Effective taxation of agricultural income will further this objective.

Of course, this requires a constitutional amendment. Careful negotiations and a credible estimate of gains can make it happen. Back-of-the-envelope calculations place the yield between Rs150 billion to Rs200bn. The yield from plugging a hole for evasion will be in addition. All parties in the NFC will gain, in proportion to their respective shares in the divisible pool, without touching the sensitive vertical distribution.

WHEAT PROCUREMENT: FARMERS VOICE CONCERN OVER DELAY IN ANNOUNCEMENT

ZAHID BAIG | MAR 12TH, 2019 | LAHORE

Farmers have expressed their concern over delay in announcement of wheat procurement campaign dates for the current season and urged the provincial government to kick start it in the South of Punjab from April 15 and in Central Punjab from April 20. Though the country and the province has received good rains in this season, it has also increased moisture in the crop and the farmers have to spend more to save it from fungus or other such diseases, said founding convener Punjab Water Council (PWC) Farooq Bajwa on Monday.

Talking to Business Recorder, Bajwa expressed the fear that the provincial food department may delay the procurement drive this year on the pretext of higher moisture level in the wheat crop. He said growers had to dispose off their produce in a certain time to payback the loans taken on the current crop and to buy seed and inputs for the coming crops.

“Owing to the lethargic policies of government departments, growers already had received lower rates of their cotton crop and were also facing outstanding payments for their sugarcane produce. Sugarcane was also short this year,” he claimed.

“Wheat is our major crop and staple food for our people. Growers should be compensated accordingly so that it could be sown on more area and with more devotion in next season. The government had announced Rs 1300 per maund support price for this crop in the year 2013 when the dollar was at Rs 90. Now in the year 2019 when the dollar is hovering around Rs 139; the support price for wheat is the same,” Bajwa said and added that even then growers could not receive this amount because of delaying tactics by the food departments concerned.

He said the total production of the Punjab comes to two crores bags of wheat and if growers receive Rs 100 less in the support price; accumulative loss comes to Rs 50 billion. He said no commodity had the same price for the last seven years except wheat. He said a timely and vigorous buying campaign by the food department can help the farmers to get due price and keeps the price stable throughout the season.

Bajwa concluding his remarks urged the government to immediately announce a clear-cut procurement policy as to how much wheat it intends to buy and start this buying spree in the mid of April from South and from April 25 in Central Punjab.

DRIP IRRIGATION SYSTEM INSTALLED ON 333 ACRES, SAYS OFFICIAL

APP Updated March 11, 2019

RAWALPINDI: The Punjab Agriculture Department installed drip irrigation system to cover 333 acres agriculture land in the Rawalpindi district during the current financial year.

According to a spokesman, the drip irrigation system had 90 to 95 per cent efficiency and sprinkler irrigation system saved 60 to 70pc water as compared to the traditional irrigation system.

He said the drip system had helped irrigate over 4,443 acres while 1,090 acres was covered through the sprinkler irrigation system installed during the last two years in the Potohar region.

The water management department was providing 80pc subsidy to the farmers for installation of the solar system which is an alternative source of energy.

It is economical, effective and environment friendly technology, he added.

He said the department was also striving to promote tunnel farming in the region and 50pc subsidy was being provided to the farmers for installing tunnels to produce off season vegetables and fruits.

At present, over 105 acres is under tunnel farming in the Potohar region and off season quality products are being produced.

The department has taken steps for promoting agriculture in the Potohar region which has a different environment and soil from other areas of the province, he said.

The Potohar region is facing severe shortage of water and the situation necessitated efficient irrigation system such as drip and sprinkler systems, he said adding the department was providing 60pc subsidy on drip and sprinkler irrigation system.

DROP IN KINNO EXPORTS MAY GET STEEPER

Ahmad Fraz Khan Updated March 11, 2019

Pakistan has missed the kinno export target by 33 per cent as the four-month season draws to an early close.

The country exported around 200,000 tonnes of kinno against the target of 300,000 tonnes. The season officially ends on March 15 every year. But more than 60pc factories were closed by the end of February.

The drop in kinno exports is sharp as Pakistan sold 370,000 tonnes in the foreign market last year. Although a group of exporters has expressed some doubt about that figure, the Pakistan Fruit and Vegetable Exporters, Importers and Merchants Association insists that it is accurate and claims to have earned $222 million. Going by that figure, the drop is just under 50pc year-on-year.

On top of it, exporters have said the downward trend will not only continue but is also expected to worsen going forward. Terming the early close of the export season a sign that the worst is yet to come, the exporters warn that kinno exports are now a matter of “a few years”.

The fruit has not only lost most of the international market but is also losing the residual demand because of multiple factors, such as diseases, lack of certification, high prices and a massive increase in the cost of business.

Pakistan exports less than 10pc of its kinno crop. Per-acre yields in Spain, Morocco and even Turkey are around 450-500 maunds as opposed to Pakistan's average of 150 maunds

"All these factors have neutralised the effect of a steep devaluation of the rupee (around 32pc) this season," says Shahid Sultan, an exporter from Sargodha who also serves as a director on the board of Pakistan Horticulture Development and Export Company (PHDEC), a federal body that looks after horticulture exports.

"One can imagine the true status of kinno exports and their future prospects as the massive devaluation coupled with a domestic price fall in almost equal measure failed to spur foreign sales," he says.

His views were seconded by Saadat Ejaz Qureshi, an exporter from Lahore and former chairman of PHDEC. Highlighting the root cause of the problem, Mr Qureshi says that the kinno crop is diseased, adding that no agency can certify low-quality and diseased fruit for export.

"Pakistan does not have even a single disease-free nursery. It means even the replacement trees cannot be taken as disease-free. If a tree is diseased, who can certify the nursery? If the nursery is diseased, who will certify the fruit as fit for export? This is the reason our kinno is being pushed out of the world market," he says.

Even in relatively low-end and relaxed markets, competitors like Turkey, Morocco and China are elbowing Pakistan aside on the price factor. Exporters sent around 1,500 containers to Indonesia in December alone, but the number dropped to less than 100 as China entered in January and swept the market with its low-price and better-quality kinno.

The level of exports to Russia, which is a market for small-size kinno, always depends on other markets that consume bigger-size kinno. With the Indonesian market drying out, exports to Russia also fell because exporters were left without a market for their bigger-size fruit. Morocco quickly fulfilled Russia's demand and, hence, two of the biggest markets were lost in one month, explains Mr Qureshi.

Exporters plead for immediate measures to save kinno exports, which brought home either \$170m (as per PHDEC's last year's figures) or \$222m (as per the claim of the exporters' representative body).

Both bodies agree that kinno exports have the potential to grow beyond the \$1bn mark within a few years. At present, Pakistan exports less than 10pc of its grossly under-produced crop. Per-acre yields in Spain, Morocco and even Turkey are around 450-500 maunds compared with Pakistan's average of 150 maunds.

With new and better-yielding varieties, total production of kinno can easily cross 6m tonnes from the current 2.2m tonnes while exports can reach the 1m-tonne mark.

Fortunately, Pakistan has the knowledge base to grow its kinno exports. After starting exports in the late 1980s, Pakistani writers wrote a few books on the subject in the early 1990s. Nursery rules were written in 1998. Exports standards were developed more than a decade ago. In the last three years alone, two voluminous reports were produced on the subject. One of these reports was financed by the

United Nations Industrial Development Organisation (UNIDO) and the other was by the Punjab government.

The Punjab government was warned by its market intelligence wing that the citrus business is sliding fast and may create social unrest in Sargodha. It ordered a detailed study and sought recommendations to avoid such a situation. Now these reports are gathering dust in government offices.

"Academics can only rectify knowledge deficiency — something that they have done regularly," says Dr Iqrar A Khan, former vice chancellor of the University of Agriculture, Faisalabad, and co-author of the two reports. The need is to build an action plan based on those reports and execute it, Dr Khan says. "Nothing will work unless that action plan is put in place, executed, monitored and updated regularly to absorb new realities."

WHY OUR FISHERIES ARE UNDERPERFORMING

Amin Ahmed Updated March 11, 2019

Aquaculture is one of the fastest-growing food sectors worldwide. Global demand for fish products has been growing at more than nine per cent a year. But in Pakistan, aquaculture — centred in Sindh — is dominated by low-value, low-productivity carp production while marine and coastal aquaculture, such as shrimp farming, is almost nonexistent.

Comparisons with neighbouring countries indicate the underperformance of aquaculture: it's growing at 1.5pc annually as opposed to 6.8pc and 9.5pc in India and Bangladesh, respectively.

The sector is growing slowly in Sindh because of constraints on private-sector investment, which exist despite the availability of global trade opportunities and favourable agro-climatic conditions. Slow growth is a product of private-sector uncertainty due to the lack of a sector-specific strategy, spatial planning and bio-security and value-chain constraints.

As the marine fisheries sector, centred in Sindh, is in decline due to over-fishing, a project to transform and revitalise the fisheries sector in the province is on the anvil with the support of the World Bank.

Most of Pakistan's commercial fish stocks are overfished, with nine of the 14 major species groups already depleted

The fisheries sector project is now under active consideration of the World Bank. It is expected that the bank's executive board will approve a soft loan of $150 million from the International Development Association (IDA) in April.

A comprehensive study titled The Fisheries Resources Appraisal concluded that most of Pakistan's commercial fish stocks are over-fished. Nine of the 14 major species groups are already depleted. Only two species groups show any indication that fishing mortality is at or below the limit required to maximum yields.

The large shrimp fishery, worth about $48m annually, has an estimated 40pc chance of collapse in the next 20 years. Furthermore, the marine capture sector is not as profitable as it should be due to high costs.

The fisheries sector is estimated to produce over $650m worth of fish annually. Of this, Sindh produces around two-thirds: an aquaculture and inland capture component worth around $130m and an annual marine catch worth around $280m. Sindh's fisheries directly employ an estimated 137,000 people in the marine sector and 29,000 people in the aquaculture and inland capture sectors.

The industry supports a lot more jobs indirectly in retailing, transportation and distribution. Sindh is also home to important fisheries-supporting ecosystems, including the Indus River Delta, the largest dry-land mangrove forest in the world and numerous inland water bodies.

Sindh's fishing communities are poor and vulnerable, with low incomes and inadequate nutrition. In addition to declining marine fish stocks, inland capture fisheries are also in decline due to ecological degradation, overfishing and climate change. Participation in fisheries resource management at the community level is low. More than 60pc of fishing households in communities in the Indus eco-region are living below the poverty line.

In addition, Sindh's rural communities need improved sources of nutrition. About 44pc of children under the age of five are stunted physically and cognitively. Increased fisheries production could increase incomes and fish consumption. Fish is a highly beneficial source of proteins, healthy fats and essential nutrients that are important for child development and cognition. Aquaculture has the potential to provide communities — those currently engaged in declining capture fisheries, or not involved in fisheries at all — with new livelihood opportunities.

A World Bank report related to the project says these challenges can and must be addressed to ensure that Sindh fully realises the economic and social potential of its fisheries sector. Commercial aquaculture has strong growth potential in the short to medium term, which will provide jobs and export revenues. Small-scale aquaculture techniques using indigenous fish species can support communities' nutrition and incomes.

In the longer term, improved management of marine fisheries can ensure sustainable growth in value and jobs. The benefits of investing across the sector are thus complementary: commercial aquaculture can drive growth while marine fisheries recover to provide longer-term value. Small-scale aquaculture can support the livelihoods of the poorest.

In the 1990s, Asian Development Bank financed a $15m project that constructed demonstration fish farms and hatcheries, and improved extension, training and data collection systems in three provinces. The project's estimated annual value of fish production following completion was $13m.

Sindh can harness a similar strategy of public-private partnership investment in the base of the aquaculture value chain, particularly in hatcheries and feedstock plants, to reduce impediments to private-sector investment further up the value-chain. Revitalising marine stocks requires effort reduction to enable depleted fish stocks to replenish over time. Bio-economic modelling suggests that Sindh's fisheries sector could be at least $35-70m per year more profitable by 2030 under revitalisation policies relative to business as usual.

Realising these benefits requires effective licensing, monitoring, surveillance and control operations, and the scientific capacity to set fish stock targets. It also requires coastal zone spatial planning to protect the ecosystems important for fish breeding. In turn, these require the relevant provincial and federal institutions to have clear mandates and sufficient capacity, the World Bank says.

Returns to both commercial capture and culture fisheries can be further enhanced through improved postharvest processing and value-add. Postharvest processing in Sindh is characterised by poor quality control and outdated technologies. Much of the sector's capacity is focused on lower-grade products, such as fishmeal. Limited capacity for high-quality and certified processing inhibits access to lucrative export markets.

Poor sanitary and phytosanitary (SPS) conditions led the European Union to impose an import ban for several years. It still continues to partially restrict access in a range of markets. Exports, which have averaged about $350m annually in recent years, appear to have become flat. Investments to improve SPS conditions in markets and auction halls, certification standards, competitive benchmarking and market access development can help Sindh's aquaculture grow, the report says.

LAWS OF ABSURDITY: CROP ZONING

BR Research March 11, 2019

As the shift in area under cultivation from cotton to other cash crops with better returns per hectare continues to grow pace, proposals are being made in the corridors of power to restore zoning laws for major crops.

In FY05, land under cotton peaked both in terms of area at 3,193 hectares and 42 percent share in four major kharif crops. According to latest numbers from Federal Committee on Agriculture, cotton crop will record its worst year since three decades, with cultivated area 25 percent lower than the peak figure.

This has sent alarm bells ringing across MoC, which has betted big on textile export revival but has little power to influence cropping patterns across country, thanks to devolution of agriculture as a provincial subject under 18th amendment.

This has revived proposals for zoning of agricultural land for major crops, under which government is entrusted with the wisdom to identify suitable area for each major cash crop based on factors such as climatic conditions, proximity to industrial units, and crop targets.

It remains to be seen how far the federal government can push the envelope on the proposal, considering it hands are tied so far as provincial government is concerned. On surface, it may appear that the proposal may receive strong opposition from rice and sugar millers, two crops which have gained share in area on cotton's expense.

But BR Research's past conversations with sugar millers indicate that the proposal may find strong support, at least in the sugar lobby.

It may be recalled that a different kind of zoning laws existed for sugarcane until early 1990s, which mandated that growers may only sell their produce to mills set up in the area.

Abolition of these laws led to mushroom growth of mills, as 52 new units were setup in the following decade, more than the total mills setup since colonial Raj. Opening of industry allowed businesses to compete for the crop by offering premium, also contributing to increase in area under cultivation.

The abolishment of zoning is to the chagrin of old players, who previously held growers in the farmgate area beholden to their demands. As farmers could only sell to the industrial unit within the zoned area, industrial units enjoyed virtually unlimited power to procure raw material on self-determined rates.

The proposal to reintroduce zoning poses similar risks. For one, the proposal is an obvious infringement of fundamental freedom of choice and right to free enterprise. Second, it is also an infringement on property rights, by bestowing government with the power to determine what business communities may engage on their privately own lands.

More importantly, it also risks entrusting the government to decide winners and losers in agriculture, as different crops offer varying rates of return. This opens the floodgates of rent-seeking and corruption, as farming communities shall lobby their MNAs and MPAs to ensure their tehsils and districts are zoned such that they grow crops with highest returns per hectare.

The policymakers should be weary of the proposal, as they may find ostensible support from a cross-section of industrial as well as farming associations. However, the proposal will leave small farmers beholden to the most powerful industrial unit, as they will have little freedom in terms of choice of crop or buyer.

GOVERNMENT COMMITTED TO BRINGING CHANGE IN FARMERS’ LIVES: BUZDAR

RECORDER REPORT | MAR 11TH, 2019 | LAHORE

Punjab Chief Minister Sardar Usman Buzdar on Sunday said the Pakistan Tehreek-e-Insaf provincial government was committed in bringing prosperity in farmers’ lives. In a statement issued from Lahore Sunday, the Chief Minister said a long term policy is being pursued for development of agriculture sector that will produce far-reaching results.

The chief minister said approval has been given to provide certified cotton seeds to farmers that will increase yield of this crop. He said indiscriminate action will be taken against manufacturers of spurious pesticides.

Earlier on March 1, PM Imran Khan had chaired a meeting regarding National Agriculture Emergency Programme at the Chief Minister House, Punjab. The PM was briefed on steps taken by the provincial government to improve agricultural conditions and up-gradation of the sector. PM Khan was told about future planning of the Punjab government to make necessary changes in the sector.

Khan told the meeting that China’s model should be followed to make much-needed changes in the agriculture sector of Pakistan. “We need to equip peasants with modern techniques of farming,” he added. He said adulterated milk badly affect the health of children; hence put their life at risk.

He directed officials concerned to strictly punish anyone found involved in adulterating milk.

NEWS COVERAGE PERIOD FROM MARCH 4th TO MARCH 10th 2019

FALLING EXPORTS, ETHANOL PRODUCTION BOOSTS US CORN STOCKS: USDA

RECORDER REPORT | MAR 10TH, 2019 | CHICAGO

The US Department of Agriculture (USDA) issued a surprise boost to its outlook for domestic corn supplies on Friday by trimming its estimate of how much will be used by exporters and ethanol producers. The government also lowered its outlook for domestic soyabean supplies, bumping up its estimate of the crush, and raised its wheat stocks view as export prospects worsened.

Domestic corn ending stocks for 2018-19 were forecast at 1.835 billion bushels, the USDA said in its monthly supply and demand report, up from its outlook for 1.735 billion bushels in February. Analysts in a Reuters poll had given corn ending stocks estimates that ranged from 1.680 billion bushels to 1.795 billion bushels.

The government cut its corn export view by 75 million bushels to 2.375 billion. The latest outlook also calls for ethanol producers to use 5.550 billion bushels of corn, 25 million less than the prior estimate. “It was certainly warranted that they cut the corn export forecast and the ethanol forecast, but 100 million bushels is a fairly sizable cut for one month,” said Brian Hoops, president of Midwest Market Solutions. “It was pretty unlikely that exports would meet that earlier forecast because of big South American corn production this year after the drought last year.”

Chicago Board of Trade corn futures sank to their lowest since November 27. Wheat futures dropped to a fresh 13-month low but quickly rebounded into positive territory, while soyabeans hit their lowest since February 20. Soyabean end stocks for the 2018-19 marketing year will be 900 million bushels, down from the government’s February estimate of 910 million bushels but still the biggest on record. The crush forecast was raised to 2.100 billion bushels from 2.090 billion bushels.

The soyabean export projection was left unchanged at 1.875 billion bushels despite US Agriculture Secretary Sonny Perdue’s announcement in late February that China had committed to buying an additional 10 million tonnes of US soyabeans.

US wheat ending stocks were pegged at 1.055 billion bushels, up from the February outlook of 1.010 billion and above the high end of market expectations. Wheat exports were cut to 965 million bushels from 1.000 billion.

USDA left its outlook for the Argentine corn and soyabean crops unchanged and also maintained its Brazil corn crop view. It cut its Brazil soya harvest outlook to 116.50 million tonnes from 117.00 million.

SMUGGLING OF VEGETABLES RESUMES AFTER DE-ESCALATION BETWEEN PAKISTAN, INDIA

By Asif Mehmood Published: March 9, 2019

LAHORE : Vegetable smuggling from India has resumed as tensions de-escalated between the two hostile neighbours following the release of captured Indian Air Force (IAF) pilot by Pakistan.

Smuggled garlic from India is openly available in Lahore's vegetable market. Two truckloads of garlic were sold within hours of reaching the Badami Bagh vegetable market, according to sources.

Trade between the two halves of the disputed Himalayan region of Kashmir was halted after hostilities led the two nuclear-tipped enemies to the brink of war late last month.

However, trade resumed between Occupied Srinagar and Azad Kashmir through Srinagar-Muzaffarabad route, trucks loaded with tomatoes and other vegetables from India reached the wholesale vegetable markets of Rawalpindi and Lahore.

The two truckloads of garlic which reached the market in Lahore on Friday morning were carrying at least 200 bags of 50 kilos each, said sources from the wholesale vegetable market.

An importer had ordered the garlic consignment, which reportedly raised concerns among local traders. As the wholesalers association has posted anti-Indian posters and banners, only a few sellers are engaged in selling the smuggled commodity.

The general secretary of the Traders Association at Badami Bagh Fruit and Vegetable Market, Chaudhry Khalid Mehmood, said the fruits and vegetables imported from IOK are smuggled to markets in Punjab after meeting the local demand as the demand in Azad Kashmir.

"Despite informing the Customs Chief Collector and several authorities in writing, the smuggling remains unhindered," he said.

Mehmood claimed that the trucks loaded with Indian vegetables are allegedly smuggled to the Punjab markets by bribing Customs authorities.

Chaudhry Akram, an assistant to the Punjab chief minister and the chief of the price control task force, said the trade of goods between Azad and IOK takes place through the barter system.

"The fruits and vegetables imported from Indian Occupied Kashmir are over and above the need of people in Azad Kashmir. Hence, the items reach Lahore and other markets."

He said that he opposes trade with India via Wagah border but since the item is supplied through a barter system via Kashmir, he does not oppose it.

He further claimed that potatoes from Pakistan are being exported to IOK through the barter system.

SINDH GOVT URGED TO NOTIFY SUGARCANE PRICE AT RS182/40KG

Our Correspondent March 10, 2019

HYDERABAD: Farmers in Sindh on Saturday asked the provincial government to fix sugarcane, wheat and cotton support prices to quell the ongoing unrest among the growers.

“The sugarcane price should be issued without delay so that small growers could get the official price of Rs182/40kg,” said Nawab Zubair Talpur, president Sindh Abadgar Ittehad.

Talpur said the growers were concerns over the stagnant cotton price that had resulted into import of 0.6 million metric tons of cotton worth Rs52 billion in the year 2017-2018.

“The federal government will have to spend billions of rupees more this year to import cotton in case domestic price is not fixed at the rate of Rs4000/40 kg,” Talpur added.

He said sugarmills were paying Rs130-140/40kg cane to growers in the absence of government notification, which “was a great injustice”. A statement said the growers association also expressed its concern over delay in opening of wheat procurement centres by the Sindh Food Department and delay in the fixing of wheat price.

It demanded that the wheat support price should be of Rs1500/40 kg instead of continuing the same price of Rs1300/40 kg fixed six years ago.

It was critical over silence of Sindh government on issue of acute shortage of water in the province causing billions of rupees of losses to growers and maintained the preparation of strategy of protest if the government failed to provide justice to growers.

The association, while supporting the protest of the growers staged outside Naudero Sugar Mill also demanded the government to take action against those policemen who tortured growers participating in sit-in and warned massive protests if no action was taken against the culprits.

It must be noted that last year in December the government set the sugarcane price at Rs182/40kg, while growers demanded Rs198/40kg saying that input cost has increased after rupee depreciation, and rates should be increased accordingly.

Contrary to growers, Pakistan Sugar Mills Association had suggested sugarcane price of Rs130/40kg.

The growers have also been demanding the abolition of Sugarcane Control Board over its failure to safeguard farmers’ rights and interests and rejected Sindh government’s plan to revise sugar cane price in violation of Sindh High Court’s directive.

They said the government should constitute a new board with associations of small growers on board so that the body could address farmers’ genuine issues.

MILLS CRUSHED OVER 21.6M TONNES OF SUGAR CANE IN 2017-18, PA TOLD

The Newspaper's Staff Reporter March 09, 2019

KARACHI: The Sindh Assembly was informed on Friday that the sugar mills in the province had crushed 21,625,828 tonnes sugar cane and produced 2,281,452 tonnes sugar in the crushing season 2017-2018.

Furnishing a statement and replying to the lawmakers' queries during the Question Hour in the assembly, Minister for Agriculture, Supply and Prices Ismail Rahu said the provincial government had fixed the rate of sugar cane at Rs182 per 40 kilograms.

However, he said the Pakistan Sugar Mills Association (PSMA) challenged the sugar cane rates in the Sindh High Court that passed an interim order and fixed the rate at Rs160 per 40kg.

In the meantime, the Supreme Court took a suo motu notice of the sugar cane price and directed the mill owners to pay cane growers at the rate of Rs160 per 40kg till the decision of the case.

To a question asked by Grand Democratic Alliance (GDA) member Arif Mustafa Jatoi, he said the agriculture, supply and prices department provided a fixed subsidy/financial assistance to farmers on purchase of tractor amounting to Rs200,000 for a tractor costing less than Rs800,000 and Rs300,000 for a tractor costing more than Rs800,000. "There is no effect of imposition of holding and sales taxes."

In reply to a question by GDA's Nusrat Sehar Abbasi, the minister said the sugar mills in the province had crushed 21,625,828.030 tonnes sugar cane and produced 2,281,452.950 tonnes sugar in the crushing season 2017-2018.

He said that as per final estimate, there was total 20,611,878 tonnes produce of sugar cane during 2017-2018.

Answering another query by Ms Abbasi, he said there were 120 registered pesticide companies working in the province. "The companies are registered under Rule 9(5) of Agriculture Pesticide Ordinance 1971," he added.

KBP FOR LAW TO FACILITATE FEMALE FARM WORKERS

RECORDER REPORT | MAR 9TH, 2019 | LAHORE

Kissan Board Pakistan (KBP) has urged the government to enact a law for facilitating the female farm workers like those men and also for women working in the industrial sector. KBP also demanded the status of an industry to agriculture so as all the labour working in this sector can have the same facilities and incentives which are given to their counterparts in the industrial sector.

The demand was raised by the KBP President Chaudhry Nisar while speaking at a gathering of female farm workers convened to mark the International Women's Day here on Friday.

Chaudhry Nisar said that millions of females work side by side their male counterparts in the farms but they are not even paid half of the payment as received by the male farm workers. Similarly, women are paid very low in other rural activities without any other incentive.

He urged the government to also fix minimum wages and eight hours a day duty time for female farm workers. Similarly, he said that Social Security, Employees Old Age benefit Scheme, pension and free treatment should also be given to these workers. Compensation in case of any accident should also cover the farm workers, KBP chief added. Chaudhry Nisar announced that the KBP would soon prepare a "charter of demand" and submit to the government, NGOs and international organizations to improve the situation of female farm workers.

FARMERS UPSET OVER NON-PROVISION OF INCENTIVES IN FINANCE BILL

FAZAL SHER | MAR 8TH, 2019 | ISLAMABAD

Farmers have expressed dissatisfaction over the second supplementary amendment finance bill 2019 as it does not contain any incentives for the farming sector and have urged the government to take effective steps for the protection of the sector.

"Farmer associations have planned to stage protests against lack of incentives for agriculture sector in Finance Supplementary (Second Amendment) Act, 2019 but delayed it due to escalation of tension between India and Pakistan", said President PKI Khalid Mehmood Khokhar while talking to Business Recorder.

He said that the decision to slash tax on agricultural loans from 39 percent to 20 percent would not provide relief to the farmers but will benefit the banking sector. "The step to reduced regulatory duty (RD) from 17 percent to 5 percent on import of all diesel engines would also play no role in boosting farm output as farmers do not import diesel engines but purchase locally manufactured engines", he said.

He said that if the government's intent was to incentivize agriculture sector it would have taken steps to reduce price of fertilizer, end the role of middleman in agri-marketing and provide significant incentives to input costs incurred by farmers.

PKI president said the government needs to increase investment on agriculture research to 1 percent of the Gross Domestic Product (GDP), which at present is 0.2 percent. The price of fertilizers and other input materials, especially pesticides, have gone up and these should be reduced to bring them at par with the Indian fertilizer prices, he said.

He said that agriculture export mechanism should be formulated for wheat, potato, rice, mangoes, oranges and vegetables. Farmer associations would stage a protest against lack of incentives for agriculture sector in the supplementary finance bill and for setting up south Punjab civil secretariat at Multan Agriculture University as soon as the security situation normalizes in the country, he said.

About impact of current rains on standing corps, Khokhar said that recent rains would have a positive impact on overall agriculture production of major Rabi crops including wheat.

As per the present condition of wheat crop, country is likely to achieve wheat production target of 25.572 million tons, he said. Nawaz Zubair Talpur, Chairman Sindh Abadkar Ittihad (SAI) while criticizing the finance bill said that Pakistan Tehreek-e-Insaf (PIT) during election campaign had promised to impose agriculture emergency but after coming into power the party has ignored agriculture sector as former governments did.

"Federal Minister for National Food Security and Research Pakistan Central Cotton Committee (PCCC), Sahibzada Muhammad Mehmood Sultan announced during the Pakistan Central Cotton Committee (PCCC) that government is planning to fix Rs 3500 per maund cotton indicative price but so far the government has not announced the cotton indicative price to encourage cotton growers", he said, adding that government needs to take practical steps for improvement of agriculture sector.

He said that country is importing billions of dollars worth of cotton due to decline in cotton production in the past few years. A senior official of Ministry of National Food Security and Research (NFS&R) said that recent rains would bring positive impact on Rabi crops including wheat, grams and vegetables. Rains will improve the growth of wheat and grams, he said, adding that wheat crop is at the booting and trilling stage and requires a large quantity of water during this period.

He said that timely and widespread rains have compensated the stressed surface irrigation water supplies and supplemented crop water requirements. Official said that the Federal Committee on Agriculture (FCA) has fixed wheat crop production target at 25.572 million tons from an area of 8.833 million hectares during Rabi 2018-19. Out of 25.572 million tons, Punjab will produce 19.5 million tons, Sindh 3.8 million tons, Khyber Pakhtunkhwa 1.36 million tons and Balochistan will produce 0.900 million tons.

NEED STRESSED TO PROMOTE TRADITIONAL FOOD

By Our Correspondent Published: March 8, 2019

FAISALABAD: The promotion of traditional food, seasonal fruits and vegetables are essential to fight the daunting issue of malnutrition as it has affected more than 45% of the people in the country, said University of Agriculture Faisalabad Vice Chancellor Dr Zafar Iqbal Randhawa.

He was addressing the inaugural session of a two-day seminar titled sensitisation seminar on nutrition for media, academia, and students at National Institute of Food Sciences and Technology (NIFST) UAF. The event was organised by the UAF in collaboration with UNICEF and the government of Punjab.

"Most of the students don't eat their breakfast before leaving home and it causes so many health issues. Parents should make sure their children eat homemade dishes, full of nutrition and energy," said Dr Randhawa.

The vice chancellor advised students to have a balanced diet and adopt physical activities in their daily lives. He said that people should wake up early in the morning, offer prayers and exercise. "Excessive eating also leads to malnutrition and causes various health issues."

Faculty of Food Nutrition and Home Sciences (NIFSAT) Dean Dr Masood Sadiq Butt said the issue of malnutrition is worsening due to poor lifestyle. Therefore, there is a need to avoid junk food. He stressed upon the need to enhance efforts to address the issue of malnutrition and suggested food fortification to deal with the problem of malnutrition and food insecurity.

NIFSAT is introducing lassi in packing at its store to foster the trend of desi food in the youth. NIFSAT Director General Dr Tahir Zahoor said that education about nutritious and balanced food at school level will help overcome the issue of malnutrition. He said that malnutrition has emerged as the biggest problem than energy crisis.

GOVT WORKING ON LAWS TO REVIVE DAIRY SECTOR

The Newspaper's Staff Reporter Updated March 07, 2019

ISLAMABAD: The government is working to rationalise taxes on milk supply chain to incentivise the sector in order to expand collection and processing units across the country, said Advisor to Prime Minister on Commerce and Investment Razak Dawood in a meeting with the delegation of International Finance Corporation

The meeting was held to discuss policy options to revive the growth of Pakistan's dairy sector. Dawood said the tax incentives will transform dairy farming into a formal sector.

He added that the taxation policy for dairy supply chain must be re-aligned for government's broader socio-economic objectives with the nutritional requirements of the population.

An official statement issued after the meeting said it was discussed that processed milk, being an essential commodity, remained under the zero-rated sales tax regime from 2006 till 2016. However, the incentive was withdrawn in 2016 and sales tax was reapplied.

As demand for packaged milk is highly price elastic, the imposition of sales tax led to a decline of domestic market by 30 per cent and the formal processing units registered a drastic 80pc decline in profitability. These policies forced manufacturers to cut down costs and close milk collection points across the country as farmers starting shifting back to the informal market.

The advisor informed the meeting that unprocessed milk poses a health hazard due to a high degree of adulteration and contamination and is a major cause of malnutrition and stunted growth among children.

The delegation informed that despite huge potential in the dairy sector, only 5pc of milk sold across the country is processed and packaged while 95pc of the consumed milk is unprocessed. The delegation also highlighted issues of taxation and pointed out the need to pass pasteurisation law which would reduce the health risk from unprocessed milk sold in the market.

The advisor emphasised the need to reverse this trend and bring the dairy farmer back into the formal eco-system where the farmers can work in partnership with companies to improve yield and livestock health.

He also stressed the need for holistic approach to revive the sector by focusing on reducing the regulatory and taxation burden, improving productivity and supply chain management.

CHINA REVOKES CANADIAN CANOLA PERMIT AS DISPUTE ESCALATES

AP Updated March 07, 2019

BEIJING: China said on Wednesday that it is blocking some imports of the agricultural product canola from Canada because of fears of insect infestation.

The move, which comes amid heightened tensions over Canada's arrest of a Chinese tech executive, is seen by some as a new tactic to seek leverage over Ottawa.

China suspended canola imports from a Canadian company "in accordance with laws and regulations and international practise", foreign ministry spokesman Lu Kang said at a daily news briefing.

He cited "harmful organisms" that he did not identify further, and said China's government "needs to protect the health and safety of its own people".

"I can tell you responsibly that the Chinese government's decision is definitely well-founded," Lu said. "Upon verification, China customs has recently detected dangerous pests in canola imported from Canada many times."

One of Canada's largest grain processors, Richardson International Ltd., said on Tuesday that China had revoked its permit to export canola there.

Some saw that as retaliation for Canada's arrest of Meng Wanzhou, the CFO of Chinese tech giant Huawei.

Canada announced recently that it is going ahead with an extradition hearing for Meng, the daughter of Huawei's founder. Canada arrested her at the request of the US, where she is wanted on fraud charges for allegedly misleading banks about the company's dealings with Iran.

Canadian Agriculture Minister Marie-Claude Bibeau said in a statement that the Canadian Food Inspection Agency conducted investigations after China issued notices of non-compliance on canola seed imports, including nine since January. She said the agency had not identified any pests or bacteria of concern.

China, whose rapid growth has made it an important market for many countries, has a history of using commercial retaliation against those at odds with Beijing.

The most recent high-profile target was South Korean retailer Lotte, which sold land to the Seoul government for a US anti-missile system opposed by Beijing.

Authorities closed most of the company's 99 supermarkets and other outlets often alleging safety violations and a theme park project.

China suspended a trade deal with Norway and restricted imports of Norwegian salmon after the Nobel Peace Prize was awarded to Chinese political prisoner Liu Xiaobo in 2010.

It stopped buying fruit from the Philippines during a dispute over territory in the South China Sea.

Britain and other countries also faced retaliation over meetings with Tibetan spiritual leader the Dalai Lama, considered a dangerous separatist by Beijing.

China receives about 40 per cent of Canada's canola exports, and the revocation of Richardson's permit hurts the entire chain of industries involved in the market, the Canola Council of Canada has said.

Canola prices already have been hit by China's retaliatory tariffs on US agricultural exports. Further cutbacks on Chinese buying would deal a major blow to what is a lifeline for agriculture in western Canada.

"We are working very, very hard with the Chinese government on this issue," Canadian Foreign Affairs Minister Chrystia Freeland said on Tuesday.

China has warned of serious consequences if the Huawei executive is not released.

China arrested two Canadians on Dec 10 in what was widely seen as an attempt to pressure Canada.

After Meng's arrest, a Chinese court also sentenced a Canadian to death in a sudden retrial, overturning a 15-year prison term handed down earlier.

COTTON INDICATIVE PRICE: EXERCISE CAUTION!

BR Research March 7, 2019

In public policy, unlike religion, there are no marks for trying. A policy is as good as the outcome it achieves, because economies cannot be run on good intentions alone.

The current government has identified poor domestic cotton production as the last bottleneck in its dream to kick start textile export growth. From improved and subsidized power and energy availability to devalued PKR, it appears all other pieces of the puzzle have fallen into place. The solution to conquering the last frontier, according to PTI's commerce czars, is to introduce an indicative price for cotton.

The problem with this line of thinking is that it fixates on a singular symptom: the declining area under cotton cultivation, viz. other kharif crops. More specifically, the decline in cotton cultivation and output is blamed on high support price for sugarcane. It is argued that the perverse incentives structure has led to sugarcane production in excess of domestic consumption; whereas the milling sector is unable to offload its inventory build-up without government subsidy for export.

Going by that logic, should the solution then not to remove the support price on sugarcane? While support price has acted as an added incentive, it is by no mean the only factor in driving high sugarcane cultivation. Moreover, if FY19 numbers are any guide, areas under cultivation for both cotton and cane have shown a slump of 11 and 17 percent respectively over previous year.

The Achille's heel of Pakistan's agriculture is poor yield and not cultivation; and poor yield has many causes. Cotton's yield saw stunted but progressive trend circa FY05 – FY15, when GMO cotton seeds were first introduced in the country, first through illegal, and then under governmental stewardship.

Except, when it comes to innovation in biotechnology, there are no easy answers. In a race to catch up to competition, the country cut corners and bypassed Monsanto, the patent owner for Bt cotton. Hybrids seeds were introducing by cross-breeding Bt cotton with local varieties. This, at first brought improvement in yield and production, as early generation of crop produced effective against pest attacks, reducing application of pesticides.

Soon after, the pests, specifically bollworm, soon developed resistance against the first-generation seed variety, leading to wide scale crop destruction in F16. While the other countries such as China and India moved on to second, even third-generation seed varieties, under the stewardship of patent company; when push comes to shove, Pakistan had no support system for its cotton farmers.

If farmers shifted to other crops such as sugarcane in subsequent years, they were only responding to natural forces; sugarcane after all, is a more resilient crop that can better withstand the unpredictability in weather patterns compared to cotton.

Moreover, claiming that indicative pricing alone is responsible for higher sugarcane sowing is blissful ignorance. For one, it cannot explain persistent complains by farming community that millers across the country paid less than indicative price, which was on record acknowledged by sugar miller's association in the Supreme Court hearing in January 2018.

While growers and millers may not see eye to eye, both groups agree that support price mechanism has been an abject failure as farmers received delayed payments and lower rates; whereas millers incurred losses for procuring crops at what they perceive above-market rates.

For one, in absence of an enforcement mechanism, support price is no more than a notional rate whose impact on growers' decision-making is subjective. If the government plans to remain fixated on increasing cotton output, it needs to go above and beyond the fantastical notion of setting an indicative rate that no one follows in practice.

In order to get growers' incentive structure right, the government needs to take tangible policy action on introducing latest pest-resistant seed variety, adapted to local climatic conditions. This requires taking bio-innovation companies on board. But most importantly, it needs to introduce policy measures that guarantee farmers a price at the time of sowing, whether on market-set or indicative rates.

For as long as farmers are left exposed to market rates at the time of harvest, they will place their bets on the safer crops. If that is too hard for the policymakers to swallow, there is always synthetic fibre!

SEAFOOD EXPORT PLUNGES BY 5.40PC

RECORDER REPORT 2019/03/07

KARACHI: Pakistan's seafood export plunged by 5.40 percent to $217.251 million in July-Jan 2018-19, official figures say.

Seafood export fall now stands at $12.403 million in July-Jan 2018-19 from $229.654 million in July-Jan 2017-18, Pakistan Bureau of Statistics (PBS) says.

In term of volume, seafood export is stagnant with less than one percent or 149 metric tons fall to 96,426 metric tons in July-Jan 2018-19 comparing to the fisheries export of 96,575 metric tons in July-Jan 2017-18.

In Jan 2019, the country exported $33.606 million of seafood which is up by 16 percent or $4.573 million from $29.033 million in Jan 2018. The seafood export quantity also surged by 28 percent or 3017 metric tons to 16002 metric tons in Jan 2019 from 12,985 metric tons in Jan 2018.

BUSINESSMEN PANEL PROPOSES INDUSTRY STATUS FOR HORTICULTURE SECTOR

N H ZUBERI | MAR 7TH, 2019 | KARACHI

Businessmen Panel (Federal) secretary general Ahmad Jawad has proposed that horticulture sector should be given the status of a full-fledged industry. He said we are lobbying with the government to prepare a policy accordingly and provide incentives in its yearly budgets.

Jawad who was former chairman of FPCCI Standing Committee on Agriculture Produce also recommended that cotton production target should be set at 25 million bales by 2023. As different causes for the stagnation in cotton harvest, which included the use of old first generation rather than fourth generation BT technology, absence of better quality seeds, lack of solution to the cotton leaf curl virus, low processing quality at ginning factories and high contamination levels in the produce. These reasons brought down profits for cotton farmers and slashed by 20 percent the area planted with the crop from 2004 to 2016 which needs to be addressed now to uplift cotton industry. As previous governments allowed to import cotton on zero percent from India which hurt farmers.

He also elaborated following challenges and Industry role for the uplift of the sector which needs to be taken up in the coming budget 2019-20 and so on till 2023.

1 – Small landholding: Since the bulk of farmers have less than 10 acres of land, there is problem in getting the benefits of ‘economics of scale.’

2 – Limited access to technology and extension: Farmers still do not have access to better technology. Also, effective dissemination of information from lab to land remains a challenge.

3 – Storage: We need to come a long way in terms of availability and access of agricultural storage facilities for farmers.

4 – Price volatility: The agriculture sector faces the cobweb phenomenon, so there always a need exists to ensure farmers get remunerative prices.

5 – Market integration: Pakistani farmers need to be well connected to the end-consumer. The number of stakeholders across the value chain needs to be reduced. Industry may ask: 1 Better environment for start-ups in food and agri business 2 Greater technological investments in the field of agriculture 3 Simplified leasing norms for setting up processing infrastructure 4 Corporate farming norms to be made more acceptable and balanced for both farmers and corporate 5 Increased involvement of

private players for increasing storage infrastructure including CA stores. He said significant focus is needed on agriculture, with a view to improve rural economy and livelihoods. Policies and allocations are needed to ensure good prices for farmers' crops, food and nutritional security and minimum wastage. Risks will need to be reduced via better implementation and monitoring of risk-mitigating policies, Jawad added.

Almost every government has announced incentives and financial packages for the agriculture sector in a bid to ensure food security and win over voters. Agriculture areas remain a huge vote bank for the political parties and the elected landlords (not peasants and farmers) dominate parliamentary affairs, but in Naya Pakistan we will like see concrete measures in the coming annual budget in order to uplift the sector. Jawad said unlike the importance PTI attached to the agriculture sector in its election manifesto, despite some incentives the party largely chose to ignore the sector in the last two mini-budgets of the incumbent government. He said if the government was really giving any importance to the agriculture sector; it would have taken steps to reduce prices of fertilizers at the optimum level, end the role of middleman in agri-marketing and provide significant incentives to the farmers on input costs.

GROWERS PROTEST OUTSIDE SUGAR MILLS FOR PAYMENT OF DUES

The Newspaper's Correspondent March 06, 2019

LARKANA: Sugar-cane growers and small landowners on Tuesday accused management of the Naudero Sugar Mills of applying delaying tactics in clearing their outstanding dues.

They expressed their concern over the tactics aimed at depriving cane growers of their millions of rupees outstanding against the mills on account of procurement of their crop.

The growers came from Larkana, Shikarpur, Khairpur, Naudero and other areas to get their dues on Tuesday. They were led by Ghulam Rasool Buriro, Ghulam Qadir Shah, Zulfikar Kartiyo, Ali Gul Abro and others.

When they were denied entry to the mills, they held a protest demonstration outside the main entrance and raised slogans against the management. Later, they pitched tents there and held a sit-in.

They said that the management was not ready to clear their dues despite the fact that it purchased their crop for Rs130/40kg, a very low rate as against the official price.

SHC ORDERS SINDH GOVERNMENT TO NOTIFY NEW PRICE OF SUGARCANE IN 15 DAYS

TANVEER AHMED | MAR 6TH, 2019 | KARACHI

Sindh High Court (SHC) on Tuesday directed provincial government to notify new price of sugarcane for current crushing season in fifteen days by de-notifying previous Rs 182 per 40 kilograms price. The SHC division bench headed by Justice Mohammad Ali Mazhar also ordered sugar mills to buy sugarcane from growers at Rs 182 per 40kgs for current crushing season until Sindh government notified the new prices.

The court stated that Sindh Chief Minister should convene a meeting of provincial cabinet and complete all the codalities for notification of new sugarcane price. The judge remarked that the bench would issue contempt of court notice to Chief Minister if the order for new notification of sugarcane price was not complied with.

Court issued these directives in a petition, filed by sugar mills against the sugarcane price notified by Sindh Government on December 07 last year and prayed the court to set aside this notification. The counsel for sugar mills contended that fixation of sugarcane price by Sindh Agriculture Department was illegal. They argued that it should have been fixed by Sugar Control Board, constituted on the orders of Sindh Court.

The counsel stated that notification for the sugarcane price without the approval of Sindh cabinet was illegal and provincial government fixed the price without considering stance of sugar mills. Sugar mills prayed the court to declare the notification of the sugarcane price of the current crushing season void.

Additional Advocate General Sindh submitted before the court that power of taking decisions rests with the provincial government under rules of business and argued that approval from the cabinet is just a formality. He argued that all the stakeholders were taken on board for fixation of the sugarcane price and Rs 182 per 40kg is appropriate price for all the stakeholders.

Meanwhile, Sindh High Court (SHC) approved a petition for hearing against airing Indian movies/ dramas in Pakistan. It issued notices to federal government through Foreign Ministry, Information Ministry, PEMRA and Censor Board to submit their comments on March 08.

Atam Parkash and Salim Michael moved the high court against airing of Indian movies and dramas in view of tense situation on the border with India. They stated that airing of Indian movies is tantamount to injuring the hearts of Pakistani nation in the backdrop of standoff with India. They stated minorities stand by armed forces of the country.

POULTRY PRODUCTS EXPORT: GOVERNMENT URGED TO ALLOW 50 PERCENT FREIGHT SUBSIDY

RECORDER REPORT | MAR 6TH, 2019 | KARACHI

Poultry sector has demanded to allow 50 percent freight subsidy on poultry products export. According to a presentation given by Azhar Ali Dahar, Director General, TDAP, on the other day, poultry sector has demanded for 50 percent freight subsidy on the export of poultry products.

“They are also seeking duty drawbacks on import duty and waiver from local taxes and levies in order to make the poultry products competitive in term of pricing,” he said and added that none of the FTAs negotiated by Pakistan have provided any leverage to the poultry industry.

Azhar said that UAE had revised the regulations for import of poultry which meant that all the companies that were previously registered with and exporting to UAE now have to get registered again of Muslims in European.

He said that Pakistan was the sixth largest producer of milk and the eighth largest producer of meat and poultry but the potential of international Halal market was still to be tapped and urged the authority concerned to develop its own Halal standards and a certification body recognized by the World Halal Council.

In addition, infrastructure facilities such as Halal Parks, Halal Export Processing Zones should also be established with tax incentive to develop it as export oriented sector, he said.

AGRICULTURE: TO DO MORE WITH LESS

M ZIAUDDIN | MAR 6TH, 2019 | ARTICLE

Pakistan is a low income developing country. Agriculture is the most important sector of the country meeting food and fibre requirements of the fast growing population. Although the rate of population increase has considerably slowed down from over 3 percent in 1980s to 2.04 percent in recent years, it is still considered high. With the current rate of population growth, the population is expected to get doubled by 2050-making Pakistan 4th largest nation by 2050 from current status of 5th most populous state of the world. The total cultivated area has increased by just 40 percent during past 60 years, while there has been more than 4 times increase in population with urban expansion of over sevenfold-resulting into mega-cities as well as rising population pressure on cultivated land. Wheat production, a major food crop, has increased five-fold during the same period-yet the country is marginal importer of wheat. Tremendous efforts are needed both advances in technology and population control to narrow the food supply-demand gap. Reducing poverty, hunger and food insecurity are essential part of MDGs3 and are pre-requisites for economic development. Food security and economic growth mutually interact and reinforce each other in the development process [Timmer (2004)]. A country unable to produce the needed food and has no resources or afford to buy food from the international market to meet demand-supply gap, is not food sovereign state [PinstrupAndersen (2009)]. Food security is thus fundamental to national security, which is generally ignored [Fullbrook (2010)]. The extraordinary rise in food prices in later part of the first decade of 21st century raised an alarm bell on food security, particularly for the developing world. Pakistan is no exception. To achieve food-secure and pro-poor agricultural growth, Pakistan needs to adopt a comprehensive approach towards increasing productivity of all foods rather than merely concentrating upon achieving just wheat-based food security. Moreover, for benefiting from adoption of new agricultural technologies, the farm households should be able to finance expensive inputs and diversify their livelihoods through optimum farm and non-farm sectors' employment-mix. Managing food security in Pakistan also requires an understanding about its dimensions; future challenges of agricultural growth and food security; and impact of agricultural policies on food supply and income, the poor vulnerable in rural and urban areas; and what are do-able options. (Extract from a paper "The State of Food Security in Pakistan: Future Challenges and Coping Strategies" by Munir Ahmad and Umar Farooq – published in (c)The Pakistan Development Review 49:4 Part II (Winter 2010) pp. 903-923).

Pakistan's latest estimated population is 207,774,520 (excluding the regions of Azad Jammu and Kashmir and Gilgit-Baltistan). The agricultural sector sustains the livelihoods of 45 percent of Pakistan's population (FAO 2012). And today not only we are a water-stretched country but the worldwide climate change phenomenon is also affecting our agriculture sector very seriously.

It's critical, therefore, to note that growing enough food will be no small task in the years ahead, and that the kind of agriculture practised today – reliant on industrial-era concepts of land use and productivity – isn't poised, it is believed, to get us there. The reality is that we have to quickly and efficiently bring farming from the industrial age into the digital one.

With a predicted global population of 9.8 billion by 2050, the world is needed to figure out how to feed a much larger population, and fast. Studies show this could mean we need to grow as much as double the amount of food we do today, simply to avoid food security issues and mass social disruption. Already, more than 3 million children die worldwide each year because they don't get enough to eat. At the same time, climate change is making it harder to feed the world through conventional means – in fact, with world's current rate of crop yields; we'll only have enough food for half of that projected population. The way out of the looming agri-crises is said to be digitization of relevant agri-practices. And agricultural technology – from vertical farming to data science to farm drones – is the new hot thing in investor circles.

In an article Why the agtech boom isn't your typical tech disruption, published on 25 Feb 2019 in The Agenda Weekly from the World Economic Forum on March 1, 2019) Karn Manhas, Founder, Terramera has discussed these new digital technologies being increasingly used for boosting agricultural sector and improving universal food security:

The Investment Corporation of Dubai alone just dropped $203 million into agtech investments; another $200 million came from the Japanese holding behemoth SoftBank; and dedicated VC funds are zeroing in on the sector's potential.

In 2017, total investment was over $1.5 billion – a new record for the sector, and one that's setting the stage for explosive growth.

At its core, agtech – name of the new game – is about using advanced monitoring and data analysis to do more with less – to find ways to increase yields without burdening already overtaxed resources such as land and water.

Right now, a cross-section of technologies and disciplines – from sensors, artificial intelligence and big data to biotech and robotics – are being used by progressive startups to boost global food supplies. For example, Hortau systems is increasing watering efficiency through smart monitoring, which in turn increases plant yield. Phytech is optimizing crop production with its "Plant Internet of Things" – smart devices in fields that send simple colour-coded alerts to smartphones with recommendations and warnings. Meanwhile, the Israeli-based CropX uses hardware and software to measure soil moisture, conductivity and temperature, allowing farmers to save water.

The agtech market is expected to grow organically (indeed, exponentially) over time, giving early entrants an edge and access to an ever-increasing customer base.

Apart from the pressing need to keep the world properly fed, agtech addresses another crucial pain point: keeping farming viable for the next generation of people who grow our food.

Yet a yawning tech gap in farming has emerged in recent decades, with real-life consequences. In our approaches to land management, resource use, labour, transportation and more, we're firmly stuck in an outdated industrial model – emphasizing large-scale farms and massive output at all costs, while ignoring externalities from environmental impact to financial repercussions and human tolls.

Case in point: conventional farming is largely viable today because it's propped up with massive government subsidies. The US currently pays around $25 billion to farmers annually. But even with a cash infusion, it's still a tough go for today's farmers. The world's most important career has notoriously tight margins and is often a losing proposition. (Grapes, for example, bring in as little as $6 of profit per acre, and they are considered a higher-profit crop.) It's little wonder that young people aren't stepping into the industry anymore. (Britain is even facing a farmer shortage.)

For example, Cainthus, an AI facial recognition software for cows, allows small farmers to maintain larger herds and track the health of individual animals, right down to how much they've eaten each day and how much milk they've been given. Meanwhile, aWhere is a next-gen Farmers' Almanac, monitoring and forecasting the weather with pinpoint accuracy thanks to a global network of 1.4 million weather stations. Drones and robots from companies like Farmbot are helping fill the farm labour gap, with drag-and-drop interfaces that allow farmers to build sequences of actions for hardware or set repeating growing regimens. Blue River Technology, recently acquired by John Deere, uses cameras and AI to dole out herbicide more precisely as needed.

The digitization of agriculture is necessary simply to maintain the status quo. If we want to continue to go shopping – to continue filling our baskets with healthy and affordable food – we need to fundamentally rethink how we do agriculture. Behind the scenes, a radical shift is needed to retool our food systems and make the most of what we have for a growing population. Failing that, the average trip to buy food may soon be anything but.

INDONESIAN OFFER FOR MARKET ACCESS TO RICE NOTIFIED: SULEMAN

RECORDER REPORT | MAR 6TH, 2019 | KARACHI

Rafique Suleman, Convener, FPCCI Standing Committee on Rice Tuesday said Indonesia has offered market access to Pakistani rice and a formal notification has been issued.

Addressing the first meeting of FPCCI Standing Committee on Rice at the Federation House, Suleman said that international scenario for Pakistan rice is positive and with aggressive marketing Pakistan can enhance its rice exports.

The first meeting of the rice committee attended by S M Muneer, Abdul Rahim Janoo, former chairman, Rice Exporters Association of Pakistan (Reap), Engr. Daroo Khan Achakzai, President FPCCI, Safder Mehkri, Reap, Jawed Jillani, Muhammad Raza, Members of Reap's Managing Committee along with prominent rice exporters, Muzammil Chappal, Mahesh Talreja, Faisal Anis Majeed, Fuad Garib, Salman Paracha and a large numbers of rice exporters. Various matters related to rice export trade were discussed.

Suleman informed the meeting that Reap has decided to arrange Biryani festivals at domestic as well as international level for promotion of Pakistani Basmati rice and explore new export markets.

Reap is going to organize a grand Biryani festival at Sindh Governor House this month. Second festival is being planned in South Africa by the end of this month. Another grand Biryani festival will also be arranged at FPCCI for all diplomats to promote Pakistani rice, he added.

Suleman said Reap is closely working with federal government to enhance rice export and earn more foreign exchange for the country. As part of these efforts and the consistent efforts of Reap and Ministry of Commerce, Indonesia has offered market access to Pakistani rice and in this regard a notification has already been issued, he added.

He said trade delegations of rice exporters will visit various countries for the promotion and marketing of Pakistani rice.

S M Munir said that he always gave preference to rice export trade which is the 2nd largest trade of Pakistan. He assured all rice exporters that FPCCI will continue to support and resolve all the issues related to rice export trade.

Abdul Rahim Janoo said at Johannesburg Biryani festival all the diplomats in South Africa as well as large number of rice importers will be invited to promote Pakistani rice.

He was hopeful that after this event, rice export to South Africa will take a boost as South Africa is a major market for parboiled rice – approximately one million tons, wherein Pakistan's share is negligible.

Safder Mehkri, Chairman Reap informed the participants about the recent activities of Reap. He said after the success of rice conference at Larkana, Reap is working on projects that will lead to doubling the rice production in five years.

"We are hopeful that till 2023, we will be able to increase rice exports to $ 5 billion," he added. He said support of provincial and federal governments will be instrumental in achieving the target.

Later, Rafique Suleman thanked all the participants for attending the meeting and sharing valuable suggestions for promotion of rice trade.

POULTRY EXPORTS TO AFGHANISTAN FALL

By Our Correspondent Published: March 6, 2019

ISLAMABAD: The government and industry stakeholders have voiced concern over the slump in poultry exports to Afghanistan and have agreed to take up the matter with Afghan authorities.

The issue came up for discussion in a meeting between a delegation, led by Big Bird Group Chairman and Pakistan Poultry Association (PPA) Export Committee Convener Abdul Basit, and Federal Minister for National Food Security and Research Sahibzada Muhammad Mehboob Sultan on Tuesday.

Federal Secretary Dr Hashim Popalzai and other senior officials of the ministry were also present. "We are making efforts to enhance export of poultry and rightful demands of the industry will be considered," the minister said and assured the poultry association of support for their budget proposals. He told the association to comply with international standards, which were indispensible for poultry exports.

"Disease-free poultry is fit for exports and to achieve that we need proper surveillance. The National Veterinary Lab provides the facility to check samples," he said and sought the PPA's cooperation in poultry monitoring.

The association submitted budget proposals with the objective of enhancing export of poultry and poultry products. It pointed out that the poultry sector was demanding duty drawback facility on the export of poultry products in line with other sectors, like 6% relief on chicken hatching/ eggs and 8% on chicken meat and products.

The PPA also called for waiving cash margins on the import of raw material for value addition in poultry.

BAN ON UNPACKED SPICES FROM 20TH

Bureau Report March 05, 2019

PESHAWAR: The Khyber Pakhtunkhwa Food Safety and Halal Food Authority announced ban on loose and unpacked spices from March 20.

The authority's director general Riaz Khan Mehsud has urged spices dealers to adopt the technology and introduce packing before the crackdown starts, according to a statement issued here on Monday.

He said unpacked spices were injurious to health and might cause fatal diseases. He added that last year the authority's scientific committee had suggested the ban and proposed one-year grace period to transform existing businesses into the approved mechanism. He warned the business owners and dealers to introduce packing to improve quality of their products.

Meanwhile, the authority's director technical Dr Abdul Sattar Shah said loose spices might contain Aflatoxin which causes cancer. He said packing was the only solution to stop weather impact on the product.

Authority's director operations Khalid Khattak said the dealers had already been asked to stop sale of unpacked spices. He said food authority's teams would carry out the crackdown on expiry of the deadline.

COTTON PRODUCTION DOWN 6.8PC

Parvaiz Ishfaq Rana Updated March 05, 2019

KARACHI: Adversely affected by the decrease in area under cultivation coupled with the use of poor quality seed and pesticides, cotton production as of March 1 clocked in at 10.471 million bales down 6.80 per cent over the corresponding period last year.

Cotton analysts believe the cotton production during the current season (2018-19) is expected to be the second lowest in eight years.

The lowest production was recorded in 2015-16 season which fell to 9.7m bales, however, there is a stark difference between the two as the decline in cotton crop production three years ago was a result of massive pest attack including armyworm and pink bollworm which caused widespread devastation to the crop.

Whereas, the major cause for production shortage in the ongoing season is the reduced area under cotton crop cultivation and use of poor quality seed and pesticides resulting in poor yield per acre causing heavy losses to cotton growers.

According to private estimates, against 9m acres earmarked for cotton crop, only 6m acres have been cultivated in 2018-19.

For the last several years, cotton growers have gradually shifted to sugarcane crop either under the pressure of sugar mills which are mostly owned by political figures and influential landlords or due to economic factors since cotton crop needs heavy doses of pesticides which are mostly of poor quality.

Prime Minister Imran Khan has also taken notice of the falling cotton crop size and even directed concerned departments to take measures on war footing to achieve a target of 15m bales for next crop season (2019-20).

Meanwhile, Minister of Food Security and Research Sahibzada Mahboob Sultan had suggested that the government can set support price for phutti (seed cotton) at Rs3,500 per 40kg in order to encourage growers.

Cotton Commissioner Khalid Abdullah, who also happens to be vice president Pakistan Central Cotton Committee, said that next crop would not face water shortage but certified seed and quality pesticide will have to be used in order to increase yield.

Moreover, the government is also likely to impose section 144 in order to protect cotton cultivation area A detailed examination of the total figures revealed that the largest cotton producing province — Punjab recorded a shortfall of 9.34pc at 6.592 million bales as of Mar 1, 2019 whereas Sindh registered a fall of 2.45pc at 4.149m bales.

The only organic cotton producing province of the country, Balochistan also reported 0.99pc shortfall in production at 117,852 bales.

TDC WILL GO TO TOBACCO PRODUCING AREAS

By Our Correspondent Published: March 5, 2019

PESHAWAR: Chief Minister Mahmood Khan in principle approved the utilisation of Tobacco Development Cess (TDC) Funds for the tobacco producing districts of the province, an official statement said on Monday.

However he made clear that these funds must be released by deputy commissioners concerned after scrutinising the facts and figures to insure realistic evaluation, the statement read.

Mahmood was chairing a meeting at CM Secretariat Peshawar that was attended by Provincial Ministers Taimur Salim Jhagra, Shehram Khan Tarakai, Sultan Mohammad Khan, Special Assistant for Industries Abdul Karim Khan, MPAs of the tobacco growing districts, administration secretaries of the departments concerned and other higher authorities.

The CM was briefed in respect of the utilisation of Tobacco Development Cess for the years 2016-17 and 2017-18. The meeting gave approval to the methodology for revenue collection of the Cess, its utilisation, setting up of the concerned committee and TDC revenue generation also took stock of the factual revenue collection for the years 2016-17 and 2017-18 that amounted to Rs263.415 million and Rs397.66 million respectively.

The meeting was informed that the overall ADP evaluation for the year 2017-18 was Rs100 million while for the year 2018-19 it was Rs261.928 million.

It was further told that TDC fund was allocated for the tobacco producing districts on the basis of the total tobacco produce of the area concerned wherein Pakistan Tobacco Board provided the data for the purpose.

It was further revealed that distribution of funds within the districts was undertaken on the basis of under cultivation land of tobacco crops for which data was being provided by the deputy commissioner of the district concerned. The meeting was also informed of the proposed shares in tobacco development cess funds for the district of Swabi, Mardan, Charsadda, Buner, Nowshera, Malakand and Mansehra of the years 2016-17 and 2017-18.

CM Mahmood in principle approved the proposed evaluation of TDC Funds for various constituencies. However, on the proposal of MPA of the relevant districts, he directed for release of the funds after revision of the facts and figures. He also directed for reviewing the data for the year 2018-19 in backdrop of the new delimitations of the concerned constituencies.

Mahmood said that provincial government was streamlining all the sectors so that various matters and things were made clearer and transparent and institutions worked in the right direction under its ambits of better service delivery. He said that this would also greatly contribute in safeguarding the rights of the people and ensure transparent and judicious resources.

He assured that positive progress and changes could be seen in the coming budget in this regard. The meeting was proposed that shares of the concerned districts might be provided on tobacco prices and rates instead of its produce as there was difference of rates and quality of tobacco crops in different districts.

CM Mahmood said that provincial government will set up a marble city in Buner so as to exploit the local resource for generating economic activities and creating employment opportunities.

Talking to a delegation of Buner that called on him at CM House Peshawar led by MPA Riaz Khan, the chief minister also assured of providing piped gas to the underdeveloped district.

He said that he was aware of the problems and grievances of the people of the backward districts as he belonged to a backward area.

The 200-member delegation comprised elected local government representatives, Nazmeen, Insaf Students Federation (ISF), Insaf Doctors Forum (IDF) and PTI youth officer bearers and workers. On this occasion former Tehsil Councillor from Buner Dr Abdullah announced joining PTI along with dozens of his supporters and family members. The CM welcomed the newcomers to the PTI fold and put party caps on their heads.

FARMERS BEGIN 21KM MARCH OVER WATER CRISIS IN BADIN

A Correspondent Updated March 04, 2019

BADIN: Charged farmers marched on roads in Tando Bago town and staged a demonstration before embarking on 21-kilometre march on foot to Badin town on Sunday to draw government's attention to nagging water crisis in the district.

Leaders of farmers' organisations and Save Badin Action Committee told journalists that their share in water was being stolen by influential landlords in connivance with officers of irrigation department and Sindh Irrigation and Drainage Authority.

They said that despite continuous protest in different towns of the district no responsible officer of the Sindh government had bothered even to talk to them.

They would devise future course of action on Monday in Badin where they would stage a big show with thousands of farmers participating from across the district, they said.

SCA WORRIED OVER DELAY IN WHEAT PROCUREMENT

The Newspaper's Staff Correspondent March 04, 2019

HYDERABAD: The Sindh Chamber of Agriculture (SCA) has expressed concern over delay in establishment of wheat procurement centre in the province.

At a meeting held here on Sunday under chairmanship of Kabool Mohammad Kathian, the SCA office-bearers observed that harvesting of wheat had already started in the province, but procurement centres were not opened yet by the food department.

The meeting also demanded that wheat support price should be fixed at Rs1,500 per 40kg, complaining that new crop was reaching market in the absence of procurement centres.

It urged the Sindh government to provide gunny bags to the wheat growers who had harvested the crop. It also reminded the Sindh government that growers had paid cost of tractors under a subsidy scheme and such amount was deposited in Sindh Bank which was drawing interest on it.

But one year had passed and growers failed to get tractors, it added.

It called for provision of tractors to growers who had paid the cost. It also demanded of the Sindh government to ensure payment of Rs42 per maunds of sugar cane crop of this year to farmers. The

SCA said conditions in Sabzi Mandi of Hyderabad and Karachi should be improved where traders faced serious difficulties.

It said that wholesale vegetable markets were faced with poor civic conditions in rains and this needed to be improved.

The meeting was attended by SCA general secretary Zahid Bhurgari, vice president Nabi Bux Sathio, Mohammad Khan Sarejo and others.

POTATO GLUT SHOWS HOW SMALL-CROP FARMERS ARE SUFFERING

From the Newspaper Updated March 04, 2019

This year's potato glut has once again exposed how vulnerable our growers of small crops are to market forces.

When a Karachi-based superstore offered potatoes for Rs2 per kilogram to lure customers in mid-February, many thought it was a typo. However, it turned out that the store was really selling potatoes at that rate. It is a separate story, though, that it doubled the rate after a few days — and began selling the same potatoes after 10 days for Rs70 per 5kg bag. The same superstore, as part of a sales promotion deal for customers, had also offered other vegetables at unbelievably low prices: 2kgs of cabbage, for example, were available at a token price of just Re1.

Apart from the dark secrets of mega marketing schemes of our superstores, the fact that stands out here is this: the potato crop has been large and, with sufficient carryover stocks of the past year, the market is witnessing a potato glut. The same is not true for all other vegetables. But generally speaking, supplies of some of other vegetables have also exceeded demand. So their prices have crashed.

Larger production of vegetables has, meanwhile, resulted in 41 per cent increase in export volumes and 9.8pc growth in foreign exchange earnings in the first seven months of this fiscal year, according to the Pakistan Bureau of Statistics.

The absence of a modern system to ensure fair play in markets of perishable items creates erratic patterns of small-crop production

In July-January, Pakistan exported more than 507,000 tonnes of vegetables, up from 359,000 tonnes in the year-ago period. Export earnings, however, rose to just $115.5 million from $105.2m. But within this group, exports of potatoes have not increased, thus deepening its glut. But potato exports are yet to pick up pace as the country has exported only about 250,000 tonnes of them in the last seven months.

According to recent media reports, this year's crop size is huge — 4.5m tonnes — against the maximum projected domestic consumption of 3.75m tonnes.

However, regardless of a few sales promotion schemes being offered here and there, a vast majority of the consumers of vegetables gets little benefit of the price crash. They have got some benefit only in the case of potatoes whose market prices range between Rs15 and Rs20 per kg in most of Karachi markets, down from the last year's Rs25-Rs30 per kg.

It is difficult for consumers to realise how our potato farmers have suffered this year with the wholesale prices not even covering half of their cost of production.

The problem with our food crops is that for decades the country's political elite has pampered wheat and sugar cane crops, paying little attention to equally important two other major crops — rice and maize — and neglecting almost all minor crops, including pulses, oilseeds and vegetables. Successive governments have spent hundreds of billions of rupees in subsidies on wheat and sugar cane for cultivation and production of the crops and local and foreign sales of wheat grains or sugar.

Not a fraction of that amount has been spent on the promotion of minor food crops.

Another problem is that in the absence of a national action plan for promoting minor crops, inter-provincial coordination for the production of these crops has become difficult. Each province continues to facilitate cultivation of minor crops on its own depending upon local factors.

Every year, one or two minor crops experience a glut-like situation due to broken supply chains and lack of coordination in inter-provincial movements of these crops. Sometimes it is potato, sometimes tomato, sometimes cabbage or green or red chilli. Farmers of these crops get little or no support from the government and have to dump their produce at the rates that don't even cover the cost of output.

As a result, those farmers switch over to other crops the next year. And if the switching over takes place on a mass scale, the country's production of certain small crops falls short of its need the very next year or the year after. Unavailability of credible and timely data on the output of vegetables and other minor crops also makes the price discovery system difficult.

In addition to the factors responsible for making rationalisation of the crop size difficult and impeding the pace of diversification of our agriculture base, the absence of a modern system to ensure fair play in markets of perishable items also creates erratic patterns of production of small crops. The establishment of more and more wholesale vegetable and pulse markets in the districts where these crops are grown and the abolition of advance auctions of crops are the two things that must be done. Right now, most of the growers and small sharecroppers of minor crops sell their output to traders-cum-speculators at throwaway prices to repay loans or cover the cost of cultivation.

One reason for doing so is that there are not many wholesale markets within their own districts. In order to avoid the hassle and the cost involved in transporting their produce to faraway markets, they develop a permanent relationship with the traders. These traders lure them into selling their produce in advance at very low rates before the crops are ready. Once the crops are reaped, they transport them to main cities. Consumers in the main cities pay a lot more for vegetables not knowing that the growers sometimes get peanuts for their produce. Last year, many tomato growers in Sindh received not even a fraction of their cost of production.

Just read this paragraph from a Dawn story titled "Too many pitfalls, not enough profit" of Nov 12, 2018: "A few days ago, on a visit to the Dodo Soomro union council, we saw a small landholder flinging tomatoes in a nearby drain. When we enquired as to why he was doing so, he said that the rates were so low that he could not even afford to pay the cost of transport required to get the crop to market. He decided it would be better to just throw the produce instead." — MA

NO TARGET FOR WHEAT PROCUREMENT

Mohammad Hussain Khan Updated March 04, 2019

WHEAT harvesting has commenced in the lower Sindh region but the provincial government has not yet fixed a procurement target for this year's (2018-19) wheat crop.

Sindh is presently said to have a million tonne of carry-over wheat from 2017-18 which is being released to flour mills and chakki owners. Last year the Sindh government had fixed a wheat purchase target of 1.4m tonnes which was met by the food department.

The federal government has allowed the export of 0.5m tonnes of carry-over wheat from last season.

According to Sindh food officials, the province is finalising the export of around 150,000 tonnes of wheat while around 200,000 tonnes will be released to flour mills and chakki owners. This will deplete overall stocks to around 700,000 tonnes by the time the new crop's procurement starts.

Of total wheat production, Sindh usually contributes around 13 per cent in area sown and around 14.7pc in national production. The province's average yield per acre in 2017-18 was recorded at 32.9 maunds as per estimates of the provincial agriculture department.

Given the gradual rise in the flows of the river Indus, irrigation water availability has lately improved, rekindling hope among farmers of an increase in grain formation as well as per acre productivity

Punjab remains the main producer of the staple food with a 74pc contribution in total annual production. The remaining 12pc is jointly produced in Khyber Pakhtunkhwa and Balochistan.

Sindh missed its wheat sowing target of 1.15m hectares by 11pc this fiscal year owing to water shortages, while last year as well only 3.6m tonnes of crop were produced against a production target of 4.2m tonnes.

Given the gradual rise in the flows of the river Indus, irrigation water availability has lately improved at the province's barrages. The improved flows, coupled with recent rainfall, have rekindled hope among farmers of an increase in grain formation as well as per acre productivity.

The lower Sindh region has an early sowing and harvesting trend for crops. Mirpurkhas has started wheat harvesting. Growers in the area are selling their produce at Rs1,150/40kg to traders against a support price of Rs1,300 in the absence of procurement which will begin around April.

Growers who cultivate early are hard-pressed to sell their crop to both traders and middlemen, and often face exploitation. They have to cash in on irrigation water flows and sell their crop to middlemen who have loaned them inputs for cultivation. One could say these farmers mortgage their crop to market players even before they have cultivated. Traders, for example, buy their crop at low rates after adjusting loans.

Every year fears of flawed wheat procurement haunt wheat producers. They end up as major losers amidst an unholy alliance between food officials and traders or middlemen which deprives genuine small- and medium-farmers of their right to avail subsidy (support price of Rs1,300/40kg) on their wheat crop.

Gunny bags are intentionally denied to such growers while the big landowners get them relatively more easily thanks to their connections. But big landowners usually don't grow wheat as they prefer either orchard farming or growing sugar cane.

"A trader purchases wheat at Rs1,150 per maund and a gunny bag at Rs100 per bag. While he may earn Rs375 on 2.5 maunds of wheat, after deducting the Rs100 of the gunny bag, his actual take home is a mere Rs275," says Nadeem Shah, a wheat grower from Matiari. He's concerned about the government's slackness in starting the tendering process for gunny bags which need at least a month's time to become available.

Further, the Sindh government has been buying plastic gunny bags which, from a farmers' point of view, don't store the produce as effectively as jute bags do.

Sindh has an official wheat storage capacity of 750,000 tonnes. The remaining quantum is kept in rented premises of flour mills. The same goes for Punjab where, according to analyst Ibrahim Mughal, around 3.6-3.8m tonnes of crop is procured every year out of a total production of around 19.6m tonnes.

Providing a subsidy on the wheat crop, according to a former director of the Sindh food authority, remains misplaced. "It reaches neither the farmer nor the consumer. A farmer by and large doesn't avail the subsidy at the time of crop procurement because food inspectors are always at a liberty to buy from the middlemen by providing bags to them instead of the actual growers. Flour mill owners purchase wheat in every season," he said.

PFA DISCARDS 10,000KG DESI GHEE

From the Newspaper March 03, 2019

LAHORE: The Punjab Food Authority (PFA) has discarded 10,000 kilo substandard organic ghee worth Rs10 million of a Sahiwal factory in the market on Saturday.

The action was taken after samples from the market, warehouse and factory failed lab test.

The representatives of the factory requested the PFA to reanalyse their failed samples. The second test also failed to meet safety and quality parameters.

IMPORTS OF PULSES, PALM OIL, TEA INCREASE DESPITE RUPEE DEVALUATION

Aamir Shafaat Khan Updated March 03, 2019

KARACHI: Consumers are paying higher prices for essential food items despite a decline in rates of raw materials and finished goods in world markets during the past seven months of the current fiscal year.

Meanwhile, traders said the rupee devaluation has faded away the impact of falling world prices, thereby increasing the prices of ghee, cooking oil, tea, pulses, and spices.

Many companies and traders had enhanced their buying following drop in world prices of many commodities and raw materials. These stakeholders came out with a price hike on the basis of 15 per cent rupee fall against the dollar in the last seven months. Back in July 2018, when one dollar was equal to Rs121, the exchange rate changed drastically to Rs138/139 in January 2019.

Amid a decline of 8pc in the country's overall food import bill to $3.464 billion in 7MFY19, imports of pulses, tea and palm oil registered a positive growth in terms of quantities.

Import of pulses rose to 563,035 tonnes costing $324 million in 7MFY19 from 408,975 tonnes worth $315m in same period last fiscal. Its average unit price (AUP) fell to $576 per tonne from $771 per tonne.

Wholesalers of pulses had pushed up price by Rs5-10 per kg on falling rupee value against the dollar.

Talking to Dawn, Patron-in-Chief Karachi Wholesalers Grocers Association (KWGA) Anis Majeed said, "Regardless of the prevailing global prices of essential food items, the landing cost increases due to rupee devaluation which is done according to the ratio of increase in dollar value."

"Given that the prices of pulses in world market are going down, the local market price should have fallen accordingly. However, the rupee devaluation has impacted the prices as payment is made in dollars," he added.

Tea imports climbed to 132,784 tonnes ($347n) from 110,147 tonnes ($340m) in 7MFY18, while its AUP witnessed drastic fall to $2,616 per tonne from $3,086 per tonne.

Chairman Pakistan Tea Association (PTA), Shoaib Paracha said tea prices in the wholesale markets increased by Rs50-60 per kg from July 2018 onwards owing to rupee depreciation. He said Kenya tea prices had fallen due to good crop in the last two to three months.

The most notable decline of 74pc and 70pc in quantity and volume was witnessed in dry fruits and nuts — 16,997 tonnes and $27m — owing to massive smuggling of these items via informal channels. However, the AUP climbed to $1,596 from $1,396 per tonnes.

According to the figures of Pakistan Bureau of Statistics (PBS), another major fall came in soybean oil imports to 66,705 tonnes valuing $49m, down by 44pc and 53pc in quantity and value over same period 7MFY18. Soybean oil AUP plunged to $740 per tonne from $891 per tonne.

The AUP of palm oil also declined to $611 per tonne from $745 per tonne. However, its imports surged in quantity by 11pc to 1.8m tonnes but plunged in value by 9pc to $1.1bn. The local industry has expedited its imports to meet higher demand for ghee and cooking oil during Ramazan which will begin in the last week of May. Consumers had witnessed Rs10 per kg/litre jump in ghee and cooking oil prices.

Imports of milk cream and milk food for infants plunged to 48,162 tonnes ($137m) from 52,550 tonnes ($152m) in seven months of the last fiscal year. The AUP of milk products slightly fell to $2,859 per tonne from $2,898 per tonne.

Spices imports rose in quantity to 78,091 tonnes from 77,818 tonnes but its import bill remained low at $86m versus $93m. Its AUP came down to $1,105 per tonne from $1,195 per tonne.

Rice prices soared by Rs15-20 per kg in the last seven months amid a mixed trend in rice exports. Basmati exports surged to 328,374 tonnes ($305n) from 244,040 tonnes ($255m) while other varieties exports fell to 1.791m tonnes ($749m) from 2.034m tonnes ($812n) in 7MFY18.

Sugar prices swelled to Rs62-65 from Rs55 per kg while its exports plummeted to 276,393 tonnes ($82m) from 610,770 tonnes ($227m) in 7MFY18.

The price of various varieties of flour also rose by Rs2 per kg despite the availability of ample stocks from last year and the arrival of new crop in March/April. Wheat exports in 7MFY19 climbed to 468,443 tonnes ($99m) from 173 tonnes valuing $45,000.

PUNJAB AGRICULTURE IT ACT: SC GIVES GO AHEAD FOR RECOVERY OF TAX FROM LAND OWNERS

TERENCE J SIGAMONY | MAR 3RD, 2019 | ISLAMABAD

The Supreme Court has held that Punjab tax authority could recover all due amounts from the owners of agriculture land within a period of two years from the time when the total agricultural income was first assessable, ie, the assessment years of 2012 and 2013. A three-judge bench, headed by former Chief Justice Mian Saqib Nisar, on 8th January after hearing the arguments of all the parties had reserved the verdict, which was released on Saturday.

The verdict authored by ex-CJP Mian Saqib Nisar said where an assessee has not filed his income tax return or has done so without disclosing his agricultural income, the tax authorities are obliged to levy, assess and collect agricultural income tax in terms of the provisions of the Punjab Agricultural Income Tax Act, 1997 (Act) and Punjab Agricultural Income Rules, 2001 (Rules).

The Punjab tax authority (petitioner) had issued recovery notices to the owners of agricultural land (respondents) for recovery of agricultural income tax for the assessment years 2012, 2013 and 2014 under the Act.

The respondents challenged the recovery notices by filing constitution petitions before the Lahore High Court, which were allowed. The Punjab Revenue Department then approached the Supreme Court against the LHC judgements.

The court noted that particularly tax statutes operate prospectively and not retrospectively unless clearly indicated by the legislature. Retrospectivity can only be attributed to a statute where it is made explicit or can be inferred by necessary implication; it cannot be presumed.

The court observed that Section 3B inserted in the Act through the Punjab Finance Act, 2013 by way of amendment in Punjab Agricultural Income Tax Act, 1997 was to apply prospectively. It said that Section 4(4) of the Act read with Rule 14(3) of the Rules, albeit couched in negative terms, clearly allows for the recovery of agricultural income tax for the two years (i.e. 2012 and 2013) prior to the assessment year in which the total agricultural income was first assessable, ie, the assessment year beginning on 01.07.2014.

It was further the case of the respondents that there is a mandatory process under the Act to levy, assess and collect agricultural income tax for a given assessment year which has not been so done by the petitioner, rather the latter has simply issued recovery notices demanding the recovery of agricultural income tax which it is not allowed to do under the law.

The court said that the precise wording of Sections 3 and 3B of the Act are important and need to be considered. The Section 3 provides that there shall be levied, assessed and collected each year a tax in respect of agricultural income of a tax year of an owner at the rate specified in the First Schedule.

However, according to Section 3B, notwithstanding the provisions of Section 3 of the Act, where any person has declared agricultural income for any assessment year in the return filed under the Income Tax Ordinance, 2001 (the Ordinance) he shall pay tax on such income at the rate specified in the Second Schedule.

The court said where the assessee has himself filed his income tax return in which he has declared his agricultural income, by virtue of Section 3B of the Act, the tax department is not required to levy and assess agricultural income tax and can recover the same by issuing recovery notices directly. “Therefore, we find that the argument of the learned counsel for the respondents that failure to pass an assessment order has deprived the respondents of the right to challenge such order under Section 7 of the Act is unfounded.”

The application of Section 3B of the Act is based upon the agricultural income as declared by the assessee himself in his income tax return under the Ordinance.

The judgement observed that Section 3(1) of the Act which provides that subject to the other provisions of the Act, there shall be levied, assessed and collected each year a tax in respect of agricultural income of a tax year of an owner. Furthermore, according to Section 4(1) of the Act, agricultural income shall be assessed and collected by the Collector in such manner as may be prescribed. “Prescribed” has been defined in Section 2(g) of the Act to mean “prescribed by rules” and Section 11 of the Act states that “the government may frame rules to carry out the purposes of this Act.”

Pursuant to such power, the Rules were framed. Rule 14(1) whereof provides a certain procedure for the recovery of agricultural income tax under the Act. Therefore in the situation where an assessee has not filed his income tax return or has done so without disclosing his agricultural income, then the tax authorities are obliged to levy, assess and collect agricultural income tax (in spite of the presence of Section 3B of the Act) in terms of the provisions of the Act and the Rules.

GLOBAL SUGAR SURPLUS FORECAST FOR 2018-19 REVISED DOWN

RECORDER REPORT | MAR 3RD, 2019 | LONDON

The global sugar surplus is expected to be 641,000 tonnes in the 2018/19 season, down from a previous forecast of 2.17 million, the International Sugar Organization (ISO) said on Thursday. The inter-governmental body said the smaller surplus was mainly due to a downward revision in production forecasts for Brazil and the European Union, although the forecast for Thailand's output was revised up.

Global production in 2018/19 was seen at 178.68 million tonnes, down from a previous forecast of 180.49 million tonnes. The ISO said production forecast for Brazil had been revised down by 1.35 million tonnes and the European Union's forecast was lowered by 800,000 tonnes. Thailand's projection was raised by 800,000 tonnes.

India's forecast was unchanged at 32.0 million tonnes but the ISO said that "if our forecast proves over-optimistic, a reduction in India's actual output may have significant consequences for the global picture." Global consumption was seen at 178.04 million tonnes in 2018/19, a rise of 1.63 percent from the prior season, marginally below the 10-year average of 1.67 percent. The ISO said its assessment pointed to a well-balanced supply and demand although stocks remain high.

CM ORDERS MASTER PLAN FOR PESHAWAR UPLIFT

Bureau Report October 03, 2018

PESHAWAR: Khyber Pakhtunkhwa Chief Minister Mahmood Khan on Tuesday asked the planning and development department to come up with a master plan for the development and beautification of Peshawar and said the government would ensure the early yet effective resolution of the people's problems, especially water, sanitation and traffic's.

He also ordered the completion of mega projects on priority basis.

The orders were issue during a meeting held here to finalise the annual development programme for financial year 2018-19.

The meeting was attended by provincial ministers, advisers and special assistants to the chief minister, chief secretary, additional chief secretary, administrative secretaries and relevant officers.

A statement issued here said the projects prioritised for completion included Swat Motorway, Peshawar Bus Rapid Transit, Chashma Right Bank Lift Canal, Gomal Zam dam, development of sports grounds, and upgradation of 200 higher secondary schools in the province.

The chief minister ordered the completion of ongoing development schemes and the execution of the new demand-driven public welfare projects on need basis saying the government will provide funds for them.

He asked the heads of public sector institutions to ensure proper utilisation of resources and speedy completion of schemes. Mr Mahmood underlined the need for the capacity building of employees of the mines, minerals and tourism projects to attract investment.

He said the departments should focus on priority areas. The statement said 135 of the total 1,749 projects had been completed, while work on others was in progress.

The chief minister called for the strengthening of the province's fiscal base for the implementation of the ruling PTI's development plan.

He also asked the relevant authorities to plead the province's case for net hydel profit and other payments well with the federal government. The participants approved the opening of new government schools in rented buildings.

They also reviewed progress on the Reshakai Economic Zone and allowed the acquisition of additional 1,600 acres of land for the zone.

PUNJAB CM DIRECTS AUTHORITIES TO INTRODUCE LAW ON ANIMAL HEALTH

By Our Correspondent Published: March 2, 2019

LAHORE: Punjab Chief Minister Sardar Usman Buzdar has directed the authorities concerned to introduce animal health act for the promotion and development of the livestock sector in the province.

He issued the directives while presiding over an important meeting at his office on Friday in which the performance and future roadmap of livestock and transport departments were reviewed.

The meeting decided to introduce animal health act for the promotion of livestock sector. The target of registration of one million animals was fixed and the meeting was informed that the registration of animals would help produce a better breed which would enhance milk and meat production. It was also decided in the meeting that crossbreed animals would be produced to get enhanced production of milk and meat by adopting IVF technology.

The meeting directed authorities concerned to quickly complete the vaccination process for saving animals from different diseases in Bahawalpur.

Addressing the meeting, the chief minister said poultry project would be expanded to alleviate poverty and it would generate lots of employment opportunities. He said Punjab has a tremendous potential of increased production of milk and meat and the economy would also be strengthened due to the development of livestock sector on modern lines.

"There is a dire need to give attention to research and development in the livestock sector," he added.

Buzdar said livestock would be promoted to wriggle the rural folks from the quagmire of poverty as livestock plays the role of an engine for the betterment of the national economy. "We will have to adopt the latest technology to increase the production of milk and meat and the livestock farmers will be informed about the latest methods of livestock farming," he added.

The heads of Punjab Agriculture and Meat Company and Punjab Livestock and Dairy Development Board gave detailed briefings about the steps taken for the development of the livestock sector. Meanwhile, the heads of Punjab MassTransit Authority and Lahore Transport Company also gave briefings about the transport department and the latest transport system.

The chief minister said the government was working hard to provide the best transport facilities to the citizens and latest transport service would also be introduced in backward areas of the province. Provincial ministers Hashim Jawan Bakht, Sardar Hasnain Bahadur Dreshak, Jehanzeb Khichi, Provincial Advisor Faisal Jabwana, additional chief secretary, administrative secretaries and other high officials were also present on the occasion.

SAY NO TO GM MAIZE

Zubeida Mustafa March 01, 2019

THERE is bad news and there is good news for our environmentalists, agriculturalists, healthcare givers and all those who care for the welfare of Pakistan. First, the bad news.

In January, the Prime Minister's Office announced that Cargill, the global food and agricultural producer with an annual revenue of $114.6 billion (2018), will be investing $200 million in Pakistan in the next two to five years. This announcement came after two top-ranking executives of Cargill met Prime Minister Imran Khan. It seemed innocuous, at least to people who know little about biotechnology giants.

One of them, Monsanto (now merged with Bayer), fathered the genetically modified organism (GMO) in 1983 which did terrible damage to numerous crops and farmers all over the world. As a result, we saw a spate of high-profile lawsuits in which the company admitted to having bribed officials abroad. At least 35 countries have now banned GMOs.

Obviously our political leadership is not well informed on such matters, nor is transparency its forte. Hence the Cargill heads' meeting with the prime minister and their offer to create a huge number of jobs in Pakistan raised no scepticism in government circles.

Our experience with GM cotton has been disastrous.

But mercifully the Ministry of National Food Security & Research still has men of integrity and knowledge at its helm. It appears they have resisted this move. That has now prompted the American Business Council of Pakistan (representing 64 companies), a leading foreign investors' group, to seek the prime minister's help "to allow commercial cultivation of GM maize". These American companies want the "obstacles" removed that are preventing them from implementing their controversial plans.

The good news is that the Pakistan Kissan Mazdoor Tehreek has issued a press release titled 'Peasants Declare "NO TO GM MAIZE!"' The party has categorically supported the ministry's refusal to grant approval to genetically modified maize in Pakistan. The PKMT's own position on GMOs and the seed companies has been clear for over a decade: they violate farmers' collective rights to seed and will pauperise the small and landless tillers of the soil.

The Seed Association of Pakistan has also "sternly opposed" any commercialisation of GM maize in Pakistan. Civil society is also gearing up to resist any such move which will have a devastating effect on food security as well as agriculture. BT cotton should come as a lesson — that is, if we are willing to learn. Introducing BT cotton proved to be easy sailing in 2010. There was hardly any resistance from those in authority.

The Seed Law was changed by the National Assembly in 2015 to accommodate the seed multinationals. This was done at the behest of the US in spite of the fact that the 18th Amendment was in place and a courageous lawyer, Ahmad Rafay Alam, went to court on behalf of the Kissan Board to challenge its legality as well as the safety of BT cotton. The case has still to be decided.

BT cotton — Monsanto's GM pet project — has proved to be a disaster for the country. Since its debut in Pakistan — by virtue of seeds smuggled from India in 2005 and later sanctioned by the government in 2010, cotton production has been falling. The figures cited have varied from source to source. It has of late been in the range of 10.5m and 11.5m bales. In 2004, cotton production stood at a record high of 14.1m bales (of 170kg each). Contrary to the government's claim, the All Pakistan Textile Mills Association says the weight of the bales is now 160kg each.

For years cotton production has failed to meet the target set by the government. This has adversely affected the national economy as cotton is the major element in the textile sector, the mainstay of Pakistan's exports. BT cotton has also introduced new bugs in the cotton fields requiring greater use of pesticides, produced as can be expected by the biotech companies themselves. With Monsanto monopolising the seed market, nearly 88pc of the area under cotton cultivation is BT. The yield per acre has also fallen. All this adds to the cost of the inputs, causing farmers to switch to other crops.

It is horrifying to think of what the impact would be if maize, which is a thriving crop at present, is handed over to producers of GM maize. Has GM maize been thoroughly tested in our soil and climatic conditions? Without extensive research we cannot assess its impact on human health. We cannot afford to risk a rise in the prevalence of deadly diseases; the pesticide Roundup, which is required to be used, has been declared carcinogenic by WHO. This should be reason enough for the government to resist pressures from the biotech multinationals which are out to destroy our economy.

Let us learn from our own sordid experience of GMO cotton. Let sanity prevail. Besides, we cannot allow our peasantry to be destroyed. It is the backbone of our agriculture.

US WINS DISPUTE OVER CHINA GRAIN SUBSIDIES BEFORE WTO

AFP Updated March 01, 2019

GENEVA: The World Trade Organisation on Thursday sided with Washington in a dispute it filed three years ago over "unfair" Chinese subsidies to producers of wheat and rice.

Back in 2016, the United States alleged that China doled out $100 billion in "market price support" for wheat and rice as well as corn production, above levels agreed at the Geneva-based WTO.

A panel established by the WTO's Dispute Settlement Body to rule on the matter found on Thursday that the grain subsidies provided by Beijing exceeded the accepted level, and that China had "acted inconsistently with its obligations" under international trade rules.

The experts said they had found that each year from 2012 to 2015, China's market price support for wheat, Indica rice and Japonica rice "exceeded its 8.5 per cent de minimis level of support for each of these products."

The WTO panel said it had not considered whether China had also exceeded the acceptable subsidies for corn producers, since it found China had removed the challenged subsidy before the US launched its complaint. Both sides have up to 60 days to appeal Thursday's ruling.

US Trade Representative Robert Lighthizer and Agriculture Secretary Sonny Perdue hailed the ruling in a statement as a "significant victory for US agriculture that will help American farmers compete on a more level playing field".

SINDH GOVERNMENT FIXES SUGARCANE PRICE AT RS 182 PER 40KG, SHC TOLD

RECORDER REPORT | MAR 1ST, 2019 | KARACHI

The sugarcane price of Rs 182 per 40kg for the current crushing season was fixed by taking into consideration the interests of all stakeholders, provincial government told Sindh High Court (SHC) on Thursday. The Sindh government presents its comments in the division bench of the SHC, headed by Justice Muhammad Ali Mazhar, which is hearing a petition of sugar mills against the sugarcane price for the current crushing season.

Sugar mills challenged the provincial agriculture department's notification with regard the fixation of Rs 182 per 40 kgs prices of sugarcane on the contention it should be have been fixed Sugarcane Control Board, constituted on the orders of the court rather than agriculture department.

Additional Advocate General Sindh argued that Article 77 of constitution empowers the parliament in financial matters and in the spirit of said article, power of taking the decision rests with the government under rules of business.

Provincial attorney submitted before the court that consultation with the cabinet for fixation of sugarcane price is only a procedural formality and stated that implementation of the fixed sugarcane price is ensured.

He described the sugarcane prices fixed for the current season appropriate for all the stakeholders as they were consulted before its fixation. The court sought the comments from the counsels of other parties in the petition, filed by sugar mills with the plea to cancel the notification for fixation of sugarcane price.

Meanwhile, a division bench headed by Chief Justice SHC Ahmed Ali M Sheikh observed Voluntary Returns (VR) scheme of National Accountability Bureau (NAB) has badly impacted the system when it resumed the hearing on case related to officials, who were reinstated after benefiting from plea bargain for committing corruption.

The court sought the reports about the reinstatement of Mehdi Shah, Sardar Shah, Zahid Shah and Nazir Shah as well as ordered that details of their corruption should also be submitted as how much they embezzled and deposited in national exchequer under plea bargain clause of accountability bureau.

The court stated that it would announce the order after going through various aspects of this case and said that it has reports that many officials including deputy commissioner are posted on important positions after benefiting from VR scheme.

DRY CONDITIONS TO CURB AUSTRALIA'S WHEAT CROP

RECORDER REPORT | MAR 1ST, 2019 | SINGAPORE

Dry conditions for up to six months in parts of Australia's east coast are set to curb wheat crop yields for a third straight year in the world's No.4 exporter of the grain, a private US-based weather forecaster said on Wednesday. Australia has been grappling with successive years of drought that have wilted crops and left some farmers struggling to stay in business.

Declines in Australian wheat production in the 2019/20 crop year could buoy global prices that on Wednesday struck their lowest in 10 months. "Over the next three to six months we expect drier-than-normal weather in parts of (the states of) Queensland and New South Wales," said Kyle Tapley, senior agricultural meteorologist at Radiant Solutions, formerly MDA Earthsat.

"This is an area of concern as it is already dry," Tapley told Reuters on the sidelines of a grains conference in Singapore. Australia's wheat production fell to an 11-year low during the 2018/19 season, according to the country's chief commodity forecaster.

Output totalled 17.3 million tonnes, down from 21.24 million tonnes a year earlier, the Australian Bureau of Agricultural and Resource Economics and Sciences said in its final tally for the crop. Australian farmers will begin sowing wheat for the 2019/20 season in April.

Top palm oil producers Indonesia and Malaysia are forecast to remain drier-than-normal over the next two to three months, said Tapley. "For Malaysia and northern parts of Indonesia, we expect drier weather which could impact palm oil output towards the later part of the year as there is a lag," he said.

India's June-September monsoon season is forecast to be normal this year, Tapley said. The four-month monsoon season delivers about 70 percent of India's annual rainfall and is key to the success of the farm sector in Asia's third-biggest economy. Meanwhile, Tapley expected weather across much of the northern hemisphere to be normal over the summer.

El Nino weather conditions associated with droughts and flooding have a 50-60 percent probability of developing by May this year, the UN World Meteorological Organization said on Tuesday, but any El

Nino was not expected to be strong. The last El Nino, a warming of ocean surface temperatures in the eastern and central Pacific every few years, occurred from around 2015 to 2016.

FOOD SHORTAGES THREATEN 80PC OF VENEZUELA HOMES

2019/03/01

CARACAS: Eight out of 10 Venezuelan households are at risk of food shortages in the country's economic crisis, a study has found.

The study by three Venezuelan universities indicated that 80 percent of households were "at risk of food insecurity because 90 per cent of the population do not have enough income to buy food," said one of the researchers, Anitza Freitez of Andres Bello Catholic University.

Hyperinflation and shortages of basic foods and medicine have led to a volatile political crisis in Venezuela.

Opposition leader Juan Guaido has declared himself the country's leader in a challenge to socialist President Nicolas Maduro, who has blocked foreign aid shipments from entering the country.

The study released on Wednesday by the Andres Bello, Venezuela Central and Simon Bolivar universities found that half of all households were in a state of what it called "multidimensional poverty."

It indicated that only half of all Venezuelan children were going regularly to school, due to a lack of water, food and transport, or other causes.—AFP

PM TO ANNOUNCE RS 3,500/MAUND INDICATIVE PRICE FOR COTTON

FAZAL SHER | FEB 28TH, 2019 | ISLAMABAD

Prime Minister Imran Khan will announce Rs 3,500 per maund (40kg) indicative price for cotton in the next month with an aim to control speedily declining cotton cultivation area in the country. "The Ministry of National Food Security and Research (MNFS&R) has proposed Rs 3,500 per maund indicative price for cotton and purchase of 500,000 tonnes of cotton from the farmers through Trading Corporation of Pakistan (TCP) and the Prime Minister is likely to announce it in the next month," Minister for MNFS&R Sahibzada Muhammad Mehboob Sultan said on Wednesday.

Speaking at the Senate Standing Committee on National Food Security and Research, Sultan said that fixing of indicative price of cotton would play a vital role in increasing the growing area for cotton crop.

The committee which met here with Senator Muzaffar Hussain Shah in the chair recommended to conduct zoning for identifying areas for different crops. In the absence of zoning and due to many other reasons, the cotton growers are shifting to sugarcane in the country.

Secretary MNFS&R Dr Muhammad Hashim Popalzai informed the committee that currently no law exits for crop zoning in the country. Crop specific provincial ordinances including the Sugar Factories Control Act, 1950, Cotton Control Act, 1966 and Punjab Rice Ordinance 1959 exist, he said, adding that as per 18th Amendment, agriculture is the subject of provincial governments while the MNFS&R is responsible for coordination.

About reduction in cost of production, Popalzai said that cost of production of urea is estimated at Rs 715 per bag. With the addition of Gas Infrastructure Development Cess (GIDC) of Rs 405 per bag, the base price was worked out at Rs 1,120 per bag, he said, adding the price was escalated further to Rs 1,150 per bag with the addition of 2 percent GST (Rs 28 per bag) and advance tax Rs 2 per bag. “We have proposed that with the waiver of GIDC (Rs 450 per bag), the price of urea in the local market will decline.”

He said the government’s 100-Day Agenda specifically catered for lowering the cost of production by increasing per acre yield of major corps like wheat, rice, cotton, maize, and sugarcane. Improvement in the existing cold storage facilities is on the cards to hold agricultural produce if the price crashes to farmer’s disadvantage, he said, adding that steps to be taken to ensure availability of certified seeds, awareness about the use of irrigation water, balanced use of fertilizers, modern technology and agriculture financing, especially for the small farmers.

The committee also expressed annoyance when it was informed that there is no laboratory in the country for checking the quality of staple food and pesticide residue.

Shah said that due to absence of laboratories, Pakistani rice has been rejected and become non-competitive in the international market. A senior official of Pakistan Agricultural Research Council (PARC) said Pakistani rice was rejected due to increase in the Aflatoxin level.

The committee discussed the budgetary proposals of the ministry for the financial year 2019-20. An amount of Rs 19,587.62 million was demanded by the ministry under Public Sector Development Programme (PSDP) for 52 projects, of which 18 are ongoing, 21 are new and 13 projects are under the Prime Minister’s initiative for the next financial year 2019-20.

The project under Prime Minister’s imitative includes national programme for improvement of watercourses in Pakistan, enhancing command areas of small and mini-dams in the arid (barani) areas, enhancement of productivity of wheat, rice and sugarcane, promotion of cage fish culture and cluster development, promotion of trout farming in the northern areas of Pakistan, save the buffalo calf programme, fattening of calf and backyard poultry.

Managing Director Pakistan Agricultural Storage and Services Corporation (PASSCO) Muhammad Khan Khichi told the meeting that the PASSCO did not export 500,000 tonnes of surplus wheat allowed by the government as the provincial governments of Sindh and Punjab had allowed export of the commodity. However, he said that agreement of export of 100,000 tonnes has also been signed.

The meeting was also attended by senators including Najma Hameed, Quratulain Marri, Seemee Ezdi and Hafiz Abdul Karim, and senior officials of the PARC.

https://fp.brecorder.com/2019/02/20190228450533/

SINDH CABINET DECIDES TO EXPORT 5 MILLION TONS OF WHEAT THROUGH OPEN SALE

RECORDER REPORT | FEB 28TH, 2019 | KARACHI

The Sindh cabinet which met here for the second time in a week on Wednesday decided to export five million tons of wheat through open sale, established provincial grid company to construct more than 792 Kv grid stations of renewable plants, and approved the bill of Abdul Majid Bhurgri Institute for Language Engineering. However, it seemed to be reluctant to start procurement of wheat for crop 2018-19.

The meeting was held under the chairmanship of Chief Minister Syed Murad Ali Shah here at New Secretariat. The meeting was attended by Chief Secretary Mumtaz Shah, all provincial ministers, advisers, special assistants and other concerned officers.

The chief minister presented a resolution to condemn violation of Pakistan's airspace by Indian air force. The cabinet also rejected the false and malicious propaganda of India against Pakistan and has resolved that the government and the people of Sindh stand united against any possible Indian aggression. The cabinet also appreciated the well rounded and measured response of Pakistan armed forces against claims and remains committed to defend our great country along with the Armed Forces.

Reservation on procurement: The food department requested the cabinet to set new procurement target of wheat for crop 2018-19, however it proposed a target of 500,000 tons. The department had procured 1.4 MMT wheat during the last crop at a rate of Rs 1300 per 40 kg (Rs3250 per 100 kg). To a question of the chief minister the department told the cabinet that there was net 800,000 tons of wheat surplus with food department which 360,000 tons of last year crop.

The chief minister in consultation with the cabinet members decided to export 500,000 tons of wheat through 'Open House Sale'. A committee was formed under Minister Food Hari Ram and secretary of finance and its members with the task to talk to the exporters and facilitate them for exporting 500,000 tons of wheat.

Most of the cabinet members opposed fresh procurement drive saying that it [procurement] has never given any benefit to the small growers. The purpose of the procurement was to stabilise wheat prices in the market, to encourage small growers and develop some stocks in the food department to intervene in case any emergency or shortage of wheat.

The cabinet members said as a matter of fact the small growers have never taken benefit out of government procurement drive. The government was earning bad name despite spending millions of rupees on wheat procurement and top of this the food owned Rs100 billion debt of commercial banks. Therefore, the cabinet members opposed the new procurement and said 'let the market decide the new rates.'

The cabinet decided to talk to exporters first for export of wheat and then the next cabinet meeting would decide procurement target.

Provincial Grid Company: The energy department presented an item in the cabinet with the request to approve establishment of Provincial Grid Company so that four grid stations of 792 KV of renewable energy could be constructed.

Minister Energy Imtiaz Sheikh and Secretary Energy Musadiq briefing the cabinet said Sindh has already established Sindh Transmission and Dispatch Company (STDC) for evacuation of 100 MW electricity from Sindh Nooriabad Power Company to KE with 95 km long transmission line.

The professional team of STDC has the capacity and capability to operate as provincial grid company. The Provincial Grid Company which would be a part of STDC would construct five projects. They are 220 kV Nooriabad Grid Station & Associated Transmission Lines for wind power projects, 220 Kv Jhimpir Grid Station & associated transmission for wind power projects, 220 kV Gharo Grid Station & transmission line for wind power projects.

Two 132 KV Grid Stations and 132kv transmission line of around 25 km in KWSB K-IV project for supply to pumping stations – I & II. It would provide Battery Storage System (BSS) in all the above grid stations to over the intermittency problem in Renewable Energy Systems.

AMBILE Established: Education & Culture Minister Sardar Shah told the cabinet that with a view to provide for development and advancement of Sindhi language engineering and to bring Sindhi language at par with National and international languages, it is expedient to establish Institute of Abdul Majid Bhurgri Institute for Language Engineering (AMBILE).

The chief minister said the provincial government has filed a review in the Supreme Court for taking back all the three institutions, NICVD, JPMC and NICH returned to federal government. At this stage cancellation of MoU between the NICVD and health department may affect the case. Therefore, he constituted a committee under him with minister health, Advisor law, Advocate general Sindh, secretary law and secretary health to review the legal position. In case the cancellation of MoU was necessary then it would be deemed as cancelled.

SRB: The Sindh Revenue Board (SRB) proposed to levy Sindh Sales Tax on Services Health and Life Insurance, Cable Operators and on contractors and construction services. The chief minister said that at present the overall financial position of the people of the province were not stable. Therefore, these proposals may be placed in the cabinet next time so that these levies could be imposed from the next financial year.

The cabinet also approved Sindh Public Finance Administration Act 2019 under which more financial powers have been devolved with a certain quality to the field and administrative officers.

The cabinet after necessary discussion approved recruitment rules of Provincial Disaster Management Authority (PDMA), Sindh.

The cabinet appointed Advocate Manzoor Hussian Larik as secretary Board of Governors of Law colleges affiliated with Shah Abdul Latif University Khairpur.

CHINA'S TECH FIRMS ARE MAPPING PIG FACES

2019/02/24

As a devastating disease afflicts the country's swine, companies are scrambling to roll out facial and voice recognition and other unproven ways to save them.

A database of every pig's face. Voice scans that detect hogs with a cough. Robots that dispense just the right amount of feed.

Chinese companies are pushing facial and voice recognition and other advanced technologies as ways to protect the country's pigs. In this Year of the Pig, many Chinese hogs are dying from a deadly swine disease, threatening the country's supply of pork, a staple of Chinese dinner tables.

So China's ebullient technology sector is applying the same techniques it has used to transform Chinese life — and, more darkly, that the Chinese government increasingly uses to spy on its own people — to make sure its pigs are in the pink of health.

"If they are not happy, and not eating well, in some cases you can predict whether the pig is sick," said Jackson He, chief executive officer of Yingzi Technology, a small firm based in the southern city of Guangzhou that has introduced its vision of a "future pig farm" with facial and voice recognition technologies.

China's biggest tech firms want to pamper pigs, too. Alibaba, the e-commerce giant, and JD.com, its rival, are using cameras to track pigs' faces. Alibaba also uses voice-recognition software to monitor their coughs.

Many in China are quick to embrace high-tech solutions to just about any problem. A digital revolution has transformed China into a place where nearly anything — financial services, spicy takeout, manicures and dog grooming, to name a few — can be summoned with a smartphone. Facial recognition has been deployed in public bathrooms to dispense toilet paper, in train stations to apprehend criminals and in housing complexes to open doors.

"I like the idea, I like the concept, but I need to be shown that it works," said Dirk Pfeiffer, a professor of veterinary epidemiology at the City University of Hong Kong. "Because if it doesn't work, it's counterproductive."

Facial recognition won't help unless China has a comprehensive database of pig faces to track their movement, he pointed out. Also, facial recognition doesn't help "once the animal is in the slaughterhouse and they chop it into bits."

"How then can you connect the head to the rest of the carcass?" Professor Pfeiffer asked.

Many of China's pig farmers are also skeptical. China is in the midst of closing and consolidating many of its small pig farms, blaming them for polluting the environment. But there are still 26 million small pig farms in the country, representing about half the number of farms, according to the agriculture ministry and experts.

"We will not choose to invest in these things," said Wang Wenjun, a 27-year-old farmer who won a modest amount of fame after he uploaded videos of himself singing to his hogs.

"Unless it's a large-scale pig farm, farms that have just over a couple hundred pigs will not find a use for it."

Broadly, the Chinese government in recent years has endorsed technology on the farm. Its most recent five-year plan, a major economic planning document, calls for increased use of robotics and network technology. In October, the State Council, or China's cabinet, said it wanted to promote "intelligent farming" and the application of information technology in agriculture. In August, Beijing city agricultural officials praised “raising pigs in a smart way” using the A-B-C-Ds: artificial intelligence, blockchain, cloud computing and data technology.

So when African swine fever swept through China’s farms, the country’s technology companies saw an opportunity. The disease has no known vaccine or cure. It can spread through contact between animals or through infected pig products, meaning it can lurk for months in sausages or ham. It doesn’t affect humans, but they can carry it. China has culled nearly a million pigs, set up roadblocks and built fences, to no avail.

There’s a lot at stake. China is the world’s largest pig breeder, with a current population of about 400 million, and its largest pork consumer. The meat is so important that the country has its own strategic pork reserve in the event of a shortage.

The disease could also ripple across borders. It has been found in sausages transported by Chinese tourists in Australia, Taiwan, Japan and Thailand, stoking fears that it could end up in the United States. A prolonged outbreak could cause prices to rise globally.

Government rules to fight the swine fever prevent outsiders from visiting pig farms to see the technology in action, so claims by the companies couldn’t be independently verified. Local media and the companies said several big farms use the systems.

The companies backing the technology say they can help farmers isolate disease carriers, reduce the cost of feed, increase the fertility of sows and reduce unnatural deaths. JD.com’s system uses robots to feed pigs the correct amount of food depending on the animals’ stage of growth. SmartAHC, a company that uses A.I. to monitors pigs’ vital statistics that offers commercially available services, hooks up sows with wearable monitors that can predict the pigs’ ovulation time.

They pitch their technologies as an alternative to the tagging of pigs’ ears, a practice that many farmers find cruel. The tags — which are far cheaper — can be manipulated by humans or fall off if pigs get into fights, they point out.

JD.com’s facial technology can detect if a pig is sick and try to find out why, said a spokeswoman, Lu Yishan. Its system would then notify the breeder, who can then prescribe treatment. The company said that it has put the system into use at a farm in China’s northern Hebei Province that it created with China Agricultural University in Beijing, and that it is for sale to willing farmers.

Alibaba’s system monitors hog activity and allows farmers to track the swine in real time, the company said in a statement. It would then prescribe an exercise plan to improve their health. Its marketing video shows pigs running in the woods and playing with a ball. Alibaba said Tequ Group, a large pig farming company based in the southwestern province of Sichuan, uses the technology. Tequ didn’t respond to a request for comment.

Pig facial recognition works the same way as human facial recognition, the companies say. Scanners and software take in the bristles, the snout, the eyes and ears. The features are mapped. Pigs don’t all look alike when you know what to look for, they said.

“It’s just like how a human face is different from others,” said Mr. He, of Yingzi.

The pigs don’t always cooperate. Yingzi, which introduced its products commercially last year, uses video to capture them in motion.

“You can’t take a single picture of a pig,” said Mr. He, who is trying to add to his database of more than 200,000 pig images. He said his technology, which is being used in a pig farm in the southern region of Guangxi, won’t eliminate swine fever but could help farmers detect it sooner

Not everybody in the pig technology field agrees on approach.

Chen Haokai, the co-founder of SmartAHC, said farmers don’t really need facial recognition. According to Mr. Chen, the cost of trying to map a pig’s face is about $7 versus $0.30 for tagging a pig’s ear. He said his products are used by four pig breeding companies.

“We found that in trying to capture the faces of pigs, the labor cost far exceeds that of tagging,” he said.

Wang Lixian, a research fellow of animal and veterinary science at the Chinese Academy of Agricultural Sciences, is optimistic that the cost of the technologies will drop.

“Right now, these applications may not have reached their desired levels,” he said, “but in the future they will become more and more extensive.”

SC REJECTS PLEAS FOR REVIEW OF SUGAR MILLS RELOCATION ORDER

Nasir Iqbal Updated February 27, 2019

ISLAMABAD: The Supreme Court rejected on Tuesday petitions seeking review of its Sept 13, 2018 order for relocation of three sugar mills from cotton belt districts in southern Punjab to their original sites after dismantling of their machinery.

The industrial units in question — Haseeb Waqas Sugar Mills Limited, Chaudhry Sugar Mills Limited and Ittefaq Sugar Mills — are believed to be linked with the Sharif family.

A three-judge SC bench headed by Justice Sheikh Azmat Saeed had taken up the review petitions filed by Haseeb Waqas Sugar Mills and Ittefaq Sugar Mills against the apex court’s decision to uphold the March 2, 2017 Lahore High Court verdict of shifting the mills from the cotton belt area.

Malik Qayyuum, the counsel for Ittefaq Sugar Mills, argued that the high court had in its decision observed that the sugar mills could apply to the government for the shifting of the industrial units, but the apex court order had no mention of it.

Judge says unchecked cultivation of sugarcane affects water resources, destroys cotton crop

He contended that these mills had been shifted to Bahawalpur from Pakpattan, but when sugarcane was not cultivated how could they take back the mills to Pakpattan again.

At this, Justice Saeed wondered should they pass an order for growing sugarcane in Pakpattan.

When Sibtain Fazli, representing Haseeb Waqas Sugar Mills, said the mills could be set up with the permission of the government, Justice Umar Atta Bandial asked whether the apex court had in its judgment not discussed the matters relating to government policies.

Justice Bandial pointed out that the unchecked cultivation of sugarcane had adversely affected water resources and also destroyed cotton crop in the area, which was a major crop that Pakistan exported.

At a previous hearing on Sept 13 last year, Justice Bandial had stressed the need for giving some incentives to peter out sugar mills from those districts which were known as cotton belt areas but where some sugar mills had massive monopoly.

Justice Saeed observed that everything would start functioning smoothly if the sugar support price was abolished, adding that most of the sugar mill owners were those who decided the subsidy on sugar.

Justice Qazi Faez Isa observed that the owners of sugar mills did have the fundamental rights to shift their mills, adding that sugar mills should be shifted from one location to another in the interest of the country. The prime purpose of the apex court order was not to close the mills but to impose a ban on establishing sugar mills in the two districts.

In its Sept 13, 2018 order, the apex court bench headed by then chief justice Mian Saqib Nisar had held that though the machinery and other industrial equipment would have to be relocated, the buildings in which the sugar mills were installed would remain intact and the appellants could run any other lawful business other than sugar mills.

The main plea of the appellants was to set aside the high court order and allow the petitioner companies to commence function without any restraint.

In 2006, the Punjab government had issued a policy under which neither a new sugar mill could be set up in the province nor could an existing one expand its production capacity. The purpose of the policy was to discourage sugarcane crop in cotton belt areas as the former consumes 18 per cent more water than other crops. It was believed that the relocation of an existing sugar mill would not be covered under the 2006 policy.

Subsequently, petitions were filed in the high court during the hearing of which the then provincial government announced a relocation policy on Dec 4, 2015, allowing relocation of an existing sugar mill but only on the recommendations of a special committee. That policy too was challenged in the high court and was suspended on Jan 4, 2016.

While the operation of the relocation policy was suspended, one of the sugar mills decided to relocate its existing unit to Rahim Yar Khan with an impression that since the relocation policy had been suspended, there was no requirement for the mill to seek permission from the Punjab government for relocating the existing facility.

The petitioners believed that relocation was not in contravention of the 2006 policy since it applied only to setting up of new mills or expanding the production facility of the existing mills in Punjab as neither new mills were set up nor the size of the existing facilities expanded.

The appellants believed that the 2006 notification did not impose restriction on relocation of the existing sugar mills since such relocation would leave the total crushing capacity installed in the province unchanged. They believed that at the time when the mills were established in Pakpattan district, there was an average sugarcane cultivation of 50,000 acres, but with the passage of time the total cultivation reduced to 8,000 acres during 2013-14.

Due to decreasing availability of sugarcane in the area, the petitioner mills were forced to function below their available capacity which constrained their business viability. Contrary to the situation in Pakpattan, Bahawalpur has shown huge growth in sugarcane cultivation and at present approximately 400,000 acres are under sugarcane cultivation.

MURAD ORDERS FOOD AUTHORITY TO INTENSIFY CHECKING OF EATERIES

Habib Khan Ghori February 27, 2019

KARACHI: Sindh Chief Minister Murad Ali Shah said on Tuesday that the recent incidents of killing of people in the metropolis, including of young medical student Nimra Baig and death of five siblings, were quite painful.

The CM presided over a meeting to review the law and order situation here with specific reference to the incidents of Malir building collapse, killing of three labourers from Bajaur in Larkana, Irshad Ranjhani murder case and encroachment of forest land and properties of Hindu community.

“We have to take necessary measures to stop such incidents and need to strengthen the Sindh Food Authority,” he said referring to the death of five siblings and their aunt at a room in Qasr-i-Naz on Feb 22.

IGP given two days to complete and submit report in JST leader’s murder case

Karachi Commissioner Iftikhar Shallwani briefed the CM about the incident and said that the lab reports were being awaited.

The CM ordered Chief Secretary Mumtaz Ali Shah to further strengthen the Sindh Food Authority and direct them to keep testing kitchens of restaurants and eateries.

The CM said that the killing of an innocent final-year MBBS student, Nimra, was quite painful. Mr Shah directed Inspector General of Police Dr Syed Kaleem Imam to conduct a thorough inquiry into the incident and also start necessary training of police regarding how to deal with criminals at public places.

He also asked the IGP to issue necessary instructions to all police ranges and zones to improve law and order in their respective areas.

Talking about Malir building collapse, the chief minister was told that the building was constructed without any approved plan.

All the agencies — the provincial disaster management authority (PDMA), Karachi Metropolitan Corporation, Rangers, police — rushed there for starting a rescue operation and it created some problems in the rescue work.

The chief minister directed the chief secretary to develop a system under which only one agency should carry out the rescue operation.

He also issued directive for the proper training of PDMA rescue crew.

Regarding Ranjhani's murder case, the chief minister was told that the case was under investigation from all angles, including personal enmity, robbery attempt or any other reason.

The CM asked the IGP to complete the investigation process within two days and submit a report to him.

Ranjhani was a local leader of the Jeay Sindh Tehreek (JST) who was shot dead by a union committee chairman in Malir.

The CM also directed the police authorities to support the district administration to get vacated forest lands and the lands and other properties of Hindu community members occupied by some people.

He said out of 70,000 acres of forest land some 25,000 acres had already been vacated. The forest department needed police force to get vacated the remaining land, he added.

Referring to the complaints of some members of the Hindu community about illegal occupation on their lands, the chief minister directed the district administration to get their properties vacated and hand them over to their legal owners.

Joining via a remote video link, the DIG Larkana briefed the CM about killing of three labourers.

He said that several suspects had been arrested, but the main culprits were still at large.

Also, Karachi police chief Dr Amir Shaikh gave the CM a briefing on the situation of law and order in the metropolis.

The chief minister directed him to further focus on street crime, which was still a threat to the peace of the city.

IRAN BUYS INDIAN SUGAR FOR FIRST TIME IN FIVE YEARS TO OVERCOME U.S. SANCTIONS

Madiha Shakeel February 26, 2019

MUMBAI: Indian traders will export raw sugar to Iran for March and April delivery, five trade sources said, the first Indian sugar sales to Tehran in at least five years as Iran struggles to secure food supplies under sanctions imposed by the United States.

Under the sanctions, Iran is blocked from the global financial system, including using U.S. dollars to transact its oil sales. Iran agreed to sell oil to India in exchange for rupees but it can only use those rupees to buy Indian goods, mainly items it cannot produce domestically.

Trading houses have contracted to export 150,000 tonnes of raw sugar for shipments arriving in March and April at $305 to $310 per tonne on a free-on-board basis, the trade sources told Reuters this week.

"Oil payments have piled up in UCO Bank. Iran is keen to utilize the payments to buy sugar and other food items," said one of the sources, a Mumbai-based dealer with a global agricultural trading firm, who asked not to be identified as he was not authorized to speak to media.

Iran's state buyer, the Government Trading Corporation (GTC), purchased the sugar to ensure ample supplies in the coming months, said a second source, a Mumbai-based exporter. Iran usually buys sugar from Brazil, the world's biggest producer and exporter of the sweetener.

Cargill, Bunge and other global traders have halted food supply deals with Iran because the new U.S. sanctions have disrupted the banking systems used to settle payments, industry and Iranian government sources said in December.

Iran is paying a premium of as much as $7 per tonne compared to other buyers as traders are anticipating a risk of a delay in payments, said a third source, also based in Mumbai, who did not want to be identified because of the sensitive nature of the U.S. sanctions.

The exports will help reduce swelling sugar inventories in India, the world's second-biggest sugar producer, but could weigh on global prices that have risen 8.9 percent so far in 2019 to 13.1 cents per pound as of Monday.

BUZDAR ANNOUNCES OVER RS 2 BILLION FOR DRIP IRRIGATION SYSTEM

MUHAMMAD SALEEM | FEB 27TH, 2019 | LAHORE

Announcing the allocation of over Rs two billion for drip irrigation system and provision of certified cotton seeds to improve the cotton production, Punjab chief minister Sardar Usman Buzdar on Tuesday said that innovative programmes will be launched to increase agri-productivity and to help enhance the income of the farmers.

The CM chaired a four-hour long meeting at CM's office, here on Tuesday in which the performance and future roadmap of agriculture, food, revenue, forest and wildlife departments were reviewed in detail.

Sources disclosed that the CM desired to extend all-out benefits to the farming community to help improve their living standard.

He called for facilitating the farmers for promotion of agriculture sector.

The meeting also decided to devise a comprehensive programme for promoting hatchery in the province. A pilot project will also be devised for the production of shrimps.

Addressing the meeting, the CM said that subsidy will be given for certified cotton seeds while sale of unpacked seeds will be banned. He also directed that action should be initiated against the production and sale of spurious pesticides. The farmers will be facilitated for sowing sunflower, olives and canola and special measures will also be taken for increasing the production of oil-seed crops. In this regard, the farmers will be given subsidy, he added.

He said that Punjab government has launched crops insurance adding that its target should be achieved within the given timeframe. A comprehensive plan of wheat procurement should be devised for the current year, he added.

The CM directed that the Cabinet Committee should be constituted for upcoming wheat procurement campaign and this committee would prepare necessary monitoring mechanism. He said that trees plantation campaign should be made a success at every cost and directed that the detail of saplings planted under the campaign should be provided to him. He expressed the displeasure over planting less number of trees in DG Khan and sought a report from the Secretary Forests in this regard.

The CM maintained that Punjab has a tremendous potential of fish and shrimp production and added that a 'Fish Health Lab' will also be established.

The meeting also deliberated upon the proposal of giving soft loans to the farmers for promoting cage fish farming.

He said that cage fish farming will help generate new job opportunities. He also approved the pilot project of computerization of urban lands. Under the pilot project, the urban lands record will be computerized. He directed that provision of land records should be ensured to the overseas Pakistanis through their respective embassies.

Provincial Minister Agriculture Nauman Langrial, Minister for Forests & Fisheries Sabtain Khan, Special Assistant for Food Khurram Khan Leghari, Special Assistant for Forests and Fisheries Amir Muhammad Khan, Senior Member Board of Revenue, Secretaries of Agriculture, Food, Forests & Fisheries departments, Secretary (Implementation) to CM, Secretary (Coordination) to CM, DG Punjab Land Record Authority, Head of Special Monitoring Unit and senior officers attended the meeting.

Moreover, members of National and Provincial Assemblies from various districts met CM Sardar Usman Buzdar and discussed issues pertaining to their respective constituencies.

Talking to them, the CM said that PAF falcons have foiled the coward act of the enemy and evil face of India has again been exposed to the world.

PFA SEALS THREE FOOD UNITS ON ADULTERATION CHARGES

RECORDER REPORT | FEB 27TH, 2019 | LAHORE

The Punjab Food Authority (PFA) sealed fat rendering unit, maraba (jam) unit and a sweets factory during a grand operation under the supervision of its Director General Captain Muhammad Usman(R) in Lahore and Sheikhupura on Tuesday.

During the operation, the authority discarded more than 11,000 kilograms of prepared food and raw material including 4,000kg animal's filth (fat), 1600kg substandard oil, 2800kg maraba covered with the fungus layers, 1900kg daal matri, 500kg vermicelli and 280kg matri gram flour.

Muhammad Usman said that PFA raided Zulifqar Fat Rendering Unit in the area of Kot Abdulmalik, and sealed it over finding evidence regarding selling substandard oil after adding oil (extracted from animal's filth) in used oil. He said that extracted oil from animal filth could be used in bio-diesel as per PFA Law.

In another raid, PFA closed down Al-Masomiya Punjab Fruit located at Hiran Minar. DG said that unit was sealed for producing adulterated maraba by adding artificial sweetness, loose colours and chemicals in it. He further said that the team also found an abundance of flies and unavailability of a food license. Food authority also sealed a unit of Qadri Sweets and Nimko for not complying with authority instructions, preparing substandard quality nimko through poor quality spices, daal matri and colours. He told that the use of daal matri is strictly prohibited in eatables.

He has appealed the citizens to prefer homemade food instead of store-bought food items. PFA is taking concrete steps to ensure the provision of safe food as per the vision of Prime Minister.

Meanwhile, the Authority in collaboration with Kinnaird College arranged a seminar on "Stress Management and Diet" for the public awareness concerning the role of food during stress.

PFA Director General retired Captain Muhammad Usman was the chief guest. On the occasion, actor and director Sarmad Khoosat, psychology experts, nutritionists, teachers, students and people from different walks of life have participated. A group of students also presented a drama on stress management and diet which was highly appreciated by participants.

Muhammad Usman said that the excessive use of fast food, lack of exercise and smoking are big reasons behind depression.

He said that PFA is taking difficult decisions (like ban on banaspati ghee, carbonated and energy drinks) for the protection of public health. He added that consciousness has awakened among people regarding choose the best food along with awareness. DG further said that the provision of safe food is the utmost priority of PFA while good foods promote good health and help to protect against chronic disease.

Principle Kinnaird College said that we are ready to collaborate with food authority in order to promote the awareness programs in future. In the end, a yoga session was held for participants to reduce their stress level.

LOCAL FISHERMEN GET POSSESSION OF SEA FISHERIES IN BADIN, THATTA, PA TOLD

Tahir Siddiqui Updated February 26, 2019

KARACHI: The Sindh Assembly was on Monday informed that possession of the sea fisheries at the zero points of Thatta and Badin had been handed over to the local fishermen.

Furnishing a statement and replying to the written and oral queries of the lawmakers from opposition benches during the assembly's Question Hour, Livestock and Fisheries Minister Abdul Bari Pitafi said that the provincial government got the area withdrawn from the occupants to hand it over to the local fishermen.

To a supplementary question, he said that 450 million tonnes fish was exported last year. He said that almost entire catch from the sea and other inland fisheries was exported.

He stressed upon the need of promoting inland fishing and said that the target of the department was to bring scientific and artificial ways of enhancing fishing.

Fisheries minister says 450 million tonnes fish exported in 2018

The minister also urged the need to decrease fish trawling in the sea and said that marine life should be preserved. “We want fish trawling to be decreased so as to ensure controlled fishing from the sea as well as facilitating our local fishermen,” he added.

He said that the department was taking measures to revive marine life in lakes, informing that 800,000 and 600,000 fish were released in Manchhar and Keenjhar lakes, respectively.

Replying to a question from Arif Mustafa Jatoi of the Grand Democratic Alliance, the minister said there was no contract system in vogue for freshwater fishing across the province.

“We have a licence system and only the bona fide fishermen receive the licences under the Sindh Fisheries Rules 1983 and Sindh Fisheries (Amendment) Act 2011,” he said.

Mr Pitafi said that the fisheries department earned over Rs1m against the fee for licences during the past six months.

To another question by Mr Jatoi, he said that the last livestock census was conducted in 2006, while the next census was scheduled to be held in 2016 but could not be held due to multiple reasons, including the devolution of powers under the 18th Amendment to the Constitution.

He explained that conducting the census was the responsibility of the federal government as livestock was in the federal domain before the constitutional amendment.

The minister also mentioned financial constraints in this regard and added that efforts were, however, under way to computerise the livestock data.

Livestock population stands at 22.7m in 2018

The minister said that the estimated population of livestock animals was 15,417,883 in 2008, and the number was estimated to be 22,769,419 in 2018.

He said that the estimated numbers of cows and buffaloes in 2018 were 11,703,622 and 11,065,797, respectively.

The minister also informed the assembly that Tharparkar topped in the number of livestock in the province.

To a supplementary question, he said that he did not have the number of sheep and goats in the province. However, he said that he would furnish the figures soon.

DUTIES, TAXES ON SOYABEAN OIL IMPORT DISCUSSED

RECORDER REPORT | FEB 26TH, 2019 | ISLAMABAD

Ministry of Commerce and local ghee and cooking oil industry on Monday discussed issues of imposition of duties and taxes on import of soyabean oil, duty and tax remission for export (DTRE) scheme and harmonization of standards under World Trade Organization (WTO) regime. A delegation from Pakistan Vanaspati Manufacturers Association called on the Prime Minister's Adviser on Commerce, Textile, Industries and Production and Investment Abdul Razak Dawood here on Monday.

Different issues regarding duty and taxes on import of soyabean oil compliance issues and DTRE facilities were discussed. The issue of harmonizing standards, licensing conformity assessment and traceability procedures adopted by federal and provincial authorities in the light of WTO's technical barriers to Trade agreements were discussed.

The delegation highlighted the different standards for the same product by provincial authorities is creating additional compliance and cost for the business community.

It was agreed that different initiatives would be adopted to divert oil seeds import to local farmers so that Pakistan can become self sufficient in oil seed crop and foreign exchange could be saved. Pakistan is having oil seed production far below its potential that allows massive import of oil seed.

Pakistan annually imports over 2.3 million M Tons of soyabean seed which is used to extract 418,700 M Tons of soyabean oil. The current government is focusing on import substitution in the oil seed sector. The delegation appreciated business reforms package of the current government and expected that it would be very helpful in uptick of exports.

TARGET OF 5 MILLION ACRES SET FOR COTTON CULTIVATION: MINISTER

RECORDER REPORT | FEB 26TH, 2019 | LAHORE

Punjab Minister for Agriculture Malik Nauman Ahmad Langrial has said that the provincial government has planned to attract farmers towards cotton growing and a target of 5 million acres has been set for cotton cultivation. Speaking at the Lahore Chamber of Commerce and Industry, the minister said that quality seed for one lakh acres will also be provided by the government to encourage cotton cultivation because farmers prefer to grow wheat, rice and oil seed due to high profit margins as compared to cotton. Punjab Seed Corporation's Managing Director Waheed Akhter Ansari also spoke on the occasion.

He said the Punjab government attaches priority to the development of agriculture sector to give a boost to the national economy. All possible measures including agriculture marketing, good price of crops for the farmers and facilitation are being taken in this regard, he added.

The minister further said that Punjab Agriculture Marketing Regulatory Authority is in the formation process that would ensure good price of crops for the farmers. During the current year, per acre cotton production will be increased from 18 maund to 25 maund. Farmers are also being encouraged to grow edible seeds that would help save huge foreign exchange, he added. He said the Punjab Seed Corporation is organizing motivational seminars for the farmers.

LCCI President Almas Hyder said the agriculture and economy are vital for each other. Development of the agriculture sector will bring economic issues under control besides getting rid of the IMF. Though Pakistan is an agrarian country but cotton production is not enough to meet the local demands and the country is spending billions of dollars on import of this commodity, he said.

Almas Hyder said that Pakistan has produced around 10 million bales of cotton on average for the last several years against consumption of over 14 million bales. The modern techniques and hybrid seed can help Pakistan produce 30 to 40 million bales of cotton, he said. He also highlighted the issues of sugar industry, flour mills and tractor manufacturers and said that the government must support tractor manufacturers as this sector is vital for agriculture.

PACKAGING MATERIALS: HORTICULTURE EXPORTERS TO GET TWO-YEAR UTILISATION PERIOD

RECORDER REPORT | FEB 26TH, 2019 | ISLAMABAD

Exporters of horticulture products would be granted maximum utilisation period up to 24 months of packaging materials to be consumed in finished products, ie, horticulture products to be exported under the Duties and Taxes Remission for Export (DTRE) scheme. The Federal Board of Revenue (FBR) has issued SRO 143 (1)/2019 to amend Customs Rules, 2001 here on Monday.

According to the Customs Rules 2001, provided that the utilisation period of packaging materials for horticulture products shall be 24 months. Provided further that the said period may be extended by the chief collector of respective jurisdiction in cases of exceptional circumstances and in case of extension such fresh securities as mentioned in rule 300 covering the extension period shall be obtained.

Provided further that the said period may be extended by the chief collector of respective jurisdiction in cases of exceptional circumstances and in case of extension such fresh securities as mentioned in rule 300 covering the extension period shall be obtained.

Under the DTRE rules, the input goods acquired shall be utilised in the manufacture and export of output goods within specified months from the date of approval of DTRE application. Provided that the said period may be extended by the chief collector of respective jurisdiction in cases of exceptional circumstances and in case of extension such fresh securities as mentioned covering the extension period shall be obtained.

The FBR has also decided to empower the collectors of customs to uphold the previously determined input-output ratios without sending it to IOCO. Provided that if there is no change in previously determined input and output ratio, the regulatory collector shall uphold the previously determined input-output ratios without sending it to IOCO. Provided further that the regulatory collector may grant provisional DTRE approval pending receipt of response from lOCO or, as the case may be, EDB in this behalf. Such provisional approval shall not in any case be delayed beyond three days after expiry of the due date of receipt of response from IOCO or, as the case may be, EDB. Provided also that quantity equivalent to hundred percent capacity of the producing or manufacturing unit may be approved provisionally by the regulatory collector, as applied by DTRE user, however up to fifty percent quantity may be allowed to be used by the time lOCO or Engineering Development Board (EDB) determines output and input ratios.

According to the FBR, IOCO or, as the case may be, EDB upon receipt of a reference from the regulatory collector, shall determine input-output ratios and wastages, as may be deemed appropriate, and forward their findings to the regulatory collector within a period of thirty days, or such shorter period as may be specified by the regulatory collector in any specific case: Provided that the regulatory collector may grant provisional DTRE approval pending receipt of response from IOCO or, as the case may be, EDB in this behalf. Such provisional approval shall in any case not be delayed beyond three days after expiry of the due date of receipt of response from IOCO or, as the case may be, EDB: Provided further that quantity approved provisionally by the regulatory collector shall not exceed twenty-five per cent of the quantity applied by the exporter or twenty-five per cent of the capacity of the producing or manufacturing unit, whichever is less.

In case the IOCO or, as the case may be, EDB fails to forward their findings to the regulatory collector within the prescribed period, the input-output ratios and wastages, as determined provisionally, by the regulatory collector shall be deemed to be final till such time that the regulatory collector revises them upon receipt of the aforesaid report at some later stage or for any other reason to be recorded in writing: Provided that no revision shall be made beyond the expiry of utilisation period of input goods as mentioned in rule 305.

Provided further that the regulatory collector may grant provisional DTRE approval pending receipt of response from lOCO or, as the case may be, EDB in this behalf. Such provisional approval shall not in any case be delayed beyond three days after expiry of the due date of receipt of response from lOCO or, as the case may be, EDB. Provided also that quantity equivalent to hundred percent capacity of the producing or manufacturing unit may be approved provisionally by the regulatory collector, as applied by DTRE user, however up to fifty percent quantity may be allowed to be used by the time lOCO or EDB determines output and input ratios.

SFA SEALS AND FINES A DOZEN EATERIES IN HYDERABAD

By Our Corresponden Published: February 26, 2019

HYDERABAD: In a rare action in Hyderabad, Sindh Food Authority (SFA) sealed and fined nearly a dozen restaurants and eateries on Sunday night in the two food streets of the district. The SFA Deputy Director Imtaiz Ali Abro told The Express Tribune that six outlets were fined and four were sealed because they did not comply with the authority’s standards of the authority.

“We sealed the restaurants because they were selling expired food items,” he informed. The sealed outlets include Rakabi restaurant, Chai Shistam, Indus Fish point and Breeze Fish Point, all of which are located on Autobahn road. The authority also noticed a lack of pest management in the hotels.

Abro, however, said the sealed outlets can be reopened within 24 hours, “Provided they submit to us in writing that they will meet the SFA’s standards and, subsequently, our team verified that the standards had been met”.

According to him, the authority imposed fines of around Rs450,000 on eateries. The leading restaurants of Hyderabad like Royal Taj and Lal Qila, besides Khan Barbecue, New Salateen Hotel and two others were fined. SFA Director General Amjad Ali Laghari headed the raiding teams during the inspection.

UREA SALES FALL 21% AS SOWING SLOWS DOWN

By Our Correspondent Published: February 26, 2019

KARACHI: Urea fertiliser sales dropped 21% on a month-on-month basis in January 2019, driven down by the seasonal effect as crop cultivation slowed down in the month compared to December 2018.

On a year-on-year basis, fertiliser sales, however, rose 5% to 564,000 tons compared to January 2018.

“Demand for fertiliser for new crop plantations is always high in December as compared to January, when sowing slows down,” remarked Mahmood Nawaz Shah, an office-bearer of the Sindh Abadgar Board and CEO of Shah Agricultural Products.

Company-wise, urea sales of Fauji Fertiliser Company (FFC), Fauji Fertiliser Bin Qasim Limited (FFBL) and Engro Fertilisers decreased 12%, 80% and 39% respectively. “FFBL’s production dropped sharply because its plant remained shut for annual maintenance,” said Shankar Telreja, an analyst at Topline Securities.

However, sales of Fatima Fertiliser rose 100% on a yearly basis mainly on the back of resumption of production by Dawood Hercules, according to Taurus Securities.

In the case of di-ammonium phosphate (DAP), domestic sales of Engro Fertilisers rose 1.12 times year-on-year whereas sales of FFC and FFBL declined 80% and 64% respectively.

On a monthly basis, the urea inventory came down 59% to 71,000 tons, which included 11,000 tons of imported urea with National Fertiliser Marketing Limited (NFML), said Taurus Securities. DAP stocks stood at 488,000 tons.

“Fertiliser demand varies according to the emerging situation in Pakistan’s agriculture sector,” said Shah. “This is the wheat harvesting season, which is being collected in isolated areas. By the second week of March, its pace will increase.”

In April and May every year, new crop sowing begins, which is expected to give a boost to fertiliser offtake in the next couple of months. However, the country is facing water shortage and in the last sowing season farmers got water supply late, which resulted in delayed cultivation of different crops.

INDONESIA GRANTS MARKET ACCESS TO PAKISTAN’S 20 NEW PRODUCTS

By Our Correspondent Published: February 26, 2019

ISLAMABAD: Indonesia has issued a notification for the correction of Indonesia-Pakistan preferential trade agreement (PTA) by offering immediate market access for 20 new products of Pakistan's prime interest.

The priority products include mangoes, broken rice, ethanol, tobacco, yarn and fabric, home textile, terry towel, apparel and knitwear. A memorandum of understanding (MoU) to amend the agreement was signed between the two countries during the visit of Indonesian president in January 2018.

Following this, a meeting was held between the Indonesian minister for trade and Pakistan's Commerce Secretary Younus Dagha on the sidelines of Shanghai Expo in 2018.

Dagha highlighted the non-tariff barriers imposed on Pakistan's agricultural products by Indonesia. "After sustained efforts of the Ministry of Commerce, Indonesia has finally offered unilateral market access for Pakistani products," said a statement issued by the Ministry of Commerce on Monday.

The Indonesia-Pakistan Preferential Trade Agreement was signed in 2012, but it failed to help increase Pakistan's exports to the Indonesian market.

Despite the PTA, Pakistan's exports to Indonesia fell after the agreement came into force. Exports came down to $141 million in 2016-17 from $236 million in 2011-12. However, 2017-18 proved to be a good year for Pakistan's exports, when shipments jumped to $296 million, the commerce ministry said.

The balance of trade is highly tilted in favour of Indonesia. At the time of signing the PTA, the total volume of bilateral trade was $1.6 billion, which reached $2.8 billion in 2017-18.

The commerce ministry pointed out that the growth was due to increase in Indonesia's exports to Pakistan, which were at $1.72 billion in 2013-14 and rose to $2.53 billion in 2017-18.

The ministry said it took up the matter with Indonesia's Ministry of Trade during review meetings for the PTA. Three review meetings were held and Indonesia acknowledged the concern over adverse effect of the PTA on Pakistan's exports and agreed to unilaterally grant zero-duty status to 20 products of Pakistan's export interest.

A formal notification for including the additional tariff lines in the PTA has now been issued and it will be effective from March 1, 2019.

In the previous year, Pakistan exported 200,000 tons of white rice and 200,000 tons of wheat to Indonesia. The commerce ministry said it recently managed to get special permission from Indonesia for the export of mangoes as well in the upcoming season.

Traditionally, Indonesia has been one of the leading export destinations for Pakistani kinnow.

RECYCLING POLICIES

Ahmad Fraz Khan Updated February 25, 2019

PUNJAB is turning out to be a prolific writer of agriculture policies. In the last five years it has written three — occasional policy papers are in addition to these elaborate policy documents. None of them, however, have been followed by an implementation plan or financial commitment.

Of the series of policy writing, the first one was inked in 2014 and the second one was notified on June 13, 2018 (it is still available on the official website of the agriculture department).

In 2016, the province constituted the ‘Kissan Commission’. Its sub-committee on policy, headed by then vice-chancellor of the University of Agriculture, Faisalabad Dr Iqrar Ahmad Khan, came up with a policy paper promising further short- and long-term policy documents.

Now, barely eight months after notifying a policy, the Punjab government is at it again. Chief Minister Usman Buzdar was supposed to launch the document last Wednesday but the provincial agriculture minister chimed in at the last moment at a flashy function in a local hotel.

Interestingly, the latest policy had been completed on Nov 29, one of the writers claim, and that is why it is still called the ‘Punjab Agriculture Policy 2018’, but the government took another three months to announce it. The last two policies, thus, are only five-months apart.

Barely eight months after notifying an agriculture policy, the Punjab government is at it again. Ideally, the new government should have come up with an action plan

Explaining this policy rush one of the writers, who did not want to be named, says that the third document is just an extension of the second one with a few slight changes — some additions of PTI-manifesto points — with the rest remaining unchanged.

“In fact, the PTI, when it came to power conveyed two preferences to the writers of the document. It wanted a document with the PTI seal and prepared within its first 100 days. The authors were thus left with no choice but to use the available material and previous policy consultative documents to meet the deadline.

“This also explains the massive overlapping in goals, objectives and recommendations: the writers were mostly the same, the ground realities and the input material remained unchanged — the results thus could not be different,” he says.

The difference, however, is that this policy echoes the PTI mindset: stress on rural youth and women, commercial farming, information technology, availing opportunities created by CPEC and targeted subsidies. “It is more of a short-term implementation strategy rather a long-term policy,” claims the un-named writer.

A run through the 53-page document creates a feeling of déjà vu, especially for aware of the previous exercises and policies. The document states the three usual objectives: enhancing economic growth, raising the standard of living and maximising agriculture’s contribution to the national GDP.

In order to achieve the objectives six goals have been set: enhance competitive agriculture, increase food production, raise farmers’ income, conserve (natural) resources, enhance sustainability and induct private sector in the business of value addition.

The document also suggests 10 areas of policy thrust: increase profitability, reduce cost of inputs, introduce regenerative farming, crop diversification, targeted subsidies, farmers’ access to finance, transforming markets, storage expansion, encourage (agricultural) SME and conserve water.

In addition, it charges the government with modernising laws (most of them belong to the 1950s and 60s), improve institutional framework, train human resource, create value-chains, incentivise the private sector, strengthen research, devise mechanisms for direct subsidies to farmers and so on.

Critics, however, think that Punjab has gained enough policy wisdom in the last few decades, as reflected by successive documents both at the federal and provincial level.

Ideally, the new government should have come up with an action plan: how to achieve these goals, identifying where resources will come from, who will spend them and how, where responsibility for the results will lie and how much growth can be expected from these plans?

All policies made the right noises in the past. Where they floundered was in the implementation stage. The PTI has made its theoretical mark through this document, it should now quickly move to the next stage of improving agriculture governance and come up with an action plan, critics suggest.

Before embarking on the action plan, the Punjab government should also get involved with the federal government to ensure policy coordination, suggests a former Punjab secretary agriculture.

The federal government has recently approved the Agriculture and Food Security Policy after three years of effort.

At the draft stage, Punjab had objected to the federal preference of ‘accessible staple supplies to all, especially to the poor, at an affordable price,’ saying it was an effort at pandering to the poor and urban consumers at the cost of farmers — because ensuring affordability means keeping commodity prices artificially low.

The province went ahead and wrote its own policy (in 2016, under the Kissan Commission) to ensure better prices for farmers. With the federal government going ahead and approving its policy and Punjab still sticking to its stance of market prices of commodities, especially staple, there is a need to resolve this disconnect.

“Even if [the agriculture policy] is an extension of the previous policy, it is always good to have a document on the table which can be used to measure the performance of any government,” says Dr Iqrar A Khan, author of the previous policy paper. The need for an action plan, he says, cannot be overstressed.

THE CASE FOR NON-TRADITIONAL CROPS

Amjad Mahmood Updated February 25, 2019

WHILE climate change, poor storage capacity, transmission losses and inefficient irrigation methods are blamed for increasing water shortages in the country, the unabated trend of sowing water-guzzling crops like sugar cane and rice only compounds the water scarcity problem.

This coupled with the use of decades-old uncertified seed that have lost their productivity and resistance to diseases, and the improper use of fertilisers, has lead to a gradual decline in various crop yields.

The trend of sowing traditional cash crops, ie wheat, sugarcane, rice and cotton, has not withered away though the growth potential for most major crops has been exhausted to the disadvantage of the farming community and the national economy.

Experts and progressive farmers caution that the sector is set to suffer even more if remedial measures, such as introducing efficient irrigation methods and changing crop patterns, are not taken at the earliest.

‘Crop diversification is very important for the sector. We need to grow locally what we are importing to ensure our food security and protect the farmer from financial losses’

Quoting a report of the provincial government, experts say Punjab is currently reaping the lowest crop yield in the region and the world. The province needs to take urgent steps to fix the situation and turn around a sector that is the backbone of the national economy.

“We’re over-sowing sugar cane and wheat which leads to a glut in the market and of course lower prices for farmers. These crops enjoy no real value in the changing global food scenario,” says Malik Afaq Tiwana of the Farmers Association of Pakistan (FAP), a body that represents big landholders.

“Crop diversification is very important for the sector. We need to grow locally what we are importing to ensure our food security and protect farmers from financial loss,” he opines.

Punjab Agriculture Minister Malik Nauman Ahmad Langrial endorses the need for crop diversification and emphasises that the government is not oblivious to the fact: “Oilseed crops are on top of our priority list, though the major traditional cash crops cannot be ignored altogether.”

He says that a five-year plan has been devised to cut wheat acreage, dedicating the land thus spared to growing oilseed crops like canola and soybean. This will help reduce the over Rs250 billion edible oil import bill.

To encourage oilseed sowing, growers of the districts being earmarked for the purpose are being offered Rs5,000 per acre subsidy which will be increased to Rs7,000 per acre in the next financial year.

Mr Tiwana believes that a subsidy alone is not a sufficient incentive to make farmers abandon the crops they had been sowing for centuries: “The growers can work wonders provided they are offered the guarantee that their entire yield will be procured at reasonable rates, either by the public or private sector. They made the wheat-scarce country self-sufficient in the crop in just one season when given such a guarantee.”

Referring to the woes of potato growers for want of a reliable market, the FAP leader said that if they earned Rs500,000 per acre in one season, in the next their earnings dropped to such an extent that they were unable to meet the charges for transporting their produce to the market.

Admitting that in the absence of official patronage farmers will remain reluctant to embrace non-traditional crops, the minister claims that oilseed crops will enjoy a steady market as the initiative has been taken only after taking farmers and solvent industry bodies on board: “Marketing of oilseed crops will be no problem as we are guaranteeing that the government will procure the entire yield if no one else comes to the fore.”

Tajammal Hussain Nisar, a progressive farmer who runs a model farm in the vicinity of the Punjab capital points out that besides a stable market, growers also require capacity building and training in post-harvest grading, packing etc, to make the initiative a success.

He also calls for levying a heavy duty on the import of palm oil, or at least ensuring that no substandard edible oil is imported by the industry to the loss of local farmers.

A senior agriculture official endorses the view saying better investment in the agro-processing and value-added sectors, including fruits and vegetables, is required for exports to high-end international markets.

"Establishment of processing units for pulp, puree, paste, concentrates, dehydration and oil extraction, both edible and essential, is needed along with suitable storage, packaging and transportation facilities to make horticulture realise its full potential," he said.

He recalls the cases of kinnow and mango exports which grew manifold with the development of these facilities.

"Punjab's agriculture will benefit from CPEC connectivity and the export of value-added agriculture products will increase through a robust processing sector," concludes the official.

The minister responds that they are also planning the promotion of value chain industry by offering it certain incentives such as matching grants: "To support and encourage business entities to set up food processing units, they will be offered 50 per cent matching grants through a competitive process so that they may implement commercial activities and ensure markets operate effectively in the province."

RICE: OUR 'ORPHAN' EXPORT PRODUCT

Amin Ahmed February 25, 2019

Basmati rice is Pakistan's celebrated export. But its production and exports have slipped of late.

The absence of research and development makes it extremely difficult for the rice sector to prepare for new challenges. The high status of basmati rice as a major export commodity conceals the fact that its contribution to the economy is below its potential. Without a strong commitment to elevating basmati rice as a strategic product, it will continue to be a victim of changing economic and environmental conditions.

A report prepared with the help of technical assistance from the Asian Development Bank (ADB) says the handling of the country's premier export product as an 'orphan' is a tragedy. In the absence of research and development–based preparedness, the subsector is exposed to multiple risks from internal as well as external sources.

While the overall revenues from rice are stable, the lack of growth of basmati revenues should be a 'red flag' for policymakers. A reform programme is urgently needed because years of under-investment have weakened the system. However, some practical measures can reverse the trend, ADB says.

The overriding requirement is for the government to commit to a strategic road map that fills the research and development gap. It should create an environment that enables the public and private sectors to engage in commercially viable research. The rice sector is already paying the bills for its development.

The missing link is the utilisation of the resources. New efforts may be needed to bypass the existing setup if it is too costly or rigid to reform. But, without a reform of research and development, the future of the production and marketing of Pakistan's basmati rice is uncertain, cautions the report.

The additional levy on exporters would not be needed if the current levy is channelled as intended. In 1999, parliament passed the Export Development Fund Act under which all exporters, including rice exporters, pay a surcharge of 0.25 per cent. This is deducted by the exporter's bank from foreign receipts and submitted to the State Bank of Pakistan (SBP).

The bank transfers the collected cess to the Ministry of Finance. Under the Act, the finance ministry must transfer all proceeds of the Export Development Fund to the commerce ministry, which is responsible for disbursing the proceeds according to the stipulations of the Act.

In reality, the finance ministry has not been transferring all the amounts to the commerce ministry. As a result, the commerce ministry has a large sum due from the finance ministry. The cess collected in 2017 from rice exporters is equal to half of all expenditures on rice research and development for the last 20 years. The Act specifies that the cess funds can be used for research and development, technical institutes, market and product development and other areas related to export enhancement.

While the export segment of the value chain benefits most from rice in terms of private profits, exporters still expect the public sector to fund core research and development. The inability to view the whole value chain means that the billions of rupees that have been collected from rice exporters in the last 20 years have not been used for basic research and development. The vision of the Export Development Fund or the exporters is not broad enough to realise that research and development across the value chain will contribute to increased export revenues.

The amount of funding required to reviving growth in basmati production and exports is not huge. Recent policy work, especially in Punjab, has recognised the need for investment in research and development. Funds are available in the government's annual development budget.

The study suggests that the Malaysian Palm Oil Board, a government body, is a good model of how the coordinated efforts of a whole value chain can improve the prospects of a particular crop. The board has made Malaysian palm oil an international benchmark product and has invested heavily in research and development and commercialisation.

Pakistan can create a basmati rice board based on the Malaysian model and funded by the rice exporters' contributions to the Export Development Fund. As is the case for all research and development in the country's agriculture, basmati research and development in rice suffers from a low quality and quantity of funding. The core issue relates to the absence of policy commitment and the recognition of the need to invest a minimum amount consistently. The irony is that the amount of research investment needed is tiny compared with its potential return, it says.

Insufficient investment in agriculture research and development in Pakistan has resulted in suboptimal yields and a lower-than-potential productivity growth curve of its basmati rice varieties. Pakistan is the globe's fourth largest rice exporter in terms of quantity and rice is the country's largest export earner after cotton. This status was achieved by liberalising the rice trade in the early 1990s and allowing the private sector to operate freely.

India is Pakistan's only competitor in the export market for basmati rice. But basmati has to compete with other varieties in the global marketplace. Although Pakistan inherited good rice varieties and managed to improve on them, the country has not made significant progress during the last 20 years.

DONKEYS' EXPORT TO CHINA NOT YET MATERIALIZED

RECORDER REPORT | FEB 25TH, 2019 | PESHAWAR

The export of donkeys to China has not yet been materialised due to delay in submitting required documents by the investors and companies. The livestock department officials told this scribe that many Chinese companies had evinced their keen interest in establishment of donkey farms and their exports but the KP government had planned to deal only with state-owned companies or state-owned investor in china.

The government would provide all legal and technical support to the investors. The MoU was terminated due to ineligibility of the investor to produce the required documentations. The officials said that Chinese companies also expressed their interest in the exports of donkeys. They were asked to present the required documents in this regard. However, they responded that they would submit the documents after Chinese New Year celebrations at the end of February.

Pakistan, which has the third largest donkey population in the world, will export the animal to China, opening the avenue to earn millions from the trade, said the officials concerned. During the first three years, the government plans to export as many as 80,000 donkeys to china.

The project titled: 'Khyber-Pakhtunkhwa-China Sustainable Donkey Development Programme' is expected to bring Rs 1 billion. It is aimed at attracting Chinese investment in Pakistan's livestock and agriculture sector. Main purpose of the plan is to prevent illegal smuggling of donkeys to foreign countries, because the donkeys are used for medicines and meat consumption in china.

The proposed project will help improve the socio-economic status of donkey-rearing communities and also improve the health and production of local donkeys. An official said that new technologies would also be introduced. Work on capacity-building of donkey breeders and services they provide would also be done. The official said they were only dealing with state-owned companies because if started on commercial basis it would be a possible threat to extinction of the donkey species.

The officials said that the government had planned to establish two donkey farms initially in DI Khan and Mansehra districts. The KP livestock department would focus on building donkey farms in order to breed donkeys to increase its population.

Around 70,000 people use donkeys as working animals in KP province. During PML-N government, Economic Coordination Committee (ECC) led by then-Finance Minister Ishaq Dar had placed a temporary ban on the export of donkey hides, after the customs in Karachi seized 35,000 skins of donkeys destined to china.

STRENGTHENING NATIONAL FOOD SECURITY

RECORDER REPORT | FEB 25TH, 2019 | EDITORIAL

Potatoes don't speak, but what they want to say was heard loud and clear last month when they staged a sit-in opposite the Punjab Assembly building in Lahore last month. They were protesting against their gross devaluation; their lament was their Rs 5 per kilo price. And unlike ever before, they were heard. Not only they but their farm-friends including wheat, sugarcane, cotton and rice also came under discussion in parliament and also at a semi-official consultative meeting. What has gone wrong with the agriculture sector, which employs 43 percent of labour force and accounts for 21 percent of GDP? What incentives can be afforded to revive its potential? These questions came under discussions. At Independence, its share was 53 percent of the GDP as compared to little over 21 percent at present. Although other sectors of national economy were bound to overtake it, it could still retain its supremacy had it received the needed official patronage. How ironic, however, it is that when all elected houses in the history of the country have always been characterized by the presence of legislators from agricultural background, the causes and the practices undermining its inherent potential still remain out of focus. Not that there was not enough in sight to indicate as to what ails the agriculture sector. We knew that half of rural households are landless while 5 percent of population owns almost two-thirds (64 percent) of the country's farmland. While a large majority owns less than five acres the 2 percent households own 50 acres or more, and are less productive. According to a World Bank study, the productivity of larger farms is lower than that of small farms. That disparity in ownership remains a lingering cancer, to which there is no cure in the foreseeable future – an impossibility rooted in history of failed land reforms in 1962 and 1972. But almost all other weaknesses restricting fuller play of the country's agriculture sector are curable. Quite a lot is still possible to restore the socio-economic potential of agriculture sector by way of discouraging outdated irrigation practices, increasing per-acre yield, introducing better seeds and improving the farmer's access to various announced/available facilities and resources.

Both at the forums of National Assembly parliamentary committee and the consultative meeting, a call was made for enhanced allocation for agriculture research, decrease in mark-up rates on agricultural loans and indicative prices for major crops. That the bank mark-up rate be reduced from the present 14 percent to 5 percent is something which is not likely to happen anytime soon, but some concession must be made in view of rising threats to national food security. Prices of fertilizers and pesticides too need to be rationalized, mainly by reining in the high commissions, while the quality of what the end-user gets should be kept under strict official watch. However, the issue begging immediate official intervention is the indicative price structure. As to what price would be available to the farmer for his produce greatly makes his mind to sow or not to sow cotton or any other major crop. A case in point is the cotton crop, which is losing its ground to sugarcane and thus adversely affecting the textile industry that is now left with no option but to import this commodity. The problem arose essentially from the unchecked location of sugar mills in the cotton-growing areas which forced the farmer to give up on cotton and go for sugarcane. Perhaps, relocation of concerned sugar mills may not be possible, but the framer can be incentivized to keep growing cotton by indicating him as to what price he would get for his produce. Another incentive, which is reportedly now under government consideration, is that regulatory duty should be imposed on import of cotton. Accepted, the subsidies and indicative prices would greatly help restore health of the ailing agriculture sector, but then these are merely fix-ups. The real issue is exploitation of the inbuilt strength of agriculture, mainly by improving the quality of inputs in terms of seeds and post-sowing care – the concerns that fall in the ambit of agri research. Isn't it pathetic that investment in agricultural research is just 0.2 percent of GDP, which is not more than fifth of the minimum required to see that Pakistan's extensive arable landscape is productive enough to buttress the much vulnerable national food security.

NEWS COVERAGE PERIOD FROM APRIL 22nd TO APRIL 28th 2019

INCREASE IN YIELD BOOSTS BALOCH FARMERS' INCOME

Amin Ahmed Updated April 28, 2019

ISLAMABAD: The Australian government, under the first phase of its 'Australia Balochistan Agribusiness (AusABBA) programme', has increased the gross value of agricultural produce in the six districts of Balochistan by over $9.1 million and helped farmers increase their household income.

According to the project document prepared by the Food and Agriculture Organisation (FAO) of the United Nations which implemented the project in cooperation with Balochistan government, the initiative has helped enhance crop yields and livestock productivity in Balochistan and introduced farmers to new technologies, better ways manage their farms and increase production in addition to improving community-based water management.

The conclusion of the first phase of the project witnessed significant improvement in food and nutrition security and income of over 30,600 poor households in 340 rural communities in the province.

The Australian-funded programme covers six districts of Chaghai, Kech, Kharan, Nushki, Punjgur and Washuk.

The programme helped farmers from several adjacent communities of the districts to form farmers' marketing collectives, strengthen their linkages to the markets, and increase their sales of surplus produce.

The programme also encouraged farmers establish small local agribusiness, and a recent study has shown that the farmers' marketing collectives approach can increase farmer profits by up to 34 per cent.

Building on the success of the first phase, the second phase of AusABBA has been launched which will run through 2023 and focus on training female and male farmers to help strengthen supply chains and eventually connect them with markets for Balochistan-specific commodities, such as onions, fruit trees, goat, sheep, meat, seeds, wood and dates.

The programme will target women's economic empowerment – at least 25pc of the beneficiaries will be women – thus ensuring the economic benefits also improve the nutritional status of families. Homestead gardens, sheep fattening, vegetables and dates grading and packaging, fruit drying and seedling production are among the culturally suitable activities that women can engage in.

The goal of the programme will be to contribute to “people in South West Balochistan [so that they can] live more prosperous in a food-secure environment”. During the second phase of the programme, households in the six districts, engaged in agricultural livelihoods will be helped adopt suitable, profitable and diversified strategies in an enabling environment that increase their incomes, food security and nutritional status.

RAINS LOSSES: STEPS AFOOT TO COMPENSATE FARMERS: ASAD

RECORDER REPORT | APR 28TH, 2019 | PESHAWAR

Speaker National Assembly, Asad Qaiser, said that the government was taking measures to compensate farmers over their losses in current torrential rains. He was speaking at a ceremony regarding up-gradation of Government High School to Higher Secondary School in Marghuz district, Swabi on Saturday. The upgradation project has completed at an estimated cost of Rs 20.7 million.

Member provincial assembly, Saqibullah Khan, District Education Officer district Swabi Shahi Malik and Principal Mohammad Zubair were present during the inaugural ceremony. The NA Speaker said that Pakistan has never made intervention in any country and will not tolerate interference of anyone. He said the incumbent government is following formidable foreign policy in best interest of people and the country.

Asad Qaiser said that effective measures are being taken to create job opportunities in the country. He noted that corruption and maladministration have undermined roots of the country. He admitted the government is confronting with host of challenges and issues, which were not originated during last eight month government that was inherited to PTI by the previous regimes.

The NA Speaker said that the days have gone when teachers received appointment order in MPA Hujra (guesthouse) against the merit. He said that PTI government has appointed highly-qualified and competent teaching staffs by National Testing Services to give quality education to male and female students in the province.

Asad Qaiser said that teachers had played an integral role in national building and country. However, he asked them to teach children with full dedication and hard work and fully concentrate on character-building of students.

CM ORDER ALL-OUT MEASURES TO CONTROL SUGAR PRICES

By APP Published: April 28, 2019

LAHORE: Punjab Chief Minister Sardar Usman Buzdar has decided to take all-out measures for consistency in the price of essential food items especially sugar.

The chief minister, presiding over a high level meeting, directed to make the price control mechanism effective before the start of Ramazan and said indiscriminate crackdown would be launched against hoarders and profiteers.

He said all administrative powers should be used to ensure the sale of food items according to rate list and profiteering would not be tolerated. He directed to take all-out measures to provide relief to the people saying law would come to action against those selling essential items on inflated rates.

WHEAT FORECAST

Shehryar Warraich April 28, 2019

The unexpected rains and hailstorms since February 2019 have damaged the Rabi crops, mainly wheat, particularly in Punjab and Khyber Pakhtunkhwa. The government and farmers are not on one page on assessing the damage.

Advisor to Chief Minister Punjab, Muhammad Akram Chaudhry, tells TNS that 0.7 million metric tonne wheat crop has been destroyed which is around 40 percent of the total crop of the current season. Punjab Agriculture Minister, Malik Nauman Ahmad Langrial, says that 35,000 acres of wheat and corn crops have been destroyed during the recent spell of rains and hailstorm across the province.

According to Pakistan Agriculture Research Forum (PARC) wheat, being the staple diet, is the most important crop and 80 percent farmers grow it on an area of around nine million hectares (close to 40 percent of the country’s total cultivated land) during the winter or Rabi season.

It contributes 14.4 percent to the value-added produce in agriculture and 3.0 percent to GDP. In January 2019, the government was expecting a good wheat crop and the set target of wheat production was 25.51 million tonnes.

Wheat is grown in different cropping systems, such as; cotton-wheat, rice-wheat, sugarcane-wheat, maize-wheat, fallow-wheat. The zoning is mainly based on cropping pattern, disease prevalence and climatological factors. PARC data shows that wheat productivity has increased over the last few years in all the major cropping systems representing diverse and varying agro-ecological conditions.

Coming back to the assessment and data presented by the Punjab government on wheat damage, Director Farmers’ Associates Pakistan and Member Agri Commission Punjab, Farooq Bajwa, strongly dismisses the official assessment.

“Wheat crop was cultivated on 16.5 million acres across the Punjab province where 4 million acres depend on seasonal monsoon rains and the rest on canal system that is sourced from snow and glacier. Out of such production we normally get 300 million Boris (a bag carrying 100kg weight) per year if the weather remains normal,” he says.

This year rains started after mid February which was harmful for wheat crop at the age of maturity. “That spell damaged the crop severely and we lost almost 30 million Buris. The second spell started after April 14 at the time of harvesting that cost us 20 million more Buris. Now the total number of lost Buris is 50 million (5 million tonne) that means around two million acres of crop is destroyed," he adds.

"The government is not giving real assessment and the concerned authorities don't appear serious in tackling this catastrophic situation."

Harvesting of the crop began in Sindh and South Punjab in late March and is expected to continue till mid June in North Punjab. However, torrential rains since April 14 have dashed the hopes of farmers, especially those belonging to South Punjab region which falls in the cotton-wheat cropping system. Farmers here normally manage to harvest two crops in a year.

Advisor to Chief Minister Punjab, Muhammad Akram Chaudhry, tells TNS that 0.7 million metric tonne wheat crop has been destroyed which is around 40 percent of the total crop. Punjab Agriculture Minister, Malik Nauman Ahmad Langrial, says that 35,000 acres of wheat and corn crops have been destroyed during the recent spell of rains and hailstorm across the province.

Central Secretary General Pakistan Kissan Ittehad, Mian Umair, tells TNSthat farmers are facing two kinds of damages because of unexpected rain and hailstorm; first is the area where hailstorm destroyed wheat crop completely, the second one is the region where rains have turned the wheat black. "Black wheat neither carries proper weight nor attracts good price from the open market. Government centres are always unwilling to purchase such quality of wheat."

He adds that farmers, along with the destroyed crop, will have to bear the harvesting cost of the destroyed crop so that the land may be prepared for the cotton crop. This can delay the sowing of cotton, affecting the whole farming ecosystem as-well.

According to Mian Umair, the devastated farmer is looking towards the government to get some relief. Nevertheless, instead of announcing any relief package for the aggrieved farmers, the Punjab government has increased by Rs2.8 per electricity unit as fuel price adjustment on tube-wells being used for agriculture purposes. "In the current circumstances, it's a ridiculous and shameful act by the government."

Advisor to Chief Minister Punjab, Muhammad Akram Chaudhry, asserts the government will share farmers loss. "Chief Minister Usman Buzdar has principally agreed to share most of the wheat growers' loss. Therefore, a special package will be presented to the provincial cabinet soon for formal approval."

Besides, there is another concern being expressed by farmers and traders: the expected shortage of wheat in the days to come. Being a dietary staple, wheat flour currently contributes 72 percent of Pakistan's daily caloric intake with per capita wheat consumption of around 124 kg per year, one of the highest in the world. This can pose a serious challenge to the government.

However, Chaudhry doesn't take it as a point of concern for the government. Practically, he believes, there will be no crises for the common people as the government has enough in stock to fulfill the demand of flour mills and general market.

"Wheat worth Rs437 billion is already in the government's warehouses which is considered as a liability as the government has to spend Rs36 billion extra per year to maintain warehouses and keep the wheat safe. The government can lessen its liability by facilitating flour mills and overcoming expected wheat shortages in the open market."

Even if the government doesn't purchase the amount of wheat like it used to be, there would be enough in stocks to avert any troublesome situation in the future, he says.

Despite the fact that the government has not started purchasing wheat from farmers in the areas where they have already harvested their crops, farmers are getting Rs1200 per 40kg in the open market – Rs100 more than the last year.

This situation alarms people like Farooq Bajwa. He believes the government must be ready to face the catastrophe in terms of shortage of wheat in the whole country around November or December. "It would be so because wheat in Afghanistan and Iran is already short because their crop is also destroyed by the unexpected climatic disaster. Afghan buyers are already here and purchasing wheat at a very large scale and exporting it to their homeland. This would, certainly, create shortage in our market and I am afraid the government doesn't have enough supply to handle any unexpected crises."

Considering the local and international circumstances, Mian Umair and Farooq Bajwa suggest the government must keep its stocks full to avoid any problematic situation in the country. "The opportunity to sell its stocks in the international market would remain intact as Afghanistan and Iran are going to be serious buyers of wheat this year."

UPSURGE IN FOOD PRICES AHEAD OF RAMAZAN

Aamir Shafaat Khan | Mubarak Zeb Khan Updated April 27, 2019

ISLAMABAD/KARACHI: Despite government's commitment to implement its writ in the markets, prices of essential food items have increased significantly across the country ahead of Ramazan, which starts from first week of next month.

Sugar hit new retail peak of Rs70 per kg from Rs65 per kg few days back following persistent rise in wholesale rates at Jodia Bazaar, the country's biggest wholesale commodities market.

The demand for the sweetener goes up exponentially in summers as it is extensively used in preparation of traditional drinks, syrups, juices and confectioneries.

At the start of this year, sugar was priced Rs55 per kg and then it soared to Rs58-60 per kg in February while in March it was available at Rs63 per kg in retail markets. The country's sugar production came down by eight per cent to 3.728 million tonnes in July-February 2018-19 from four million tonnes in same period last year.

In Karachi, retailers are charging Rs68-70 per kg for sugar. However, many of them who had piled up stocks in bulk at lower wholesale rates, are now making a good profit in view of frequent increase in retail prices.

Patron in Chief Karachi Wholesalers Grocers Association (KWGA), Anis Majeed said the wholesale price was Rs53-55 per kg two months back which now ranges between Rs63-64 per kg. He blamed the millers for pushing up the rates.

He said sugar millers had procured sugarcane from the growers at high price of Rs200 per 40 kg as against official rate of Rs 182, while the country also recorded low sugarcane production this season.

Anis recalled that last year, sugarcane production was high but growers got low price from the millers as against official rate of Rs182 per 40 kg.

Sugar exports in the current fiscal year had remained subdued. In 9MFY19, sweetener exports stood only at 377,677 tonnes, fetching $115 million versus one million tonnes that earned $362m in same period last year.

Pakistan earned $508m with export of 1.489mn tonnes in FY18 as compared to 307,448 tonnes valuing $161mn in FY17.

The weekly inflation, measured through the Sensitive Price Index (SPI), up by 0.37pc in the week ended on April 25 from the previous week. The hike in prices is nearly 13pc on a year-on-year basis, suggesting further increase in weeks ahead.

The increase in prices of essential food items was witnessed despite the presence of price committees and special price magistrates.

SPI monitors prices of 53 items based on a survey of 17 cities and 53 markets. Prices of 20 items increased and those of 10 items decreased during the period under review. Prices of 23 items remained unchanged.

The impact of prices on various income groups also witnessed variations during the week under review.

For the lowest income group (earning up to Rs8,000 a month), the SPI posted 0.4pc increase over the previous week, while inflation for the top income group (earning Rs35, 000 and above) was up by 0.35pc.

The food items whose prices rose over the previous week included tomatoes which rose by 9.32pc, followed by onions 8.35pc, potatoes 4.71pc, eggs 4.52pc, bananas 3.42pc, pulse moong 1.98pc, sugar 1.86pc, pulse mash 1.42pc, garlic 0.73pc, pulse gram 0.67pc, tea prepared 0.59pc, mutton 0.51pc, curd 0.28pc, break plain 0.14pc, beef with bone 0.03pc, rice Irri-6 0.03pc, cooked daal 0.02pc and gur 0.02pc.

The price of non-food items increased over the week includes cigarettes 0.02pc and shirting 0.47pc, respectively.

The prices of 10 items decreased during the week under review. These include chicken price which declined by 1.11pc, wheat 0.77pc, wheat flour 0.51pc, red chilly powder 0.25pc, cooking oil 0.23pc, vegetable ghee 0.23pc, and pulse washed 0.05pc. The non-food items price of which decline include LPG cylinder 1.06pc and firewood whole 0.45pc, respectively.

SINDH IMPOSES COMPLETE BAN ON RICE CULTIVATION ALONG PERENNIAL CANALS

THE NEWSPAPER'S STAFF REPORTER Published Apr 27, 2019

KARACHI: The Sindh government has decided to impose a complete ban on cultivation of rice along perennial canals such as Ghotki Feeder, Rohri Canal and Nara Canal to save their command area from waterlogging, salinity, seepage and land degradation.

Sindh Chief Minister Syed Murad Ali Shah issued directives to all divisional commissioners to ensure implementation of the ban at a high-profile meeting at Chief Minister House on Friday, said a spokesman for the provincial government.

Mr Shah said that rice was a high-delta crop which required more water than cotton and other Kharif crops and NW and Dadu canals were designed for irrigating dry crops but it was allowed later to use their water for the cultivation of rice in the wake of World War II to ensure food security.

He directed Hyderabad Comm¬is¬sioner Abbas Baloch to talk to growers whose lands were wat¬ered by Dadu Canal and convince them to switch over to low-delta crops. “This is the time we have to switch over to low-delta and high-yield crops because of water shortage and waterlogging issue,” he said.

The meeting was told that cotton sowing in Sindh started in May and rice cultivation in June, therefore, the chief minister asked the irrigation department to release water to the perennial canals in May so that farmers could start sowing cotton. If water supplies were delayed, the growers would opt for rice, he cautioned.

The chief minister constituted a committee of secretaries of irrigation, agriculture and revenue departments to work out a detailed plan for releasing irrigational water and launching a drive to convince growers to opt for low-delta crops. He also directed the agriculture department to guide and facilitate growers in swapping the high-delta crops.

The meeting was attended by MNA Syed Khursheed Shah, Minister for Agriculture Ismail Rahu, Minister for Irrigation Nasir Shah, Special Assistant to CM Ashfaq Memon, all secretaries concerned, principal secretary to CM Sajid Jamal Abro and Karachi Commissioner Iftikhar Shallwani.

All the other commissioners, deputy commissioners and irrigation engineers also joined the meeting through video link.

Murad rejects governor’s remarks about Sindh govt

SEHWAN: Mr Shah said in a rejoinder to Sindh Governor Imran Ismail’s remarks that Sindh government was in a comfortable position with regard to finances and said the provincial government was facing serious difficulties completing ongoing schemes, not to speak of launching new schemes.

Mr Shah told journalists after laying wreath on the grave of Lal Shahbaz Qalandar on the concluding day of the 767th annual urs celebrations of the saint on Friday that it was not the governor’s job to comment on the financial position of the government. During the current financial year, the Sindh government had not been able to launch any new development scheme because of shortage of funds, he said.

He said the Sindh government was raising the issue of budget with Centre which had to release Rs120 billion to Sindh from NFC award but it withheld Rs8 to 9bn out of Rs15bn for development works.

He said that since the provincial government could not withhold salaries it had to reduce funds for development and non-development schemes. Last year, the Sindh government had used Rs204bn on development works but this year it would utilise less than Rs80bn, he said.

He rejected the governor's claim that Sindh government was not able to utilise funds. If it was so then how had it spent Rs204bn last year, he said.

Mr Shah criticised President Arif Alvi for talking about abrogation of 18th Amendment and presidential system and said that PPP chairman Bilawal Bhutto-Zardari and party leadership wanted to see democracy continue to function in the country but a few people wanted to derail it.

He said that there were reasons the Sindh government had decided not to purchase wheat from growers this year. First, it had big stocks of wheat stored at food department godowns, secondly the government had no funds to start buying the grain, he said.

He said that Sindh government was working with World Bank and international agencies on its development schemes. Work on many schemes was going on in Karachi and irrigation system and Sukkur Barrage would be improved with the help of World Bank, he said.

About Prime Minister Imran Khan's use of questionable language for Bilawal Bhutto-Zardari, Mr Shah said that Imran Khan had not learnt how to tender apology for his mistakes.

He said that this year heatwave was more intense during urs celebrations than last year's and about 2.5 million people had visited the shrine this year.

The chief minister was accompanied by PPP lawmakers, party leaders and officers of police and administration during the visit of the shrine.

DILEMMA OVER WHEAT PRICE

By Editorial Published: April 27, 2019

As the annual wheat harvest draws near the government wrangles with setting a procurement price for the grain which aims to balance the cost of inputs with the final price of flour in the market to keep it affordable for the vast segments of the population. Like every year, the government is mulling its options on providing subsidy to keep the prices of wheat – the basic ingredient for bread – low or to pass on the increased cost to the public. The Punjab Food Authority has suggested keeping price locked at Rs1,300 per maund (40 kilogrammes) at the bare minimum after its earlier suggestions to raise it to Rs1,350 were rejected by the government. Only a few months ago, the government had decided to maintain for a fifth-consecutive year the wheat support price at Rs1,300 per kg where the government had conceded that farmers were earning a meagre 2% as profit.

But now, the government has locked horns with the PFA to further lower this rate. The PFA, though, is refusing to budge. The main reason for this is that there are some voices in the federal cabinet who are afraid of provoking another backlash from the public after it has raised fuel prices, power rates and allowed the exchange rate to slip to the highest it has ever been. To make matters worse, there is pressure on the government – which just saw its finance czar walk out – to decide this price quickly so that flour mills can start their procurement. The government must now decide, and quickly, whether it wants to set a lower wheat procurement price or whether it is ready for another round of expensive subsidies to keep the masses undisturbed. Or is it strong enough to embrace the backlash of hikes in wheat prices.

WHEAT, FLOUR PRICES RISE

Aamir Shafaat Khan Updated April 26, 2019

KARACHI: Wheat has become costlier by Rs100 to Rs3,150 per 100kg bag in the open market following reports of crop damage in Punjab due to recent rains coupled with brisk exports of the commodity. As a result, millers have raised wheat flour prices ahead of Ramazan.

The price of flour no.2.5 was raised to Rs1,700 per 50kg bag from Rs1,675 followed by jump in fine and super fine flour rates to Rs1,875 from Rs1,825.

Chairman All Pakistan Flour Mills Association (Sindh Chapter) Mohammad Jawed Yousuf told Dawn on Thursday that everything was going smooth until reports of crop damage broke after heavy rains and storms. He said harvesting was due to start when rains hit the wheat-producing belt in southern Punjab.

As a result Sindh wheat, which started arriving from March, is now finding its way into Punjab. Besides, substantial increase in wheat exports had also put Sindh wheat crop under pressure. Besides, wheat exporters are also piling up stocks owing to better future export prospects.

Jawed said the Sindh government has so far not started wheat procurement from the growers for the current crop. The support price of wheat is Rs1,300 per 40 kg. When asked how much Sindh now holds last year's wheat stocks, he said on government papers, the stocks are estimated at 820,000 tonnes of last year's crop.

Pakistan's wheat exports rose to 557,587 tonnes ($122m) during the first nine moths (July-March) period of this fiscal year from 307,344 tonnes ($59.7m) in same period last year. The average unit price of wheat came to $218 per tonne as against $194 per tonne in same period last year.

According to figures of Pakistan Bureau of Statistics, the country earned $236m by exporting 1.189m tonnes in FY18 versus 3,937 tonnes valuing only $1m in FY17.

In the last week of March, flour millers had slashed flour No.2.5 price to Rs1,675 from Rs1,900 per 50kg bag while the rate of fine and super fine flour was reduced to Rs1,825 from Rs2,025. As a result, the price of 5kg bag of good quality flour (Bake Parlour and Ashrafi) had eased to Rs220 from Rs230 while 10kg bag was costing Rs420 as against Rs440.

PAKISTANI FISHERMAN DIES IN INDIAN JAIL

The Newspaper's Staff Reporter Updated April 26, 2019

KARACHI: Another Pakistani fisherman has died in an Indian jail within a month, leaving the fisherfolk community in the grip of fear and panic as more than 100 of them are languishing in Indian prisons.

The spokesman for the Fishermen Cooperative Society (FCS) said that they received information about the death of Sohail Rasheed from authorities on Thursday afternoon. Rasheed had been in a prison in the Indian state of Gujarat since October 2016.

The cause of death, he said, had not yet been shared by the Indian authorities. However, the news caused consternation within the fishermen community as only earlier this month 80-year-old Noorul Amin succumbed to the injuries inflicted on him by the Indian jail staff.

"He [Rasheed] was in his early 20s," said Ghulam Rasool Sheikh, a welfare officer of the FCS, which looks after the legal and diplomatic processes for the release of Pakistani fishermen detained in India. "He has left a widow and a two-year-old son. The most tragic part of the story is that he hadn't met his son, who was born in 2017 while the father was in jail," he said. The officer said that they were not even informed about Rasheed's death on time and were told that the fisherman had died some three or four days ago.

He said the FCS on directives of its chairman Abdul Berr had already initiated the process to bring back the body, but it could take at least four to five days. The deceased, he said, was a resident of Mohammadi Colony in Maripur area.

"The FCS in correspondence with the Indian authorities has sought early release of our fishermen but in vain so far," said FCS chairman Berr.

ROW BETWEEN CENTRE, PUNJAB OVER WHEAT PRICE PERSISTS

By Rizwan Asif Published: April 26, 2019

LAHORE: A dispute over the control price of wheat continues as the federal government appears to have rejected the Punjab government's price demand.

The Punjab Food Authority, however, is standing firm on its decision that the price of wheat will be set at Rs1,300 per maund (40 kg).

On the other hand, the federal government has decided to sell more than one million tons of wheat to Pakistan Agricultural Storage and Services Corporation (Passco) at local rates, on which the Punjab government has expressed serious reservations.

Flour mill operators have demanded that the government should announce the control price so that the private sector can move forward with confidence.

Punjab Food Secretary Shaukat Ali recently met with stakeholders and it was suggested that before the initiation of wheat purchase, the government should announce the price so that flour mills can buy wheat directly from farmers, which would not only give the farmers a set price, but would also reduce the pressure of purchasing on the PFA.

Conflicts of opinion were also seen in the provincial cabinet, where some members were of the view that the wheat price might rise sharply if the government sets a high control price, which could lead to a strong public backlash, while few were of the opinion that prices should be increased because currently the PFA purchases wheat from farmers at Rs1,300 per maund and sells it at the same price, whereas previously it was selling wheat at a loss, to reduce food price inflation.

The government was bearing a subsidy of Rs400 per maund, which translated into Rs20 to Rs30 per bag, meaning that if the government is to keep wheat prices in control, it will have to bear heavy subsidies PFA went to the federal ministry for food security with its proposed price of Rs1,330 to Rs1,350 per maund but the federal body and PASSCO authorities did not agree to the price at the time.

Sources said the federal authorities had made the principled decision of selling wheat to their sub-department Passco at the normal price.

Passco currently has 1.3 million tons of wheat stock available and in the next few weeks it will buy another 1.1 million tons. Federal authorities want Passco to sell between 1 and 1.2 million tons locally, and if possible, take permission from the federal government to export 500,000 tons of wheat.

But the Punjab and Sindh governments are strongly opposing the decision of permitting local sales to Passco, claiming that this will lead to the food authority facing difficulties in exporting wheat. The provincial governments had also observed that Passco should focus on Balochistan, Kashmir and Gilgit-Baltistan.

In the past, Sindh and Punjab both sold wheat to flour mills at reduced prices to lower the final sale price, due to which an additional financial burden of billions had to be tolerated.

Punjab Food Minister Samiullah Chaudhry told The Express Tribune that his government is constantly in touch with federal authorities on this issue. “One thing is clear, that the Punjab government will keep pursuing the wheat price issue.”

He said an increase of Re1 per kg in wheat is expected, which should not worry consumers.

UREA SALES RISE 19% IN MARCH 2019

By Our Correspondent Published: April 26, 2019

KARACHI: Urea sales rose 19% to 408,000 tons in March 2019 on a year-on-year basis, according to latest data released by the National Fertiliser Development Corporation (NFDC).

Sales of urea had been recorded at 342,093 tons in the same month of previous year.

On a month-on-month basis, the sales of urea increased 5% to 408,000 tons in March compared to 388,000 tons in February 2019. “Fertiliser sales display a positive trend as the Kharif sowing season kicks in,” stated Aba Ali Habib Securities in its report. “However, the off-take of di-ammonium phosphate (DAP) fertiliser plunged 56% year-on-year.”

Company-wise, Engro Fertilisers recorded the largest growth in urea sales of 64% to 147,119 tons in March 2019 against 89,833 tons in the same month of previous year.

DAP sales of the company also swelled 44% to 28,500 tons compared to 19,812 tons last year. Fauji Fertiliser reported only 1% growth in urea sales during the month under review. Its sales inched up from 193,219 tons in March 2018 to 194,299 tons in March 2019.

In DAP sales, the company witnessed a drastic fall of 70% to 9,560 tons in March this year against 31,459 tons in March 2018. Fauji Fertiliser Bin Qasim reported a sharp decline in urea sales of 78% to 10,485 tons in March 2019 against 47,149 tons in March 2018.

Same was the case in the DAP segment of the company as sales plunged 78% to 15,245 tons against 69,864 tons last year. “Engro Fertilisers made its fortunes by selling urea at old prices as opposed to Fauji Fertiliser which increased prices by Rs70 to Rs80 per bag in March. Engro Fertilisers raised its prices in April, data for which will be released next month,” said Topline Securities’ analyst Shankar Talreja. “Dealers started hoarding urea as they were aware that if one player had increased prices, others would follow.”

Fatima Fertiliser recorded a growth of 6% in urea sales that stood at 12,495 tons against 11,802 tons last year.

“Going forward, we believe that the demand for plant nutrients is set to grow on the back of continuation of the sowing season and greater demand for agriculture exports to China as part of the free trade agreement,” said Aba Ali Habib’s report.

DAWN’S FOOD AND AGRI EXPO BEGINS TODAY

From the Newspaper April 25, 2019

LAHORE: The Dawn Media Group is set to organise the eighth edition of the Dawn Pakistan Food & Agri Expo at Expo Center, Hall 1, Johar Town on April 25 & 26.

The two-day event beginning today is supported by the Punjab government and the technical working sessions related to food and agriculture sector will be held.

This year the Dawn Pakistan Food & Agri Expo will once again bring together key domestic and international players such as farmers, landowners, agriculture investors, government officials, agents, distributors and exporters on a single platform to explore new technologies and innovations in the food and agriculture sector.

It will also provide the food and agriculture sector the drive it needs in the form of exposure to new technology, machinery, food technology and general improvement in farming methods.

The exhibition will be open from 11am to 7pm and entry to the event is free.

DATE EXPORTS FALL AFTER INDIAN DUTIES

Jamal Shahid Updated April 25, 2019

ISLAMABAD: The parliamentarians on Wednesday informed the National Assembly that the export of dates has declined sharply after India slapped a 200 per cent duty on Pakistan's exports.

"It is an issue. The decline in exports of dry dates is directly linked to the Pulwama attack in February," Parliamentary Secretary for Commerce Shandana Gulzar Khan said in response to a calling attention notice in the NA session.

The notice was raised by Dr Nafisa Shah along with other MNAs including Syed Javed Ali Shah Jillani, Shamim Ara Panhwar, Shagufta Jumani, and Shahida Rehmani.

Nafisa Shah said the trade barriers to export dates are a matter of concern and showed her disappointment with the incumbent government's failure to increase exports.

"Has Pakistan reciprocated or banned Indian imports into Pakistan in response to the overnight barrier erected by Delhi? As the fifth or sixth largest exporter of dates in the world, has the present government sought alternate markets to sell dates since the Pulwama incident two months ago?" asked Nafisa Shah.

She said that if Pakistan did not use trade as leverage like India, around Rs8 billion worth of goods sitting in go-downs are likely to rot.

She was also curious as to why despite surplus local production; the government is importing dates from Saudi Arabia and Iran.

Responding to questions, Shandana Khan said that since the Pulwama attack, Indian importers, who now have to pay 200pc duty on importing dates from Pakistan, have stopped importing goods from the country.

"This has caused the annual $500 million dollar trade to shrink to $6m as of March. Conditions are unlikely to change until elections in India are completed," she responded, adding that Indians consumed Pakistani dry dates as 'prasad' during their religious proceedings.

"We are currently negotiating with six different markets such as Morocco, France, Germany, the UK, USA, and Indonesia, which are the biggest buyers of dates," said the Parliamentary Secretary.

Pakistan is not in a position to retaliate against India with respect to trade after the Pulwama attack especially in the absence of industrial policy for the last 11 years, Shandana Khan maintained.

"We are a failure because we have not done our homework successively. However, Pakistan has responded to increase on duties on imports into India with similar increases on Indian imports into Pakistan, a list of which can be shared with concerned members," Shandana Khan informed the members.

In another question, the house was informed that in order to lessen trade deficit, Pakistan has reduced expenses on imports by $3.5bn after increasing duties on items purchased from abroad.

While most opposition members protested the move to reduce imports to settle trade deficit as bad for business, especially when exports have not increased, the government announced that expenses on imports will be cut by $5bn by June this year.

FOOD PROCESSING POTENTIAL NEEDS TO BE OPTIMISED

Ahmed Affan April 25, 2019

FOOD processing and packaging across the world have seen a boom in recent times, and the Pakistani market is no different. The rise in the local market is undeniable but it is still not at its optimal level. Our food processing and packaging brands have even crossed borders and are very popular in international markets, but the gap between our yield from food crops and the quantity in which we produce processed and packaged food is considerable. We could achieve much better results from this industry but it has been hindered for numerous reasons one of which is our negligence towards upgrading the farming procedures and equipment.

For a country which relies massively on agriculture for foreign exchange earnings and a better part of our 200 million population is in one way or the other associated with agriculture, we are way behind in modernising the sector

According to industry experts, we are not just spending enough to introduce modern practices in the agriculture sector and we are criminally behind in terms of agricultural research and development. The new government seems focussed on increasing our export figures in an effort to make Pakistan self-sufficient financially, and, that being so, there is better way than to improve our food export figures, say the experts.

Pakistani industries, like, say, textile and its value-added products, which represent a pillar of our country's exports, are also dependent on one of our main agricultural produce; cotton. There is almost no other logical way to improve our country's cash inflow from exports without massive and meaningful improvements in our agriculture sector.

We do have agricultural research departments and even full-fledged universities focussing on agriculture alone, but are they doing enough? We haven't seen a breakthrough in any agriculture-related research in quite some time that would have given us an edge over our competitors in the international market. Other agriculture-based countries are way ahead of us in the race for modernising their farming practices and subsequently high-end value addition in food industries.

We produce surplus in numerous crops every year and after fulfilling our national requirements we just export what is left of it without any value-addition to the crop. Even what value-addition we do for the local market is at best minimal. Apart from some basic products that we have been making for decades, we do not come up with products or even concepts which encourage value-addition and processing part in the national food industry. For the very basic products that we create with value-addition, the quality is still not up to the mark in most cases when we talk of international markets.

With CPEC, we are entering a phase where a lot of international players from different industrial sectors are expected to take interest in making investments in Pakistan. There is every reason for us to particularly promote foreign investments in agriculture, food-processing and packaging domains.

Foreign investors should be offered financial and taxation incentives for setting up industrial units for food processing and packaging. If it happens alongside technology transfer, it would be the proverbial icing on the cake This seems like a very good opportunity for the new government to work upon and achieve its goals of not just increasing exports but creating the promised job opportunities.

MIDDLEMAN DOMINANCE

Saleem Shahid April 25, 2019

AGRICULTURE is a commercial proposition taking care of many a livelihood. Every farmer adopts a cropping pattern where his comparative gains are higher. However, it is the middleman who has a complete stranglehold over the farmer as the former controls the payments for what the latter produces. Successive governments have failed to change the prevailing system. For decades, farmers in Pakistan have had little or no say in choosing markets or buyers for selling their produce. The government mandates marketing and selling of farm produce of essential crops only through state-owned institutions on minimum support price as announced by the government for each crop. In order to avoid delay in receiving payment by the government departments, the farmers prefer to sell their produce to the middleman or to local buyers.

“We have our own aarhtis – as the middlemen are called locally – since the time of our forefathers. We sell all our produce, primarily wheat, to them. In return, they take care of all our needs and demands in cash or kind. We do not have to face any problem in case of any tragic or happy happening in the family as the aarhtis have to meet all our demands,” said Mohsin Ali, 55, a farmer in village Jagiot, in the outskirts of Islamabad. Explaining the challenges involved in direct payment, Mohsin Ali says a majority of the farmers would not understand the basics of the system, and the government in any case cannot provide the services provided by an aarhti.

In Pakistan, farmers do not sell their produce in the open market. The middlemen purchase their produce by paying a little higher price than the prevailing price — in books alone — and fulfil farmers’ productive and non-productive needs. Middlemen continue to act as the custodian of the produce and sale proceeds because all procurement happens through them and the payment from procurement agencies reaches the farmer through them as well. This indirect system of payment puts the cash in the hands of the middlemen, which they leverage to exploit the farmers.

Giving the middlemen complete hold over farmers is actually a parallel business of money-lending. Between sowing and harvesting, any time farmers need money, the middlemen are happy to provide a loan at a high rate, which would be higher if it is for a wedding. After the harvest, the middlemen first deduct the debt and/or interest, if any, from the payment due for the produce. As the input costs of farmers increase and relative returns diminish, they often find themselves in need of loans. Here again, the middlemen are their saviours. Besides high interest, the farmers are also made to hand over blank signed cheques to the middlemen so that they could recover their loaned amount as and when a cheque is deposited in the bank.

Marketing is the weakest link in the agriculture chain, creating more and more space for the middlemen who overrule both the growers and the consumers.

“Eliminating the middlemen would enable the growers to get 35-40 per cent higher returns. The only constraint is that the local demand is limited,” says Raja Basharat, a farmer-cum-builder in village Barma in the vicinity of Islamabad.

In such a situation, it seems that setting up of private agricultural markets has become inevitable where farmers could sell their produce then and there without the influence of the middlemen. The setting up of modern private agriculture markets would facilitate proper grading, processing, packaging and marketing of quality produce. Provision of cold chains would also facilitate access to high-end domestic and international markets of perishable farm commodities. The presence of competitive private markets will have healthy effect on the existing markets in terms of prices offered and facilities provided.

The farmers do need protection. They have to face a raw deal amid market fluctuations. Every now and then, cotton does not fetch the expected price; the onion-growers have to shed tears as the prices slump, and the wheat producers feel cheated when they have to sell the commodity at below-market prices despite a bumper crop. It is common knowledge that the traders manipulate prices in connivance with officials of various procurement agencies when the farmers bring their produce to the markets. As a result, the middlemen make more profit than the growers. So it makes sense to strengthen the marketing mechanism to protect the farmers’ interests. The farmers too will have to make efforts. They can, for instance, form cooperatives and store their produce for deferred disposal.

Achieving economic sustainability is the biggest challenge for small and marginal farmers. Production and marketing of all products, industrial or agricultural, are interlinked issues. But this principle vis-a-vis agriculture has not been given due consideration and marketing of food grains has continued to be quite outdated. Marketing is considered to be the weakest link in the agriculture development chain, creating more and more space for the middlemen.

There is a need for reaching out to the farmers with a multi-disciplinary approach to develop agri-business information hubs to provide them with the latest information regarding the sale and purchase of agricultural produce.

Apart from providing information on agricultural marketing and agronomic practices, these centres may play a key role in improving the quality of agricultural produce by educating the farmers about the scientific approach to farming with the aim of making the farmers aware of the latest advances in the field and help them getting a competitive price for their produce besides providing the relevant information on agro-marketing, organic farming and improvement of crop quality.

These centres should have computers, television sets, libraries containing videos and literature on farm education for the benefit of the farmers besides guiding the farmers and organising regular training programmes, seminars, workshops, buyer-seller meetings, laboratories to test and grade farm produce, providing complete information on marketing, post-harvest management of crops and prevention from various diseases.

All in all, the move to set up centres to educate the farmers about various aspects of agricultural practices besides providing them much-needed information on marketing their produce will be a step in the right direction.

MODEL PILOT PROJECT LAUNCHED AT NARC FOR FARMERS

RECORDER REPORT | APR 25TH, 2019 | ISLAMABAD

A model pilot project has been launched at the National Agriculture Research Centre (NARC) to advise farmers on the efficient use of water. According to details of the project shared by Dr Munir Ahmad, Director of Climate Change, Alternate Energy and Water Resource Institute at the NARC Islamabad, only 40,000 acres in the country is under drip irrigation.

In contrast, the total irrigated area in Pakistan is estimated to be 20 million acres.

The solar-powered project spreads over seven acres and comprises three components i.e. citrus orchard on one acre, sprinkler orchard on 2.5 acres and raise bed on 2.5 acres. As part of its “Caring for water initiative”, Nestle, one of the largest multinational food companies, has made an investment of Rs 4.5 million in the project to promote the drip and sprinkler technology, said an official of the company.

The firm has already launched an agricultural efficiency project in Sheikhupura in collaboration with the Punjab government which has the potential to help save 54 million litres of water annually. Talking to media, Dr Munir Ahmad informed the institute had been mandated to develop and disseminate science-based effective technologies and innovative practical management of water, energy and resources in collaboration with provincial and national research and development organisations.

In view of the effects of climate change on agriculture, there is a need to bring high value crops under sprinkle and drip irrigation as well as solar pumping irrigation, he said.

Nestle understands the need of water conservation and to that end has been extremely supportive in modernizing the agricultural practices in Pakistan. With the drip and sprinkler technology, water wastage will be brought down drastically and a more efficient system will be set in place for the agricultural sector.

Farmers in water-stressed regions of Balochistan have taken keen interest in the drip irrigation technology and have been visiting the pilot project to gain knowledge to adapt it to promote agricultural productivity.

High cost of imported valves, pipes, tubing and emitters from China is the major hindrance in the way of promoting drip and sprinkle irrigation. Dr Ahmad suggested that the government should seriously consider encouraging the private sector to produce drip irrigation devices locally that can help introduction of drip irrigation at a massive scale, he said.

In the absence of local industry manufacturing drip irrigation devices, there is less availability of skilled manpower since the technology requires sediment-free clean water and hindrances in agronomic practices.

He said proposals had been submitted to the prime minister's task force on agriculture and the recent measures to promote agriculture such as green technology would boost introduction of drip irrigation.

Explaining advantage of drip and sprinkle irrigation, Dr Ahmad said 40 percent of irrigation water can be saved through this technology compared to flood irrigation.

The technology also helps efficient utilisation of fertilizer whereas crop yield increases by up to 40pc and water application uniformity reaches over 90pc, he said.

10-15 PERCENT RD ON COTTON IMPORT, MINIMUM SUPPORT PRICE: SPECIAL BODY TO PRESENT RESOLUTION IN NA TODAY

TAHIR AMIN | APR 25TH, 2019 | ISLAMABAD

The Special Committee on Agricultural Products will present a joint resolution in the National Assembly for passage on Thursday (today), recommending minimum support price for cotton crop and imposition of 10-15 percent regulatory duty (RD) on cotton import to protect local growers and reduce import bill, which is currently around one billion dollars annually.

The was decided in a meeting of Special Committee on Agricultural Products which was chaired by Asad Qaiser, Speaker National Assembly. The committee was given a briefing by Commerce Division and Ministry of National Food Security and Research (MNFSR) on exports/import of cotton as well as its stagnant production. The committee unanimously approved the TORs of the Special Committee on Agricultural Products which outline an ambitious undertaking to turn around Pakistan's agriculture sector.

Qaiser remarked that cotton is Pakistan's strategic crop and boosting productivity and export competitiveness is central to the revival of cotton in Pakistan. The committee was informed that cotton exports as well as imports have significantly declined in the last 9 months. It was highlighted that Pakistan's cotton continues to lose export competitiveness and cede space to the regional competitors.

The members remarked that the middle men extract maximum profitability on the basis of their lobbying and bargaining power while the farmers continue to be exploited.

The committee maintained that higher cost of production, price differential vis-à-vis international prices and lack of value addition have deprived Pakistan of competitive advantages in the international markets.

The members remarked that middlemen extract maximum revenue during the purchase. It was one of the reasons that area under cultivation for cotton has ceded considerable space to other crops. It was also highlighted that cotton price that farmers get, is also not in line with the international trend as they receive considerably lower prices than their counterparts in neighbouring countries. The members were informed that a short window for import, based on the limited needs of the local industry, resulted in massive imports and subsequent dumping.

The MNFSR also supported the imposition of RD on cotton import, saying it would protect and encourage local growers as the cotton sowing is about to start.

Joint Secretary Commerce Division Usman Qureshi said that Pakistan is a net importer of cotton as cotton of around one billion dollars was imported last year which contributed to trade imbalances. Furthermore, cotton exports declined by around 71 percent during the first nine months of the current fiscal year compared to the same period of last year.

Secretary MNFSR Hashim Popalzai said that India cotton production increased by 150 percent while Pakistan cotton production is stagnant, which is resulting in exports' decline. To meet local textile industry requirement, the country has to import cotton; however when regulatory duty is waived off, the industrialists import heavily and dump it which is resulting in low prices for local growers. Around 0.7 million bales of cotton are dumped in factories at present, he added.

Some parliamentarians said that All Pakistan Textile Mills Association (APTMA) has become a strong cartel and succeeds in manipulating government's policies in its favour at the cost of growers' loss.

MNA Riaz Fatyana recommended for 10-15 percent RD on cotton import to give level playing field and protect local growers. The recommendation was strongly endorsed by all the committee members.

Popalzai said that duty on cotton imports was waived off by the ECC despite their opposition, adding they support that duty be imposed on cotton imports.

Cotton Commissioner Dr Khalid Abdullah said that APTMA agreed last month on import parity prices but backed out two days ago from its commitment. Due to duty free cotton import, growers get on average Rs 34-40 billion less per annum. He further said that around 1.7 million of bales have been imported so far in the current year.

The speaker National Assembly said that it means the growers are being exploited. The MNFSR official said that even if duty is imposed on cotton import, it would not hurt industry as they could take it back in the shape of Duty and Tax Remission for Exporters (DTRE).

The committee was further informed that cotton import is not allowed through land route as per the law and can only be imported through sea, but cotton is being imported through land route in the country.

The committee decided to present a joint resolution in the National Assembly for passage on Thursday (today) while recommending for imposition of RD on cotton import as well as minimum support price.

Furthermore, all stakeholders would be invited in the next meeting to take their views. The committee also directed minister for NFSR to visit areas where crops were damaged by recent rains and storms and come up with estimated losses as the government has pledged to compensate the growers.

Qaiser further advised the Federal Minister Mehboob Sultan to personally visit the affected region and ascertain the estimated losses to the farmers. The minister assured that the government will extend maximum relief to the poor farmers. He added that the Prime Minister has also assured compensation to the farmers.

The minister expressed confidence, "Given the support and commitment of this committee, we may revitalise our agriculture and realise out true potential."

The committee was further informed that electricity prices was fixed at Rs 5.35 per unit for agriculture sector with no further taxes through the Parliament, but the government has added Rs 2 per unit fuel adjustment, which has increased the cost of production manifold.

The committee decided to summon concerned departments in the next meeting to resolve the issue.

TCP PLAN TO SET UP 'RICE CITY' IN KARACHI

ZAHID BAIG | APR 25TH, 2019 | LAHORE

The Trading Corporation of Pakistan (TCP) is planning to set up a 'Rice City' in Karachi in order to facilitate exporters and help enhance export of the commodity to strengthen national economy.

"We are going to put the plan before the TCP Board of Directors in next meeting for approval," said TCP Chairman Riaz Ahmad Memon while talking to Business Recorder at the sidelines of launching ceremony of digital process of TCP authenticity certificate for export of rice.

Senior Vice Chairman REAP Ali Hussam Asghar, former chairman Sami-ullah-Naeem, Pir Nazim Shah, REAP General Secretary Kashif-ur-Rehman and a large number of brown rice exporters were present at the event.

He said although we have sufficient storage capacity but the proposed new facility will be reserved specifically for rice exporters. He said storage will help save the consignment from aflatoxin.

Memon further said that the TCP is going to introduce a website to help exporters of different sectors to search buyers for their goods. He said it will be sort of online commodity market where exporters of surgical instruments, rice, cement or any other exportable items can place their query for buyers. He said that this online facility will have data of importers from different countries. "Idea is that exporters will place their commodity and it will be displaying full profile of the exporters and all the details about the company and the goods on sale including quantity.

The system will generate an email which will go to all the buyers registered on this system thus trying to create a B2B link between Pakistan exporters and foreign importers," he added.

Earlier, addressing the launching ceremony of digital inspection and certificate service, Riaz Ahmad Memon also threw light on this proposal and said they are at present in procurement process of this new software and local talented software engineer is in negotiation with the Corporation. He said that it will provide publicity and fast access to exporters to importers.

Responding to a demand of the rice exporters, he announced to increase the slots of rice analyzers and deputing most of them in Punjab as this province is hub of rice exports, especially brown rice. He said that at present there are two analyzers and 10 more will be added after imparting them necessary training.

Rice Exporters Association of Pakistan (REAP) Senior Vice Chairman Ali Hussam speaking on this occasion said that 90-95 percent of brown rice is exported from Punjab so the TCP should bring its command and control system to this province to make issuance of certificate and inspection fast and quick.

He also demanded to increase analyzers in Punjab and deputing them region wise. He also asked for speeding up the inspection process and accounts process. He lauded the launch of digital process for inspection and certification and assured to promote it.

Earlier, TCP officials briefed the participants about IT-based digital process of rice inspection and issuance of authenticity certificate launched to facilitate the rice exporters. They said the exporters have to create account on portal, file online application/request to carry out inspection and submit detail documents and bank challan fee.

https://fp.brecorder.com/2019/04/20190425467169/

‘IMRAN TAKING KEEN INTEREST IN ACHIEVING PRODUCTION TARGET OF 15 MILLION BALES’

HASSAN ABBAS | APR 25TH, 2019 | LAHORE

Prime Minister Imran Khan while chairing the meeting on the challenges being faced in cotton sector in the last week of December 18, has asked the Ministry of National Food Security and Research to take measures to achieve the production target of 15 million bales of cotton.

The meeting was also attended by Advisor to Prime Minister on Climate Change, Malik Amin Aslam; Punjab Minister for Agriculture Malik Nauman Ahmed Langrial; Secretary National Food Security Dr M Hashim Popalzai and other officials.

In the meeting he directed the official to evolve the strategy to achieve the target of production of 15 million bales of cotton. He also directed the officials that they should ensure that farmers get certified seeds.

Chairman Karachi Cotton Brokers Forum Naseem Usman told that they had presented their recommendations for achieving the target of 15 million bales at that time.

He also said that he still remembers that 12 years back while addressing the seminar on cotton seed in Karachi Jahangir Tareen read the paper in that seminar on increasing the production of cotton. At that time he said that in 2015 we made Cotton Vision and tried to achieve the target of production of 20 million bales of cotton. But unfortunately in 2015 the production of cotton was 9.7 million which is less than 10 million.

Naseem said that the meeting of Federal Agriculture Council was held every year in the months of March and April in Islamabad in which after reviewing the estimate of production of cotton the land for cotton cultivation was allocated and estimation of cotton production in the provinces was done. But unfortunately the production of cotton was much less than the estimation which means that estimation was not done seriously.

During the last four years according to the estimates the production of cotton was 14 million, 14.3 million but 9.7 million and only one time 11 million bales were produced.

In the cotton producing countries there was a difference of 0.3 million to 0.5 million bales between the target and the production but in our country the gap between the production and estimate was huge. The plant of cotton is very sensitive and weather had an impact on it. During the last two years the cotton crop faces acute water shortage. Experts were of the view that estimates of the FAC regarding the production of cotton were not right and the huge difference exists between the production and the estimate.

This year too the FAC has the set the target of production of 15 million bales for the year 2019-20 during the meeting held in the month of April according to the vision of Prime Minister Imran Khan. FAC should conduct a survey of the total cultivated area of cotton in the month of June and after that set the real target instead of setting the target on assumptions. Due to setting the target on assumptions there was an uncertainty in the whole sector. Last year the government constituted a committee to prepare the estimate of the cotton production.

According to the estimates of that committee, Pakistan can produce 25 million bales till 2025. All the estimates were based on assumptions the target should be set after conducting the survey of the cultivated land so that it should be easy for the policy makers to make policies.

Prime Minister Imran Khan is taking special interest in achieving the target of production of 15 million bales. He has directed to provide certified seeds. He also directed to give incentives to the farmers for the achievement of the target. Before that in the past, Pakistan produced 14.9 million bales in 2011-12. If serious steps should be taken production of cotton will be 15 million bales. While appreciating the statement of Prime Minister Imran Khan regarding increase in cotton production All Pakistan Textile Mills Association and Karachi Cotton Association has given fruit full suggestions.

According to the estimates of Federal Ministry of Food and Agriculture 15 million cotton bales were produced in the financial year 2011-12.

Chairman Karachi Cotton Brokers Forum Naseem Usman said that at that time the farmers of cotton cultivated areas of Hyderabad, Mirpur Khas, Badin and other districts of cotton production gave priority to cotton instead of sugar cane and rice due that reason the cotton was cultivated 30 to 40 percent more as compared to 2010-11. It should be clear that in that year as compared to the allocated cultivated land of 7.8 million acres allocated land was 8.8 million to 9 million acres.

Keeping in mind, this year in 2018-19, 7.3 million acres were allocated for cotton cultivation. Per acre yield of cotton in Sindh is 30 to 32 maund per acre while per acre yield in Punjab is 18 to 20 maund per acre. It should be taken seriously. It is suggested that ban should be impose on cultivation of other crops in cotton cultivated areas in Punjab like Sindh.

It is a fact that if we focus on the development of agriculture sector we can achieve self reliance. Cotton is a cash crop of our country and by increasing its production we can fulfill our domestic cotton needs as well as earn foreign exchange by exporting it.

Moreover we can fulfil the needs of our textile industry, edible oil and fodder for animals.

The increase in production of cotton can only be possible if we provide assistance to farmer on every step from sowing to cultivation. Farmers get healthy seed on economical price and get fertilizer on time; ample amount of water and pure pesticides then there is no reason that production target of cotton and other crop should not be achieved. The administration should take care of all these things.

Our country faces a problem that when the production of one crop increases the production of other crop decreases and we have to import that crop to meet our domestic needs.

It should be kept in mind that production of cotton should be increased in such a way that the production of other crops can not suffer. In our agriculture sector there is a lot of potential our farmers are hard working and with some hard work we can turn around. If we construct some small dams and one big dam we can achieve our production target.

The target set by Prime Minister Imran Khan of the production of 15 million bales of cotton can be achieved if federal and provincial agricultural ministries allocate the cultivation land which was allocated in 2011-12.

At present sowing season partially starts in the low lying areas of Sindh while the partial sowing of cotton started in Multan division of Punjab. The relevant departments should work on war footings to increase the production of cotton.

NA PANEL TO SEEK 10-15% IMPORT DUTY ON COTTON

By Haseeb Hanif Published: April 25, 2019

ISLAMABAD : In order to facilitate local cotton cultivators, the Special Committee of National Assembly (NA) on Agricultural Products has decided to bring forward a resolution to consider placing import duty of 10 to 15 per cent on cotton.

NA Speaker Asad Qaiser, who chaired the meeting held in the Parliament House on Wednesday, also instructed authorities to determine the practicality of the suggested increase in import duty, which currently stands at zero.

The meeting also expressed concern over the Rs2 increase in price of per unit of electricity under the fuel price adjustment and summoned the energy minister in the next meeting in this regard.

The secretary of the Trade Ministry informed the meeting that Pakistan is a net importer of cotton, importing mainly from USA, India and Brazil. The import of cotton the previous year amounted to $1 billion. The production of cotton in India increased by 150% but did not increase in Pakistan due to which cotton cannot be exported, he said.

Minster for Food Security Sahibzada Mehboob Sultan informed the meeting that steps were taken to provide relief to cultivators whose crops were destroyed due to rain. He added that people would be compensated once losses have been estimated.

During the meeting, Riaz Fatyana said that the duty on import of cotton has been decreased from 5 per cent to zero, while calling for the levying of 10 to 15% duty on import of cotton. He said currently it was benefitting businessmen.

Khalid Khokhar, a representative of a farmers’ collective, said that the production cost in Pakistan was very high which skewed the situation in favour of the All Pakistan Textile Mills Association (Aptma) while resulting in losses for the farmers.

“Pakistani cultivators stopped the plantation of cotton on not receiving profits,” he said. He added that for the improvement of economy, the support price of cotton is necessary.

The secretary for food security, Hashim Popalzai said that they had opposed the decision made by the minister of textiles to impose zero duty on import of cotton. "Cotton is imported due to zero duty on cotton," he added.

Cotton Commissioner Dr Khalid Abdullah said that the production area of cotton has declined from 770,000 hectare to 400,000 hectare. "This year there was a difference of Rs1,500 per ton of cotton. The rates of cotton remained around the cost of production," he said.

Speaker Asad Qaiser said that to promote local cotton, a resolution would be brought to the NA in relation to imposition of duty. He directed committee member Syed Fakhar Imam to prepare the draft and discuss it with him for presentation in the NA today (Thursday).

On this occasion, Chaudhry Iftikhar Nazir said that the electricity has been hiked by Rs2 for agricultural consumers.

"The electricity has been increased by Rs2 under the fuel price adjustment but the rate for agricultural consumers is Rs5.35 paisa per unit. Now the pressure of fuel price adjustment has been put on the cultivators," he said, upon which the committee summoned the federal minister energy in the next session.

The committee also summoned the Aptma representatives in the next meeting on the issue of cotton.

PFA ACT IS ALL ENCOMPASSING, SAYS FOOD MINISTER

The Newspaper's Staff Reporter April 24, 2019

LAHORE: The Punjab Food Authority (PFA) does not require more legislation as it is working under the PFA Act 2011, says Punjab Minister for Food Chaudhry Samiullah.

"The PFA Act-2011 was passed by the Punjab Assembly, giving authority to penalise food business operators on violations," the minister told journalists in response to PA Speaker Chaudhry Parvaiz Elahi's observation in which he questions the legality of the PFA.

The speaker questioned the minister for food what the standard operating procedure of the authority is. "Where does it draw its legal strength from? How does it decide fines; it has been fining with impunity from a few thousands to hundreds of thousands of rupees? What is its professional strength? All the questions beg answers," he asserted.

Explanation comes on the heels of Pervaiz Elahi's outburst in Punjab PA

He said food safety officers of the authority could impose fine, issue warnings and seal factory after finding violations under the law and food business operators could appeal against any action to its director general.

Mr Chaudhry said the authority was implementing the PFA Act in the province and fist it would give five warnings to the business operators and later they would take action of imposing fine or seal premises. "I am personally monitoring all the actions of the authority and it is working under the set standard operating procedure," he said.

He said the SOPs are defined for all posts in the PFA Act-2011 and work of the Food Safety Officer is clearly described in section 13 of the Act 2011. Similarly, protocols are well defined for all employees including the food safety officer as how to seal any food premises, to serve improvement notice to food business operator and to remove the substandard food material from the market.

The minister said regulations were prepared to further define the way of the authority's work whereas all regulations were passed from the forums concerned and notified from the Law Department. "A mechanism to impose fine is in the PFA Act 2011 and it's board has given power to officers to impose fine on the fourth inspection and seal it on fifth inspection," he said.

He said the 99 per cent human resource of the authority had graduated in food safety-related studies and were technically qualified and later they were also trained professionally in field.

Sources said the Speaker raised the questions after the authority penalised the food businesses he was associated with.

DAMAGED BY HAILSTORM: SURVEY OF CROPS TO BE CONDUCTED: MINISTER

HASSAN ABBAS | APR 24TH, 2019 | LAHORE

Provincial Minister for Energy Dr. Akhtar Malik said on Tuesday that the government of Punjab will conduct a survey in order to know the real estimate of damage caused by hailstorm to crops. The report of the survey will be presented in the House.

He was speaking on the floor of House. He said the government will compensate farmers whose crops were destroyed due to recent hailstorms. Speaking on the adjournment motion, PML-N MPA Muhammad Arshad Malik pointed out that the potato growers are not getting proper price of their crop. He said due to decreasing prices of potato, farmers are suffering particularly belonging to districts of Sahiwal, Okara and Pakpattan. He demanded that the government should take notice of the situation and look for new international markets for the export of potatoes.

Speaking on a point of order, PML-N MPA Hina Pervez Butt asked that how many teams visited the rain-affected areas after the directions of Prime Minister Imran Khan to the Chief Minister Punjab to take steps for solving the problems of farmers who lost their crops due to hailstorm.

While responding to questions on health during the question hour, Health Minister Dr. Yasmeen Rashid said that she met the drug inspectors and directed them to have zero tolerance against sale of spurious medicines. She said the government had taken notice against 1061 medical stores for selling spurious medicines in 2018. The samples of 29 medicines were found substandard and the cases against them were pending.

PML-N MPA Malik Ahmed Khan said that instead of giving details of the health initiatives taken by Prime Minister Health program, Dr Yasmeen Rashid should brief the House about initiatives taken by the provincial government in health sector. He further said that after 18th amendment health is a provincial subject.

Speaking on the point of order, PML-N MPA Rana Mashood criticized the government for cutting the higher education budget. He said opposition will resist any such move.

PML-N MPA Tariq Gill speaking on the point of order said that a unanimous resolution should be passed in the house for showing solidarity with the innocent Christians of Sri Lanka who were killed in a terror attack on Easter.

Law Minister Raja Basharat said that Tariq Gill should move the resolution and treasury benches will support it.

RICE GROWERS URGED TO AVOID OVERUSE OF CHEMICALS

RECORDER REPORT | APR 24TH, 2019 | LAHORE

Speakers at a seminar called upon the rice growers to avoid over-use of chemicals especially tricyclazole and buprofezin to ensure safe and healthy basmati rice from farm to fork. The seminar was entitled as 'Khushal Kissan' organized by the Pakistan Basmati Heritage Association (PBHA). A large number of basmati growers from Narang Mandi Distt Sheikhupura and members of the Association attended the meeting. Former Rice Exporters Association of Pakistan (REAP) Chairman Samiullah Naeem, Shahzad Chaudhry & Raja Arsallan attended the event. Pakistan Basmati Heritage Association (PBHA) has been formed for promotion and preservation of basmati rice heritage of Pakistan.

While moderating the seminar Imran Sheikh Coordinator PBHA highlighted the mission of PBHA and stressed the basmati rice farmers for avoiding overuse of chemicals especially tricyclazole and buprofezin in Basmati rice to ensure the safe and healthy basmati rice from farm to fork.

Shahid Tarer Convener PBHA shared the vision of Pakistan Basmati Heritage Association (PBHA) regarding working to resolve the challenges being faced in Basmati rice production and export. He said our country is lagging behind not only in productivity of Basmati rice but the rising cost of production making us less competitive from other rice-producing countries.

Sheikh Adnan Director PBHA shares the expectations of PBHA from Basmati rice farmers and assured to provide healthy and certified seed on subsidized rate during this season.

Chief Guest of the seminar Zafar Yab Haider Naqvi DG Pest Warning and Quality Control threw light on strategies of the Punjab Agriculture Department for controlling insects and pests of rice. He appreciated the mission and efforts of PBHA and assured his full cooperation on the behalf of Punjab Government. Asif Hayat Khan Niazi Zonal Manager Fuji Fertilizer Company shared his views about fertilizer application and importance of using potash, zinc and boron. Aftab Naseem Regional Manager FFC emphasized a balanced use of fertilizers especially Urea and its impact in boosting rice productivity, quality and profitability.

Dr Muhammad Sabir Director Rice research Institute KSK briefed the audience about research updates and development projects of Basmati rice. He elaborated the work on new varietals development of Basmati rice especially BLB resistant varieties. Dr Tahir Hussain Awan Rice Research Institute KSK shared his experience about Direct Seeding Rice and shared the set of new technology for weed management in DSR. Dr Riaz Deputy Director Agriculture, Pest Warning & Quality Control Sheikhupura advised the farmers for responsible use of pesticides and ensuring the quality of Basmati rice. Khalid Khan Kakar Assistant Director Agriculture Muridke District Sheikhupura discussed the key factors for boosting the rice yield and quality.

COTTON PRICES FIRM ON IMPROVED BUSINESS ACTIVITY

RECORDER REPORT | APR 24TH, 2019 | KARACHI

Prices maintained a firm posture on the cotton market on Tuesday in the process of low supply of best quality, dealers said. The official spot rate was unchanged at Rs 8,850, they added. In the ready session, over 15000 bales of cotton Changed hands between Rs 7500-9000, they said.

Market sources said that continued increase in demand pushed the rates firm. The mills were trying to replenish their stock. On the other hand, the ginners refrained from fresh selling due to little stock with them, they said. Cotton analyst, Naseem Usman said that cotton yarn is in demand and this is an encouraging factor. Sowing is on full swing because of availability of irrigation water in both Sindh and Punjab, he observed.

Achievement of better and improved cotton production will demand on weather condition and supply of irrigation water to the standing crop, he added. Reuters adds: ICE cotton futures settled higher on Monday as the dollar weakened and tumultuous weather in the US Southeast restricted progress in plantation of the natural fibre crop.

The most-active cotton contract on ICE Futures US July settled up 0.2 cent, or 0.26 percent, at 78.47 cents per lb. Total futures market volume fell by 3,638 to 20,861 lots. Data showed total open interest gained 293 to 213,138 contracts in the previous session.

The following deals reported: 2000 bales of cotton from Ghotki at Rs 9000, 1000 bales from Sadiqabad at Rs 9000, 1600 bales from Khanewal at Rs 7500/9000, 1800 bales from Rahim Yar Khan at Rs 8900/8950, 1400 bales from Dera Ghazi Khan at Rs 8900, 2600 bales from Haroonabad at Rs 8600, 1400 bales from Bahawalpur at Rs 8500, 2077 bales from Lodhran at Rs 8400 and 1000 bales from Rajanpur at Rs 9000, they said.

PAKISTAN EXPORTS SUGAR, RICE TO CHINA UNDER $1B PACKAGE

By APP Published: April 24, 2019

ISLAMABAD: Pakistan has so far exported 150,000 tons of sugar to China while export of 200,000 tons of rice will be completed by June under the $1-billion duty-free incentive package offered by Beijing, revealed Adviser to Prime Minister on Commerce, Textile and Industry Abdul Razak Dawood.

Briefing the Senate Standing Committee on Commerce on Tuesday, the adviser said China had extended the duty-free package for the export of rice, sugar and 350,000 tons of cotton yarn.

Committee Chairman Mirza Muhammad Afridi was of the view that the domestic textile industry would be hurt by the export of yarn as its prices would surge in Pakistan's market.

However, Dawood said Pakistan produced a huge quantity of cotton yarn so no such issue would arise. He added that textile-related industries were now giving good results as even closed factories had resumed production and there were hopes that textile exports would go up in coming days.

He informed meeting participants that he would be accompanying Prime Minister Imran Khan during the upcoming visit to China, where second phase of the free trade agreement (FTA) would be signed.

Under the agreement, Pakistan will get duty-free market access equivalent to that already enjoyed by member countries of the Association of Southeast Asian Nations (Asean) from China. "Although it took a long time to finalise the second phase of FTA, I would like to appreciate the Chinese government's support in this regard."

Senator Nauman Wazir pointed out that the government should get assurance from the Chinese side that it would not impose non-tariff barriers on imports from Pakistan.

Dawood pointed out that all such matters had already been discussed with China and he would further talk to Chinese authorities to get such assurances.

Talking about the performance of textile sector, Senator Shibli Faraz said the sector had become a 'spoilt child' by getting unnecessary subsidies. The productivity, efficiency and quality of the textile sector was not up to the mark despite getting huge subsidies and average monthly textile exports never exceeded $1.2 billion in the past 20 years.

Endorsing the senator's stance, the adviser said the textile industry needed assistance around 15-20 years ago but now there was no need to offer any subsidy to the sector. However, he was of the view that the garment industry needed support owing to high prices of land, therefore, the government was mulling over extending long-term financing to garment manufacturers for the purchase of land and buildings to establish their industrial units.

Dawood told the committee that the government was engaged with Japan for the purchase of modern textile machinery and expressed hope that in the next six months an agreement would be finalised.

Senator Wazir suggested that the government should conduct a value chain analysis in the textile sector to find out the reasons behind the decrease in textile exports. He said commercial counsellors in Pakistani embassies abroad should also be bound to give feedback from their respective countries in order to find out potential markets in various parts of the world.

"If we want to boost our exports beyond $50 billion, we must have a look at areas other than textile," Dawood remarked.

He pointed out that the engineering sector had a market share of over $4 trillion across the globe and it could help increase Pakistan's exports to the desired level.

3,753 PACKETS OF UNSAFE MEAT REMOVED FROM MARKET

RECORDER REPORT | APR 22ND, 2019 | LAHORE

The Punjab Food Authority (PFA) on Sunday removed 3,753 packets of six meat companies from the market over failure to meet the food safety standards by sharing laboratory results of frozen meat products with media for the public interest.

The authority had taken samples of 115 products of seven companies. According to details, PFA removed 544 packets of Seasons, 127 packets of Man Salwa, 164 packets of Hamza Foods, 100 packets of Neat Foods and three packets of Sabroso. Moreover, the authority has issued fine tickets and served improvement notices to food business operators of meat companies owing to fail their 16 products on quality basis. These products are not harmful for human consumption; however, improvement space is always present.

PFA Director General Captain Muhammad Usman (retd) said that PFA has sealed the supply of all failed brands at their factories in order to ensure the availability of quality meat in the market of Punjab. He said that supply of failed brands would be remained suspended until to bring reforms according to the PFA. He added that anybody can download the complete list of the sample results from the PFA website. PFA also ordered to stop the production of all those brands that failed to meet the standards in the analysis report of the laboratory test. He said that PFA will again collect samples for laboratory test after ensuring proper reforms.

Muhammad Usman told that PFA will check frozen meat products two times in a year as per annual sampling schedule. He added that PFA is taking indiscriminate action against food business operators in the light of laboratory report. He said that the purpose of the continuous checking of food points is to ensure the provision of safe and healthy food for the public.

‘WE WANT TO MAKE THE AGRI SUPPLY CHAIN EFFICIENT THROUGH TECH’

BR Research April 22, 2019

An interview with Jehanzeb Nasir Chaudhri, founder Mandiexpress.pk

In the age of digital disruption, the possibilities for young tech entrepreneurs are endless. Though late to the game, Pakistani entrepreneurs have not been short of ideas. Some have worked, others faltered, many going out of business as rapidly as they came in. But of all the e-commerce ideas, selling fresh grocery online may be the trickiest—it has the biggest potential given the sheer size of the agriculture industry and the demand coming from Pakistan’s burgeoning markets, but despite facing virtually no online competition, it is also the most difficult to successfully take off the ground and keep gaining market share. BR Research sat down for quick chat with the young founder and CEO of mandiexpress.pk, Jehanzeb Nasir Chaudhri to determine what the business model is, and how he is tackling this mammoth task four-year down the line since the launch.

Jehanzeb has a Bachelor in Economics and Communications from Lake Forest College with a Master in Data Science from the Institute of Business Administration, Karachi. He started practicing farming in his backyard as a hobby after spending three months in the rainforest of Maui Hawaii learning permaculture and organic farming. Following are edited excerpts from the conversation.

BR Research: Tell us how you founded mandiexpress and what was your motivation behind it?

Jehanzeb Nasir Chaudhri: I was studying in Chicago when I found out about this program called the Worldwide Organization for Organic Farms (WWOOF). I had no inclination toward selling sabzi or getting into agriculture before, but I joined this program in Hawaii for three months at an organic farm and the experience completely changed me. I went on a macrobiotic diet, which is based on organically grown whole grains and vegetables. Within a month, my body started to detox itself; I had immense energy. I realized that this is what I want to do in Pakistan. I started experimenting in my backyard with organic farming and after some success, I wanted to scale it; however, after talking to some farmers, I realized that I needed to go in another direction.

My next stop was the mandi. The mandi is a chaotic marketplace. There are about nine intermediaries between the farmer and the end-user customer—a product that a farmer sells for Rs10, eventually reaches the consumer at Rs100 with the middlemen collecting most of that revenue. And that's how the idea for mandiexpress was born. I thought before I could do any organic farming myself, I should create a platform where I can connect the farmer directly to the consumer, which could be done best with an IT infrastructure and data science backing it up.

BRR: Did you raise any funds?

JNC: Initially I financed the project myself since there were no investors willing to put money in a new idea with indeterminate returns. I was running the operations from home. In August 2015, we were incubated in Nest I/O, and I found a partner, Danyaal Balkhi who could come on board with me. We rented out a small place where we were delivering 120 orders day. We were then able to get an equity investor, but even that was not enough. This is a very capital intensive business.

BRR: Explain to us how the business model works?

JNC: We use a just-in-time model, which means, if a customer places an order today, he will get the delivery the next day. We aggregate all the orders overnight, our team at the mandi and at other various procurement points, purchase the orders that get delivered to us from 5am till noon, and we subsequently deliver to our customers after an in-house quality control check. This is also the main difference between any other vendor and us. For the sabzi wala or a retail store, the produce may be laying in inventory for days. When customers buy from us, it is a much shorter chain: from farm to mandi, and from mandi to us within a day. In some cases, it is directly from the farm to us, and onto the customer.

BRR: Walk us through the agriculture supply chain. Where does mandiexpress stand or hope to stand in that line-up? Do you want to replace the sabzi wala?

JNC: The farmer is in the middle of the village who links up with an agent. That agent links him to the nearest mandi where there is an arthi who is an auctioneer. His job is to auction and sell the produce in the mandi, which is typically bought by mashakhors who are wholesalers and day traders buying in bulk. The produce they buy will have all varieties in terms of size, quality etc. He will grade this produce, which he will then sell to retailers. This is the simplified version—there are other moving parts in the distribution network, which ultimately lead to the retailer that can be a sabzi wala or a big store.

In our operations, we work as both the wholesalers and the retailers. We have confirmed orders that we provide to businesses as well as households, something which the mashakhors cannot do, and to do this, we work with the arthis and in some cases the farmers themselves.

As to your other question, no we don't want to replace the sabzi wala. Our plans in the future involve partnering with the sabzi wala and in fact, it is the same for all the other links in the value chain.

BRR: What is your pricing mechanism?

JNC: This is an industry plagued with corruption. One of the largest markets in Asia feeds Karachi, which is the 6th largest population in the world. When you walk in the mandi, no one would tell you the price because they are playing on it. They size up the buyer and then give you the rate. Even the sabzi wala does that. So our costs fluctuate on a daily basis. We have a lot of tech that is working in the background. We have a mechanism by which we collect data on prices in the market, and based on that, we price our product and collect a pre-set margin.

On a micro level, price is dependent on the quality, and on a macro level, it is dependent on the supply—for instance, the price of tomatoes would depend on how many tomatoes landed in the mandi. But it is more complicated than that because within the same mandi, the same tomatoes can be priced differently based on the different auctions that are happening simultaneously. On any given day, there is no single price for a tomato. This is a data game.

In the more developed world, the farmer himself grades the produce, runs it through a quality control, brands his product, and prices it accordingly after packaging and weighing. In the wholesale markets, the buyer can pick the produce without having to sift through it. That is what we are trying to do.

BRR: What are your margins for different produce: vegetables, fruits, etc?

JNC: Our costs as I explained earlier vary; and we fix the margins taking into account the perishability, quality and volume. Typically, higher margins for highly perishable produce like lettuce because in that equation we have to consider wastage.

BRR: What is the share of produce that goes into waste for you compared to the industry?

JNC: For us, it is less than 0.2 percent, but the industry average is around 40 percent—from farm to the table. The reason is that we are on a just-in-time model. A big retailer based on the daily footfall procures the goods and hopes to sell it. We have confirmed orders before we go into procurement.

BRR: But can you continue with the same model at scale? Wouldn't you eventually need to build inventories?

JNC: We can easily scale it. We have a hybrid model in which we purchase from the farm directly, from arthis and from the mashakhors based on the volumes. Tomatoes and onions, which are typically high volume produce, come directly from the farm. The advantage of buying from the arthis is we can get the orders in bulk and the advantage of buying from mashakhors is that it is pre-graded.

BRR: Where is your demand coming from, and what is your customer retention?

JNC: Primarily, its young working professionals between the ages of 24-40. On a daily basis with orders of 100-150 orders, we have about 80-90 percent people who keep coming back. About 40 percent are probably in the Defence/Clifton area; 25-30 percent are in the more central locations like Bahadurabad and KDA.

BRR: Your produce online is more expensive than retailers including the sabzi wala. How do you justify that to an average customer?

JNC: I'll give you a supply chain example. The mandi starts at around midnight and the auction begins at 1:00 am and between then and 3:00 am, the mashakhors grade the produce. The peak buying is being done soon after the grading where the mashakhor is selling to retailers. The best quality produce is being sold at that time. By 5:00 am, the best product has already left the mandi, bought by exporters, hotels, and us. This is where the sabzi walas come in who purchase after 5:00 am onwards. The price goes down as the produce gets older, even by a day. That makes the difference between our price and the sabzi wala's price. But yes, it is hard to explain to a consumer that we are providing the best quality produce.

BRR: How do big retailers price their produce?

JNC: They have a smart system in place. The prices of tomatoes, potatoes and onions are the price indicators. They will make sure that the prices of these goods are low. But they will hike up prices of goods that the customer wouldn't have prior knowledge about, such as turnips. Fresh produce for them is a magnet. It pulls customers in and it has a very high buy-back—-when they are coming to buy that cheap tomato on discounted prices, they end up buying other things

BRR: At 150 orders a day right now, are you ready to scale or are you happy with your current customer base?

JNC: We don't want to do what others have done and failed. I have seen nearly 20-30 e-commerce companies hoping to do the same. But they came in, put a lot of money in, tried to scale fast and failed. Our vision is to provide a quality product and educate an average customer about the quality of food they are purchasing. We want to slowly grow with the demand to stay in the game.

BRR: But your current demographics show your customer base is concentrated in the high income areas. Is that the only market you want to tap?

JNC: It depends on how you think about it. We may not be supplying the produce to the houses across the city, but we are supplying to many sabzi walas in Karachi, which ultimately reach different income households.

BRR: Some believe that a major problem in the agriculture system is the existence of arthis. Farmers are cash strapped, arthis provide them with credit at sky-high interest which can go up to 150 percent, and they also get 80 percent of the profit earned on the produce they purchase from the farmers. So if you are working with the middlemen, are you really solving a problem?

JNC: In Pakistan, people don't like change. To change something, we have to start with baby steps. My goal, as I told you was to sell organic produce. It took me 4 years to build that customer base to be able to procure organic produce and sell it. When we started, we were primarily buying from the mandi and we had 1-2 farmers. Now we have about 20 farmers. We are slowly building a database; we are surveying different markets, and creating a network across the country. As volumes go up, we can work with more and more farmers.

BRR: But can you even go to the farmer directly? They rely on arthis for credit. How can you eliminate that important step?

JNC: There are many equations to this. One is that farmer doesn't have the funds. The arthi provides credit to a farmer in the form of inputs etc. and when the output comes, deducts the amount from that. Another equation is, they lend the money to the farmer, and whatever output the farmer produces will be bought by the arthi. A good farmer will get out of this cycle. He makes enough money because of the quality of his produce. Better quality is auctioned at higher prices. We have certain sympathy for the farmers but not all of them are the same. There are some farmers that are selling their produce at three times the price I am buying that produce at the mandi. What we are trying to do is connect with the farmers and ensure a good margin for them, but we seek good quality produce from them in return. We also direct them toward where the demand is.

As we are growing, we want to facilitate the entire value chain through technology. Our way forward is where we partner with all the players and regulate the system in the long term, rather than remove any from the equation.

BRR: Would you agree that poor marketing is a greater problem for Pakistan's agri exports than pricing and availability of inputs?

JNC: It is neither. The problem is of information sharing. People don't have the basic knowledge about how to export, they don't know about certification, regulations, export requirements etc. They are mostly unbanked. Marketing will come after knowledge.

100 INDIAN FISHERMEN RELEASED, MORE TO FOLLOW

PPI Updated April 08, 2019

KARACHI: Pakistan released the first batch of 100 Indian fishermen as part of a goodwill gesture on Sunday.

The fishermen were released from a Karachi prison and they left for their home by train.

The Edhi Foundation made arrangements for their travelling from Karachi Cantonment Station and onwards to Wagah border.

The fishermen were brought to the station in police buses and Edhi ambulances amid tight security.

The Edhi Foundation gave a gift and money to each Indian fisherman to help them meet their travelling expenses to reach their homes from Wagah border.

The fishermen smiled and waved to the people at the railway station as their train left the platform.

An official of the Sindh home department said that during this month, Pakistan would release 260 more Indian fishermen.

He said these fishermen had been released after completion of legal formalities in compliance with their repatriation order issued by the the interior ministry.

Earlier, Foreign Office spokesperson Dr Mohammad Faisal said at a weekly press briefing that Pakistan would release 360 Indian prisoners, 355 fishermen and five civilians, during the month of April.

The prisoners will be released in four batches, scheduled as 100 each on April 8, April 15 and April 29 while 60 prisoners, including five civilians, will be freed on April 29.

WEEKLY COTTON REVIEW: PRICES REMAIN STABLE DUE TO BUYING BY TEXTILE, SPINNING MILLS

NASEEM USMAN | APR 22ND, 2019 | KARACHI

The prices of cotton remained stable. The government has set the target of production of 15 million bales according to the vision of Prime Minister Imran Khan. However the premium of Rs 200 per 40 Kg on Cotton Seed will be paid.

In the local cotton market during the last week the prices of cotton remained stable due to the buying of cotton by textile and spinning mills. The ginners had the stock of 600,000 bales while many mills need cotton due to which the trading volume remains little bit reasonable.

The prices of cotton in both Sindh and Punjab remained Rs 7300 to Rs 9000 per maund. The Karachi Cotton Association (KCA) Spot Rate Committee stabled the spot rate price at Rs 8800 per maund while Seed cotton (Kapas/Phutti) is not available.

Chairman Karachi Cotton Brokers Forum told that during the current season estimated crop of cotton will be 10.08 million bales as compared to the last year production of 11.6 million bales which was 7 % less. The relevant departments were active to achieve the target of production of 15 million bales set by Prime Minister Imran Khan for the year 2019-20.

In the international cotton market mixed trend was seen in the prices of cotton. The fluctuation of 2 American cents was seen in the Rate of Promise (Waday Ka Bhao) of New York Cotton market due to which the rate of cotton is in between 76 and 78 American cent. According to the Cotton Association of India the production of cotton in India will be 3 crore 21 lac bales which is 44 lack bales less than the initial estimate of 3 crore 65 lac bales. More over China announced the quota of importing 800,000 ton bales of cotton which is equal to 47 lac bales of 170 kg due to which it is expected that prices of cotton in international market will increase.

Mean while cotton sector is in confusion regarding the announcement of payment of Rs 200 per 40 kg premium on the production of contamination free cotton in a meeting held in Multan last week regarding increase in the production of cotton.

Chairman Karachi Cotton Brokers Forum said that Chairman Pakistan Cotton Ginners Association Mian Muhammad Mahmood Ahmed said that it was decided in the meeting that 20 cotton factories in Punjab and Sindh will be selected which will give Rs 200 per 40 Kg premium on Contamination Free Cotton. The farmers of these will be directed that they will give clean Contamination Free Cotton to these selected factories. The ginners will make cotton bales from this cotton and the textile and spinning mills as well as private exporters of cotton will pay the premium accordingly. Mahmood said that government had given them assurance that they will give directions to the big textile and spinning groups that they will only buy cotton from these ginning mills after paying reasonable premium.

According to the information Federal Committee on Agriculture (FCA) set a cotton production target of 15 million bales for the year 2019-20. The cotton will be sowed on an area of 2.895 million hectares. It is hoped that sufficient amount of water will be available for the crop, while the tender for the import of fertilizer has also been issued.

According to the experts FCA has set a cotton production target of 15 million according to the vision of Prime Minister Imran Khan. For this purpose an area of 2.895 million hectares has been allocated. Last year FAC has set the initial target of production of one crore 43 lac 70 thousand bales for which 2.955 hectares (73 lac acres) was allocated but due to intense shortage of water sowing process was completed on 2.406 hectares (60 lac acres) due to which only one crore 8 lac cotton bales were produced. In the year 2017-18 one crore 16 lac bales of cotton were produced for which government had allocated 2.700 hectares (67 lac acres) for cotton sowing.

For the year 2019- 20 FCA has set the target of production of 15 million bales which is difficult to achieve from the allocated land because it is not sufficient to achieve the target. According to the experts 15 million bales of cotton were produced in 2011-12 for which cotton was sowed on 3.600 hectare (88 to 90 lac acres). If the cultivated land of cotton is not increased then it is difficult to achieve the set target.

The experts were of the view that it is premature for FAC to set the target before knowing the estimated land of sowing of cotton because for the last many years the officials of FAC gave the estimates of production by sitting in rooms due to which difference of lacs of bales were seen. The process of estimation of cotton crop should be done in the month of June so that estimation should be real.

Moreover, chairman All Pakistan Textile Mills Association (APTMA) Syed Ali Ahsan and Prime Minister's advisor on Commerce and Textile Razzaq Dawood and Chairman Task Force on Textile Salman Shah will try to achieve 50 billion dollar export of textile products in next five years which will give rise to investment and 15 million jobs will be created. In the local market the upward trend was witnessed in the prices of cotton, cotton yarn and textile products.

'SINDH GOVT'S DELAY IN WHEAT PROCUREMENT CAUSING LOSSES TO FARMERS'

By Our Correspondent Published: April 22, 2019

HYDERABAD: With delays in official wheat procurement pushing the exercise far behind schedule, the Sindh Chamber of Agriculture (SCA) has blamed the Sindh government for causing financial losses to the farmers. A meeting of the SCA in Hyderabad on Sunday, attended by the farmers' representatives from Karachi, Sukkur, Ghotki and Sanghar through video link, deplored that not a single wheat procurement centre has been opened in Sindh as yet.

The process was scheduled to start from April 1 but currently, a summary for the purchase of 0.5 million tonnes of wheat is pending approval of the Sindh chief minister. Once the sanction is given, the government will float the tender for purchase of the gunny bags only after which, the procurement process will start. It is expected that the province's farmers, who are harvesting a bumper crop this year, would have sold a large part of their harvest in the open market by that time.

The government had fixed Rs1,300 per 40 kilogrammes as the support price of wheat. However, SCA President Qabool Muhammad Khatian said that the open market has been exploiting the farmers by paying between Rs1,050 to Rs1,150 per 40 kg to the farmers.

The wheat support price of Rs1,300 has remained static since the fiscal year 2014-15 despite repeated demands of the farmers, who cite the rising cost of cultivation as justification for the increase. Even Sindh agriculture research department had previously suggested the government to fix the price at Rs1,448.

"Because the government's centres haven't yet opened, traders in the open market are exploiting farmers by purchasing their crop at cheaper rates," said Khatian, demanding that the government immediately open the centres. "This is happening for the first time in Sindh's history that the government hasn't opened a single centre".

Thanks to the weather and intermittent rain, the farmers are reaping a bumper crop of up to 2,000 kg per acre against Sindh's average productivity of around 1,350 kg per acre. The crop was cultivated at 1,046,845 hectares against the target of 1,150,000 hectares.

The provincial government appears averse to initiating the buying process because it is still utilising the carry-over stocks of its procurement last year. Another obstacle to the process is said to be Sindh food department's limited storage capacity which ranges between 700,000 to 750,000 tons.

Meanwhile, those attending the meeting also expressed grave concern over the shortage of water, particularly in Thatta, Sujawal and Badin districts where the people have complained that they cannot even get drinking water. The farmers denounced the imposition of 200% duty on import of dates from Pakistan to India and requested the federal government and Trade Development Authority of Pakistan (TDAP) to find alternative export markets.

The farmers called for providing Rs5,000 per acre subsidy to the growers of soybean crop by Sindh government, similar to the subsidy being received by their counterparts in Punjab.

The SCA's General Secretary Zahid Hussain Bhurgari, Syed Aijaz Nabi Shah, Nabi Bux Sathio, Ghulam Hassan Chachar, Ghulam Mujtaba Unar, Nisar Hussain Khaskheli and others attended.

CHINA-PAKISTAN JEANS 'MARRIAGE': IS IT BEIJING'S DUTY TO HELP?

By Meng Lingjuan Published: April 22, 2019

BEIJING: The theme of Texpo Pakistan 2019 – Sharing a common thread – reminded the reporter of an old Chinese saying that an invisible red thread connects those who are meant to be together. If the first phase of the China-Pakistan Economic Corridor (CPEC) starts from 'several power plants and three roads', will the second phase begin with yarns of below 20s?

From April 11 to 14, the second Texpo, hosted by the Trade Development Authority of Pakistan (TDAP), was held in Lahore, Pakistan's third largest city. China and Pakistan are world leaders in the textile industry while Weiqiao and ChenOne are famous in the industry of the two countries.

“Pakistan has an edge in its high-quality short-staple cotton, which is suitable for producing yarns of below 20s and can be used to make denim fabric. Pakistan exports a large amount of yarn of below 20s to China,” said Sun Jingying, General Manager of China Weiqiao Textile Co Ltd.

“Xinjiang's long-staple cotton is used to produce high-count fabric very well,” he said while pointing to his shirt cuffs.

ChenOne Home Textiles is the first booth on the right side of the main aisle at the No 1 Hall of Expo Centre Lahore. “If we have to compare with China, I think Pakistan's greatest advantage is that the cotton planted here is one of the best in the world,” said Pakistan ChenOne Home Textiles General Manager Muhammad Amir Mahboob.

Sun and Mahboob both mentioned one of Pakistan's major advantages in textile – the short-staple cotton. But according to Dawn's report, as of March 1, the cotton production in Punjab, Sindh and Balochistan – the top three cotton-producing provinces in Pakistan – was down 6.8% over the corresponding period of last year, and was expected to be the second lowest in eight years.

Analysis by Dawn suggests that the major cause for production shortage in the ongoing season is that against the nine million acres earmarked for cotton crop, only six million acres have been cultivated in 2018-19 and the use of poor-quality seeds and pesticides, resulting in a low yield per acre and causing heavy losses to cotton growers.

In this regard, Muhammad Siddique Rana, an exhibitor and CEO of MHR Exports, said agricultural production was unstable. “The bumper year usually comes after an off-year for production. It is unnecessary to worry too much about what the media report says,” he said.

Among the visitors, Xi Jianlong, Deputy Director of International Business Centre of Xinjiang Xinyan Mushen Technology Co Ltd, said the key to solving current problems was to increase per-unit area yield, but there were three limiting factors in Pakistan.

First of all, Pakistan has no breeding technology, so the local farmers use inferior seeds of Monsanto and Pioneer, which are less tolerant to the muggy monsoon temperatures in Pakistan. Second, Pakistan's field management ability is weak, and the crops could not grow well because of a lack of water and fertiliser, Xi said.

Third, the low labour costs lead to insufficient mechanisation in Pakistan. Xi pointed out that the labour price is about $3 to $4 per day during a busy season in Pakistan, meaning the monthly salary is about 500 yuan ($74.5).

“They plant and harvest the cotton all by hand and use flood irrigation method. As a consequence, some cotton plant grows to 1.5 metres in height and some 50 centimetres in height. We use trickle irrigation and mechanised cotton topping technology with all the plants almost having the same height in China.

“Spending six dollars a day or 700 to 800 yuan ($119.2) a month seems like the trigger point for introducing agricultural mechanisation in Pakistan. We really hope to establish a model project in

Pakistan, using our own seeds and machines to let Pakistani people truly see the effect of mechanised operations," Xi concluded.

Gu Jie, Head of the Central Asia Comprehensive Experimental Station of the Cotton Research Institute of the Chinese Academy of Agricultural Sciences, has long promoted cotton farming techniques in Central Asia.

"When the output-to-input rate of cotton cultivation reaches 4 to 1, the farmers will consciously consider using machinery. Now that it is difficult to bring equipment in Pakistan, we, Chinese, can initially export the two key technologies of flood irrigation as well as soil testing and formulated fertilisation. As far as I know, these two technologies have been popularised in Kyrgyzstan and have been adopted in one-third of Tajikistan."

Gu particularly pointed out that most of the countries that responded to the Belt and Road Initiative lived on farming and herding. Agricultural cooperation must be put on the agenda, he said.

"The Belt and Road Initiative will eventually be implemented by the enterprises. Seed breeding is our core technology. If the irrigating and fertilising technologies can be properly combined and transferred with part of seed breeding technologies, the initiative will be more active. The policy is supposed to be in line with strategy. In the current international trade environment, properly and conditionally transferring agricultural production out of China will resolve core risks and reduce the probability of counter killing. China should be more proactive," Gu added.

NEWS COVERAGE PERIOD FROM APRIL 15th TO APRIL 21st 2019

COMMODITIES: SLOW TRADING ON COTTON MARKET

The Newspaper's Staff Reporter April 21, 2019

KARACHI: After witnessing brisk activity throughout the week, the cotton market on Saturday turned lackluster as buyers withdrew to the sidelines. Trading resumed on a dull note, however overall undertone was steady and outlook positive.

Ginners avoided entering into deals in the hope of getting higher prices as demand peaks while the arrival of new crop is likely to be delayed.

During the week, cotton from Sindh and Punjab was quoted between Rs7,300 to Rs9000 per muand and official spot rates remained pegged at Rs8,800 per maund.

All government departments connected with cotton crop are reportedly working actively to achieve the next crop target — as wished by Prime Minister Imran Khan — at 15 million bales.

There is a hope that the country could achieve this target as federal committee for agriculture has marked out an area of 2.8 million hectors for cotton cultivation for season 2019-20. Above all, there would not be any shortage of water for the season.

However, the proposal to give Rs200 premium price to contaminated free phutti (seed cotton) per 40 kg still needs to be worked out along with a mechanism of giving this amount to growers, brokers said. The Karachi Cotton Association (KCA) spot rates were steady at Rs8,800 per maund.

Trading on ready counter was negligible as buyers stayed away from the trading ring and only one deal of 150 bales from station Kandiaro was done at Rs8,450 per maund.

ANALYSIS: FARMERS HAVE LITTLE CAUSE FOR JOY THIS YEAR AS WHEAT PRICE REMAINS ON LOWER SIDE

Mohammad Hussain Khan Updated April 21, 2019

Even though wheat crop on his two-acre land is ready for harvest, Ali Mohammad Mirjat, an elderly peasant, has little cause for being happy this year as his hard-earned produce did not fetch him the price he had expected.

He had to sell off his wheat at Rs1,150 per 40 kilogrammes in Jhando Mari taluka. Still, he considered himself lucky to get that price, which was Rs250 less than the support price of Rs1,300 per 40kg, because the market price was on the decline by each passing day.

He would, however, get only 25 per cent share in profit, for he did not share cost of input with the landowner. A peasant usually shares expenses on crop sowing as well as profit with the landowner on 50-50 share formula.

Though farmers are reaping a better harvest because of favourable weather conditions this year, peasants like Mirjat have little prospects of earning profit in current season due to falling price of wheat caused by Sindh government’s delay in procuring the crop which has already reached open market.

Extended winter season and rainfall at crucial stage of the grain formation have benefitted the crop considerably and increased wheat productivity. Farmers are reaping 2,000 to 2,200kg wheat per acre though Sindh’s average per acre yield remains 1,320 to 1,360kg as per agriculture department’s figures.

And it is in spite of the fact that Sindh has missed the wheat sowing target by 9pc as 1,046,845 hectares area could be brought under wheat cultivation in 2018-19 season against a target of 1,150,000ha (2.8m acres).

Last year, the province had missed the target by a marginal 3.9pc. Sindh had produced 4.2 million tonnes of wheat in 2009-10 and four million tonnes in 2013-14. Since then it did not cross four million mark as the production vacillated between at 3.6m tonnes to 3.9m tonnes till 2017-18.

The Sindh government is reluctant to buy the crop since it already had last year's carryover stocks to dispose of while Punjab government has decided to purchase four million tonnes of the grain from farmers despite having carryover stocks.

The government's wheat procurement system has been made so complex for farmers and it is so plagued with corruption that majority of small and medium famers do not get support price for their produce and they normally sell it in open market or to middlemen.

The procurement was supposed to start from April 1. Since the food department was said to be having 0.7m tonnes to 0.8m tonnes of carryover stocks and the new crop was again likely to be bumper some cabinet members advised the government not to procure it this year, sources said.

The food department has though sent a summary for procurement of 0.5m tonnes wheat crop to the chief minister and the provincial cabinet is to take a decision in this regard. Once the summary is approved, tenders will be floated to purchase gunny bags, which will take so long that farmers will already have sold major portion of their harvest by then.

The support price of Rs1,300 per 40kg has been unchanged since 2014-15 which farmers like Nabi Bux Sathio of Sindh Chamber of Agriculture believe must be increased in view of rising cost of inputs and withdrawal of subsides on fertilisers, increased fuel prices and miscellaneous expenses.

The Sindh Agriculture Research Department had assessed cost of production last and this year at Rs1,317 per 40kg and proposed fixation of support price at Rs1,448 per 40kg with 10pc profit margin. Sindh Abadgar Board (SAB), however, has calculated it at Rs1,200 per 40kg.

"A bag of urea fertiliser was available for Rs1,380 and DAP fertiliser for Rs2,600 until 2017-18 season and this time their price has increased to Rs1,850 and Rs3,850 per bag, respectively, after withdrawal of subsidy," said Mr Sathio.

"Traders also deduct one kg on each 40kg of the crop which is again another loss to us. We are giving 40kg of wheat and getting the price for 39kg by traders on the pretext of crop wastage which is unjustified as there is no wastage," he said.

Another possible reason for the food department's reluctance to begin the procurement is its lack of storage capacity which limits its purchases to a certain quantity. The food department has a capacity to store 700,000 to 750,000 tonnes of the grain.

The department has to rent private premises to keep over one million tonnes or 1.1m tonnes of the crop. In last season, 1.4m tonnes of wheat was purchased by the department.

Hyderabad-based grain traders claimed that Sindh's wheat was also going to Punjab where the harvest started later than in Sindh. Rainfall has damaged their crop in 15 districts but Punjab has sizeable carryover stocks and there is currently no inter-provincial ban on the movement of wheat.

"To me the damage to the crop in Punjab is not much. Sindh's crop reaches Punjab which starts harvesting after some time," said Mehmood Nawaz Shah, a representative of SAB.

The government's subsidy in the shape of support price does not normally reach farmers and is mostly pocketed by middlemen in collusion with unscrupulous officials of the food department.

A genuine farmer feels discouraged when he is not issued gunny bags to enable him to bring his grain to the food procurement centres. He is hence forced to sell the crop to middlemen at much lesser rate and the latter then supply the same to the food department and earn windfall profits by pocketing the support price.

SFA SEIZES 16,000 LITRES OF ADULTERATED MILK

By Our Correspondent Published: April 21, 2019

HYDERABAD: In a raid at the wholesale milk market at Badin transport stand area in Hyderabad, Sindh Food Authority (SFA) seized 16,000 litres milk after the chemical tests established use of urea and detergents besides water.

SFA Operations Deputy Director Imtiaz Ali Abro told the media that six shops in the market were fined for the adulteration.

He said that the seized milk was also drained. “Around 50% of the seized milk contained water and we also found urea and detergent in the milk,” he claimed.

Abro said he had warned milk traders that the authority will maintain a constant check on their business and that adulteration will not be tolerated. The shopkeepers were also asked to maintain hygienic condition in the shops. The milk from the wholesale market is mostly bought for commercial purpose by sweet shops, bakeries and wedding caterers. The authority also raided a factory producing salt in Matiari district and collected samples for laboratory tests.

The authority’s laboratory in Hyderabad’s government hospital Pretabad still remains non-functional. The laboratory was established over a decade ago by former Hyderabad nazim Kanwar Naveed Jamil of Muttahida Qaumi Movement-Pakistan.

MANGOES OUTPUT FEARED TO FALL 20-25PC ON INCLEMENT WEATHER

Munawar Hasan April 21, 2019

LAHORE: Pakistan’s mangoes harvest might reel from unfavourable weather conditions this summer, growers and exporters said on Saturday, fearing a significant 20 to 25 percent drop in production of the aromatic and juicy fruit.

They feared a shortfall of 300,000 to 400,000 tons in mango output this year compared to the last year.

“Production of mangoes is going to squeeze this year due to climate change-induced severe events,” Tariq Khan, president of Mango Growers Association Multan said. Punjab contributes around 72 percent to the annual mango production of 1.7 million tons.

Khan said drop of temperature adversely impacted the pollination process. Low night temperature causes shedding of fruit, which is a loss for the farmers. Besides, hailstorm badly hit mango trees.

Stakeholders said altered mango flowering due to prolonged winter, dust and hailstorms, rains, gusty winds and fruits are stated to be a major challenge that hit the crop size.

Onslaught of fungal disease due to moist conditions would also harm fruits in days to come if not treated properly.

Mango exporter Ahmad Jawad said the mango crop in the south Punjab is likely to be late in the market due to rains and storm. Sunlight could not properly pass on mango trees for optimum ripening, Jawad said in a statement.

Asif Ali, vice chancellor of Muhammad Nawaz Shareef University of Agriculture, Multan, said there was a massive damage to mango fruits due to the current week's hailstorm.

"Flowering was badly hit from the hails and gusty winds," Ali said. "There is also fear of loss from the powdery mildew fungus to remaining fruits. Extensive losses have been seen in patches."

Zain Shah, group leader of Sindh Mango Growers and Exporters said mango growers sustained losses due to rains in February. Powdery mildew disease triggered by moist weather in patches could not be contained by timely sprays in several belts right from Hyderabad to Shaheed Benazirabad districts. The province accounts for 28 percent of the country's total mango production.

"Owing to this onslaught, farmers have to face 10 to 20 percent loss at flowering stage," Shah said.

"However, most of the orchards remained immune to this attack due to timely remedial measures taken by the growers."

Powdery mildew is one of the worst diseases affecting almost every variety and is common threat to mango trees across the country. It appears from December to March and infects flowers in rainy condition, especially to those who fail to open and sometimes shed before being fertilised and results in a substantial reduction of fruit set. If the fruit is already set, it may drop off prematurely due to disease.

Shah said recent spell of rains and windstorm did not harm mango orchards in Sindh. "Overall mango, which is presently at fruit formation and growth stage, seems good in the province, especially in central belt of the province," he added. "I hope volume of exports, originating from Sindh, would not be hurt."

Grower Khan said the ministry of climate has not done anything to deal with the climatic effects on agriculture sector.

Khan also feels sorry over the work being done by public sector research institutes and academia for reducing negative impact of climate change.

"Farmers don't know how to deal with challenges being posed by changing weather pattern," he said. "There is complete disconnect which is regretful."

NO THREAT TO FOOD SECURITY AMID RAINS, SAYS GOVT

Amin Ahmed Updated April 20, 2019

ISLAMABAD: The ministry of national food security and research announced on Friday that there was no threat to food security in the country or wheat shortage, adding that the damage caused to wheat, maize and gram crops owing to recent rains and stormy weather was only moderate.

"This situation does not indicate any shortage of wheat and speculations about the wheat shortage are incorrect," the food ministry said in a statement.

The ministry is in complete liaison with provincial agriculture departments for updates about affected villages and subsequent crop losses due to recent rains, particularly in Punjab, according to the statement.

It says Minister for National Food Security and Research Mehboob Sultan is personally monitoring the situation on the ground, and he is undertaking visits to affected districts of Punjab and Khyber Pakhtunkhwa.

The ministry is collecting data for other crops and the Punjab agriculture department is working to reach out to all areas to gauge the losses. The ministry is also collecting data from other provinces.

The losses suffered by farmers are indeed painful news and the minister for national food security has reiterated that the government is doing its best to estimate the damage and monitor financial and human loss and relief would soon be announced for farmers affected by the calamity, according to the statement.

Mr Sultan further reiterated that in the face of the calamity the government stands by the farmers and there should not be any uncertainty among them. He held out the assurance that the government would provide every possible relief to affected farmers. He said that the prime minister had issued orders that no effort should be spared until the relief was provided to farmers affected by the rains.

The Met Office has also been asked to remain vigilant and maintain steady liaison with provincial agriculture departments so that timely weather report may be communicated to farmers.

KP COMBATS POPPY CULTIVATION WITH US ASSISTANCE

The Newspaper's Reporter Updated April 20, 2019

ISLAMABAD: The US government on Friday donated seven new vehicles to Khyber Pakhtunkhwa to help combat poppy growth in the province since Pakistan has reduced poppy cultivation by 87 per cent over the past three decades.

The vehicles delivered on Friday will be used to implement crop control and related development projects in the tribal districts of Bajaur, Mohmand and Khyber.

The donation is part of an overall $5.1 million grant to the provincial government to combat poppy cultivation in the merged areas.

The assistance underscores the American government's long history of partnership with Pakistan in its mission to combat poppy growth. Over the past 37 years, the United States has invested $60 million in Pakistani efforts to support rural communities in developing economic alternatives to narcotics production; expand legal employment opportunities, especially for women; provide training in sustainable farming techniques; construct roads that extend the writ of the government and provide farm-to-market access; and construct small water supply projects that increase the viability of growing alternative crops.

Speaking at the ceremony where the vehicles were handed over, deputy chief of the mission John Hoover said: "We are proud to continue our longstanding partnership with the KP government and former Fata secretariat, which has resulted in a significant decrease in poppy cultivation, ultimately benefitting the people of KP and the rest of Pakistan."

The US State Depart¬ment's Bureau of Inter¬national Narcotics and Law Enforcement Affairs (INL) — which provided the crop control assistance — works in more than 90 countries to help combat crime and corruption, counter narcotics trade, improve police institutions, and promote court systems that are fair and accountable.

THREAT TO WHEAT CROP

Editorial April 20, 2019

HEAVY rains accompanied by high winds and sporadic hailstorms in parts of Punjab earlier this week have damaged the standing wheat crop on a vast area. In a few southern districts, the crop has been flattened, and in others the harvest is delayed. The exact extent of the damage is now being assessed by the agriculture bureaucracy to quantify the losses. The food security ministry, however, seems to indicate that the damage is not significant. Hopefully, it will not affect the overall provincial output target of 19.5m tonnes for the present harvest. Yet many individual smallholders may have suffered substantial losses that will increase their indebtedness and reliance on middlemen for expensive loans for future harvests. The government has promised to compensate the affected farmers once the girdawari (crop assessment) is complete. It has always been the standard official response. This practice needs to change. Immediately, the government should not only compensate the affected farmers but also ensure that the smallholders get access to cheaper loans to buy inputs for their future crops. Microfinance banks are well placed to serve the needs of the small farmers, who form more than 80pc of the landholdings below five acres because of their presence in remote areas, if the government agrees to subsidise the loans. A workable plan needs to be designed where growers can easily get insurance for their crops against calamities that are beyond human control.

The recent unusual rains are but a sign of the changing climate of the region. The change has become more visible in recent years in the shape of unpredictable weather, new diseases, increased pest attacks, diminishing crop output, etc. If not tackled on a war footing, the changing climate could indeed affect the nation's food security and have a deep impact on the overall economy of the country, which largely depends on agriculture. This week's rains, for example, have not only damaged the wheat output but also delayed cotton sowing in the affected districts. It is time the government took the lead in educating farmers about changing weather patterns, improving extension services to train them in modern cultivation practices and new technologies, developing climate-resilient seed varieties, and bringing farmers, researchers and policymakers on to one platform so that they can develop solutions based on modern methods to mitigate the effects of climate change on crops. Otherwise, we should prepare ourselves for greater damage to the agricultural sector.

TRACTOR SALES DROP

Aamir Shafaat Khan April 20, 2019

KARACHI: Tractor sales started recovering slightly from January but were unable to boost cumulative sales figures during the first nine months of FY19 which remained low at 37,421 units versus 52,067 units in the same period a year ago.

Data from Pakistan Automotive Manufacturers Association (Pama) suggests positive recovery in 2019 as Massey Ferguson sold 1,950 units in January, followed by 2,412 units in February and 3,078 units in March. Al-Ghazi's New Holland sales in January 2019 stood at 1,492 units, rising to 1,596 in February and 2,628 in March. The tractor industry suffered massive sales drop in Oct-Dec 2018, resulting in huge lay off of contract and daily wage workers in the vending sector.

Al Ghazi kept its plant closed for many weeks in the last quarter of 2018 owing to plant maintenance and unsold stocks at the plant and sales centres.

Talking to Dawn, CEO Al Ghazi Tractors Shahid Hussain said, "We have seen some movement in the market despite a 35 per cent downturn compared to January-March 2018. There is considerable slowdown," he said.

The industry is suffering from a plethora of issues including the long outstanding sales tax refunds which has led to a severe liquidity crunch.

Talking about the upcoming budget 2019-20, he said, "We proposed mobilisation of Zarai Taraqiati Bank Limited (ZTBL) to act as a catalyst offering loans to farmers at easy terms rather than announcing usual tractor schemes that favour the middlema." The amount designated for such schemes – if diverted as a mandate and pool money to ZTBL to dish out easy term loans as proposed – could bring out multifold benefits and speed farm mechanisation, he said.

Former chairman Pakistan Association of Automotive Parts and Accessories Manufacturers (Paapam) Mumshad Ali said his company has rehired 125 people who were laid off from two plants in Jan 2019 owing to suspension in parts procurement by tractor makers in Nov-Dec 2018. "We have not received good orders from assemblers for parts supplies. May and June will also remain depressed due to Ramazan and Eid holiday," he said. He added that 2018-19 will end on a negative note as the sector remains bogged down by sales tax refund and lowering sales issues.

Co-Convenor Tractor Committee Paapam, Rana Mansoor Qadir said only six workers have been rehired out of the five fired earlier on following improvement in sales from January 2019 onwards. He recalled that in previous years, tractor production was lower by 10-15pc in Ramazan and this trend is likely to continue this year too.

SINDH’S FIRST-EVER AGRICULTURE POLICY NEEDS WELL-DEFINED PROCEDURE, SAYS FAO CONSULTANT

The Newspaper’s Staff Correspondent Updated December 05, 2018

HYDERABAD: Policy consultants of the UN’s Food and Agriculture Organisation (FAO) have said that implementation of first-ever agriculture policy of the Sindh government would require well-defined procedure and added that action plan for implementation of the policy needed capacity and adaptation.

They also called for investing in research and development to achieve required target of overall seven per cent growth in Sindh’s agriculture sector, which is currently three per cent. They were speaking at a strategic planning workshop on Sindh Agriculture Policy 2018-30 at a local hotel organised by the agriculture extension wing of the Sindh agriculture department here on Tuesday. The workshop was organised for agriculture officers/officials.

Genevieve Hussain, a policy consultant, talked about salient features and objectives of the agriculture policy that would be implemented from next year after it was adopted in April this year by the Sindh cabinet.

The policy was drafted as a component of World Bank-funded Sindh Agriculture Growth Project (SAGP). She said that an action plan was to be prepared by line depart¬ments for consideration of the Sindh Agriculture Policy Implementation Commission in early 2019.

She said that agriculture policy sought to raise the growth rate by four per cent to have overall seven per cent growth in Sindh to create jobs and income from agriculture.

Other objectives aim to reduce malnutrition, poverty and food insecurity by half along with managing natural resources sustainably, especially water resources and soil. She said that resilience was to be ensured and climate-responsive agriculture to adapt to climate change was another goal.

She said that between 1972 and 2000 average growth in agriculture was four per cent and from year 2000 to 2017 it dropped to three per cent due to high cost of production. It needs to be raised. She said that high-nutrient foods like pulses, milk, fish, meat and vegetables have actually become too expensive for consumers to afford.

Discussing growth in farm sector, she said that regulatory framework needed to be reviewed to create enabling environment that was conducive to private sector’s investment in agriculture.

Sometimes laws, legislation, regulatory regime and even subsidies need to be looked into to make sure incentives were there for private investment.

She said that uptake of agriculture technology, research and development and modernisation of agriculture was another way to achieve growth.

She said that agriculture policy adopted in April 2018 was to align with Sustainable Development Goals (SDGs) and it should be started in order to be implemented quickly. She said steps towards its implementation required regulatory changes, capacity development for departments concerned and technological changes. She said that all these issues would be addressed in the action plan.

Ejaz Qureshi, another FAO consultant, pointed out that growth in China's agriculture sector came with some policy initiatives.

He said that this helped China overcome poverty adding that India was focussing on its farm sector as well. He said that institutional reforms and interventions were essential for achieving growth. He expressed concern over the fact that mostly Sindh's land was waterlogged.

Strategic management has to be systematic and it should also be adjustable in local context. He said that timeline must be fixed for achieving objectives.

The Sindh agriculture policy aims to ensure efficient, prosperous and resilient agriculture sector that could provide good income and decent employment to those involved in production, processing, transport and storage.

DAMAGE CAUSED TO STANDING CROPS BY RAINS TERMED 'MODERATE'

RECORDER REPORT | APR 20TH, 2019 | ISLAMABAD

It was officially stated from the Ministry of National Food Security and Research that the damage caused to standing crops due to heavy rains is moderate and there is no likelihood of food insecurity or emergency situation thereof.

The losses suffered by the farmers are indeed painful news and Federal Minister for National Food Security & Research Sahibzada Mehboob Sultan has reiterated that the government is doing its best to estimate the damage and monitor financial and human loss and relief would soon be announced for the affected farmers, says a press release issued here on Friday.

Mehboob Sultan further said that he will visit the affected areas and himself monitor the situation on ground and would meet the affected farmers/families. The Ministry of National Food Security is in complete liaison with provincial agriculture departments for updates regarding the affected villages and subsequent loss to crops due to recent rains, especially in Punjab Province.

According to the Federal Ministry National Food Security the latest report(s) received from Punjab Agriculture Department there is no threat to food security in the country or wheat shortage and the damage to wheat, maize and gram is moderate and does not indicate any shortage, moreover the speculations regarding the wheat shortage is not right, the Federal Ministry formally denies any such speculation.

The latest report regarding crop wise affected areas in Punjab shows that the loss and damage occurred in wheat, gram and maize crops is of mild to moderate nature. It is further said from the Ministry officials that data for other minor crops is also collected and Punjab agriculture department is working to reach out to all possible areas to gauge the losses. The data from other provinces is yet to be received and a letter to that affect is delivered to relative provincial departments.

Mehboob Sultan reiterated that in face of this calamity, the government stands by the farmers and there should not be any uncertainty among them. The federal minister further said that the government will provide every possible relief to the affected farmers. He added that he will visit the affected areas and it was also directed by Prime Minister that no effort must be spared until the relief is provided to affectees.

The Met department is directed to remain vigilant and maintain steady liaison with provincial agriculture departments so timely weather report may be communicated to farmers.-PR

SUSTAINED BUYING OF FINE QUALITY ON COTTON MARKET

RECORDER REPORT | APR 20TH, 2019 | KARACHI

Prices improved slightly on the cotton market on Friday in the process of sustained buying of fine quality of lint, dealers said. The official spot rate was unchanged at Rs 8,800, they added. In the ready session, over 5,000 bales of cotton finalised between Rs 8900-9000, they said.

According to the market sources, leading mills continued buying to replenish their stock. The ginners have very little stock of cotton and quality is not so bad, this is a solid factor behind the strong demand.

Cotton analyst, Naseem Usman said that yarn is in demand, it's a positive development in the market.

The outlook is encouraging for the textile sector, the mills are still facing shortage problem, import will keep a balance between demand and supply, other brokers said.

Adds Reuters: ICE cotton futures fell on Thursday as the dollar strengthened, while a fall in the weekly export sales report from the United States Department of Agriculture's (USDA) added to the downbeat sentiment.

The most-active cotton contract on ICE Futures US July settled down 0.69 cent, or 0.87 percent, at 78.27 cents per lb. It traded within a range of 77.77 and 79.04 cents per lb.

Total futures market volume fell by 20,876 to 18,654 lots. Data showed total open interest gained 336 to 212,845 contracts in the previous session.

Following deals reported: 600 bales of cotton from Rahim Yar Khan at Rs 9000, 1800 bales from Dera Ghazi Khan at Rs 8900, 1400 bales from Khanpur at Rs 8900, 800 bales from Liaquatpur at Rs 8900 and 400 bales from Feroza at Rs 8900, they said.

GERMAN WHEAT CROP TO INCREASE SHARPLY AFTER DROUGHT

Madiha Shakeel April 16, 2019

HAMBURG: Germany's 2019 wheat harvest will jump 20.6 percent on the year to 24.44 million tonnes with rising expectations of a recovery after the drought-reduced harvest last year, the country's association of farm cooperatives (DRV) said on Tuesday.

The German crop in 2018 suffered enormous damaged from a drought and heatwave which hit much of western Europe.

Germany's 2019 winter rapeseed crop will fall 11.6 percent on the year to 3.24 million tonnes after reduced sowings, the association said in its second harvest forecast.

Germany is the European Union's second largest wheat producer after France and in most years the EU's largest grower of rapeseed, Europe's main oilseed for edible oil and biodiesel production.

The mild winter and warm start to spring has helped wheat crops after the sown area was expanded, the association said. However, after the weather turned cooler in April growth slowed.

Grain growth had been as much as three weeks in advance of normal in March but the lead has now generally been lost.

German grain and rapeseed plants now urgently need more rain in some areas, especially the north and northeast, the association said.

Farms are still suffering the impact of last year's drought with below-ground water supplies less plentiful than usual.

Dry autumn weather also prevented a significant volume of planned rapeseed sowings. But rapeseed has developed generally well in the warm winter and has started to bloom.

Although yield development is positive, this will not be enough to compensate for the huge 25.1 percent reduction in rapeseed planted area on the year, it said.

The winter barley crop, mostly used for animal feed, will increase 34.6 percent on last year's drought-reduced harvest to 9.92 million tonnes, the association said.

German sowings of spring grains is generally complete after the warm start to spring allowed an early start, apart from some grain maize (corn), for which sowing is expected to intensify in the second half of April.

The spring barley crop, used for malt and beer production, is expected to fall by 5.1 percent on the year to 2.09 million tonnes partly because the mild winter has reduced the need to replant other frost-damaged grains.

The grain maize crop will rise 28.0 percent from last year's heatwave-damaged crop to 4.28 million tonnes.

FOOD MINISTRY DISMISSES TALK OF WHEAT SHORTAGE

By Our Correspondent Published: April 20, 2019

ISLAMABAD: The Ministry of National Food Security and Research has emphasised that the damage caused to standing crops, especially in Punjab, due to heavy rains is moderate and there is no likelihood of food insecurity or emergency situation in the country.

"The losses suffered by farmers are indeed painful and the government is doing its best to estimate the damage and relief will soon be announced for the farmers," the ministry said in a statement on Friday.

It quoted Federal Minister for National Food Security and Research Sahibzada Mehboob Sultan as saying that he would visit the rain-hit areas and meet the farmers and families there. He announced that the government would provide every possible relief to the farmers.

The ministry pointed out that latest reports received from the Punjab Agriculture Department suggested that there was no threat of wheat shortage and food insecurity in the country. “The damage to wheat, maize and gram crops is moderate and does not indicate any shortage. Moreover, the speculation about wheat shortage is not correct,” it said.

According to the ministry, data of minor crops is also being collected and the Punjab Agriculture Department is trying to reach out to all possible areas to gauge the actual loss. “Data from other provinces is yet to be received and a letter to this effect is being sent to related provincial departments.”

The Meteorological Department has also been directed to remain vigilant and maintain a steady liaison with the provincial agriculture departments in order to send timely weather reports to the farmers.

GROWERS PROTEST

A CorrespondentApril 19, 2019

DADU: Activists of Sindh United Party staged a march and a demonstration before press club in Bhan Syedabad town on Thursday in protest against food department’s failure to open wheat procurement centres and purchase the crop from growers.

SUP secretary general Roshan Ali Buriro, who led the protest, warned that if the department did not open the procurement centres and buy wheat from growers, SUP and growers would expand the protest across the province.

COTTON SLIPS; POSTS WORST WEEK IN 2 MONTHS

RECORDER REPORT | APR 19TH, 2019 | NEW YORK

ICE cotton futures fell on Thursday as the dollar strengthened, while a fall in the weekly export sales report from the United States Department of Agriculture’s (USDA) added to the downbeat sentiment. The most-active cotton contract on ICE Futures US July settled down 0.69 cent, or 0.87 percent, at 78.27 cents per lb. It traded within a range of 77.77 and 79.04 cents per lb.

Prices fell 0.7% this week, its worst weekly decline in two months.

“The dollar is up and it is the end of the week. It was an opportunity for those who were long in the market this week to get out and reposition themselves for Monday,” said Jon Marcus, president of the Lakefront Futures and Options brokerage firm in Chicago.

The dollar against a basket of other currencies gained on the back of strong retail sales data. A stronger greenback makes commodities priced in dollars, such as cotton, more expensive for holders of other currencies.

The USDA reported net sales of 217,600 running bales (RB) for 2018/2019 which were down 25% from the previous week and 9% lower from the prior 4-week average, for the week ended April 11.

The slide in USDA's weekly export data was a "force pin for people making a decision to just get flat for the weekend", Marcus said. The United States won a World Trade Organization (WTO) ruling on Thursday against China's use of tariff-rate quotas for rice, wheat and corn, which it successfully argued limited market access for US grain exports. ICE Futures US soft agricultural commodity futures and options markets will be closed on Friday for Good Friday holiday.

Total futures market volume fell by 20,876 to 18,654 lots. Data showed total open interest gained 336 to 212,845 contracts in the previous session.

Certificated cotton stocks deliverable as of April 17 totalled 57,655 480-lb bales, up from 55,517 in the previous session.

10.77 MILLIONS COTTON BALES REACH GINNERIES ACROSS COUNTRY

RECORDER REPORT | APR 19TH, 2019 | MULTAN

Seed cotton (Phutti) equivalent to 10.775 million bales have reached ginneries across Pakistan till April 15 registering a shortfall by 6.94 percent compared to corresponding period of the last year.

Out of total arrivals, over 10.773 million bales have undergone the ginning process, says a fortnightly report of the Pakistan Cotton Ginners Association (PCGA) issued here Thursday.

Arrivals in Punjab were recorded at over 6.625 million bales showing a shortfall by 9.56 per cent and over 4 million bales in Sindh registering 2.45 per cent shortfall compared to corresponding period of the last year.

Total sold out bales were recorded at over 10.124 million bales, including over 10 million bales bought by textile mills and another 102,330 bales purchased by exporters.

Exactly 651,036 bales were still lying with the ginneries as unsold stock.

Sanghar district of Sindh continued to remain on top with cotton arrival figures of over 1.28 million bales while Rahimyar Khan district of Punjab secured second berth with arrival figure of 1.19 million bales and Bahawalnagar stood third with just over a million or precisely 1,008,021 bales. The statistics show the shortfall was witnessed in 25 cotton districts out of total 32, including 18 out of total 21 in Punjab and seven out of total 11 cotton districts in Sindh.

The report does not include cotton figures from districts of Kasur, and Sargodha. Only seven ginning factories were now operational in the country, including five in Punjab and two in Sindh. However, 16 factories were operational during corresponding period of the last year including 10 in Punjab and six in Sindh.

LALIKA REVIEWS WHEAT PROCUREMENT CAMPAIGN IN MULTAN

RECORDER REPORT | APR 19TH, 2019 | LAHORE

Provincial Minister for Zakat and Usher Shaukat Lalika has said that report regarding affected crops damaged in Multan due to torrential rains and hailstorm has been sent to the Punjab government. Punjab government is standing with the affected farmers in their time of trial. He said that in order to make wheat procurement campaign transparent, actual tillers should be encouraged by curbing the role of middleman. Those involved in bogus khasra girdawari will be dealt with iron hands besides ensuring judicious distribution of gunny bags.

While addressing a meeting held to review the wheat procurement campaign in Multan on Thursday, minister said that Chief Minister Sardar Usman Buzdar is personally monitoring the wheat procurement campaign in Punjab. No one will be allowed to exploit the cultivators besides ensuring equal distribution of gunny bags, he said.

Deputy Commissioner Multan Mudasar Riaz Malik while briefing the minister said that 17 wheat procurement centers have been established in district Multan. He further stated that 164,000 tons wheat will be procured in Multan.

He said that 34,728 applications were received for the gunny bags which have been uploaded on the dashboard of Punjab Information Technology Board. Punjab Land Record Authority will scrutinize all these applications from 18th to 21st April whereas the distribution of gunny bags will be started after the cabinet committee on 21st April.

He disclosed that all the assistant commissioners have issued the certificates by completing the process of gurdawari. Legal action has been taken against those who gave applications for the gunny bag on fake account besides suspending the patwari of Jalalpur Pirwala.

Revenue officers have been asked to submit the report of the damage of affected farmers. They are bound to submit their report within two days.

USAID PROVIDES NEW SOFTWARE PACKAGE TO IMPROVE LIVESTOCK SECTOR

RECORDER REPORT | APR 19TH, 2019 | LAHORE

The US-Pakistan Partnership for Agricultural Market Development (AMD) announced the launch of a new software package to expand Pakistani meat exporters’ access to global markets.

The state-of-the-art software will track animals’ origins and where meat is processed, which will help prevent the spread of animal diseases and enhance bio-security. The new software package will also help farmers formulate economical feed rations with an optimal mix of nutrients, which will lower production costs.

"This software will give Pakistani meat exporters a huge advantage in accessing new global markets," said Director of USAID Pakistan's Office of Acquisition and Assistance Leslie-Ann Nwokora. "Buyers will be able to trace the origin, processing, and distribution of meat, while feed formulation and ration balancing software will help farmers reduce costs and provide animals a balanced diet to ensure they remain healthy."

This is the first time such a software package will be used in Pakistan. The USAID-funded AMD project provides integrated support to the livestock sector through grants, training, and technical assistance to upgrade equipment, introduce innovative meat cuts and packing technology, and support Pakistani producers and exporters in meeting international food standards.

"Through projects like AMD, USAID is supporting equipment upgrades and other initiatives to improve product quality, boost exports, streamline supply chains, and bolster Pakistani exporters' competitiveness and profitability," said USAID Provincial Director for Punjab Kevin Sharp.

USAID launched the AMD project in 2015 to improve the ability of Pakistan's commercial agriculture and livestock sectors to compete in international and national markets for meat, high-value and off-season vegetables, mangoes, and citrus.

FARMERS AVAIL 1.1% OF RS50B CREDIT FACILITY FOR FY19

By Haseeb Hanif Published: April 19, 2019

ISLAMABAD: A meeting of the Federal Committee on Agriculture on Thursday was informed that Balochistan lagged behind all other provinces in provision of agricultural credit to farmers.

The farmers of Balochistan have availed only 1.1 per cent of their share in agricultural loans from the Agricultural Development Bank (ADB) and other commercial banks while those of Punjab have taken loans amounting to Rs590 billion or 66 per cent from their available share.

The committee was presented with details of the agricultural loans extended by the ADB and other banks for the current fiscal year till February.

According to the documents available with the Express, countrywide farmers have taken Rs701 billion agricultural loans against the total allocation of Rs1,250 billion for the fiscal year 2018-19.

In agricultural loans, farmers of Azad Jammu and Kashmir (AJK) have availed the highest amount while those of Balochistan have availed the least.

Of the total allocation of Rs890 billion for Punjab, till February loans of around Rs590 billion were procured by farmers, which constitutes 66.3 per cent of the total amount.

In Sindh, agricultural loans amounting to Rs97.9 billion have been dispersed from the available target of Rs261.5 billion, which is 37.4 per cent of the target.

In Khyber-Pakhtunkhwa, Rs10.2 billion loans of the available credit of Rs43 billion have been released to farmers, which is 23.9 per cent of the total amount.

In Balochistan, Rs0.6 billion has been released to farmers against the available credit facility of Rs50 billion, which is 1.1 per cent of its target.

In AJK, Rs2.3 billion has been dispersed out of the total credit facility of Rs2.4 billion, which amounts to 98 per cent of the total target.

Similarly, the target for Gilgit-Baltistan was Rs3.2 billion of which Rs0.4 billion or 13.4 per cent has been released.

FOOD DEPT RECEIVES 850,000 APPLICATIONS FOR GUNNY SACKS

By Rizwan Asif Published: April 19, 2019

LAHORE: The Punjab Food Department has received total 850,000 applications for gunny sacks regarding government’s wheat procurement campaign in Punjab.

The Punjab Information and Technology Board (PITB) and Punjab Land Record Authority have started testing revenue record for the verification of the applications. Due to the connivance of the local revenue staff, a large number of fake and bogus applications were received for gunny sacks. It is expected that during the record checking, more than 250,000 fake and incomplete record application would be canceled in the next three days and around 550,000 applicants would be provided government’s gunny bags.

The Punjab government started receiving applications for getting gunny sacks from April 8 across the province and the final date of submitting the applications was April 17. The food department received 859,000 applications for gunny sacks till April 17 which was 145,000 more than the previous year.

Last year, the food department received a total of 71,400 applications in which 625,000 applications were approved while in these applications, 594,000 applicants had gotten gunny sacks from the food department. The departmental source told The Express News that the farmers were given only five days to submit gunny sacks requests last year. But this time, 10 days were provided to the farmers for submitting applications. But it is also revealed that this year, the number of submitting two or more applications on one CNIC was very high.

On contacting by The Express News, Director Food Punjab Mohammad Shakir said the process of receiving the application for gunny sacks has ended on April 17 and now the process of confirmation of applications has started.

All the application data is available on the portal of Punjab Information Technology Board. After the verification process, the data of approved application would be sent to the Food Department and the applicant would be informed through SMS alerts. Responding to a question, the food director said the final decision to approve the applications would be taken by the food secretary.

18 FISHERMEN LOST IN WIND STORM FEARED DEAD

By Our Correspondent Published: April 19, 2019

KARACHI.: After six days of being lost at sea due to the wind storm, only the belongings of 18 missing fishermen on board vessel Fazal Akbar have been recovered from Ghora Bari, Sindh. However, the fishermen are still missing.

Maritime Security Agency officials continued their search operation for the missing fisherman on Thursday.

According to sources in the fisheries department, the items recovered included National Identity Cards of fishermen, their sea permits, water bottles and eatables as well as personal belongings.

The items were found during a search carried out on a local lifeboat, they said, adding that the fishermen lost with the boat were "feared dead" and hunt for their "bodies is under way".

It is the sixth day since the sea vessel lost its signal owing to strong winds.

The crew last contacted the shore on Monday night, during which the in-charge of the boat informed that the vessel was drowning.

According to Fishermen Cooperative Society spokesperson, bodies of only two of the 22 missing fishermen have been found. Two fishermen were in Al-Azizi, 18 in Fazal Akbar and two in Mudassir boats.

The Al-Azizi and Mudassir boats have arrived ashore while Fazal Akbar sank, said the spokesperson, adding that the search for the missing fishermen would continue.

Separately, the body of a Korangi area fisherman, Noor Islam, who was lost with his Al-Ramadan boat was found on Wednesday, while the body of another fisherman Mannu Mian, who sailed the same boat, was found on Thursday morning from the Kharo Chan point.

GOVT LIKELY TO MISS WHEAT CROP TARGET AMID RAINS

Amin Ahmed | Intikhab HanifUpdated April 18, 2019

ISLAMABAD / LAHORE: The country's economy, already walking a tightrope, faces a grim scenario as the government is unlikely to achieve the wheat production target of 25.51 million tonnes this year — mainly because of extended spells of rain in Punjab and Khyber Pakhtunkhwa.

"The westerly wave affecting upper parts of the country is likely to move eastward during the next 12 hours," said the Pakistan Meteorological Department (PMD) in its daily forecast on Wednesday evening. "This means the spell is over," a Met official said.

The system, continuing for the past three days, produced heavy rains in many parts of the country on Wednesday, accompanied by hailstorm and severe windstorm, damaging wheat crops in the plains of Punjab, Balochistan and fruit crops over the hills.

According to officials, the system is set to move out of the country on Thursday (today).

Freak weather system to move out of country today

In Punjab alone, the initial wheat loss has been estimated to be over 200,000 tonnes, according to a senior official of the agriculture department.

Besides, the rains have left dozens of people dead and caused damage to houses and infrastructure in all the four provinces.

The Minister for National Food Security and Research, Sahibzada Mahboob Sultan, who chaired a meeting of the Federal Committee on Agriculture, said provincial governments had been asked to carry out estimates of losses in their areas. The minister said he had received reports of wheat crop losses from Jhang, Khanewal, Dera Ghazi Khan and Toba Tek Singh. Similarly, KP officials informed the meeting about such losses in certain areas of their province due to excessive rains.

After the availability of estimates, the ministry would be in a position to explain the extent of wheat crop loss, the minister said.

The FCA was informed that in certain parts of southern and central Punjab, yellow rust had been reported by the agriculture extension departments due to irregular spells of rains. The minister asked the PMD representatives to improve the forecasting system so as to alert the farming community about the weather conditions. The Met department should come up with accurate forecasts by making use of advanced technology, he emphasised.

The director general of the Punjab agriculture department, Dr Anjum Buttar, said rains coupled with hail storms had affected the wheat crop in about 15 districts.

On the other hand, PMD director general Muhammad Riaz said his organisation had timely issued the forecast for rain, storms and hail storms, claiming that 90 to 100 per cent of those forecasts were correct. As for the wheat crop losses, he pointed out, it was up to the agriculture department to advise the farmers accordingly so that they could take measures for the protection of crops.

Meanwhile, the FCA held detailed deliberations over the production targets for essential Kharif crops for 2019-20.

National Assembly Speaker Asad Qaiser expressed sadness over the loss suffered by the farmers and said he would request the prime minister to provide compensation to the farmers.

Presiding over a meeting of the National Assembly Special Committee on Agricultural Products, he vowed to improve the lot of small farmers, protect their interests and end their exploitation.

Reports from Balochistan say that rain and subsequent flood continue to wreak havoc on different areas as four more people lost their lives in weather-related incidents and many areas have been submerged by flash floods.

According to the National Disaster Management Authority, the furious freak weather system has claimed 50 lives and damaged nearly 117 houses in different parts of the country over the past few days.

Temperatures dropped significantly in the plains of Sindh and Punjab, making weather pleasantly cold at night.

Reports from different districts in south, central and north-eastern Punjab indicated heavy-to-moderate rain which further damaged the standing wheat crop.

Quoting the KP Provincial Disaster Management Authority, a report said that one each person died in Dera Ismail Khan, Karak, Swat, Haripur, Charsadda and Bajaur. Landslides were reported in Tank, Mansehra and Dir Upper.

Swat and Kabul rivers swelled at Khiyali and at Sardaryab and Hajizai, and the authorities had asked the people living in low-lying areas to move to safer place.

Quetta's rail link with other parts of the country remained severed for 30 hours as the track linking Balochistan with Sindh and Punjab was washed away by floodwater between Bakhtiarabad and Notal area of Sibi district on Tuesday.

Traffic between Quetta and Islamabad was suspended due to landslides hitting the road between Zhob and Dera Ismail Khan areas.

Reports from diffident areas of Balochistan said it had been raining for the last four days and all seasonal rivers and nullahs had swelled.

Many villages have been cut off from Jhal Magsi as River Mola is carrying floodwater.

RAIN CAUSES WIDESPREAD CROP DAMAGE IN SOUTHERN PUNJAB

Shakeel AhmedUpdated April 18, 2019

MULTAN: At least 14 districts across Southern Punjab — the wheat and cotton belt of the country — have seen large scale damage to standing crops due to hailstorms and gale force winds seen recently.

The district authorities are still in the process of assessing the scale of the damage, and surveys are still ongoing, but reports from farmers and officials suggest that crops including wheat, maize, mango and vegetables have either been severely affected, or in some cases even completely destroyed.

District administration officials tell Dawn that damage asse¬ssment surveys have only just begun, and whatever results they have at the moment are preliminary at best. Anecdotal and word of mouth reports from across the region speak of widespread damage.

The major cause of damage to the crops is from hailstorms in some parts, flash floods caused by hill torrents in others, and enduring low temperatures that are unseasonal, which is particularly bad for fruits in flowering stage including mangoes.

Deputy District Officer Agricu¬lture of Khanewal, Sardar Jamil said that crops, vegetables and mango have been badly damaged in about 40,000 acres of the district. "At many places the damage is up to 100 per cent," he tells Dawn. He said that raining is still ongoing which will further damage crops, particularly wheat in the district which is in harvesting phase.

He said that initial survey has been conducted, however complete survey is yet to be conducted. He said that he has attached the patwaris of other areas with the patwaris of affected areas to assist them.

"Survey will be conducted and the provincial board of revenue and Punjab Disaster Management Authority will be recommended for the compensation to the affectees," he said.

The affected districts include Mianwali, Bhakkar, Layyah, Rajanpur, Dera Ghazi Khan, Muzaffargarh, Multan, Lodhran, Bahawalnagar, Bahawalpur, Vehari, Rahim Yar Khan Khanewal and Sahiwal. Rajanpur district has seen damage due to a flood caused by a hill torrent after heavy rains in catchment areas of Balochistan.

The wheat and maize crops were particularly vulnerable because they were close to harvest time, says Muhammad Ilyas, a progressive farmer from Chak No. 5 in Multan district. He said in his area, maize crop had been completely destroyed while 90pc of the wheat crop had also been damaged. Fields of vegetables, particularly lady finger and chili "now look like plain fields" he tells Dawn, estimating that 80pc of those crops are also heavily damaged. Loss to cattle, trees and properties is on top.

Fayyaz ul Hasan Bhutta, another progressive farmer and General Secretary Livestock Breeders Association Pakistan based out of Multan, said, "Hailstorms have caused some damage across the region, but the scale of the damage is uneven. In Multan district we have less damage, perhaps other areas have seen more." He said Multan did not see any hailstorm, though further north on the Khanewal side and Sahiwal where hailstorms took place, the damage would undoubtedly be greater. Mr Bhutta grows wheat on his own field, and says his crop is intact.

About a four hour drive southeast of Multan, across the Indus river, is Rajanpur district, also an important crop growing area that may not have seen hail but was inundated due to a hill torrent, according to Abrar Khan Dreshak, a political figure from Fazalpur in the district.

He said that a vast area of the district came under water after Kaha Sultan hill torrent flood breached Noorpur Drain from eight points. He said that the flood entered in the area at 4am and devastated the wheat crop which was near harvest time or under harvesting.

A key drain that was supposed to control such hill torrents by diverting their waters into the Indus River could not perform its task because it is still only partially constructed as the funds were not released, he tells Dawn. He listed at least five villages that he claimed were "badly affected" from the flood water.

Due to continuous rains a couple of days prior to flood the people were expecting the flood he tells Dawn, "But the weather did not allow them to harvest their crops."

Due north of Rajanpur is Jampur, another crop growing tehsil on the right bank of the Indus river that saw a flash flood. Assistant Commissioner Jampur, Saifur Rehman Bilwani said the estimated affected area from the flood is 10,591 acres with one reported dead.

Progressive mango farmer Major Tariq Khan from Multan said that the mango crop is badly damaged due to excessive rains, hailstorm and thunder storm in all the mango growing districts of south Punjab. Though estimates of crop damage are still under preparation, he tells Dawn that he has heard of an estimated loss up to 20 percent to mango crop from one group carrying out this exercise.

"This year the mango crop was already less as compared to previous years due to fluctuating weather. Flowering and fruiting on the major variety of Chaunsa was already less by 40pc as compared to previous year while hailstorm, thunder storm and rains have further devastated the crop," President Mango Growers Association Zahid Hussain Gardezi said.

REPORT SAYS SLAVERY PERSISTS IN AGRICULTURE SECTOR IN ALL ITS FORMS

Shazia HasanUpdated April 18, 2019

KARACHI: The State of Peasants' Rights in Sindh in 2018, the fourth such report in a series, was launched at the Karachi Press Club on Wednesday to mark International Peasants' Rights Day.

The launch was organised by the Hari Welfare Association (HWA) and the Pakistan Institute of Labour Education and Research (Piler). Peasants, workers' leaders and activists also came together on the occasion to highlight the deplorable state of peasants in Sindh.

The report reveals that agriculture is the sector where slavery is still prevalent in all its forms; slavery in the name of debt, slavery in the name of house, slavery in the name of no other land, slavery in the name of power and exploitation.

During 2018, about 86 cases of bonded labourers' release and escape from the captivity of landlords were reported in local Sindhi and Urdu newspapers. In all cases, 1,421 bonded labourers were released and escaped, which include 485 women and 494 children. Of the total, 44 people had escaped from the captivity of landlords. Most often the cases of release of bonded labourers are not reported. It appears that the media persons or the media houses have lost interest in the bonded labour issue.

The State of Peasants' Rights in Sindh in 2018 launched to mark International Peasants' Rights Day

Introducing the report, Akram Ali Khaskheli of the HWA said that Sindh's bigger population consisted of peasants, or hari kissan, as they are called in local language. "And all these hari are treated unfairly and harshly by the feudal system," he said.

"This is so due to the non-implementation of acts such as the Land Reforms Act of 1977, the Sindh Tenancy Act of 1950 and the Sindh Bonded Labour (System) Abolition Act of 2015," he said.

Zulfiqar Shah of Piler said that the situation of these landless peasants was similar to that of slaves.

Dr Ashothama from Hyderabad said that it was necessary to look at the peasant movement in a new light as they should be treated like normal workers. "The hari should be seen as a normal worker as he or she is no longer in an isolated category. They need to be brought to the mainstream," he said.

Focusing more on bonded labour, human rights activist Iqbal Detho said that it was considered a cognizable offense since 1992 after the Supreme Court's verdict by former Chief Justice Afzal Zullah in a suo motu case of a bonded labourer.

He said Article 11-A of the Constitution had already abolished slavery, but bonded labour, a form of slavery, still existed.

"The National Assembly passed the Bonded Labour System Abolition Act in 1992 but it was never implemented. After the 18th Amendment, the provincial government of Sindh has also made its own law," he said.

He suggested the establishing of a district vigilance committee under the anti-bonded labour law. “Peasants get no support from lawyers or civil society. Under the District Bar Association Rules [2005] the bars should provide legal support to poor agriculture workers. Currently no pro bono lawyers are available at the district bar associations,” he said.

Mr Detho also pointed out that according to a recent report in two districts of Sindh, over 73 per cent of the children of bonded labourers did not go to schools. They also did not get proper medical aid. “This is so because most bonded labourers do not have legal documents,” he said.

Mahnaz Rahman, resident director of the Aurat Foundation, said that looking at the plight of the peasants in rural areas here she felt as if they were travelling back in time instead of moving with the times. “There is no basic infrastructure in agriculture,” she said, while suggesting that land reforms be initiated in Pakistan. She also pointed out how hard the rural women worked along with taking care of their homes. “If five acres of government land are given to a female peasant, she will be able to earn her livelihood better,” she added.

Ishak Soomro of the Change Organisation observed that peasants’ issues remain unsolved because they are not made into political issues. “No party or politician has taken up the issues of peasants as an agenda or in the assembly. Politicians only do lip service,” he said.

Nasir Mansoor, vice president of the National Trade Unions Federation, said that despite the fact that agriculture workers were included in the definition of labour in the Sindh Industrial Relations Act 2013, the rules of business for registration of agriculture workers were not made, which had deprived these workers of forming their own unions.

Karamat Ali, executive director of Piler, said that citizens’ rights, especially peasants’ rights, were not included in the main agenda of society. “In Pakistan feudalism has increased, whereas it has declined in other countries,” he said.

He also said that the bonded labour movement had never succeeded because all elected representatives belonged to the families of landlords and underlined the need to launch a political movement for peasants’ rights.

MINISTRY DESCRIBES PSMA DATA AS ‘UNRELIABLE’

MUSHTAQ GHUMMAN | APR 18TH, 2019 | ISLAMABAD

Ministry of Industries and Production (MoI&P) has reportedly declared stocks data of Pakistan Sugar Mills Association (PSMA) “unreliable” asking the millers to sit with the officials of Ministry to reconcile it, well-informed sources in MoI&P told Business Recorder. This was the crux of a meeting of Sugar Advisory Board(SAB) presided over by Prime Minister’s Advisor on Commerce, Textile, Industries and Production and Investment, Abdul Razak Dawood held on April 15, 2019.

According to the agenda, the SAB reviewed the overall availability and stock position of sugar along with remaining stocks of crushing season of 2017-18, actual production of sugar during crushing season 2018-19 and surplus stock at the end of crushing season 2018-19. The meeting also discussed increasing trend in sugar prices on the basis of a letter of Government of Punjab.

"Ministry's officials pointed out discrepancies in stocks and production figures submitted by the representatives of sugar millers which did not match the figures compiled by Provincial Cane Commissioners," the sources said, adding that the Association could not satisfy the Ministry about its figurers. This is not the first time that the government has challenged the stocks data of PSMA. During the previous administration one of the Advisors of the then Prime Minister took a stand in the ECC saying that the data shared by PSMA is not trustworthy. Sardar Asif Ahmed Ali, Deputy Chairman Planning Commission during the tenure of Pakistan People's Party had termed PSMA 'East India Company' during an ECC meeting.

The sources said Dawood also expressed concern at the increase in sugar prices which are now hovering around Rs 61 per kg and shared his concern with Punjab Government. According to the PBS, sugar prices increased by almost 20 per cent in March as compared to the corresponding period of last year. The Association maintained that since the government fixes the price of sugarcane how can it ask for a review of sugar prices given that prices are fixed by market forces.

As per Punjab-based sugar mills, stock position of sugar was recorded at 3.08 MMT as on March 27, 2019. PM's Advisor, sources said, argued that sugar mills should sell sugar in Ramazan at prices already agreed with the Government of Punjab. The Association, however, took the stance that the Punjab Government gives subsidy to the mills on sale of sugar at subsidized rates whereas this facility is not available in other provinces.

Dawood, requested the representatives of sugar millers to supply sugar at the Utility Stores at the prices agreed with the Punjab government during Ramazan, which they agreed to. PSMA also showed its willingness to reduce overall sugar prices in the country when the Advisor indicated that he would seek a higher sugar quota from China during the forthcoming visit of Prime Minister, Imran Khan to China after a request was put forward for another one billion dollar export facility. PSMA (Punjab) has already agreed to supply sugar to Ramazan Bazaars at Rs 54 per kg .

On March 28, 2019, the Punjab Government, in a letter to the Federal Government, argued that the ECC, in its meeting held on October 2, 2018, while considering a summary submitted by the Commerce Division on export of sugar, allowed one million metric tons of sugar subject to the following conditions: (i) the inter-ministerial committee will meet fortnightly to review sugar stocks, export and price situation; and (ii) in case of any abnormal increase in the domestic price of sugar, the committee would recommend to the ECC for discontinuation of further exports.

In the subsequent meeting of the ECC held on December 4, 2018 further export of 0.1 million tons of sugar was allowed. According to the Punjab Government's letter, there has been a sharp increase in ex-mill price of sugar since commencement of crushing season this year on December 9, 2018. Average ex-mill price of sugar on December 9, 2018 was Rs 50.50 per kg while the price has now touched Rs 61 per kg.

The Punjab Government requested the Federal Government to review sugar stocks, export position and price situation in the wake of increasing trend in the price of sugar.

RASHID-LED BODY TO IMPLEMENT RAMAZAN PACKAGE: RS 5 BILLION SOVEREIGN GUARANTEE FOR USC APPROVED BY ECC

TAHIR AMIN | APR 18TH, 2019 | ISLAMABAD

The Economic Coordination Committee (ECC) of the Cabinet Wednesday approved sovereign guarantee of Rs 5 billion for the Utility Stores Corporation (USC) from National Bank of Pakistan to run its affairs. Finance Minister Asad Umar chaired the meeting of the ECC of the Cabinet here on Wednesday. The Industries and Production Division gave a presentation to update the committee about the status of Ramazan Package. The committee directed the USC to expedite the procurement of essential consumer items so as to provide timely relief to the people in the holy month of Ramazan. The ECC constituted a four-member committee to be headed by Railways Minister Sheikh Rashid Ahmed to oversee the implementation of Ramazan Package. The USC management would brief the committee about the progress on a daily basis to make sure that every store has sufficient stuff available. The committee also directed the Ministry of Finance and National Bank of Pakistan to extend maximum facilitation to the USC in this regard.

Later, briefing the media, Chairman USC Zulqarnain Ali Khan said that an amount of Rs 5 billion approved by the ECC would be released within a couple of days. The amount would help clear the outstanding dues to ensure smooth supply of products to all 4,500 USC outlets across the country. He further said that the government allocated Rs 2 billion for the Ramazan Package which is not sufficient. The Ramazan Package would be effective from May 2. The USC has further sought Rs 3 billion from the government for streamlining the whole USC chain.

He was of the view that the USC needs Rs 15 billion to make sure that every USC store has all products available at subsidised rates. The operational cost of USC is around Rs 600 million which includes salaries of Rs 400 to Rs 450 million for its 14,000 employees across the country. He urged the employees of the USC not to go on strike and encouraged them to facilitate people during the holy month of Ramazan.

The Ministry of Petroleum briefed the ECC on the implementation of the committee’s decision regarding utilisation of services of the Pakistan Railways for transportation of petroleum products across the country. The Ministry of Railways informed the committee that it has the capacity to carry higher volumes and would work with the Ministry of Petroleum to explore further possibilities. The ECC in its one of the last meetings had directed state-run Pakistan State Oil (PSO) to use the Pakistan Railways for fuel transportation as it offers up to 26% lower fares compared to transportation through a pipeline and road. The cargo service of Pakistan Railways, especially oil transportation, has remained profitable over the past four decades, but previous governments, particularly the Pakistan Peoples Party’s (PPP’s) administration, shifted the entire petroleum supply business to oil tankers.

The committee reviewed proposals of various ministries/divisions. The committee also considered and approved various demands of divisions/ ministries for supplementary and technical grants. The ECC will also approve supplementary grants worth billions of rupees demanded by the Ministries of Defence, Federal Education and Professional Training and Kashmir Affairs and Gilgit-Baltistan.

The ECC has approved Rs 44.3 million supplementary grants for the Ministry of Interior. Meanwhile, it has also given approval for Rs 700 million supplementary grants for the Federal Education and Professional Training and Rs 337 million for the Kashmir Affairs and Gilgit-Baltistan.

The finance minister said that the budgetary needs of many organisations had not been properly assessed at the time of preparation of budget estimate last year which was leading to a large number of demands for supplementary grants. He emphasised the need for proper budgeting of the financial needs of various departments, which would obviate the need for supplementary grants during the currency of the fiscal year. He stated that the government is determined to phase out the supplementary grants in future budgets. The ECC approved, in principle, the proposal of Ministry of Information & Broadcasting for media campaign aiming to disseminate information relating to initiatives on poverty alleviation, Sehat Insaaf Scheme, PM's Naya Pakistan Housing Scheme etc.

'WHITE GOLD' UNDER BLACK SHADOWS

SHAHID SATTAR AND ASAD ABBAS | APR 18TH, 2019 | ARTICLE

Textile sector of Pakistan is facing many internal and external challenges including energy affordability and availability, current account deficit, shortage of raw material, credit availability, lack of institutional support, infrastructure constraints, skill development institutes, perception management, market access, GSP plus status continuation, sustainable supply chain, BCI cotton, water footprints reduction, social standards compliance and last but not least compliance linked with SDGs and the WTO rules.

On the Cotton front, it is not only an essential segment of economic strategy but has social dimensions as even the farmers' schedules of social activities which are dependent on expected cash flows from the value chain. Cotton as the basic raw material for the Pakistan textile industry accounts for almost 70% of the basic cost of production in the textile industry and any movements in price or quantity have significant impacts.

Cotton crop variety, quality and production witnessed a diminishing trend over the last few years. A decrease in cotton acreage, per hectare yield and imprudent government policies, have taken a heavy toll on cotton production. According to the Pakistan Central Cotton Committee's (PCCC's) report, cotton production target has been missed by 23 percent for the year 2019. Over the last five years, cotton production has decreased from 13.86 million bales to 10.84 million bales, witnessing a decrease of 22pc which has caused a huge loss to the economy. The shortfall requirement of the industry is 15.5 million bales and hence 5 million bales are short.

The cotton produced in Pakistan is of average quality with short fibre length (10-25 mm length) which cannot be used for producing high-end products required for exports. In Baluchistan, production of long staple length of cotton is expected and more areas are required to be exploited. Mostly, long staple length cotton is imported from Brazil, Egypt, Greece, Turkmenistan, the US, India, and Spain.

Currently, the cotton crop is suffering from the encroachment of land (sugarcane encroached best cotton growing area), poor quality seed, cotton leaf curl virus (CLCV), pest management issue, lack of plant resistant seeds, depleted technology, late sowing and the severe shortage of water. There are 24 well-known pests and diseases of the cotton crop in the world, Pakistan has 22 of them. There is no adequate pest and disease control mechanism available in Pakistan to bar impact and spread of pest attack. Reasons for low quality and production include old technology, low-quality seed, changing weather conditions, low-quality pesticides, and high prices of competing crops.

Despite the shortage of raw cotton, every year government impose Customs duty (3%), additional customs duty (2%), and sales tax (5%) on the import of cotton from July to January and lifts the ban for the rest of the year. The production shortfall forces the entire value chain to rely on imported cotton to meet the shortfall and to get export-quality cotton.

On the basis of issues, a detail way forward is suggest as follows:

There is a dire need to improve cotton quality by controlling contamination and trash content through enforcement of the standards laid down in the Cotton Control Act and Cotton Standardization Ordinance. Pakistani ginned bales contain up to 10% trash, world averages 2 to 3 percent. Encroachment of crops in cotton growing areas shall be curtailed through the adoption of appropriate policy changes in sugarcane pricing and cropping patterns. The land under sugarcane cultivation is 1,217,000 hectares while under cotton, it is 2,489,000 hectares; wheat is produced on 9,052,000 hectares. If we revert even half area (608,000 hectares) under sugarcane production with the help of corrective measures of the government which restrict its cultivation area, this area with cotton cultivation will add an additional 0.25 percent to GDP, along with minimum 1.273% of additional wheat contribution to GDP per annum. Most of the sugar mills have doubled the extension beyond the sanctioned capacity. Therefore, unsanctioned enhanced capacities should be cut back. Zoning laws for crops may be enforced strictly.

— The government of Pakistan should ensure import of best quality seed and its availability at affordable prices to farmers. A package deal should be negotiated with Monsanto to ensure better quality seed availability for farmers.

— A comprehensive training and capacity building program shall be developed to establish a system in the private sector for grading and classifying cotton. Incentives shall be provided to ensure that proper premiums are paid for increased production of contamination-free graded cotton. Labelling of cotton bales with trash content, moisture content and weight of cotton bale should be made mandatory.

— Measures shall be introduced for production of long-staple cotton for value-added products and to meet domestic demand for high-quality fabrics, including the introduction of BT cotton on priority basis. Trained staff from relevant government department should carry out training sessions, provide farmers with information about soil analysis, crop management, weather and other means to get better yield.

— On the other side, Pakistan Central Cotton Committee (PCCC) has totally failed to launch new seed qualities due to lack of dedicated and sustained research. Pakistan’s average cotton yield is 17 maunds whereas progressive farmers are getting 40 maunds yield in Pakistan. PCCC is required to ensure availability of cotton to the industry at reasonable prices throughout the year and develop such varieties of cotton seeds that are resistant to diseases and enhance per acre cotton yield.

The industry requirement is increasing with each passing year but indigenous production of cotton is further decreasing. It would be difficult for the textile industry to compete with textile giants like China, India, Bangladesh and Vietnam when we have to import a larger amount of expensive cotton to meet the shortfall of our cotton requirements. Promotion of cotton means the promotion of exports while the failure of cotton crop translates into heavy damage to the country’s economy. It is mandatory to increase the cotton production to 15 million bales within the next 2 years and 20 million bales in the next 5 years.

KSA, IRAN, KUWAIT NOW IS TIME TO CAPTURE HALAL MARKETS: APMPEA

ZAHID BAIG | APR 18TH, 2019 | LAHORE

All Pakistan Meat Processors & Exporters Association (APMPEA) Chairman Nasib Ahmad Saifi has claimed that an opportunity has emerged for Pakistani halal meat exporters to capture Kuwait, Saudi Arabia and Iranian markets as Kuwait slapped a ban on some big Indian exporters due to substandard meat.

Talking to Business Recorder on Wednesday, Saifi alleged that some big companies which were supplying frozen and chilled meat and live buffaloes to Kuwait, Saudia and other countries had to face a ban due to substandard meat. He claimed that these companies were exporting some 200 tons of chilled meat per day to Saudi Arabia only and the ban has produced a big cushion for Pakistani meat processors and exporters.

According to him, Pakistan can easily enhance its halal meat exports by US2 billion dollars per annum with a little marketing push and support from the government Pakistan to the local exporters. He said this is the time that delegation of Pakistan halal meat exporters should be sent to these countries with meetings with big importers to fetch precious orders.

Saifi also said that the government has to give incentives to the exporters to materialize the opportunity. In his opinion the exporters should be given 8-10 percent rebate on export proceeds. He claimed that the Indian government was providing a rebate of 2 percent on air-fare and eight per cent on exports to Indian exporters.

The Chairman further said that prices of electricity and gas have been doubled in the present regime while taxes rates have also been enhanced. He said the government should not treat the exporting sector like this. He was of the view that utility charges and taxes should be reduced for the exporters so that they can penetrate in the international market and compete with other countries.

AT LEAST 32 FISHERMEN STILL MISSING AFTER STORM IN DEEP SEA

By Aftab Khan Published: April 18, 2019

KARACHI: The strong winds blowing from the Western system on Sunday caused high tides and a sea storm which in turn have left the fisher folk community devastated. At least 12 fishing boats of varying sizes remain missing while 13 large boats and four small ones have reportedly drowned. The search and rescue operation to find the missing boats continued on Wednesday. According to the Fishermen’s Cooperative Society (FCS), at least 32 fishermen are still missing.

The search and rescue operations have been under way since the past four days. The 11 fishermen on board a boat named Safina Al-Jillani which had left the shore on April 8 returned on Wednesday after being caught in the storm for four days. The body of another fisherman who was on board a small launch, Al-Ramzan, has also been recovered from the sea. Pakistan Navy, Pakistan Maritime Security Agency and helicopters of Edhi Foundation participated in the search and rescue operation.

Hundreds of boats, which had set-off for 15 to 30-day fishing excursions met with difficult circumstances due to the sea storm. The communication network between the Karachi Fish Harbour, Ibrahim Hyderi and Upper Sindh was unable to connect with dozens of boats from Badin and Thatta due to the strong winds which have prevailed since Sunday. Fishing boats, big and small, have begun arriving at different jetties either through ad hoc efforts or via help from other boats which had managed to find shelter at different places when the storm was calm. However, several large and small boats have drowned due to the stormy weather.

According to FCS and Karachi Fish Harbour's emergency centre representative Nasir Buneri, the boats were restricted from setting off in the sea since Friday, April 12, in light of the weather alert issued by the meteorological department with regards to the Western system. He said that the boats that had set off between April 1 and April 8 were, however, stranded at sea due to the extraordinary weather conditions.

Buneri said that a 24-hour emergency and response centre located at the fish harbour has been monitoring the situation while fishermen have been warned against heading out in the sea through announcements via megaphones and loud speakers.

Although 11 fishermen from launch Safina Al-Jilani have returned, many others remain lost at sea. The body of a fisherman who was among those missing has been recovered.

No traces of another launch named Fazal Akbar have been found despite a three-day search operation. There are 18 fishermen including the captain, on-board the Fazal Akbar.

Yet another launch, Bismillah, which was out at sea, has five fishermen out of 14 missing while nine have been rescued. Al-Aziz had 15 fishermen on-board, of whom 12 have returned while three remain missing. On Tuesday, 12 out of the 14 men on-board Al-Mudassir were rescued but two remain missing. Besides, eight crew members on-board the Al-Zulfiqar and six fishermen from the Al-Ramzan remain missing.

Meanwhile, a boat named Ahsan Abdul Majeed drowned in the sea but the 12 men on-board jumped off in time and fortunately managed to reach safety. Four small boats also drowned in the sea but the sixteen fishermen who were on board managed to survive.

The process of shifting the rescued fishermen and the recovered boats to Karachi is under way. Nearby coastal areas, including Ghorabari, Kharochan and Khoikhadi were searched during the rescue operation.

The Pakistan Maritime Security Agency said it had received information about 22 boats which were affected by the storm. Of these 22, eight boats have been rescued so far along with 252 fishermen while 13 are said to have drowned. Aerial surveillance is also being carried out by the Pakistan Navy and Pakistan Maritime Security Agency.

The deceased fisherman was identified as Noor Islam. He was from Korangi and had been on board the Al-Ramzan boat. Of those who had accompanied him, three have returned safely.

FCS Chairperson Hafiz Abdul Barr said that all possible sources were used to warn fishermen from Mubarak Village till Keti Bandar of the emergency situation. However, losses have been incurred due to the severity of the storm. He added that rescue operation is still under way.

WHEAT PRODUCTION ESTIMATED AT 25.16 MILLION TONS

By Our Correspondent Published: April 18, 2019

ISLAMABAD: The government has estimated the country's wheat production at 25.16 million tons in the 2018-19 Rabi crop sowing season.

The estimate came in a meeting of the Federal Committee on Agriculture (FCA), chaired by Federal Minister for National Food Security and Research Sahibzada Muhammad Mahboob Sultan.

The FCA, which was tasked with overseeing strategic measures to ensure food security in the country, reviewed harvests of Rabi crops and fixed targets for 2019-20 Kharif crops.

Among Rabi crops, the committee noted that wheat production in the 2018-19 season was estimated as on April 7, 2019 at 25.16 million tons from an area of 8.83 million hectares.

Coupled with last year's leftover stock of 3 million tons, the total wheat availability will be about 28.16 million tons, which is well above the annual national requirement.

The committee was informed that gram production in 2018-19 had been estimated at 439,000 tons from an area of 943,700 hectares. It also discussed the production of other essential crops like lentil, potato, onion and tomato.

The committee set the target of cotton production at 15 million bales in the Kharif season.

It held comprehensive deliberations on production targets for essential Kharif crops and decided that 2.895 million hectares would be planted with the cotton crop in 2019-20 to achieve harvest of 15 million bales. For the rice crop, the production target was set at 7.433 million tons from an area of 2.88 million hectares.

Targets for other crops such as maize, moong, mash and chilli were also fixed. It set the production target for sugarcane at 68.583 million tons by cultivating the crop over an area of 1.184 million hectares.

Discussing the supply of agricultural inputs for Kharif crops, the committee was informed that sufficient water would be available in the reservoirs. In the 2019-20 crop season, 108.67 million acre feet (maf) of water would be available in canals compared to 88.04 maf last year. At present, all the provinces are getting satisfactory water supply.

The Meteorological Department told the FCA that normal to slightly above normal rainfall was likely in May across the country. However, based on a gradual increase in temperature, an effective use of available water stock was recommended, it said.

Average temperature is likely to remain above normal throughout the country during the period. The expected rise in temperature in the next two months is approximately 1 to 2-degree Celsius.

“The rise in temperature will accelerate the melting of snow in northern areas and water flow will subsequently increase in the upper Indus region,” it said.

The committee was informed that the supply of rice and maize seeds would be higher than the country’s requirement, which was estimated at 121.28% and 112.83% respectively.

The representative of the State Bank revealed that the allocation of institutional credit for the agriculture sector had been increased substantially to Rs1,250 billion for fiscal year 2018-19 and disbursements up to February 2019 were calculated at Rs701.6 billion.

The disbursements accounted for 56.1% of the annual target and were 23.1% higher than disbursements of Rs570.9 billion in the same period of previous year.

The FCA appreciated the positive impact of fertiliser subsidy scheme, which contributed to a high yield and noted that the supply of urea and di-ammonium phosphate was satisfactory in the Rabi season.

Owing to domestic fertiliser production and available stocks, the urea supply would remain comfortable and DAP would also be at satisfactory levels, the FCA noted.

RAINS SEND WAVE OF FEAR AMONG WHEAT GROWERS

The Newspaper’s Staff ReporterUpdated April 17, 2019

RAWALPINDI: The rain in the twin cities of Rawalpindi and Islamabad on Tuesday caused concern among farmers about possible damages to their wheat crops.

The rain brought down the maximum temperature from 29 to 26°C in the capital and from 29 to 25°C in Rawalpindi.

The Meteorological Department recorded 35mm rain in Zero Point, 43mm at Saidpur in Islamabad; 17mm in Shamsabad and 5mm at Chaklala in Rawalpindi.

An official of the Met Office said a westerly wave was affecting most upper and central parts of the country and likely to persist in the upper parts till Wednesday night.

He said widespread dust-thunderstorm/rain accompanied by gusty winds were expected in Punjab, Islamabad, Kashmir, at scattered places in Khyber Pakhtunkhwa and at isolated places in Quetta, Zhob, Sibbi, Kalat, Sukkur, Larkana divisions and Gilgit-Baltistan.

Hailstorm is also expected at a few places during the period. Isolated heavy falls may occur in Malakand, Hazara divisions and Kashmir.

There are also chances of hailstorms in some parts of the areas near Rawalpindi and Islamabad.

“There was no rain in some areas of the twin cities, including Golra, Bokra and near the Islamabad International Airport. But there are chances of rain in these areas on Wednesday,” the official said.

The farmers in surrounding areas of Rawalpindi and Islamabad feared that the rain may spoil their crops.

“The wheat crop is fully grown and strong winds could lay down the standup crops and heavy showers or hailstorm spoil the wheat,” said Mohammad Ramzan, a landowner in Rawat.

INITIATIVE FOR DEVELOPING BETTER COTTON

The Newspaper’s ReporterApril 17, 2019

ISLAMABAD: The Bet¬ter Cotton Initiative (BCI) on Tuesday sought assistance of the Ministry of National Food Security and Research to help growers develop better lint as a sustainable mainstream commodity of the country.

Minister for National Food Security and Research Mehboob Sultan met with a delegation of BCI led by its Director of Global Imple¬mentation Alia Malik.

With headquarters in London and Geneva, BCI is the largest cotton sustainability programme in the world.

Ms Malik said the success of the response in Pakistan regarding sustainable cotton is encouraging but more is yet to be achieved.

BCI Regional Director for Pakistan and Central Asia, Shafiq Ahmad said water management, pesticides, soil depletion, small holder poverty and habitat loss were major challenges.

Mr Sultan informed BCI officials that the government has launched the agriculture emergency programme although cotton is not its component.

However, increased cotton production is a goal of the government, he added.

“We are working with the Khyber Pakhtunkhwa government for potential growing of cotton in a bid to increase its cultivation area,” he further said.

In Pakistan, about 1.5 million smallholder farmers rely on cotton for a living.

COMMODITIES: COTTON PRICES STEADY AMID RENEWED DEMAND

The Newspaper’s Staff ReporterApril 17, 2019

KARACHI: Cotton prices on Tuesday stayed firm as limited unsold stocks of up to 0.6 million bales caused nervousness among leading spinners who still need a substantial quantity of raw cotton to meet their near-term requirements.

Ginners were willing sellers at the prevailing prices as their hopes of getting higher rates were dashed by the declining trend on the New York Cotton Exchange amid forecast of a bumper US crop owing to favourable weather conditions.

The New York cotton futures fell 2.59 cents.

Spinners were active in the market as imports have become costlier after a massive devaluation of the local currency.

According to preliminary reports, Pakistani traders are unwilling to import cotton from India citing quality issues whereas imports from the US are also not possible because the duty waiver allowed by the government up to June 30 could not be availed because of the long time required in shipments.

The Karachi Cotton Association left its spot rates unchanged at the overnight level of Rs8,800 per maund.

The following big-lot deals of the large size reported to have changed hands on the ready counter: 100 bales, station Dherki, at Rs9,000; 6,000 bales, Karachi (LDC to mill), at Rs8,700 to Rs8,850; 1,065 bales, Akri, at Rs7,865 and 2,800 bales, Rahimyar Khan, at Rs8,750 to Rs9,000.

FISHERIES DEPT BERATED FOR ITS FAILURE TO CURB ILLEGAL FISHING ALONG COAST

Tahir SiddiquiUpdated April 17, 2019

KARACHI: The Sindh Assembly was told on Monday that the Pakistan marine fisheries department, the watchdog force in the sea which functions under the federal government, had failed to control illegal fishing along the coastline.

While furnishing a statement and answering questions from lawmakers during the Question Hour session in the provincial assembly, Minister for Livestock and Fisheries Abdul Bari Pitafi said that illegal fishing in the sea was being carried out owing to weakness of the department.

He said the marine fisheries department was the policing force in the coastal areas but it had failed to do its job. “I don’t know whether it makes a deal with illegal fishermen or it is just not capable enough to keep a vigilant eye on the act of illegal fishing,” Mr Pitafi said.

When asked by the Grand Democratic Alliance’s Nusrat Seher Abbasi that what steps had been taken by the fisheries department to control illegal fishing in the sea as well as in sweet water, the minister said that there were two sections of fishing — inland fishing and marine fishing, adding that the provincial government was responsible for policing the inland fishing only as the other section was controlled by the marine fisheries department.

"We have a proper system at each district comprising directorates who maintain check and balance," he said and added that the licensed fishermen for inland fishing were also being monitored.

Referring to the action against illegal fishing, the minister said that all those fishermen and the contractors who bought fish from them were booked and charge-sheeted in the relevant courts.

Replying to a question asked by Pakistan Tehreek-i-Insaf's MPA Khurram Sher Zaman, Mr Pitafi said there was no environmental or water quality threat to aquatic animals in Manchhar Lake.

He also said that no fish in Manchhar Lake died due to poor environment.

Refuting the claim of an opposition member that a large number of fish was found dead, he said the poachers threw their undersize catch in bulk near the embankment of Manchhar Lake after the department took action against illegal fishing. "The department also keeps a vigilant eye upon catching of undersize fish," he added.

The minister said that there was a shortage of water for fish farming and added that there were around 4,500 ponds in the province but they had dried up. He said that the tail-end areas had been hit more severely in the circumstances.

Answering a question asked by MPA Nusrat Abbasi, the minister said that upgrade of a veterinary centre at Kot Mirs Landhi, Kot Ghulam Mohammad taluka, Mirpurkhas district, at a cost of Rs5.093 million was to be completed by June 2018. However, the same has not been completed within stipulated time because of less release of funds during 2017-18.

"Therefore, the execution period of the scheme has been extended for one more year," he added.

CANE COMMISSIONER RECONCILES GROWERS' DUES OUTSTANDING AGAINST SUGAR MILLS

Mohammad Hussain KhanUpdated April 17, 2019

HYDERABAD: An amount of Rs840 mil¬l¬ion is outstanding against Omni group's sugar mills out of Rs1.8 billion of 1,300 sugar cane growers against 22 sugar mills for 2017-18 sugar cane crushing season.

The dues have been reconciled by a com¬m¬ittee, led by the Sindh cane commissioner, constituted by the Sindh High Court's (SHC) principal seat in Karachi on Monday.

Representatives of the Pakistan Sugar Mills Association (PSMA) Sindh zone, Sindh Abadgar Board (SAB), Sindh Cham¬ber of Agriculture (SCA) and Sindh Abad¬gar Ittehad were also part of the committee which met under the chairmanship of the Sindh cane commissioner.

The SHC had tasked the committee to ensure reconciliation of the dues of around 1,300 growers who had submitted applica¬tions in the cane commissioner's office. Growers had been crying against non-pay¬ment of their dues involving an amount of Rs1.8bn for 2017-18 season when a contro¬versy over sugar cane price led to a serious crisis. Under compulsion farmers had supplied their crop mostly to middlemen for getting cash payments though at an inade¬quate rate of per 40kg sugar cane.

Sugar mills had refused to comply with a price notification of Rs182/40kg issued by the Sindh government. However, in line with consensus arrangements farmers agreed to Rs160/40kg rate to be paid by sugar factories and payment of differential amount (Rs22 per 40kg) was linked with the apex court's verdict, which was already seized with identical matters of different years.

Official sources and Sindh Abadgar Board (SAB) vice president Mahmood Nawaz Shah confirmed that the outstanding dues of mills owned by the Omni Group had been reconciled and the group was willing to pay it off if the apex court unfreezes their accounts in the wake of an ongoing money laundering probe into fake bank accounts.

"The Sindh High Court in its last order allowed farmers to approach the Supreme Court for payment of their dues as far as the Omni Group's mills are concerned. So, we [SAB] have decided to move the apex court in this regard in view of such a statement filed by the group in court," Shah said.

Out of Rs1.8bn liabilities, around Rs100m to Rs120m, which were outstanding against two mills, one of them is Digri sugar mills, could not be reconciled for various reasons. The committee was also said to have disagreed with the contention of two other mills — Bandhi and Sakrand — regarding lesser payments made to growers on ground of sugar cane's varieties. Such deductions were termed illegal by the committee.

A bumper sugar cane crop was reported in that season. Sugar cane was grown on 333,000 hectare (ha) against sowing target of 320,000ha — up by 13,000ha — with the result that growers were hard pressed to sell their bumper crop to middlemen after factory owners refused to abide by the notification, triggering a price controversy.

In that season growers got frustrated as even the price notification was issued in December 2017 and crushing was delayed by mills. They started selling their crop to middlemen then. In 2018-19 sugar cane sowing had dropped and led to likely decline in production as well. Such figures are to be finalised.

"Growers eventually agreed to a consen¬sual price of Rs160/40kg in the Sindh High Court," said an official. He claimed that middlemen had bought crop from farmers at Rs130/40kg before this arrangement was reached in court between millers and farmers. "In many cases of applicants, middle¬men are believed to have approached the cane commissioner to seek payment of their outstanding dues against certain mills," he claimed.

The Sindh cane commissioner's office was said to have written to various deputy commissioners seeking verification of land-related particulars from them in respect of those applications which were apparently filed by middlemen before the committee.

"We are also trying to see as to how those having smaller landholdings are claiming supplies of a quantum of sugar cane that can be obtained from no less than 400 acres," said a source. Such middlemen have supp¬lied sugar cane to around 13 to 14 mills. Their title documents were being obtained from civil administrations so that their quantum of supplies of crop could be confirmed whether they are indeed bona fide growers.

In rural areas, a middleman exploits farmers by playing with the economy of small- and medium-size farmers. Middlemen offer cash payments to growers to exploit their financial position as growers need cash flows to recover cost of inputs, earn profit and invest in the next crop. So, they sell their crop to them and the same broker or middleman supplies to sugar factory owners.

According to an official, the factory managements understand middlemen are demanding differential amount between Rs130 and Rs160/40kg from them in the wake of consensual agreement between growers and millers. “Mills believe this amount will not go to farmers now, therefore, they are reluctant to pay it and that’s why some mills’ dues are not being reconciled,” he remarked.

DPP TELLS KATI: FOLLOW INTERNATIONAL STANDARDS TO ENHANCE AGRICULTURE EXPORTS

RECORDER REPORT | APR 17TH, 2019| KARACHI

Director General Department of Plant Protection (DPP) Dr Falak Naaz has laid emphasis on following international standards to increase export of agriculture.

“It is necessary to follow international standards,” he said, speaking at a meeting of Korangi Association of Trade and Industry (KATI). He reiterated that the DPP issues certification regarding health and safety of agricultural products for import and export. He said that food security standards had become strict internationally. He said there were certain level of quantity of pesticide and heavy metal particle in fruits and food products.

“Fruits and crop exporters should follow the directions of DPP to align their quality with international standards,” he urged. KATI president Danish Khan said that Pakistan is an agricultural country and exports of this sector should be enhanced.

He said there is need to spread awareness among common people about international standards for food security; and especially producers and exporters should be well aware of those standards. The CEO of KITE Zubair Chhaya called for a proper liaison between the department (DPP) and the trading community.

Head of KATI’s standing committee on industrial pest management, Salman Ahmed Sabari said that food item importers were facing delay and other problems due to procedural hurdles which could be set aside with proper coordination.

SEARCH ON FOR 32 FISHERMEN LOST AFTER DEEP SEA STORM

By Our Correspondent Published: April 17, 2019

KARACHI: Of the many boats that disappeared in the sea storm that struck the coastal belt on Sunday evening, two are still missing. The maritime security agency and Pak Bahria continued the rescue operation on Tuesday in the search of the 32 missing fishermen aboard these vessels.

Before April 10, a total of 275 boats of varying sizes left the coast for fishing. Several of these boats went missing in the storm in the deep sea. The fishermen aboard these boats, who are from Badin and different islands near Karachi, contacted their families late at night that they had been caught in the storm. Later, the fishermen on some of these boats informed their families, through radios and other means, that they had taken shelter at safe islands.

A crew comprising 13 fishermen were on board a boat that disappeared returned on Monday morning. Another, comprising nine fishermen, returned on Monday evening.

According to the Fishermen Cooperative Society, a crew comprising 12 people on a boat, 'Al-Mudassir,' that had also disappeared in the storm returned on Tuesday evening. However, four fishermen on the boat are still missing.

Some of the boats could still not be contacted. Two boats, 'Qasina Akbar' and 'Al-Azizi', are still missing and search operation is under way to find them.

The Pakistan Maritime Security Agency carried out a long search and rescue operation. Pak Bahria carried out its operation in different areas of the sea including Ghorabari, Kharochan and Khaikhadi. A 24/7 monitoring centre has been established and the departure of further launches in the sea for fishing has been completely restricted.

KPFSA SEIZES STOCK OF NOODLES CONTAINING BANNED SALT

By Our Correspondent Published: April 17, 2019

PESHAWAR: Khyber-Pakhtunkhwa Food Safety and Halaal Food Authority (KPFSA) on Tuesday sealed a food company's distribution outlet over noncompliance with food safety standards.

The brand was selling noodles having monosodium glutamate (MSG) popularly known as Chinese salt. Banned across Pakistan, the manufacturer had diverted its supply of MSG-containing noodles to K-P.

However, the KPFSA got information of banned noodles, raided the warehouses and seized the snack food meant for children.

KPFSA Director Operations Khalid Khan Khattak giving details said that food authority teams got information that noodles contain china salt, which has been banned by the Supreme Court of Pakistan.

Khattak said he deputed Food Safety Officers Ahmad Ali Shah and Adeel Ahmad who investigated the matter and confirmed existence of MSG in the noodles.

Subsequently, KPFSA team with the help of local administration and police backup, raided and sealed the warehouse where MSG-containing noodles were stocked.

"The KPFSA picked up all 3,000 packets and sealed the premises till compliance," Khattak said.

KPFSA DG Riaz Mehsud said they have launched a crackdown against manufacturers and distributors of harmful and counterfeit food products.

KPFSA has sealed more than 15 soft drink production units in seven districts of the province in the last 15 days and discarded more than 150,000 litres of cola drinks packed in bottles having counterfeit labels of world-famous brands.

Meanwhile, KPFSA Kohat Deputy Director Kamran Yosafzai said that team led by Assistant Director Rukhsar Ali has sealed five counterfeit cold drink production units. He said that more than 15,000 litres of fake cold drink was discarded, production unit sealed and owners handed over to police for necessary action.

HEAVY RAINS, HAIL DEVASTATE WHEAT CROP IN PUNJAB

By Rana Amir Aslam Published: April 17, 2019

LAHORE / BHAKKAR: Stormy weather prevailed in the province, claiming the life of a minor in Lahore night. Meanwhile, standing wheat and gram crops were flattened to the ground in the wake of torrential rain and hail storms.

A minor girl was killed and 10 people were injured after the wall of a marriage hall in Shadbagh collapsed on Monday night. The provincial capital was hit by a dust storm and rains. Reportedly, winds blowing at a speed of 65 kilometres per hour knocked down the wall of the hall where a marriage ceremony was under way. The victim was identified as Taania Ashfaq.

Rescue workers shifted the injured to nearby hospitals and evacuated the remaining guests who were trapped inside. Meanwhile, the roof of a house collapse in Kahna, injuring three people. The injured were identified as Muqadas, Rafia and Asif and were shifted to Jinnah Hospital.

The wind also uprooted trees and knocked over signboards and affected routine life in the city. Many commuters remained stranded on the roads while traffic jams were also reported. Similar weather conditions were also reported in the city on Tuesday.

Rains decimate crops in Bhakkar Crops in Bhakkar have been decimated due to recent rains, strong winds and hail storms. Farmers have incurred substantial losses and are demanding that the government take notice of the situation.

Standing wheat and gram crops, sown on millions of acres in the district, have been flattened to the ground by the wind and rain while in other areas, the ears of the wheat crops have broken away.

As a result, farmers are worried about the remaining crops that managed to survive the tumultuous weather. They fear that the remaining crops will also be damaged as the harvesting process has not yet begun.

Typically around this time of year, growers have harvested and packaged the crop to sell it onwards. Several landlords stated that according to their estimates, the recent rains have caused a significant financial loss while the wheat and gram crops have also suffered irreparable damage. Further, mango and date orchards were also not spared. Farmers say that the government should provide relief to growers from the affected area.

Speaking to The Express Tribune, Deputy Commissioner Waqas Rasheed said that teams from the revenue department are conducting surveys in order to ascertain the losses caused by the recent rains. Further, an emergency flood control centre has also been formed for this purpose, he said. “All protection measures have been adopted and alldepartments have been set on high alert,” he said.

Meanwhile, the assistant commissioners of all four tehsils in Bhakkar district have been directed to formulate a survey report. In addition, awareness seminars are also underway to educate farmers on how to prevent further damage to the crops. In the wake of the heavy rainfall, farmers must adopt strategies to protect their animals and their crops. All municipal committees, Rescue 1122 and other departments have been directed to keep heavy machinery on hand.

Further, all municipal committees have been directed to ensure that all sewerage lines and drains are cleaned on a timely basis.

PERTURBED OVER SINDH GOVT’S ‘APATHY’, FARMERS’ BODY DEMANDS LIFTING OF BAN ON WHEAT MOVEMENT

Dawn ReportApril 16, 2019

LARKANA: The Sindh Abadgar Board (SAB) has urged Chief Minister Syed Murad Ali Shah to get the interprovincial movement of wheat lifted if his government cannot afford opening of wheat procurement centres in order to save growers from huge financial losses.

In a letter he sent to the CM and later talking to Dawn here on Monday, SAB founder member Gada Hussain Mahesar said wheat crop in Sindh had shown a significant growth after it was cultivated over 4.1 million acres.

During the current year, a bumper crop estimated at 6.2m tonnes yield was being harvested as expected, he said, and wondered that the Sindh government had neither announced a procurement policy nor had it fixed the official rate as yet while the process of threshing had picked up momentum.

He said growers, under the obtaining conditions, were compelled to dispose of their produce to local traders at low rates ranging from Rs1,050 to Rs1,120/40kg. Against it, the official procurement rate in Punjab appeared to be Rs1,350/40kg and procurement centres were opened across the province, he added. He asked that the ruling Pakistan Peoples Party in Sindh had its prime slogan of owning farmers; then why this kind of injustice was being done to them? He said wheat growers, who had invested their hard-earned money in this crop and achieved best results, should not be deprived of their due returns.

‘Delay in starting wheat procurement, fixing rate devastating growers’

Quoting former president Asif Ali Zardari’s statement that “it hurts me very much when I see deprivation of poor farmers and labourers”, Mr Mahesar said unfortunately the ground reality in his party's rule appeared entirely different. "What will be [the point] of holding the meeting of Federal Committee on Agriculture (FCA) on April 17 amidst this situation to study the pros and cons of enhancing production of Kharif crops? At present, the government has failed to promote indigenous production of crops," he remarked.

Meanwhile, another organisation, Watan Dost Mazdoor Federal, in its meeting held here on Monday expressed its concern over Sindh government's apathy towards issues of growers and particularly the problems of wheat growers. It said the joy of the growers in the wake of a bumper wheat crop was now going to be short-lived as the government had neither fixed the rate nor started procurement in the province.

Zawar Gopang, who chaired the meeting, said under the prevailing situation traders were exploiting growers and farmers by forcing them to accept the low rates. If the practice continued, growers could hardly repay their loans, he said.

HYDERABAD: Sindh Chamber of Agriculture (SCA) has complained that Sindh-based banks have made procedure for credit facility too cumbersome.

Speaking at a news conference at the local press club on Monday, SCA vice president Mohammad Khan Sarejo said that banks had framed their own laws for dealing with credit and alleged that they were ignoring regulatory framework of State Bank of Pakistan (SBP).

"If a borrower possesses his pass book, he does not need to produce two guarantors for obtaining a loan but commercial banks insist on this condition which is irrelevant and unlawful," he said giving an instance. Moreover, he added, two undated cheques were also obtained from borrower at the time of extending the loan and the condition of two guarantors also remained attached.

He regretted that applicants above 60 years of age were denied loans under a policy, which was not understandable. He claimed that some banks would extend agricultural loans to millers but on bank documents, they were shown as farmers which was a grave injustice.

Mr Sarejo referred to SBP guidelines which stated that "a farmer [applicant] is to be provided loan within 11 days of the submission of his papers", and said: "But practically the procedure takes three to four months and in the meantime the crop season for which the loan is sought passes".

He urged the State Bank authorities to initiate a probe into the matter as well as "corruption" which would expose everything relating to credit procedure of commercial banks in the province.

He said several letters were sent to the SBP authorities in Karachi and Hyderabad urging them to convene a meeting to look into and resolve the issues but all such requests had so far fallen on deaf ears; rather the authorities came in support of the banks.

Mr Sarejo demanded removal of corrupt officers in order to provide due relief to farmers.

TRENDS IN AGRICULTURAL EMPLOYMENT

BR ResearchApril 16, 2019

Finally! Pakistan Bureau of Statistics (PBS) has released its annual compendium (for FY18) on trends in labour market, albeit with a two-year hiatus. The document, which follows ten key indicators, is touted by PBS as an "empirical prelude towards strategizing for full, productive employment", under SDG, target 8.5.

While the document's scope is limited, it does not offer data points for all key metrics across same time period, the statistics related to agriculture sector make for an interesting read.

At 37.4 percent share in total employment, the once largest sector by labour force participation rate is fast losing its primacy. For the first time possibly since independence, services sector has taken the lead, albeit by only 1.2 percentage points.

Equally interesting is the gender-wise breakdown of sectoral share. In sharp contrast to countrywide trends, sectoral share in total female employment stands at a staggering 66.1 percent, compared to just 29.6 percent for males.

Another key indicator is share of employed in the sector working 50 hours or more. Compared to industry and services sector, agri-labour participants come out at the bottom for average number of hours worked during a week, with close to 28 percent of total working excess hours. Contrast this with trade and services sector, where over 68 percent of total spend punching in the proverbial nine hours daily.

This is surprising considering that while average work week in urban and peri-urban concentrated services sectors is usually five-six days, a typical work week at farms does not necessarily follow the weekday-weekend convention. Furthermore, since the metric indicates average work week, the seasonal intensity of farmers' toil does not explain away the distinction.

Yet, of most importance to those monitoring the SDG goals is the metric least highlighted: sectoral employment with no formal education. Countrywide, close to 41 percent of labour force lacks any formal training. Compare this to 63 percent for agriculture and a little under 23 percent for wholesale and retail trade, and the stark reality of rural-urban divide in literacy becomes glaring. Sadly, no gender-wise or geographical break up is shared for the shame; making it difficult to highlight improvement if any over the years.

The document defines "own-account workers and contributing family workers" as those vulnerably employed. A certainly useful indicator of state of labour welfare, the metric appears to be a misnomer for agricultural segment. As per the document, over 88 percent of workers in the sector are vulnerably employed. Yet, in reality, it only means that a large number of farmers and herders provide for themselves, instead of having to seek employment elsewhere.

The document is a useful stepping stone for those seeking information on state of labour in the country. But more is needed in terms of historical trends across all SDG indicators in order to measure progress over time.

12 FISHERMEN MISSING AS WINDSTORM HITS BOATS

RECORDER REPORT | APR 16TH, 2019 | KARACHI

About 12 fishermen are reportedly missing in the wake of windstorm, which started on Sunday and capsized at least two vessels, according to the locals. Several fishing boats are also feared missing with their crewmembers mid-sea amid the storm. The gusty winds that tore into the boats that were hunting at Daba and Chaan of close to the costal Gharo area, left at least 12 fishermen missing, according to the Fishermen Cooperative Society, stating that the operations are under way to find the missing crew members of the ill-fated vessels.

However, the three of the crew members were saved from drowning by the rescue operators soon after their boats as one was identified with the name of Al-Jilani while the other with its official number 17176. “Operations are under way for the missing fishermen,” an FCS official said.

The missing crew members of the Al-Jilani includes with boat owner, Aziz Shaikh; Rafiq, son of Alam Nazir; Hussain, son of Mansoor; Iqbal, son of Muhammad Ali; Yahya, son of Haji Ahmed; Abdul Sattar, son of Qasim and Juman, son of Amin.

The other was a small boat with the four crew members sank midnight from the sandstorm, which struck all of them by surprise. Boat skipper, Muhammad Siddique, Babul and Muhammad Alam struggled to fight the gusty winds and strong sea currents amid the storm.

But, Noor-ul-Islam, according to their accounts, slipped off into the waves, which drew him away and is still missing. Surviving captain, Muhammad Siddique said that a local fisherman, hailing from the Katchi community, sailed his boat to rescue them at 9 am. “All 272 boats including big and small have been called to the moorages, which are expected to return to the coast by tomorrow morning,” Chairman FCS, Abdul Barr assured the bereaved families of missing fishermen with a full support. “Over one dozens boats are missing from windstorm as there are reports that over one dozens boats have sunk,” President Sindh Trawlers Owners and Fishermen Association, Habibullah Niazi said.

100 INDIAN FISHERMEN RELEASED

PPIUpdated April 15, 2019

KARACHI: Pakistan on Sunday released the second batch of 100 Indian fishermen as a goodwill gesture.

The 100 Indian fishermen, arrested for illegal fishing in Pakistani water territories, were released from Karachi Malir Jail.

The Edhi Foundation made arrangements for their travelling from Karachi Cantonment Station and onwards to the Wagah Border.

The fishermen were brought to the station in Edhi ambulances amid tight security by Sindh police.

They will be taken to Lahore through Business Express train and handed over to the Indian authorities at Wagah Border.

As a goodwill gesture amid tension with India, Pakistan had announced to release 360 Indian prisoners, including 355 fishermen and five civilians, during April.

CABINET WILL APPROVE WHEAT PROCUREMENT, EXPORT POLICIES TOMORROW

MUSHTAQ GHUMMAN | APR 15TH, 2019 | ISLAMABAD

The Federal Cabinet, which is scheduled to meet on Tuesday (tomorrow) with Prime Minister, Imran Khan, in the chair will accord approval to wheat procurement and export policies for 2019. Though provincial governments have already announced their wheat procurement policies, the Ministry of National Food Security and Research held a meeting with the provinces, Commerce Division and Finance Division to finalise the policy at the federal level.

The sources said, a bumper wheat crop was expected this year for which proper and transparent arrangements should be made to procure wheat, so that farmers may get fair price for their crop. Food Departments of provinces and other procurement agencies should provide gunny bags to farmers in a transparent and fair manner. Other agenda items of Cabinet are as follows: (i) implementation of Cabinet decision of May 29, 2018 regarding enhancement of pay package of sitting Chairperson and Members of Oil and Gas Regulatory Authority (OGRA);(ii) strategy to dispose of abandoned properties;(iii) statutory Directors by the Federal Government (Defence Production) ;(iv) presentation on existing policy governing the hiring of testing agency for recruitment in Ministries/ Divisions ;(v) ex-post facto approval of signing and ratification of the agreement between Pakistan and Bosnia Herzegovina on the establishment of a Joint Economic Commission (JEC);(vi) designation of Provincial Counter-Terrorism Departments as Investigating and Prosecuting Agency under section 2(j) of AML Act, 2010 ;(vii) extension in deputation period of Dr Ikram Ali, Chairman Federal Board of Intermediate and Secondary, Education (FBISE), Islamabad;(viii) presentation on revamping of existing education system ;(ix) extradition of accused Nouman Hanif s/o Hanif Jan Muhammad to Dubai;(x) allocation of space for Kartarpur corridor for construction of " Pakistan Culture Centre";(xi) salary package for members of the Information Commission;(xii) appointment of Chairman, Federal Land Commission;(xiii) nomination of three additional members in Evacuee Trust Property Board (ETPB) from Nankana sahib(Punjab), Sindh and Gilgit-Baltistan and ;(xiv) posting of deputy director general (finance) (BS 20) on deputation basis in Pakistan Standards and Quality Control Authority (PSQCA).

WEEKLY COTTON REVIEW: TREND OF INCREASE IN PRICES CONTINUES

NASEEM USMAN | APR 15TH, 2019 | KARACHI

The upward trend of increase in the prices of cotton continued. The prices of cotton may increase due to the buying of 800,000 ton of cotton by China. The trend of increase in the prices of cotton yarn and textile products continues. The government departments and government officials are active and trying to increase the production of cotton. The production of cotton in India further decreased.

In the local cotton market during the last week the increase in buying of cotton by textile and spinning mills the upward trend of increase in prices was witnessed. The prices of cotton increased from Rs 100 to 200 per maund.

The prices of cotton in both Sindh and Punjab remained Rs 7300 to Rs 9100 per maund while the price of Seed cotton (Kapas/Phutti) which is available in small quantity is from Rs 3400 to Rs 3600 per 40Kgs in both Sindh and Punjab. In Balochistan cotton for buying and selling is nearly over.

The Karachi Cotton Association (KCA) Spot Rate Committee increased the spot rate price by Rs 100 per maund and closed it at Rs 8800 per maund. Chairman Karachi Cotton Brokers Forum told that ginners had left the stock of 600,000 bales while some mills who were unable to meet their demands were taking interest in the buying of cotton due to which the prices of cotton were increased. On the other hand there is an increase in the demand of cotton yarn and textile products. The financial crunch is increasing in the markets due to the slow process of payments.

The market is stable after fluctuation in international market. After fluctuation in New York Cotton market the news of cotton import quota by China the prices of Rate of Promise (Waday Ka Bhao) increased from 1.50 American cents to 78.50 American Cent. According to National Development and Reform Commission China has announced import quota of 800,000 ton of cotton which is equal to 47 lac bales of 170 kg. The spinning mills having the capacity of 50,000 or more spindles can apply till March 29, 2019. It is obvious that this news will be helpful in increasing the prices of cotton.

The prices of cotton remained stable in China. The prices of cotton in India after increasing in the starting of the week but witnessed some down ward trend at the end of the week. According to experts the prices of cotton will increase in India because Cotton Association of India has estimated the cut of 700,000 bales in production estimate. According to the association 3 crore 21 lac bales will be produced.

The sowing of cotton in Lower Sindh and in Multan started partially for the next season. The agriculture department is actively working for increasing the production of cotton; especially in Punjab the government has given incentives to the farmers of cotton which shows that government is taking interest in increasing the production of cotton.

Few days back a three day meeting was held in Central Cotton Research Institute in Multan. While addressing the meeting Cotton Commissioner Dr Khalid Abdullah said that government is committed for adopting scientific methods in agriculture including biotechnology as well as in the up gradation of cotton seeds for progress in industrialization.

Director Research Pakistan Central Cotton Committee Dr Tasawar Hussain told that 93 new varieties of cotton including BTO 85 and Non BTO 8 were included by National Coordinated variety trial (NCVT) for testing.

Mean while addressing the meeting held for increasing the production of cotton in Multan on April 12 organised by departments related with cotton agriculture minister Punjab Malik Noman Ahmed Langrial said that ginners had promised to pay premium price ie Rs 200 extra per maund for contamination-free or clean cotton.

The Minister, while addressing the meeting of Cotton Crop Management Group (CCMG) at Central Cotton Research Institute (CCRI) Multan further said that government will give incentives for increase in the production of Cotton Crop.

Senior Pakistan Tehreek-e-Insaf (PTI) leader Jahangir Khan Tareen spoke on the occasion and stated that the federal government would play its role in achieving the cotton production target of 15 million bales set by Prime Minister Imran Khan. On the other hand the commerce ministry and textile ministry has announced to give more incentives to the exporters of cotton yarn according to which yarn exporters don't need certification from All Pakistan Textile Mills Association (APTMA) for the export of cotton yarn.

FERTILIZER PRICE MECHANISM TO BE REVIEWED

MUSHTAQ GHUMMAN | APR 15TH, 2019 | ISAMABAD

The federal government has decided to review fertilizer price mechanism after witnessing current "unjustified" increase in urea prices by the local fertilizer industry which is already making huge profits, sources close to Secretary Industries and Production told Business Recorder. The decision was taken by the Economic Coordination Committee (ECC) of Cabinet on April 3, 2018 under the chairmanship of Finance Minister, Asad Umar. However, the local industry is unhappy with the decision and using its influence to get it scrapped.

The sources said ECC on February 19, 2019 had directed the Ministry of Industries and Production to ensure continuous operation of two fertilizer plants up to the end October 2019 and submit a formal plan along with cost comparison of subsidy required to run the plants compared to the financial impact in case the urea requirement is met through imports.

According to sources, in pursuance of the directions of the ECC, Petroleum Division and SNGPL were advised to restore gas supply to two plants (Fatimafert and Agritech) which remained non-operational from February 14 to 25, 2019 and both plants are now operational. Closing inventory for urea at the end of October 2019 has been projected at 627,000 MT. The cost of imported urea vis-à-vis local urea was analysed in a meeting of Fertilizer Review Committee (FRC) and the following observations were made: (i) the agreed feasible price of gas is Rs 782/MMBTU so that the cost may be capped at that level by subsidizing it and total subsidy for it is estimated at Rs 11.191 billion; (ii) it is calculated that GoP at current market prices shall have to provide subsidy of Rs 846/ per bag if urea is imported from Middle East. It would be Rs 1061/ bag in case of import from China. This is besides the foreign exchange expenditure. Quantum of subsidy per bag in case of local production is calculated at Rs 871/ bag which implies that in case of urea import from Middle East, it is more than the subsidy for gas price differential, however, it is offset by tax/revenue; and (iii) besides, GST on RLNG which is being charged by FBR at OGRA notified tariff, should be charged at the subsidized price of Rs 782/ MMBTU.

The sources said, Ministry of Industries and Production proposed that two SNGPL-based urea plants may be kept running on RLNG or system gas / RLNG(if available) till end of October 31,2019 and cap the price of gas being supplied to SNGPL based plants at 782/ MMBTU. The ECC may also direct FBR to levy GST at Rs 782/ MMBTU.

The sources said, during discussion on this issue, the ECC observed that the market price of fertilizers have been raised unjustifiably by the manufacturers, which hit farmers badly due to higher cost of the production which in turn would ultimately entail a price hike of crops in the country. Another argument was that fertilizer is a deregulated commodity under fertilizer policy therefore, market forces of fertilizer industry take advantage of this policy.

The ECC observed that the government is providing subsidy on urea manufacturing to fertilizer plants in the form of subsidized RLNG. Therefore, urea should have been available in the market at reasonable rate.

The ECC directed the Ministry of Industries and Production to review price mechanism of fertilizer industry and hold meeting with fertilizer manufacturers to ascertain the reason/ justification for price escalation of urea fertilizer and submit a report thereof along with recommendations to the ECC. The ECC also decided to allow import of 100,000 tons of urea to cater for Kharif crop.

The meeting was also informed that 70 MMCFD LNG is being supplied to two fertilizer plants for urea production. It was stated that power sector requirement for LNG is about 850 MMCFD which can be increased during peak summer season, therefore, this factor should be taken into account while considering the proposal supply of LNG to two fertilizer plants for urea production.

The ECC directed to run two fertilizer plants on RLNG/ system gas upto August, 2019 subject to the condition that provision of LNG/ gas to fertilizer plants should not effect the supply to power plants during peak summer seasons.

Meanwhile, urea manufacturers making huge profit have written a letter to the Secretary Industries and Production, opposing import of 100,000 tons of urea.

“The fertilizer industry is of the view that there is no possibility of shortage of urea during the year. Moreover, LNG price has also declined considerably, thus local industry can be run to the fully capacity without foreign exchange on import and paying heavy subsidy by the government to sell imported stocks,” said, Sher Shah Malik (retired) Executive Director Fertilizer Manufacturers of Pakistan Advisory Council, in his letter.

The government has also been informed that Pak Arab fertilizer is also likely to come into operation in May, which implies that urea production will enhance.

“Your intervention is solicited to suspend the execution of ECC decision, thus saving foreign exchange and subsidy, besides helping domestic industry to keep running and contributing to the national exchequer,” Shah said in his letter.

WHEAT TO BE BOUGHT DIRECTLY FROM GROWERS: MINISTER

RECORDER REPORT| APR 15TH, 2019 | SIALKOT

Punjab Agriculture Minister Malik Nauman Ahmad Langrial has said that necessary arrangements had been finalized for purchasing wheat direct from the growers in Punjab. Addressing a meeting of Agriculture Department the other day, he said that wheat procurement centres had been set up across the Punjab to facilitate the growers, adding that the government will purchase wheat direct from growers at the rate of Rs 1300 per mound.

The minister directed the agriculture staff that they should ensure hustle free arrangements at every wheat purchase centre to facilitate the growers. The minister further stated that overall condition of wheat crop is satisfactory in Punjab and hopefully the fixed target would be achieved easily.

On this occasion, Deputy Commissioner Syed Bilal Haider informed the minister that necessary arrangements had been finalized for the purchase of over 93000 metric ton wheat in Sialkot district. He said that in order to facilitate the farmer community as many as 10 wheat purchase centres were being established across the district.

The Deputy Commissioner further said that two wheat purchase centres would be set up in tehsil Sialkot while 5 in tehsil Pasrur, two in Daska and one in tehsil Sambrial had been established for convenience of the farmers. The basic facilities like drinking water, sitting arrangement etc would be ensured at each wheat purchase centre, Bilal said.

NEWS COVERAGE PERIOD FROM APRIL 8th TO APRIL 14th 2019

GOVT FOR ENHANCING KHARIF CROP PRODUCTION

Amin Ahmed Updated April 14, 2019

ISLAMABAD: The government will promote indigenous production of agricultural crops that would substitute the import of edible oil as well as enhance production of kharif crops in the upcoming meeting of Federal Committee on Agriculture (FCA).

The FCA meeting, which would be held on April 17 to set the target for sowing of kharif, is organised by the Ministry of National Food Security and Research (MNFSR). The biannual meeting will take stock of the previous production patterns and fix targets of all major and minor crops in consultation with provincial agriculture departments and other stakeholders.

Despite the fact that the MNFSR hosts the FCA meeting in order to enhance domestic agricultural production through increasing per yield acre, provincial representation is seen at the level of officials only. No provincial agriculture ministers attend the meeting, according to the ministry.

Sowing season for kharif crops including sugarcane, rice, cotton and pulses (maize, mung and mash) begins in April and lasts until June, while harvesting is done in October.

During the last kharif season, there was a decrease in the production of sugarcane, cotton and maize, while some improvements were made in pulses.

Sugarcane, a high-value cash crop, saw its output decreasing by 16.89 per cent to 68.25m tonnes in 2018-19, from 82.12m tonnes over the previous year. There is still a huge yield gap between average and potential yields despite continuous increase in area, yield and production over the last few years.

In 2018, rice was cultivated on an area of 2,83m acres while production decline 4.43pc year-on-year to 7.12m tonnes. The crop’s area under cultivation contracted due to lower economic returns to farmers on account of decrease in prices both domestically and globally last year.

According to estimates from provincial agricultural departments, maize production at country-level for 2018 was reported at 5.521m tonnes reflecting a decrease of 1.99pc.

For mung, the total estimated production in 2018 stood at 124,800 tonnes with average yield of 755kg per hectare while the area and production rose by 1.67pc and 2.25pc year-on-year.

Statistics from provincial bodies put cultivation area for mash at 13,400 hectares with a total output of 6,450 tonnes in 2018. The area under cultivation dipped by 12.44pc whereas production was down 10.42pc from the previous year.

Cotton crop area has also reduced due to preference for sugarcane and maize, and in Punjab alone, area under cultivation has declined by 19.7pc between 2006 and 2018. In CY18, the crop's area sown was 2.406m hectares, 81.4pc of the annual target which was set at 2.955m hectares. Against the production target of 14.04m bales in 2017, the country achieved the output of only 11.94m bales.

MERITS OF BIO-SALINE FARMING IN THAR DISCUSSED

Hanif Samoon April 14, 2019

MITHI: Stressing that bio-saline agriculture can bring about an economic revolution, elected representatives, irrigation and agriculture experts, civil society activists and coal mining firms' executives have urged the government of Sindh to introduce bio-saline agriculture scheme for farmers to eradicate poverty from the region and counter the chronic drought in Thar.

They were speaking at a two-day event titled 'Blooming Thar: transforming bio-saline agriculture in Tharparkar' jointly organised by Sindh government, Thar district administration and several non-governmental organisations (NGOs) that started here on Saturday.

The event features an exhibition, seminar and a consultative session, the last one chaired by Sindh Agriculture Minister Ismail Rahu.

Speaking at the opening ceremony, Mr Rahu said that the provincial government was ready to support the initiative which was aimed at combating drought in Thar by introducing bio-saline agriculture on large scale in the desert region. In order to bring about a paradigm shift in the cropping and watering pattern in Tharparkar, farmers should adopt modern irrigation and agriculture methods to produce round-the-year yields without fearing much about droughts, he added.

According to the minister, Sindh accounts for up to 24 per cent of saline land which is suitable for bio-saline agriculture.

He deplored that agriculture in Sindh was being badly affected due to the persisting "terrible water crisis", and held federal government bodies responsible for non-release of Sindh's due share of water in the Indus.

According to him, the provincial government is making all-out efforts to bring in latest machinery and introduce modern techniques to give a boost to the agriculture sector despite the fact that the Sindh government is facing a financial crunch due to "callousness" of the federal government.

Mr Rahu vowed to turn Tharparkar into a green land by adopting sustainable policies and plans.

He observed that women of this region could play very important role by laying kitchen gardens in or around their houses. He announced that the provincial government would provide 2,000 kits to Thari women by June this year for the purpose.

MNA Dr Mahesh Kumar Malani in his speech said that several leading NGOs in recent years executed their pilot projects in Thar to ascertain whether bio-saline farming here was possible and the results appeared positive.

“It’s time to act, not only for coal mining and power producing firms but for the Sindh government also; they should come forward and announce a bio-saline agriculture package for farmers of Thar which should include subsidised solar system-based tube wells,” he said.

MPA Faqeer Sher Mohammed Bilalani said that Sindh government should mobilise financial institutions for giving soft or interest-free loans to farmers on a long-term basis so that they could cultivate their lands and gain benefits of bio-saline farming. Dr Mohammad Ismail Kumbhar said it was the need of the hour that Tharis be trained and guided in utilising subsoil water for crop cultivation even in drought conditions.

He referred to a fact sheet to reveal that over the past 114 years, the Thar region had experienced 72 droughts and all of them wreaked havoc on lives and assets of Tharis, besides changing the region’s landscape.

Mohsin Babbar of the Thar Foundation said the experiments of bio-saline farming proved successful as cotton, sunflower, vegetables and different varieties of fodder grew in normal condition. He recalled that fish farming in Gorano dam’s bio-saline pond was another successful model which could be replicated in the region to avail a good source of livelihood.

Rano Mal Dodani, Dr Ghulam Rasool Mahar, Dr Imtiaz Kumbhar, Dr Attaullah, Bhawani Shan¬kar, Mustafa Ujjan and several other experts of their fields also spoke and endorsed the idea that cultivating cash crops and fodder using soil water in Thar’s climate was very much possible and useful.

During the proceedings of the event, Agriculture Minister Ismail Rahu along with other lawmakers, PPP leaders and agriculture experts visited many of the 30 stalls set up at the exhibition.

GOVERNMENT TO BUY 149,000MT OF WHEAT FROM FAISALABAD

RECORDER REPORT | APR 14TH, 2019 | FAISALABAD

Punjab government has fixed the target to purchase 149,000 metric ton wheat from the district during the current wheat procurement campaign for which 11 procurement centers have been set up at different localities of the district.

Deputy Commissioner Sardar Saifullah Dogar visited the different wheat procurement centers and checked the necessary arrangements for the facilities of wheat growers. He reviewed the process of receiving the applications from the farmers regarding issuance of Bardana. He also inspected the performance of the revenue staff and directed for following the wheat procurement policy of the Punjab government in letter and spirit. He emphasized upon organized and transparent wheat procurement campaign and said that all out facilities should be provided to the wheat growers at the centers for their comfort. He interacted with the farmers and assured them that regular monitoring of the wheat procurement process would be carried out for maintaining transparency.

He also assured about the fair and transparent distribution of Bardana and said that the applications from the farmers were being received by using advanced method of information technology for maintaining good governance in this regard. Deputy Commissioner directed the centers staff for maintaining the arrangements of cold drinking water, comfortable waiting areas, availability of electric fans and other necessary facilities. He directed for transparent and speedily scrutiny of farmers' applications for seeking the Bardana. He directed the staff to perform their duty with passion and dedication and warned that any negligence and dishonesty would not be tolerated in this regard.

District Food Controller Zain Ul Abedin informed that all necessary arrangements had been at wheat procurement centers and farmers were being apprised about the policy of the government regarding wheat procurement.

FARMERS DIP TOES INTO GLOBAL CROP INSURANCE PLATFORM

RECORDER REPORT | APR 14TH, 2019 | LONDON

Farmers can now for the first time insure their produce against price volatility as easily as insuring their homes, with a global platform based on hundreds of niche commodity indexes, underwritten by a Lloyd's of London syndicate.

Crop insurance has existed since the 1930s in the United States but is heavily subsidised by the government to provide protection against damage to produce and price risks. There have also been government-backed schemes in Canada and India.

Supplying insurance without such state-backing has proved challenging, however, even as price risk continues to rise due to a variety of factors including commodity market liberalisation and climate change. "We talk about insurance as the oil of the wheels of the economy but there are lots of under-served areas and one of them is farming," said Parth Patel, Chief Risk Officer for Ascot

Group's Syndicate 1414 Lloyd's of London. The new products have been made possible by recent advances in data science and the reduced cost of running the trillions of computer simulations needed to calculate risks across the portfolio of commodity indexes used by the platform's developer Stable.

Stable is a British-based start-up whose investors include agrochemical company Syngenta, seed stage investor Anthemis Group and Swiss insurer Baloise Group, as well as Ascot. So far about 450 farmers have used the platform, which has been running for eight weeks, but it may take time to earn the trust of many in a sector known for its conservatism.

In Russia, the platform uses price indexes issued by SovEcon agriculture consultancy. "They (Stable) will have to prove and show the benefit from their instrument and gain the trust of farmers and processors who are used to common practice – being left unpaid or with undelivered crops in case of sharp price changes," SovEcon head Andrey Sizov said.

English farmer Jeremy Mason was among the first to use the platform, insuring his feed wheat and feed barley. “Farmers are facing enormous risks now, much more so than in years gone by,” he said, noting price volatility had increased significantly partly due to global climate change.

Mason, who farms in Norfolk in eastern England, paid about 4,000 pounds to insure 500 tonnes of feed grain which equates to 8 pounds a tonne for seven months of cover. Payments are made in a similar way to other forms of insurance. “It seems like a straightforward insurance policy. I’ve done mine on monthly direct debit,” he said.

He warned, however, that other farmers may be slower to embrace the new products. “Farmers are extremely cautious and a lot of them are not going to understand this. It is going to take a long while for this to properly take off,” he said.

The wide range of commodities which can be insured on the platform helps the manage risks from the insurer’s point of view along with geographical diversity. The platform will be available for farmers in Britain, France, Russia, South Africa, Poland, the Netherlands, Chile, Australia, New Zealand, Ireland, Brazil, Uruguay, Sweden, Croatia, Portugal and Spain.

PRICES OF ESSENTIAL KITCHEN ITEMS CONTINUE TO RISE

AMJAD ALI SHAH | APR 15TH, 2019 | PESHAWAR

Prices of important kitchen items, including chicken meat, vegetable, pulses, sugar, flour and others have remained high-side in the previous week as compared to preceding week, according to survey carried out by Business Recorder here on Sunday.

The price of live chicken/meat has touched new peak in retail market as available at Rs 201 per kg, which was selling at Rs 171 per kg in the previous week, the survey notice, it added that a dozen of farm eggs are being sold at Rs 90 and Rs 100 in local market.

Due to lack of any mechanism and price fixing by local administration, it was observed that butchers have sharpened their knives to start squeezing inflation-hit masses with artificial rates of the cow meat as it had gone up at Rs 450 per kg, which was selling at Rs 300 and Rs 400 per kg in the previous week.

Similarly, the survey witnessed that price of sugar is also sky-high in retail market as available at Rs 70 per kg which was available at Rs 65 per kg. Gram flour (baisen) rate increased at Rs 130 per kg against the price of Rs 120 per kg. The upward trend in prices of almost all food grains/pulses have registered due to unchecked by the authorities concerned. Good quality rice (sela) is being sold at Rs 140 per kg against the price of Rs 130 per kg in the previous week. Toota rice is being available at Rs 70 and Rs 80 per kg in local market.

Likewise, the dal mash is being sold at Rs 140 per kg against the rate of Rs 130 per kg in the last week. Dal masoor is being sold at Rs 100 per kg against the price of Rs 90 per kg; dal channa priced at Rs 120 per kg, dhoti dal is being sold at Rs 130 and Rs 140 per kg.

Big-size white channa is being sold at Rs 140 per kg against the price of Rs 120 per kg in the previous week in retail market. Tajikistani red-bean is being sold at Rs 120 per kg while locally produced red-bean priced at Rs 180 per kg.

An increase of Rs 30 per kg was witnessed in price of moonge as it was available at Rs 150 per kg which was selling at Rs 120 per kg in the last week. Likewise, the white lobiya is being sold at Rs 120 per kg against the price of Rs 110 per kg.

Similarly, Dal chilka (green) is available at Rs 130 per kg, while dal chilka (black) priced at Rs 140 per kg. Prices of almost all brand/quality cooking oil and ghee have registered increase by Rs 5 to Rs 10 per kg/litre in retail market, as available within range of Rs 170 and Rs 180 per litre/kg and Rs 190 and Rs 200 per kg/litre.

'IMPROPER TAXATION HURTING THE DAIRY INDUSTRY'

Our Correspondent April 14, 2019

A dynamic individual, with a corporate experience nearing two decades, Aamir Khawas, chief operating officer, Fauji Foods Limited, and chairman, Pakistan Dairy Association, speaks about the contribution of the dairy sector in Pakistan's struggling economy. Khawas has been associated with the dairy industry for 13 years.

What are the key challenges that Pakistan's dairy industry is facing?

Milk production is the least commercialised enterprise in Pakistan's agricultural economy. One of the major challenges is the seasonality of milk production. The two seasons, namely flush season and lean season have a direct impact on milk supply. Managing too much and too little is a major challenge for the industry. Unregulated suppliers have no proper means to store the excess milk and hence a lot of it is either discarded or is sold to consumers in a substandard form (posing a cost to the system).

As the economy is going through recession, with inflation as high as nine percent and rupee depreciation by 30 percent, the price of energy is going up which impacts the input cost towards higher end, the business environment turns out to be challenging.

In addition, there is a fragile production base, financial insecurity, untrained manpower and lack of quality assurance faced by the industry. All these factors, collectively, result in an inefficient and unorganised market as 95 percent of milk industry in Pakistan is unregulated. From the government point of view, provision of quality and hygienic milk to the consumers is currently a big challenge.

What is the consumption ratio of packaged milk versus loose milk?

The milk industry in Pakistan is split. There are five percent packaged milk processors whose product prices are higher. The remaining 95 percent are loose milk sellers. There is a huge price differential between loose milk and packaged milk.

How will you explain the 'informal dairy industry' in Pakistan?

Being among top five milk producing countries in the world, Pakistan's gross production of milk was estimated to be 56,080,000 tons, according to figures published in Pakistan Economic Survey 2016-17. Out of this number, 95 percent is supplied as 'loose' and is therefore cheaper.

Pakistani consumers spend 26 percent of their food budget on milk. About 80 percent total milk production comes from rural areas, 15 percent from semi-urban and five percent from urban areas. Nearly 40 percent of the total production is marketed through informal channels.

The entire value chain, from production to consumption, suffers from poor sanitation of livestock sheds, unclean animals, milking by hand, collection in small quantities from milk producers and use of non-recommended additives and preservatives such as formalin, cane sugar, glucose, benzoic acid, and alkaline products.

Quality assurance is the most neglected aspect of the informal dairy system which creates health hazards for consumers and raises indirect system cost in terms of poor health outcomes.

Why is there a need for a Minimum Pasteurisation Law?

All around the world, milk is recognised as key source of nutrition and governments are increasing regulation to safeguard consumers' interest by introducing Minimum Pasteurisation Law to ensure baseline milk quality.

It means minimum standard of quality which all sellers have to adhere to in order for milk to be fit for human consumption. A Minimum Pasteurisation Law ensures the quality of milk.

If a Minimum Pasteurisation Law is enforced, it will help the dairy industry to produce nutritious milk products, also increasing the exports.

How important is the packaged milk industry for maximising Pakistan's dairy potential?

Packaged milk, with its five percent contribution to the overall industry, is important for the dairy sector. The country is already moving towards modernisation and even though the consumption ratio is low, processed milk industry has huge potential to grow. This chunk also ensures employment generation and poverty alleviation through training and empowerment of dairy farmers and gawalas, as well as safety of the livestock animals.

In your opinion, how can a better tax regime facilitate the formal dairy industry?

Taxation on dairy items is divided in two fronts, first is the imposition of regulatory duty on skimmed milk powder and the second is the discontinuity of sales tax zero-rated regime on dairy products. The processed industry accounts for about 33 percent of powder imports, primarily for managing the milk supply during the lean season.

Secondly high imports of skimmed milk powder are due to low quality of local milk powder required for specialised categories like infant milk etc. Presently regulatory duty is 25 percent and in addition to this customs duty is 20 percent, and additional customs duty is two percent.

Secondly, abolition of zero-rate tax policy has drastically increased the cost of the milk processing industry, which is eventually resulting in increasing trend of prices of packaged/hygienic milk and milk-based products. Both of these factors are severely affecting the packaged dairy Industry.

After the zero-rating regime, the gap between the prices of processed and loose milk is even greater, which has not only resulted in sharp decline of the packaged dairy industry, but is also making it difficult for the loose milk market to come under the formal dairy sector.

Lower profitability and decline in volumes have severely impacted the investments in the packaged dairy industry and has negatively affected the initiatives aimed to promote milk farming communities and cool chain infrastructure.

The improper taxation is hurting the dairy industry with a price hike leading to a decline in the demand of the dairy products and shifting the burden towards the consumers. In order to address this issue and provide some relief to the sector, the government should review its fiscal policy towards dairy industry; no duty or sales tax on animal feed, zero-rating on local semen production, no sales tax on local and imported semen, and zero rated tax policy on dairy products.

How is the dairy sector contributing to the country's economy?

The dairy sector comprises an important component of Pakistan's economy, which is primarily agri-based. It represents 97 percent of the informal sector (loose milk) and three percent organised sector (packaged milk).

The contribution of agriculture sector to Pakistan's gross domestic product (GDP), with its declining trend, still stands at 23 percent. The livestock sector contributes 49 percent of value-addition in the agriculture sector and about 11.6 percent to Pakistan's GDP. Some 30–35 million rural population is engaged in raising livestock and it derives 30–40 percent of its income from this sector.

Dairy sector has also contributed thoroughly in terms of generating employment, as 11 percent of the total employment is coming from livestock and dairy producers. Moreover, the sector has also created opportunities for women workers. Around 34 percent of total women employment is in various livestock sectors, as against nearly five percent in the case of total employment of men.

'GROWERS FROM 15 DISTRICTS WILL HOLD PROTEST IF WHEAT PROCUREMENT NOT STARTED'

THE NEWSPAPER'S CORRESPONDENT Published Apr 13, 2019 06:24am

LARKANA: Grand Democratic Alliance MPA Moazzam Abbasi and Sindh Abadgar Board (SAB) president Irfan Jatoi on Friday expressed their serious concern over the delay on the part of the Sindh government in opening wheat procurement centres and fixing the official rate of the commodity for the current year.

Speaking at a press conference at the local press club, they termed the delay being caused by the government "intentional" and apprehended that any further delay would result in colossal financial losses to wheat growers and abadgars (small landowners).

They said it looked strange that except for Sindh, all the provinces had not only announced their wheat procurement policy but also started procuring the crop at officially fixed rates. "Sindh has not even fixed the wheat procurement price for the season," they said, adding that it was no less a trauma for growers, who had injected all resources available to them in cultivating the crop.

GDA lawmaker, SAB leader slam govt for 'intentional' delay

MPA Abbasi said the joint opposition in the Sindh Assembly would move a resolution in this regard during its session starting later this month. He also hinted that a big demonstration would be organised in which growers from 15 districts of Larkana and Sukkur division would take part and press the government to take urgent and appropriate measures to address their genuine issues.

He noted that it was owing to the absence of a wheat procurement policy that the market rates had nosedived. He recalled that the Sindh government had been procuring wheat in the past for Rs1,300 per 40 kg which had stabilised prices in the market and the growers had been getting a reasonable rate for their produce.

He warned that the deliberate delay being made in fixing this season's rate and opening procurement centres would give birth to a host of problems for abadgars and also encourage corruption. He also cited the element of corruption that had already surfaced in the process.

Irfan Jatoi said Punjab government had not only announced its wheat procurement policy but also set the procurement target at four million tonnes out of the expected yield of 6.5 million tonnes. This was aimed at facilitating next crop's cultivation and providing financial relief to agriculturists and small growers, he added.

In Sindh, out of the around 4.2m tonnes of wheat produced previously in the province, the government had been setting the procurement target of 1.4m tonnes only, he pointed out, and apprehended a reduction in the procurement price in open market if delays on the part of government prolonged. "The rate may come down to Rs1,050-900 per 40kg," he warned. For 10 years we [growers' organisations] had been crying over the injustice but the government's attitude remained apathetic, he said.

Mr Jatoi noted that under the lame excuse of a financial crunch, the Sindh government appeared reluctant to procure even 800,000 tonnes of wheat this season. "And if this happens, the issue of food security in the province will crop up," he feared.

He wondered why the Sindh government had not worked out an agriculture policy. "That's why it's avoiding to face growers," he said, adding that if the situation persisted, abadgars would hold protests at all forums.

Growers' representatives from Khairpur, Shikarpur, Qambar-Shahdadkot including Arsalan Selro, Mohammed Ali Hakro, Sher Ali Jatoi and Jamal Mehmood Khuhro, as well as Jamiat Ulema-i- Islam-Fazl (JUI-F) Larkana general secretary Muhabbat Khuhro were also present at the press conference.

GINNERS READY TO PAY RS 200 PER MAUND EXTRA FOR CLEAN COTTON: MINISTER

RECORDER REPORT | APR 13TH, 2019 | MULTAN

Punjab Minister for Agriculture Malik Nauman Ahmad Langrial said Friday that ginners had promised to pay premium price i.e. Rs 200 extra per maund for contamination-free or clean cotton. He said this while presiding over a meeting of Cotton Crop Management Group (CCMG) at Central

Cotton Research Institute (CCRI) Multan. The Minister assured that all out efforts would be made for the provision of essential inputs for the cotton crop at affordable prices.

Moreover, the department would also remain vigilant for monitoring the quality and prices of inputs. Senior Pakistan Tehrik-e-Insaf (PTI) leader Jahangir Khan Tareen, progressive cotton growers, cotton researchers, agriculture research, extension and plant protection officials, academicians, representatives of private pesticide, seed and fertilizer associations, MEPCO, Irrigation, Pakistan Meteorological Department attended the meeting.

The meeting deliberated upon the cotton production targets for the Punjab province and measures to be adopted for achieving them. The departments presented data about the availability of essential inputs (fertilizer, pesticide) and canal water irrigation situation and electricity supply position in the coming season.

Jahangir Khan Tareen also spoke on the occasion and stated that the federal government would play its role in achieving the cotton production target of 15 million bales set by Prime Minister Imran Khan.

FLOUR MILLERS CALL MEETING

RECORDER REPORT | APR 13TH, 2019 | LAHORE

The Pakistan Flour Mills Association (PFMA-Punjab) has convened an important meeting of the millers from South Punjab to discuss flour prices, Ramzaan package and wheat procurement. PFMA Punjab Chairman Habib ur Rehman Leghari, who will also chair the meeting, has asked the flour millers from Sahiwal, Bahawalpur, Multan and Dera Ghazi Khan areas to attend this meeting which will also take important decisions with regard to hardships being faced by the flour milling industry and coming wheat procurement.

UTILITY STORES RUNNING OUT OF FOOD ITEMS

By Haseeb Hanif Published: April 13, 2019

ISLAMABAD: Over 10 companies have stopped supplying their food products to the Utility Stores Corporation (USC) as it owes them over Rs8 billion.

The USC has asked the government to pay 10% to 15% of this amount to the companies and also sought a 75% advance from the Rs2 billion Ramazan package.

Sources said with the companies cutting off their supplies, there is a shortage of food items in Utility Stores across the country.

The USC is incurring losses worth Rs12 billion every year and because of the ongoing financial crisis, it is also finding it difficult to pay the salaries of its employees.

There are dues worth Rs25 billion that the government has to pay to the USC under its subsidy.

The USC wants the government to make partial payments of 10% to 15% to the companies to ensure the supply of food items to its stores during Ramazan.

The Economic Coordination Committee had approved a Rs2 billion relief package for the upcoming holy month of Ramazan.

According to a USC spokesperson, the corporation has finalised its arrangements for the Ramazan relief package.

He said deals had been finalised with companies including oil and ghee suppliers and they had agreed to provide the required stock at subsidised rates.

“The USC is committed to ensuring smooth supply of all commodities at every nook and corner of the country during Ramazan,” he added.

The USC also intends to distribute five million free ration packs under the “Sahara Programme” to help the needy during Ramazan.

The countrywide Sahara campaign is a social initiative to ensure food safety and formulate a unified platform to help people who cannot even afford subsidised food. For this purpose, the USC has asked overseas Pakistanis to donate $15 to provide ration to each needy family for a month.

To ensure transparency in the system, a web-based application will be used to distribute food coupons. Donors can nominate the beneficiary by providing the latter’s CNIC and cell phone numbers.

ANSWER TO SAFE MILK LIES IN PASTEURISATION

By Shazia Asim Published: April 13, 2019

LAHORE: Milk is one of the basic commodities and important in one’s day-to-day life. Pakistan, with current estimates, is among five largest milk producing countries in the world and according to the Economic Survey of Pakistan 2017-2018, the annual production of milk is 57,890 million tons.

Milk is considered nature’s single most complete food and is definitely one of the most valuable and regularly consumed foods. It plays a key role in health and development of human beings throughout their life, especially in childhood. Hence, ensuring the safety of milk is important in order to preserve and maintain its nutritional values.

Milk, being very rich in nutrients, is not only a source of nutrition for human beings, but provides an ideal growth environment for many microorganisms as well. Yeasts, moulds and a broad spectrum of bacteria can grow in milk, particularly at temperatures above 16°C.

In addition, milk can be a potentially significant source of food-borne pathogens, the presence of which is determined by the health of the dairy herd, quality of the raw milk, milking and pre-storage conditions, available storage facilities and technologies, and hygiene of the animals, environment and workers.

It is a well-known fact that milk is a basic building block of a balanced diet and an important component for normal growth of children, hence it is important that the consumers should be able to utilise it without any apprehensions in their minds, but still the most important question on every consumer's mind, rightly so, remains, "how can I be sure that the milk I am buying is wholesome in every sense of the word".

The answer to consumers' questions, relating to the purity, therein lies only in pasteurised milk. Loose milk can transmit biological and chemical hazards; but there are effective control measures that can minimise the risk to human health, key among which is pasteurisation.

Pasteurisation is a process, which is undertaken by dairy companies that sell milk in packets or tetra packs. The process involves heating milk at a particular high temperature for a required time to ensure killing of harmful bacteria that can cause severe damage to human health.

Originally designed to ensure adequate destruction of common pathogenic microorganisms (including mycobacterium bovis, commonly responsible for tuberculosis at the time), pasteurisation can extend the shelf-life of milk by destroying almost all yeasts, moulds and common spoilage bacteria.

Routine pasteurisation of milk began in the United States in the 1920s and became widespread by 1950 as a means to reduce contamination and human illnesses. According to US Centers for Disease Control, improperly handled raw milk is responsible for nearly three times more hospitalisations than any other food-borne disease source, making it one of the world's most dangerous food products.

Introduction of pasteurisation led to dramatic reductions in the number of people getting sick. Most public health professionals and healthcare providers consider pasteurisation as one of public health's most effective food safety interventions ever.

The common misconception among consumer is that pasteurisation at high temperature denatures important nutrients of milk. According to the Food and Drug Administration (FDA), US, and the Centers for Disease Control and Prevention (CDC), "pasteurisation does not reduce milk's nutritional value".

When it comes to safe milk, promoting and adopting pasteurisation is an indispensable step for the protection of the public health. One of the measures taken in this regard is introduction of Minimum Pasteurisation Law, which was proposed by the Punjab government in May 2017, and it states that it will be employed over the course of five year.

According to the approved regulations, PFA intends to ban loose milk supply in five years across Punjab. If implemented and executed properly, this will help the country improve the safety and health of its citizens. However, steps need to be taken at quicker and faster pace, since most of the milk in the country is marketed in raw form. Governments, all over the world, are increasing regulations to safeguard consumers' interest by introducing Minimum Pasteurisation Law to ensure base-line milk quality.

Good quality milk is the milk of normal chemical composition, completely free from harmful bacteria and toxic substances, of good flavour and adequate in maintaining quality. In our part of the world, milk is produced in a non-standardised way and is usually supplied to the consumers from the urban and rural areas by milkmen. The challenge to all food-safety policymakers is to balance necessary modifications and control measures with desired human health outcomes.

WORKSHOPS TO CONTROL FMD LAUNCHED IN PUNJAB

RECORDER REPORT | APR 12TH, 2019 | LAHORE

Livestock & Dairy Development Department (L&DDD) Punjab has launched workshops to train the livestock farmers on how to control and eradicate Foot and Mouth Disease (FMD) in Pakistan. First programme of this kind was conducted by the department at Village Wandala Dayal Shah (Ferozewala-Sheikhupura) the other day. The programme was arranged in collaboration with the Food and Agriculture Organisation (FAO) especially for female livestock farmers.

Farmers were imparted training on Foot and Mouth Disease Control in Pakistan, precautionary measures so as how to control & eradicate FMD from the country. Dr Aisha Anjum was the expert who while addressing farmers taught them how to adopt precautionary measures and focus on FMD vaccination. She said that ultimate objective of such trainings is to boost economic growth through export market. She said that this disease not only cause mortality among animals but also cause production loss among milk giving animals.

PROTESTERS DEMAND RELEASE OF FISHERMEN IN INDIAN JAILS

By Our Correspondent Published: April 12, 2019

KARACHI: A large number of fishermen belonging to Karachi, Badin and Thatta protested in front of the Karachi Press Club (KPC) on Thursday for the release of Pakistani fishermen languishing in India's jails. The protest which, was organised by Pakistan Fisherfolk Forum (PFF), was held three days after Pakistani authorities released around 100 Indian fishermen.

Women, children, family members of detained fishermen and civil society members were among those who were shouting the slogans. "We have been facing enormous financial difficulties since my son, who was the sole breadwinner, was taken into custody by Indian authorities 18 years ago," said an elderly woman, who was holding a placard. The burqa-clad woman added, "Please don't forget to write about my son. His name is Usman. We belong to Rehri, Ibrahim Hyderi".Indian govt's action is pushing families of Pakistani fishermen towards starvation, says activist

According to the protesters, around 98 Pakistan fishermen are in Indian jails. A few of them have been languishing there since 2001. "There were around 360 Indian fishermen in Pakistan jails of which 100 have recently been released. It is high time for India to show some good gesture," said PFF Chairperson Mohammad Ali Shah. Referring to the death of Noorul Amin, he added, "Instead of releasing our fishermen, they are sending bodies here".

Amin was a Pakistani fisherman who was reportedly tortured to death in an Indian jail. "We demand to initiate a proper investigation about his death by forming a joint judicial commission," added Shah.

The protesters arrived in a rally at the KPC. Expressing grave concern over the frequent arrest of fishermen, they said, "India's maritime security forces detain Pakistani fishermen by violating our territorial waters and then imprison them for years".

Zulekha, a civil society activist lamenting the aggression of Indian forces said, “Such inhumane acts of the Indian government have pushed the families of the imprisoned Pakistani fishermen towards starvation”.

Pakistan and India started apprehending each other’s fishermen along with their boats in the Arabian Sea in 1987 and have continued since then. Poor fishermen of both the countries have suffered immensely due to this cruel practice.

While addressing the rally, Shah said that tensions between the two countries have always resulted in more problems for the fishermen and quite frequently increasing the period of their detention and leading to a situation where even highlighting their suffering becomes an issue. He said that the fear of getting arrested has led to increased reluctance among fishermen to go fishing in the deep sea which has an adverse impact on the life and livelihood of fishing communities. Confiscation of boats, which is the only source of livelihood for the fishermen, makes matters worse, he added.

PFF chairperson appreciated the decision of the Pakistani government to release Indian fishermen. “Both India and Pakistan must stop arresting fishermen and adopt ‘No Arrest Policy’”, he said.

UNBEARABLE RISE IN MILK PRICE

By Editorial Published: April 12, 2019

Milk sellers have turned into milk snatchers. The Karachi milk sellers’ association has increased the retail price of milk to Rs121 from Rs94 a litre from April 10.

This sharp increase of Rs23 will further burden the ordinary consumers who are already groaning under the weight of ever-increasing prices of all essential commodities and basic services like electricity and gas. Never before was milk price increased by such a big margin at one go. What’s worse is that the milk sellers have announced the steep increase unilaterally.

They claimed that they had been urging the government to allow an increase in the commodity’s price in view of the increase in the prices of fodder, other inputs and transport cost. As usual, the provincial government has belatedly moved into action. It is like closing the stable door after the horse has bolted. We do not know whether the government’s action has had any salutary effect on profiteers.

The increase in milk price has come at a time when Ramazan is around the corner. Considering the fact that the consumption of the commodity goes up during the fasting month, one cannot help describing the unilateral increase as an act of cruelty. Since milk will be available at an inflated price in the holy month, it will go beyond the reach of the common people.

Milk is the most balanced food. For children, it is an essential part of their diet. They need it for proper physical and mental growth. Pakistan is said to be one of the top milk-producing countries, so there should not be a shortage of the commodity. Here once again one comes to the tragedy of Third World countries.

Food is available in plenty in these countries but people do not get a sufficient quantity of food for want of money to buy food. European countries destroy their mountains of food to maintain price stability. The US stocks its surplus food.

ENVOY ASKS PAKISTANI TRADERS TO ADDRESS GRIEVANCES OF US SEED FIRMS

By Imran Rana Published: April 12, 2019

FAISALABAD: Pakistan and the US are enjoying sustained and mutually beneficial relations despite a "temporary political recession" and a visible improvement in ties is expected in coming days, said Ann Mason, Chief of Political and Economic Section, US Consulate General, Lahore.

Speaking to business community at the Faisalabad Chamber of Commerce and Industry (FCCI), she said America was investing in many countries including Pakistan.

Terming agriculture an integral and major part of Pakistan's economy, she emphasised that the US would continue to assist Pakistan within the given circumstances. However, she said some US seed manufacturing companies had expressed reservations and the local business community must take measures to address their grievances in order to take benefit of the latest American technology that was bringing high-yielding seeds.

The envoy called the M3 Industrial Estate an opportunity for investors to play their role in the overall development of Faisalabad and gave assurances to businessmen that she would persuade the Americans to invest in the estate. She also agreed to cooperate in human resources development in Pakistan.

FCCI President Syed Zia Alumdar Hussain said textile was the real economic strength of Faisalabad, but the city witnessed phenomenal diversification with the addition of many new sectors.

Crescent and Nishat groups are leading yarn manufacturers in the city, which also has a state-of-the-art edible oil manufacturing unit named Rafhan Maize. Similarly, Iqbal Rice, which is a member of the FCCI, is consistently winning the best exporter award.

Hussain revealed that construction of a residential colony had been kicked off in the M3 Industrial Estate and an additional 3,300 acres of land were being acquired on the other side of the motorway for its expansion in future.

He pointed out that work on a car assembly plant of Hyundai was being completed while other industrial units were at different stages of completion.

"Pakistan is an agrarian economy and its 70% population is directly or indirectly linked with it. Hence, we need high-yielding American seeds to enhance our per-acre yield, which is necessary to eliminate rural poverty," he said.

The FCCI chief stressed that America should invest in Pakistan and particularly mentioned the setting up of an oil refinery in Gwadar or Karachi, which would not only trim the overall import bill of Pakistan, but would also encourage ancillary industries.

He highlighted the manufacturing of solar panels as another area where American investment was required.

POPPY CROP DESTROYED IN PARTS OF PUNJAB

A Correspondent April 11, 2019

BAHAWALPUR: A police party claimed to have destroyed poppy crop around the area of the government rest house of the National Park Lal Sohanra, about 35 kilometres from here, on Wednesday.

On information about opium cultivation in park's rest house at 60-RD of Desert Branch canal, Abbasnagar SHO Aslam Baloch led a police team to the field and destroyed the plants around the rest house.

The SHO told Dawn over mobile phone that he brought the information to the notice of DPO Amir Taimur Buzdar who ordered that the crop be damaged for being illegal. He said he had asked the forest department's gardener posted there about the cultivation of the opium plants and he (the gardener) claimed that these were self-grown plants. He said action would be taken against the opium flowers cultivators.

National Park administrator Javed Gill, who is also conservator of forests, Bahawalpur Division, and Lal Sohanra Park DFO Ijaz Ahmed Tabbasum could not be contacted.

Our Sheikhupura correspondent adds: Poppy was destroyed at Rashter Khara village in Nankana Sahib as well. A police team demolished the crop and arrested cultivator Sedi Muhammad.

The crop is usually cultivated in Afghanistan and some parts of KP.

DAIRY FARMERS INCREASE MILK PRICE BY RS23 A LITRE

Dawn Report Updated April 11, 2019

KARACHI: The Karachi Dairy Farmers Association on Wednesday unilaterally increased the milk price by Rs23 a litre; now the commodity would be available at Rs120 per litre at retail outlets, triggering a wave of anger among the consumers already burdened by growing inflation.

The association said that the government had refused to increase the price despite repeated requests, which “forced” the farmers to take the decision on their own.

“We met government officials and put our case before them, but they did not pay any heed to it,” said Shakir Gujjar of the association. “The prices of fodder have increased manifold coupled with higher fuel prices, which increase the transport cost.”

The government moved in to check the price, but only after the increase in the prices was announced by the farmers. The city administration claimed to have launched a crackdown on milk retailers selling the daily use commodity at an excessive rate.

Official sources said that the price of milk was notified at Rs94 per litre by the city administration, while a large number of milk sellers sold it at prices ranging from Rs100 to Rs180.

They said that most of the milk shops had unilaterally fixed the price at Rs100 per litre, which was illegal. The officials said that the city administration teams raided several milk shops and imposed fines on shop owners for selling milk at a price higher than the notified rate.

Officials said that the deputy commissioners had been told to take strict action against those selling milk at an excessive price. They said that the city administration officers raided several shops in district East and imposed a total fine of Rs103,000 on shopkeepers for selling milk at higher prices. The officials said that one of the shopkeepers was arrested for overcharging.

The provincial government also asked the city administration to take stern action against those who had arbitrarily increased prices of milk by around 30 per cent by violating the law.

Sindh Minister for Agriculture, Supply and Prices Ismail Rahu asked the city commissioner and deputy commissioners of the six districts of the provincial capital to launch a crackdown on dairy farmers and milk sellers who were involved in fleecing the people when the month of Ramazan was approaching.

AGRI-NOMICS NEEDS STAKEHOLDERS NOT CONSUMERS

BR Research April 11, 2019

Official estimates put the contribution of agriculture sector at no more than one-fifth of Pakistan’s GDP. Yet, commentators have often noted that the sector’s primacy to Pakistan’s economy is grossly understated, attributed to a lack of appreciation for its strong backward linkages with industrial and services sector.

Take for example Dr. Hafiz Pasha’s latest volume on Agenda for Reforms, which notes that 59 percent of the value-added in the manufacturing sector is by agro-based industries. Further illustrating the sectoral linkages with the tertiary sector, it puts share of agri-based in wholesale and retail trade segment at 53 percent; transport and communications at 48 percent; with lowest for banking and insurance, at 15 percent.

It is no wonder then that SBP's latest State of the Economy report notes on at least different occasions that a slowdown in the commodity producing sector in the ongoing fiscal year may strongly moderate the performance of wholesale segment, the largest sector of economy at 60 percent share in GDP.

While the still semi-fresh government in Islamabad has spoken of "Agricultural Emergency" – much like many such initiatives by other regimes in the past – its finance czar had precious little to share in terms of details in an interaction with journalists last week. It is unfortunate because much was made of the ruling parties' business acumen prior to election, yet its top farm-man seems to have been kept distracted by political bickering in Punjab.

Yet, at a time of macroeconomic stabilization when the folks at Q block are fixated on shrinking fiscal footprint, it will be foolish to expect the government to make farming sector a priority. For one, the ruling party's appeal and staunch support base is strongly concentrated in the urban demographic. Second and more importantly, the agricultural segment has for too long been (wrongly) vilified for its feudal dominance to qualify for public sympathy in times of austerity.

Therefore, if the agricultural segment, which at 2.3 percent is witnessing its slowest growth in decades since independence, is to show any signs of recovery, it must come on the back of support from manufacturing sector.

While it is true that the farming economy is more closely integrated with the service sector through wholesale markets, the latter have largely remained unorganized as faceless middlemen. After all, there are no 'arthi associations' to negotiate with on the price and terms of credit received by small farmers.

In contrast, from potato chips to beverages, Pakistan's manufacturing base is just as much, and if one goes by Dr. Pasha's estimates, the largest beneficiary of farming output. Yet, it remains removed and insulated from the agricultural value chain, the exception of dairy companies notwithstanding.

The sector faces long term challenges such as poor efficiencies, low water availability, restricted access to credit, small average land size and declining cultivable land availability among myriad of others, which the poorly educated rural demographic under funded in research, is weakly equipped to address on its own.

The segment requires large scale sustained interventions by the private sector along the lines of contract farming undertaken by Pepsico, which guarantees provisions of subsidized inputs and production services; access to credit; technology and skill transfer; and most of all, guaranteed purchase of final produce at predetermined prices.

If agriculture is to sustain as economic backbone, large scale private sector will have to step up. Pakistan's farming economy needs stakeholders not buyers.

KPK GROWERS DEMAND WITHDRAWAL OF TAX ON TOBACCO

RECORDER REPORT | APR 11TH, 2019 | ISLAMABAD

The tobacco growers of Khyber Pakhtunkhwa and their labour unions on Wednesday urged the federal government to withdraw the recently imposed levy of Rs 300 on per kilogram of un-manufactured tobacco products as this will harm the sector that is contributing over Rs 100 billion annually to the national exchequer.

Addressing a press conference here, the growers and their unions' representatives also accused multinational companies Philip Morris (Pakistan) and Pakistan Tobacco Company (PTC) of economic exploitation and called the government for action against them.

Chairman Ittehad Workers Union Ammadul Hassan of Philip Morris (Pakistan) Limited and General Secretary Sarhad Agricultural Rural Development Organisation Hussain Ahmed demanded the government to hold all the leading international tobacco multinational companies accountable for making economic exploitation of workers in Pakistan.

Terming the imposition of Rs 300 per kg new tax on the tobacco as a conspiracy, they said the new taxation measures will crush the sector in the province, besides rending thousands of people jobless.

KPK Labour Federation President Ibrarullah said that 210 permanent employees suspended from Philip Morris Pakistan Limited should be restored.

Provincial President of Sarhad Agricultural Rural Development Organisation Haji Abdul Nabi said the employees are being deprived of health facilities. Similarly, benefits in connection of Workers Welfare Board have been seized by leaving 6,300 technical workers jobless.

He also termed Rs 300 per kg tax on tobacco as planned move of multinational companies in connivance with bureaucracy to put loss to national economy and leaving thousands of workers jobless.

The tobacco is major cash-crop for thousands of growers in KPK and the growers of the province contribute Rs 100 billion annually to national exchequer, but the government's policies are damaging the sector.

AGRICULTURE DEPARTMENT TO SET UP 309 FAIR PRICE SHOPS IN PUNJAB

RECORDER REPORT | APR 11TH, 2019 | LAHORE

The Punjab Agriculture Department is going to set up 309 fair price shops throughout the province during Ramadan to facilitate masses. The department will put 17 different daily use items on sale on these fair price shops on subsidized rates for which the cabinet committee has approved a sum of Rs320 million. These daily use items include potatoes; tomatoes, okra, bitter gourd, bottle gourd, apple, banana, lentils, daal mash, basin, white grams and rice will be available on whole sale and subsidized rates. Special Secretary Agriculture Ihsan Bhutta while chairing a meeting in this connection on Wednesday said it is estimated that 8.6 million people will get benefit of the subsidy during the sacred month.

NEED FOR INCREASING EXPORT OF AGRICULTURE PRODUCTS TO RUSSIA STRESSED

N H ZUBERI | APR 11TH, 2019 | KARACHI

Secretary General (Federal) of the Businessmen Panel (BMP) and former Chairman Standing Committee of the FPCCI, Ahmad Jawad has said that increasing exports of agriculture products to Russia is also imperative for us after they slapped ban on food imports from US and Europe. Russia extended ban on the import of agricultural products from the countries that applied economic sanctions against Russia, including the United States and Europe.

He said there is a vacuum that needs to be filled. “As Pakistani citrus fruits have already received good response in Russian market, efforts can be made to promote awareness about other food products,” he said. The exposure of the products can be maximised by taking part in Russian international trade shows, which can further build ways for business connectivity.

Russia experiences trade deficit with Pakistan. Trade deficit was at its maximum in 2015 when Pakistan imported commodities worth $96 million from Russia and exported goods of $298 million during the same year. After 2015, trade deficit considerably reduced and fell to $19 million in 2017, and according to the Federal Customs Service of Russia, the improvement was observed in 2017 and 2018.

A preferential trade agreement between Pakistan and Eurasian Economic Union is already in discussion, which could boost the trade relations between Pakistan and Russia and also pave way for Pakistan to enter other markets including Kazakhstan and Belarus. Similarly seafood, textile and surgical instruments are potential sectors in Russia where export considerably can be enhanced but the sectors need hierarchical changes and developments.

“Marketing strategies in the trade shows need to be re-drafted according to the tastes and trends of the target audience,” he said. Similarly the coal import from Russia has increased and Citrus fruits from Pakistan are finding their way in Russian market, the trade volume between the two countries is expected to increase further in the coming years.

Jawad said e-commerce and international advertising agencies can be used to enhance presence of Pakistani products in Russian market with 105 million users. “In order to increase the competitiveness of Pakistani products, efforts can be made to reduce the heavy freight charges,” he added. He said with Russia’s growing interests in different sectors of Pakistan’s economy and tapping into the potential areas where it can either invest or capture the market for Russian goods, it seems that after Chinese adventurism of CPEC, Russia Pakistan Economic Corridor (RPEC) is also in the making.

The thought of it may be ahead of time, but if Pakistan plays balanced chess moves on the board of international and regional politics in particular, it can become hotbed of intersecting world economies. He said Pakistan is at the crossroads of economic giants. With the increasingly improving security situation, the booming economies are looking up to Pakistan for their economic interests. Pakistan can cash in its geo-economic and geostrategic location, but by playing cautiously.

For Russia to expedite the RPEC, Jawad viewed they have to show their cards to Islamabad how much they invest here for further uplift our economic boom and mutually including some transfer of technology in certain defence equipments. Though Russian company Gazprom is set to lay down a

$10 billion undersea gas pipeline not specifically for Pakistan but for the region that initially will be laid down from the Persian Gulf up to India touching Pakistani waters and Bangladesh's coastal areas.

"So the impression that building a $10 billion undersea gas pipeline is investment for Pakistan is wrong, as it is for other regional countries as well," Pakistan and India have already signed MoUs and agreements with Russia separately for the project under which both countries would get gas from the undersea pipeline through the spur pipelines. However, the three countries, Pakistan, India and Bangladesh, will benefit from the $10 billion Russian investment as buyer countries.

"Since the undersea pipeline will provide gas up to 1bcfd, so it is investment for Pakistan too to some extent." And Pakistan shall get transit fee in dollar terms for the undersea pipeline that is to pass through Pakistan's sea territory which is not a surprising thing.

https://fp.brecorder.com/2019/04/20190411463057/

'INCREASE OF RS 5 PER 20KG FLOUR BAG INEVITABLE'

RECORDER REPORT | APR 11TH, 2019 | LAHORE

Pakistan Flour Mills Association (Punjab) Chairman Habib-ur-Rehman Leghari has said that an increase of Rs5 per 20 kilograms flour bag is inevitable because of increase in petroleum products prices and other expenses of the flour-milling industry. He also urged the provincial government to immediately announce price on which wheat will be released to the flour mills so that the millers could calculate their expenses in line with the wheat prices.

Leghari was addressing the executive body meeting of the Association here on Wednesday. Group Leader Asim Raza Ahmad, Mian Riaz, Liaquat Ali Khan and Chaudhry Iftikhar Mattoo also spoke on this occasion and tried to justify the increase in flour bag price.

Leghari said the wheat procurement is about to begin in the province but the government has yet not announced issue price. He also called for announcing a policy for private persons who intend to buy wheat besides price to be paid to the growers and prices which flour millers have to pay to the government to buy grains from its godowns.

Group leader Asim Raza Ahmad on this occasion urged the executive body members to hold meetings with flour millers of their respective region and personally monitor wheat procurement process to ensure transparency. He urged them to discourage any corruption or injustice with the growers and update PFMA leadership on any such wrong-doing.

He said procurement this year will be done during Ramadan so if grinding charges are paid to millers, they can help the government to prepare flour bags for Ramadan bazaars. Others also urged the government to immediately ensure payment of refund claims of the growers stuck for the last many years so mills can also participate in procurement drive and help stabilize the rates in favour of growers.

OFFICIAL ARRESTED AFTER 13,000 WHEAT BAGS FOUND MISSING

The Newspaper's Staff Correspondent April 10, 2019

QUETTA: The Anti-Corruption Establishment Balochistan (ACEB) on Tuesday arrested an official of the Food Department after thousands of wheat bags were found missing from the official stock in Khuzdar.

The investigation officer of the Kalat zone, Qazi Sufyan Sanijrani, on the directive of ACEB Director Muzaffar Zeeshan Lehri initiated investigation into the disappearance of thousands of wheat bags from the godowns of the Food Department.

The initial investigation revealed that around 13,000 bags of wheat procured in 2014 were found missing. No record of the missing wheat bags was available. Around 5,500 bags of wheat were found damaged allegedly due to negligence of officials, causing a loss of about Rs70 million to exchequer.

A ACEB team led by Deputy Director Investigation Atta Munim and comprising Qazi Sufyan Sanijrani and other officers raided the godowns and arrested Assistant Food Controller Khuzdar Nazeer Ahmed.

LESSONS FROM ECONOMIC HISTORY: POLICY DRIVERS OF FOOD INFLATION

DR SAJJAD AKHTAR | APR 10TH, 2019 | ARTICLE

Overall inflation, compared to similar previous months of FY18, has been inching up from 5.1 percent in September 2018 to 9.4% in March 2019. For the ninth month period of FY19, the average inflation stands at 6.8 percent, compared to 3.8 percent in FY18.A more dramatic increase was in year-to-year increase in Food CPI which increased from 0.1 percent in March 2018 during FY18 to 8.4 percent in March 2019 during FY19. Given that food (perishable and non-perishable) still occupies 40-50 weightage in the CPI basket for low income families, from a macro policy point of view it is imperative to identify its other remaining drivers in order to possibly dilute the 'devaluation' effect and weaken its transmission to the rest of the economy. A similar situation occurred twice during 1992-2006 in the country. During 92-94 it went up from10 to 16 percent and from 2 percent to 10 percent during 2003-2005.The second spike in food inflation was due to rise in international food and energy prices. Currently, it is the pass through effect of past eight months' of devaluation and pressure on energy prices. From a policy point of view the main question of interest for managing food inflation in the short-run (i.e., 1-2 years) is the identification of policy drivers and quantification of their impact on food inflation so that policy makers can tinker around to stabilise food prices. These drivers and their impact on food inflation during 1993-2006 are documented in evidence based study, "Macroeconomics of Food Inflation" Vol.1, No.1, June 2009, NUST Journal of Business and Economics, by the present writer. The findings of the study based on the period 1993-2006 and relevant for policy makers are as follows:-

a) A 10-percent increase in growth of real per capita income (PCY) pushed the food inflation by 0.3 percent. In lay man terms if growth in PCY jumps from 4 percent to 4.4 percent, the rate of food inflation will jump hypothetically from 5 percent to 5.15 percent. One can easily call it miniscule, benign and supportive to growth dynamics. Unfortunately, as per multilateral assessments this increase in growth of PCY is not expected in the next 1-2 years. However, if growth in informal economy (believed to be equal to formal economy) is many times higher, contribution to food inflation may be significant.

b) A 10-percent increase in the index of agriculture production lowered the food inflation rate by 5.3 percent. As it is a significant driver of food inflation, policymakers need to attend to drivers such as water availability and productivity of land and labour to reduce food inflation.

c) A 10-percent increase in the growth of agriculture support prices increased food inflation rate by 5.6 percent. It more than whipped out the dis-inflationary gains of increased agriculture production. With rise of agriculture input prices blamed on devaluation, the approaching budget is likely to witness activation of agriculture lobbies in the parliament to raise support prices for wheat, basmati rice, irri and sugarcane. Unfortunately, in order to maintain its popularity, it is far easier for the government to accede to this policy measure than to increase agriculture production through structural reforms. Strong and unambiguous evidence that increased support prices lead to ‘sustainable’ increase in agriculture productivity is missing. The method of determining yearly revision of support prices need to be more scientifically based and forward looking in a longer term perspective rather than knee-jerk reaction to political lobby pressures.

d) A 10 percent increase in the growth rate of one period lagged money supply M2 increased the food inflation rate by 14.8 percent during the period. Growth in M2 is the outcome of many inter-related monetary and fiscal variables, including monetary accommodation of fiscal expansion, private credit and its end use, net foreign assets and budgetary support for commodity operations. Thus one needs to identify and assess the specific instruments of expansionary monetary policy that have the greatest impact on controlling food inflation.

e) If food inflation is the result of shortages, policymakers resort to their liberal imports. Conversely, if there is exportable surplus of food items and adverse BOT, countries also encourage exports. This also impacts the food inflation in the short-run. The model included imports index (in quantity terms) composed of edible oil, milk, pulses, spices, sugar, tea and wheat. Export index (in quantity terms) consisted of rice, fish, fruits and vegetables. In the current scenario we have exportable surplus of sugar and wheat, while fruits follow a two-way trend. Consequently, the following impacts need to be judged carefully. In the original estimation, 10 percent increase in the growth of import quantity index lowers the food inflation by 0.7 percent, while a 10 percent increase in the growth of export quantity index leads to a 0.6 percent increase in food inflation. This offsetting impact points to the ‘soft’ intervention of liberal food trade policies in these items for influencing short-term food inflation.

f) As a major export item, rice follows the law of ‘one price’. The price of broken has risen by Rs 15-20 per kg since July 2018 an increase of 21 percent, accommodating the impact of devaluation. With China agreeing to buy US $ 1 billion of rice and sugar (both in surplus at the moment), a back of the envelope calculation based on model’s estimate was conducted assuming that a) the amount would be equally divided between rice and sugar exports; b) rice exports will be of non-basmati variety; and c) rice exports to China will be in addition to the baseline rice exports of FY19. The reduced form model suggests that increased rice exports (56 percent over FY19 quantities) will add 4.3 percent to food inflation rate in the next one or two years.

Lastly, the policymakers should be aware that short-run dynamics of food inflation are far more complex. The above impacts are attributed to popular monetary and fiscal policy interventions and do not include other observable and non-observable drivers such as erratic weather conditions, including pest attacks, inaccurate crop forecasting, leakages in cross-border trade, differentials in cross-border prices, lack of storage capacity and carry-over stocks that also play into short-run dynamics of food inflation.

(The writer is a former Acting Chief Statistician of Pakistan Bureau of Statistics)

DEADLINE FOR LABELLING HALAL FOOD EXTENDED TILL JULY 1

MUSHTAQ GHUMMAN | APR 10TH, 2019 | ISLAMABAD

The federal government has extended the deadline of Halal food labeling on edible products till July 1, 2019 with the approval of federal cabinet after importers made representation to the Prime Minister's Advisor on Commerce, Textile, Industries and Production and Investment.

In February 2019, the federal government made it mandatory to write 'Halal' on imported edible items with immediate effect. The ECC in its decision approved the addition of following conditions to the existing requirements in the Import Policy Order, for import of edible products: (i) products have at least (2/3rd of the remaining shelf life; (ii) the ingredients and details of the product (e.g. nutritional facts, usage instructions etc) of food products are required to be printed in Urdu and English language on the consumer packaging; (iii) the logo of the Halal certification body is printed on the consumer packaging; (iv) the labelling under conditions will not be in the form of sticker, overprinting, stamp or scratched labelling; (v) the shipment is accompanied by a "Halal certificate" issued by a Halal certification body, accredited with the Accrediting Body (AB), which is a member of International Halal Accreditation Forum (IHAF) Standard Methodology Institute for Islamic Countries (SMIIC); and (vi) in order to comply with WTO negotiation, similar conditions shall apply to edible products manufactured locally from July 1, 2019 for necessary instructions to be issued to PSQCA and provincial food regulatory authorities.

The embassies of different countries and private sector have approached the government, raising concerns on the decision taken in haste by the Economic Coordination Committee (ECC) of the Cabinet aimed at discouraging imports to contain or reduce import bill.

Pakistani importers also met with the Advisor to Prime Minister, Abdul Razak Dawood and raised concerns on the decision of the ECC which was ratified by the federal cabinet.

On March 9, 2019, Commerce Division, issued an new SRO 438(1)/2019- in exercise of the powers conferred by sub-section (1) section 3 of the imports and exports(control) Act, 1950 (XXXIX) of 1950, the federal government has directed that following amendments shall be made in the Import Policy Order, 2016 namely in the order, in appendix B, in table under part-1, in column (1) against serial No.13, in column(4),- (a) in clause (iii) for expression " 66%(2-3rd) of the shelf life remaining from the date of manufacturing," the expression "50% (fifty percent) of the shelf life, calculated from the date of filing of Import General Manifest (IGM)" shall be substituted and shall deemed to have always so substituted ; and (b) after the clauses (iii d) the following new clause shall be inserted and shall be deemed to have always inserted, namely :- (iii e) the provision of clauses (iii b), (iii c), and (iii d) shall take the effect from July 1, 2019.

'GOVERNMENT UNNECESSARILY DELAYING USE OF BIOTECH SEEDS'

RECORDER REPORT | APR 10TH, 2019 | ISLAMABAD

The government, apparently due to the pressuring tactics from local seed manufacturers, is unnecessarily delaying the use of the biotech seeds in Pakistan which can increase the crop productivity. Experts told Business Recorder here on Tuesday that the sustainable food production had an immense potential to deliver inclusive economic growth and to fight the challenge of food insecurity in future.

According to scientists working on modern agricultural technologies, it is now time that Pakistan also adopts modern agricultural technologies to increase its production not only to meet food challenges of the future but also to increase the productivity of crops and make them competitive globally.

Currently, the government is again unnecessarily delaying its nod on biotech seeds due to pressure tactics from local seed manufacturers. Scientists are of the view that decision-makers should consider the opinion of scientists when it comes to technology rather than creating useless debate around an urgent issue.

"If we take example of biotech corn seed, the government is sceptical in making decision even though all regulatory requirements laid out in seed law and rules are comprehensively complied while they have given multiple approvals of cotton biotech seed. Local manufacturers are deliberately making it an issue because of their commercial interests," they said.

The experts believed that the technological advancement in the agriculture sector would help Pakistan grow its agro economy which would directly have a positive impact on masses and the country would be able to start exporting corn at a better level.

According to an international donor agency, the agriculture industry has been valued at an estimated US $3.2 trillion worldwide and accounts for a large share of the GDP and employment in developing and underdeveloped nation. Current agricultural practices alone cannot sustain the world population and eradicate malnutrition and hunger on a global scale in the future. Indeed, the FAO also estimates that despite a significant reduction in global hunger, 653 million people will still be undernourished in 2030.

Poultry industry has emerged as the largest consumer of grain, consuming 70 percent of the total production. Demand and supply gap is about to be further widened as poultry industry continues to record eight to 10 percent annual growth and only latest technologies in agriculture, especially in the corn cultivation, can help achieve required production.

According to scientists, biotech corn will have an insect-resistant feature along with herbicide tolerance, which will enable farmers to enhance productivity, reduce input and labour cost, and improve grain quality. The experts hope that GMO corn seed does not become another example like BT cotton wherein indecisiveness of the government has reduced the productivity of cotton in the country whereas all other countries who adopted the BT cotton technology have increased their cotton productions which is contributing to their economies.

PAK-CHINA FOA ON AGRICULTURE TO BE FINALISED DURING PM'S VISIT: ENVOY

KHALID ABBAS SAIF | APR 10TH, 2019 | FAISALABAD

Chinese Ambassador to Pakistan Yao Jing has said that framework of agreement (FoA) on agriculture will be finalised during the coming visit of Prime Minister of Pakistan to China.

He said this during his visit to University of Agriculture where he performed groundbreaking ceremony of Modern Confucius Institute and spoke at ongoing Entomological congress.

Yao Jing said that working groups for framework of agreement had also been constituted. Still, we have a lot of space to expand our agricultural ties, he said.

"Pakistan-China academia- research cooperation especially in the field of agriculture will be further strengthened for development and prosperity," he said, adding that agriculture is foundation of the nation's economy. He noted that 40 years ago, when China began introducing reforms, they started with agriculture and now they are feeding the largest population of 1.4 billion people. He said Pakistan is also providing food to 200 million people due to agricultural intervention.

Chinese ambassador said Agriculture Display Centre may be set up at the University for technological transfer and welfare of rural population. He said they would increase scholarship cooperation and students exchange for the university. He lauded the measures being taken by university for the development and prosperity of the country.

On the occasion, Memorandum of Understandings of University of Agriculture, Faisalabad with Institute of Plant Protection And Soil Science, Hubei Academy of Agricultural Sciences, China and another MoU with Zhejiang University were signed to collaborate in the area of academia and research.

UAF vice chancellor Dr Zafar Iqbal Randhawa said the university had been enjoying excellent ties with China and had inked more than 30 MoUs with Chinese universities and agriculture institutes. He said that further strengthening in ties would help us to fight common challenges in the agriculture sector. He suggested that China could establish Vocational and Skill Development Institute at the UAF that would help get polished technicians and laboratory staff. He said China is Pakistan's all-weather friend and both countries people consider each other as their brothers.

On the occasion, MNA and Parliamentary Secretary for Railways Farrukh Habib said that Pakistan and China have been enjoying the relation deeper than occasion and sweeter than honey. He said that China-Pakistan Economic Corridor (CPEC) and One Belt One Road were hallmarks steps that would bring about revolution in the region. He said present government of Pakistan had been putting special attention on agriculture sector. He said strengthened agriculture ties between both countries would help out to increase the poverty and fight the challenges.

UAF Dean Faculty of Agriculture Dr Muhammad Aslam said that Pakistan was exporting agricultural produces worth billions of rupees. We have to work on techniques to increase productivity and pest management techniques.

Confucius Institute vice chairman Dr Ashfaq Chattha said that university had produced hundreds of students in Chinese language under CI. He also called for joint collaborated efforts to uplift agriculture sector.

Chinese Consul General (CCG) in Lahore Long Dingbin, chairman Entomology Dr Mansoor-ul-Hassan Sahi, Dr Waseem Akram, Dr Abid Ali, Dr Waqas Wakeel and other notables also spoke.

SINDH, PUNJAB YET TO SUBMIT WHEAT PROCUREMENT TARGETS

Amin Ahmed Updated April 09, 2019

ISLAMABAD: The Economic Coordination Committee (ECC) of the Cabinet on Monday directed the Ministry of National Food Security to take practical measures to arrest the current spike in food inflation.

With a view to fixing the wheat procurement targets and financial requirements to this effect, the food ministry had convened a meeting of the Wheat Review Committee in February, which was attended by officials from all provincial governments, and set a procurement target of 6.90 million tonnes.

The ECC, which met under the chairmanship of Finance Minister Asad Umar, decided that the provincial governments would get an endorsement of the agreed target of procurement of wheat. Sources said that the governments of Punjab and Sindh have so far not provided their endorsement.

Sindh and Punjab governments have failed to inform the federal government about their respective wheat procurement targets for 2018-19 crop season and the financial requirements for procurement, informed sources told Dawn on Monday.

The Khyber-Pakhtunkhwa government has informed the ministry that it will utilise its own resources to procure 0.3m metric tonnes of wheat this year.

On the other hand, the Pakistan Agricultural Storage and Services Corporation (Passco) has requested for approval to procure 1.1m metric tonnes with the financial limit of Rs41.519 billion, while the actual cost of wheat to be procured by Passco will be Rs35.750bn.

For the past three years, the public sectors have procured wheat on an average of 6.104m tonnes against an assigned average target of 6.733m tonnes per annum. During the previous wheat season, 5.989m tonnes of wheat was procured by the public sector against the procurement target of 6.1m tonnes. Low wheat procurement was due to leftover stock from the previous year and slow pace of exports despite the provision of freight support.

According to details, the current public sector wheat stocks as of March were at the level of 4.4725m tonnes as compared to 7.287m tonnes of the corresponding period last year. Passco maintains strategic reserves of 1m tonnes.

With a view to maintain strategic reserves, ensure food security and a fair return to the farming community, the provincial food departments and the Passco procures wheat every year at a minimum guaranteed price from the farmers. The existing support price fixed during the previous governments is Rs1,300 per 40kg.

Public sector wheat stocks serve the purpose of maintaining steady reserves and price stability, during the periods of lean supplies as well as fulfilling the food requirements of deficient provinces.

ECC asked the Ministry of Industries and Production and the Privatisation Commission to submit recommendations of the revival committee on Pakistan Steel Mills in the form of a summary for the final decision on the fate of PSM. Instead of privatising the PSM, the government is now moving towards its restructuring and may look for strategic partners in the private sector, according to official sources.

The ECC approved the proposal of Communication Division to provide Technical Supplementary Grant amounting to Rs500m for the construction of additional carriageway on Torkham-Jalalabad Road under Prime Minister's Programme for Reconstruction of Afghanistan.

The ECC decision would benefit the people and business community of the two neighbouring countries and promote trade between Pakistan and Afghanistan as well as the Central Asian States.

ECC expressed its deep concern over the increase in prices of medicines and directed the Ministry of National Health Services, Regulations and Coordination to take practical measures to arrest the current trend of rising prices.

WHEAT PROCUREMENT DRIVE BEGINS IN LAHORE

RECORDER REPORT | APR 9TH, 2019 | LAHORE

The District Administration Lahore on Monday kicked off wheat procurement drive in the provincial capital by receiving applications from farmers for gunny bags.

To collection application and procurement of wheat from growers, the administration has set up four Wheat Procurement Centers at Barki, Rakh Chabeal, Raiwind and Khana Kacha Mandi. Deputy Commissioner Lahore Saleha Saeed inaugurated the Kacha Mandi Wheat Procurement Center. On the occasion, she inspected the facilities, including sitting arrangements, provision of clean drinking water and establishment of information deck. She also observed the application process. She said that the administration has made all possible arrangements in the centers in order to provide maximum relief to the farmers.

Meanwhile, the DC chaired a meeting to review preparations for Ramzan Bazaars, which will be set up during the holy month of Ramzan in the various parts of the city that will be announced soon. The meeting was attended by Additional Deputy Commissioner General, Assistant Commissioners, and officers from LWMC, WASA, MCL, labor, livestock, agriculture, and market committees.

"LWMC is directed for cleanliness in bazaars while civil defense is directed for deputing at least 10 civil defense volunteers in each bazaar.

IMRAN'S GOVT CONCERNED OVER DELAY IN MAKING HALAL AUTHORITY FUNCTIONAL

By Zafar Bhutta Published: April 9, 2019

ISLAMABAD: The Pakistan Tehreek-e-Insaf (PTI) government has expressed concern over an inordinate delay as the Pakistan Halal Authority (PHA) is not yet fully functional and has decided to frame a viable plan to expand the country's footprint in the $4-trillion international halal market.

As part of the plan, the government is considering placing the PHA under administrative control of the Commerce Division instead of the Ministry of Science and Technology.

The Economic Coordination Committee of the cabinet, in its meeting held on March 20, directed Adviser to Prime Minister on Institutional Reforms and Austerity Ishrat Husain to undertake a detailed review of the current role of PHA in relation to international halal organisations and come up with a viable plan to place the authority under administrative control of the Commerce Division.

During discussions in the meeting, the economic managers noted that the PHA was still not fully functional, which prevented Pakistan from capitalising on the huge potential of international halal market.

It was pointed out that at present, the size of international market was in the range of $3 to $4 trillion, but Pakistan's share in it was quite negligible.

The PHA was established through an act of parliament in an attempt to promote foreign and inter-provincial trade and commerce in halal goods and processes. The authority is currently working under the administrative control of the Ministry of Science and Technology.

Since its inception, the authority has carried out some functions. The prime minister has approved the composition of its board of governors. Its executive committee has been constituted to carry out day-to-day functions of the authority.

PHA's recruitment regulations have been approved by the Establishment Division. The prime minister has directed that the regulations may be sent to the cabinet committee for disposal of the legislative cases.

The Establishment Division has been requested to nominate a panel of three officers of BS grade-21 for posting as the PHA director general on deputation. The Finance Division has approved an annual budget of Rs35 million for the PHA for fiscal year 2018-19.

Permission for a new office building of the PHA has been obtained from the Ministry of Housing and Works. At present, the authority is housed at the Ministry of Science and Technology. Besides these moves, the organisations concerned of the Ministry of Science have undertaken some activities to strengthen the halal food system in the country.

The Pakistan National Accreditation Council has so far accredited five halal certification bodies. Pakistan Council of Scientific and Industrial Research has also established halal authentication laboratories in Karachi, Lahore and Peshawar for the testing of different products. These laboratories will also contribute to the export of quality halal goods.

WHEAT PROCUREMENT POLICY: MILLERS FOR ‘CLEAR ROLE’ OF PRIVATE SECTOR

The Newspaper’s Staff Reporter April 08, 2019

LAHORE: Flour millers complain that by not mentioning a “clear role” for private players in the wheat procurement policy for this season the government has created problems for them and fear that it may affect the procurement drive that will start in the last week of April.

They also object to the procurement plans of federally-administered the Pakistan Agricultural Storage & Services Corporation Ltd (PASSCO) for the 2019 season.

The [Punjab] government has yet to announce a clear role for the private buyers, which may affect the wheat procurement campaign for the 2019 season, Punjab chapter of the Pakistan Flour Mills Association (PFMA) chairman Habibur Rehman Leghari, Asim Raza, Liaquat Ali Khan, Iftikhar Mattoo and others said in a statement here on Sunday.

They lamented that the government also failed to announce the wheat issue price, while private buyers would be facing problems because of higher bank loan mark-up.

They said the Punjab food department and PASSCO would purchase the grains at higher rates and then subsidise the sale of the commodity, but the private sector could not do so, urging the federal government to give a unified procurement policy for the whole country.

The millers said the food department was holding 1.7 million tonnes of wheat as carryover stock, while it would procure around 3.5m tonnes more of the commodity during the current season, whereas PASSCO had 1.3m tonnes as carryover stock and planned to purchase 1.2m tonnes more “without any logic”.

They also urged the government to release their refunds that had been overdue for years on account of wheat and flour export, so that the millers could join the wheat procurement drive and the local flour industry could flourish.

Meanwhile, the PFMA executive body will meet here on Monday (today) to discuss the wheat procurement issues.

GWADAR FISHERMEN

From the Newspaper April 08, 2019

GWADAR fishermen fear losing their livelihood because of the six-lane Bay Expressway about to be built. This expressway starts from Gwadar and goes all the way to the Makran coastal highway. This restrains fishermen's access to sea.

Secondly, the people of Gwadar lack clean drinking water, education, health and infrastructure.

The recent visit of Prime Minister Imran Khan brought some hope to the people. Mr Khan pledged to address the issues pertaining to fishermen by constructing some bridges which people have demanded previously.

I hope people's demands will be considered and their issues resolved.

100 INDIAN FISHERMEN RELEASED, MORE TO FOLLOW

PPI Updated April 08, 2019

KARACHI: Pakistan released the first batch of 100 Indian fishermen as part of a goodwill gesture on Sunday.

The fishermen were released from a Karachi prison and they left for their home by train.

The Edhi Foundation made arrangements for their travelling from Karachi Cantonment Station and onwards to Wagah border.

The fishermen were brought to the station in police buses and Edhi ambulances amid tight security.

The Edhi Foundation gave a gift and money to each Indian fisherman to help them meet their travelling expenses to reach their homes from Wagah border.

The fishermen smiled and waved to the people at the railway station as their train left the platform.

An official of the Sindh home department said that during this month, Pakistan would release 260 more Indian fishermen.

He said these fishermen had been released after completion of legal formalities in compliance with their repatriation order issued by the the interior ministry.

Earlier, Foreign Office spokesperson Dr Mohammad Faisal said at a weekly press briefing that Pakistan would release 360 Indian prisoners, 355 fishermen and five civilians, during the month of April.

The prisoners will be released in four batches, scheduled as 100 each on April 8, April 15 and April 29 while 60 prisoners, including five civilians, will be freed on April 29.

WHEAT PURCHASE UNDER QUESTION WHILE SCAMS CONTINUE

Mohammad Hussain Khan Updated April 08, 2019

THE procurement of wheat has always been a hassle for farmers in Sindh. Successive governments have been unable to establish a system where public money, in the shape of the support price, reaches small and medium farmers so that they are not exploited by market forces.

While the Kharif season began from April 1, the government remains indecisive about wheat procurement; largely due to huge carry-over stocks from last year’s crop.

As of March 26 such stocks, according to Sindh food department officials, stood at 870,000 tonnes. This year there seems to be another bumper crop owing to good weather conditions. The official wheat price remains unchanged at Rs1,300 per 40kg.

The Sindh government procures a specific quantum of the crop at the support price. Growers, by and large, sell their grain in the open market or to middlemen to save time and get cash payments that they then use for cultivation of Kharif crops.

Ground realities indicate that the support price doesn’t reach farmers. It is pocketed instead by middlemen in collusion with officials from the food department. In addition, parliamentarians, ministers, top government functionaries and representatives of influential growers’ bodies get gunny bags, free of cost, that are meant for poor farmers.

Ground realities indicate that the support price doesn’t reach farmers. In addition, vested interests get, free of cost, gunny bags that are meant for poor farmers

Gunny bags are of particular importance as it is only after farmers get them that they are able to take their crop to the food department for sale.

Many cabinet members believe that the crop should not be procured this season in view of the carry-over stocks.

A possible reason why the Sindh food department hasn’t floated tenders for this season’s gunny bag purchase may be because it is believed to have moved a summary to the chief minister. It has requested approval for the procurement of 500,000 tonnes of wheat which is to be discussed in the forthcoming cabinet meeting.

Currently, there is no ban on the inter-provincial movement of wheat whilst exports of wheat remain open. There are reports that the Pakistan Agriculture Storage and Supplies Corporation also intends to procure 1.1m tonnes of the current crop.

But amidst reports that the Punjab government will procure 4m tonnes of wheat, anxiety among farmers is growing as the wheat crop in Sindh has been harvested and has reached the market. To quote a grower leader, Mahmood Nawaz Shah, wheat prices have declined to Rs850-900 per 40kg in the open market due to the missing crop procurement target.

Former Sindh agriculture secretary Agha Jan Akhtar contended that wheat in Shikarpur is being sold at Rs1,240 per 40kg which is an unacceptable price for farmers. Given the current rupee devaluation farmers will be at the losing end when selling their crop in the open market.

He also opposed the procurement, even 500,000 tonnes, of wheat considering the availability of stocks. He argued that since the government has statistics it must ensure equity in next season's procurement — after linking it with area under cultivation and production in each district — coupled with civil administration's oversight, to ensure transparency.

In February the Hyderabad accountability court sentenced flour mill owners for colluding with food officials in Mirpurkhas, in a wheat procurement case that had been ongoing

since 2011. The case has raised questions about over the entire procurement exercise as inquiries into past procurement practices continue.

Sindh Chamber of Agriculture Vice President Nabi Bux Sathio observed that hardly 5-10pc of farmers are actually able to get the benefit of the support price, otherwise it is mainly the traders who are provided gunny bags by those with vested interests.

"Food officials mint money by providing gunny bags to those who don't own farmland or grow wheat. In connivance with officials, these people manage the paperwork in such a way that they win the support price. Ultimately, the price is shared with and amongst food officials while the government looks the other way," alleged Mr Sathio.

He proposed the formation of committees led by deputy commissioners and having farmers as members to ensure transparency in the entire exercise.

Farmers with small landholdings usually borrow money from private lenders in the shape of farm inputs for cultivating crops. They settle their accounts by providing grain to the same lenders at a lower price.

So, growers are always hard-pressed to sell their crop at an inadequate price to settle accounts. The objective of the support price is to keep the price of wheat stable since the arrival of a new crop always suppresses price.

With the government's presence felt in the market through the announced support price, traders are pressurised to offer a reasonable, if not an ideal, rate to growers.

Growers would, however be at the mercy of market players if the support price mechanism is completely done away with. This, in turn, may enable hoarders to store crops bought at low rates to be resold at higher prices in case of a shortage in the market.

Estimates from the Sindh agriculture department show that the wheat sowing target could not be met this season. Against a target of 1.15 million hectares, 1.047m hectares (91 per cent of the target) were sown in FY19 whereas 94.7pc of the target had been met the previous year. The wheat sowing target remains unchanged since FY15.

The province produced 3.64m tonnes of the crop last season against a target of 4.2m tonnes. The food department had procured 1.4m tonnes of crop with carry-over stocks of 360,000 tonnes last season.

PAKISTANI RICE: SECOND TO ALL

Ahmad Fraz Khan Updated April 08, 2019

IN Pakistan's context, rice statistics are pretty impressive. Sown on 2.89 million hectares (about 10 per cent of total cropping area), it earned $2 billion (around 8pc of export income) for the country.

Put it in the agricultural context, it is second to wheat in acreage and, in economic terms, only second to cotton (and its allied products as per Pakistan Bureau of Statistics data) in export earnings. It accounts for 3.1pc of value-addition in the agriculture sector and varyingly contributes 1.3-1.6pc to the GDP.

Last year, it assumed added significance when production hit 7.4 million tonnes placing Pakistan on the list of the 10 largest producers on the world rice chart. According to the Economic Survey of Pakistan (2017-18), the area under rice increased by 6.4pc — 2.74 million hectares in 2016-17 to 2.89 million hectares and production swelled by 8.7 per cent — from 6.84 million tonnes to 7.44 million tonnes.

Both these factors helped Pakistan post a 28pc increase in rice export. According to data from the Rice Exporters Association of Pakistan (Reap), it sent out a little over four million tonnes (for $2 billion) in 2018, as compared to 3.44 million tonnes for $1.6 billion in 2017. This showed a significant growth of 27.7 per cent in terms of value and 17 per cent in terms of quantity.

As far as profiling of rice is concerned, its three board categories are: basmati (long grain and aromatic), coarse (IRRI type) and a generic term called "others." The last type comprises of hybrid, unapproved and some smuggled varieties that have crept in due to relaxed official control.

What adds to national seed confusion is the fact that the country has approved 108 varieties in the last 15 years — from 2003 to 2018. All of them are now entitled to sale. However, only 48 of them are actually released and found in the field, depending on requirements of different ecological zones. It is the Chinese hybrids which have made the difference in the last two years.

Punjab (with all kinds of basmati, super, IRRI and hybrids) leads the national production scale with a contribution of 53pc. Sindh (IRRI and hybrids) follows with 26pc, Balochistan (IRRI, hybrids) with 12pc and the remaining 9pc comes from the Khyber Pakhtunkhwa, which has many local coarse varieties for hills and plains. Punjab's contribution may increase as hybrid varieties are now getting more space while competing crops lose economic sheen.

However, this happy rice scenario has two sore points: it is still stuck in a low yield groove and failing in international retail markets. Despite a massive influx of seeds, Pakistan has not been able to break beyond 2.56 tonnes per hectares production. The world average is 4.7 tonnes per hectare production. With high yielding seeds and recommended practices, 4 tonnes per hectare is easily achievable.

The federal Ministry for Food Security and Research took an initiative in 2015 for improving yield and tradable surpluses and enlisted the Chinese for help. For the next two years, both sides made a beeline towards each others' fields and laboratories. It resulted in better hybrid seeds arriving in Pakistan and making a difference the very next year i.e. 2018.

Last year's three-pronged increase was the result of the same effort: the area increased by 6.4pc, production went up by 8.7pc and average yield jumped from 825 kilogram per acre in 2010-11 to over 1,000 kilograms.

Despite this, improvements on the supply side and corresponding initiatives on the marketing side — domestic and international — is still a distant dream. Exports are largely restricted to bulk dumping in Middle Eastern markets while brand development is encouraged for domestic markets. These brands can then go beyond national borders and claim a niche in the world market.

Agreeing to the argument that domestic brand development is necessary for claiming a share in international retail markets in the future, Shahzad Malik, one of the largest rice brand owners, is not much hopeful about the prospects. “The domestic market is overwhelmingly dominated by loose sales. There is hardly any quality consciousness for brands. Since brand development is an expensive exercise — entailing a huge and sustained media presence — traders avoid it because there is no premium on it. That is why one can count domestic rice brands on fingers.

One or two brands, which have emerged on the domestic scene in the last few years, are restricted to supplying to international chains like Metro or Hyperstar. Considering investment on brand development as expensive, they take the easy and short-term route of open sales to domestic markets, he said.

“Multiply the domestic expenses on brand development with the dollars exchange rate (140 at time of reporting) and one will know why no one has dared developing international brands,” said one member of Reap, who did not want to be named. Since no Pakistani brand has a direct share in the world retail market, almost all exports are dumped in Dubai for those who have the share and can buy it for repackaging and re-export. Translating this domestic success in foreign advantage needs policy space, planning, investment and sustained production, which is the missing link so far, he pointed out.

WEEKLY COTTON REVIEW: PRICES INCREASED DUE TO HIKE IN DOLLAR VALUE

NASEEM USMAN | APR 8TH, 2019 | KARACHI

The prices of cotton increased due to hike in the value of dollar. The concerned departments were active for the increase in the production of cotton. Proposals for new cotton policy are under process. The buying was low in the cloth market despite the arrival of the month of Ramadan. Several power looms were closed in Jhang Bazar due to the fraud of Rs 1.5 billion committed by cloth traders of Faisalabad.

In the local cotton market during the last week the increase in buying by textile and spinning mills the overall rate of cotton was increased. The trading volume increased. Over all the trading was done in low quality cotton due to which the prices of cotton increased by Rs 200 to 300 per maund while the prices of good quality cotton increased by Rs 100 to 200 per maund.

The prices of cotton in both Sindh and Punjab remained Rs 7200 to Rs 9000 per maund while the price of Seed cotton (Kapas/Phutti) which is available in small quantity is from Rs 3200 to Rs 3600 per 40Kgs in both Sindh and Punjab. The cotton seed was not available in Balochistan while all the seven ginning factories were closed.

The Karachi Cotton Association (KCA) increased the spot rate price by Rs 100 per maund and closed it at Rs 8700 per maund. Chairman Karachi Cotton Brokers Forum told that due to the increase in the value of the dollar the local textile mills gave priority to the local market for cotton buying. More over according to the report released by Pakistan Cotton Ginners Association (PCGA) the ginners had left the stock of only 800,000 bales out of which half of the cotton is of good quality.

According to the PCGA report the production of cotton was 10.77 million bales till April 1, 2019 registering a shortfall by 6.9 percent compared to corresponding period of last year.

Over all bullish trend was witnessed in international cotton market. According to the weekly USDA report the export of cotton was increased by 47 % due to which the prices of cotton increased in New York Cotton Market while in the Indian cotton market the prices of 356 kg Candi was increased by Rs 1500. The prices of cotton remained stable in Chinese market. The news of solution of US and China trade conflict are circulating if the conflict is solved then it is hoped that there will be positive impact of this news on the American as well as world economy. The demand as well as prices of cotton and textile products will also be increased if the trade conflict between US and China is solved.

Chairman Pakistan Cotton Ginners Association Mian Muhammad Mahmood told that a meeting was held in Islamabad on Wednesday which was attended by representatives of All Pakistan Textile Mills Association (APTMA). The proposals and strategy regarding new cotton policy were discussed and presented in the meeting. Mahmood told that incentives should be given to cotton farmers. The prices of cotton seed should be fixed at Rs 3600 per 40 Kg. It was also proposed that either import duty should be abolished permanently or should be imposed permanently. The complications occurred due to imposition and abolishing duty during the season.

The APTMA members also presented their proposals regarding new cotton policy. The proposals were sent to the Prime Minister Imran Khan for approval. Moreover, there is a crisis in the Faisalabad market which is the hub of Pakistani textile market. The traders of cloth market bought cloth of worth Rs 1.5 billion on borrowing after words they refused to give back the money. One of the cloth traders had bought the cloth of Rs 1 billion from borrowed money and refused to return the money. Similarly other traders had bought the cloth of Rs 20 to 30 crores from borrowed money and they also refused to pay back the money. Moreover, power loom owners were on strike for more than two weeks. They were demanding increase in the Over Head prices.

The prices and demand of local textile products are increasing before the start of Ramadan but the industrialists were of the view that there was a slowdown in the market as compared to the previous years before the starting of Ramadan due to increase in the dearness. The finance minister Asad Umar and Governor State Bank are trying hard to control the increase in the value of dollar.

U.S.-CHINA TRADE OPTIMISM TO HELP YUAN OVERCOME CONCERNS OVER WEAKENING ECONOMY

Madiha Shakeel April 4, 2019

BENGALURU: The Chinese yuan will hold on to its recent gains against the dollar, and likely make a modest push forward from current levels over the coming year, as optimism about a U.S.-China trade deal offsets anxiety over weak domestic economic growth, a Reuters poll showed.

Having slumped about 6 percent versus the dollar in 2018, with analysts wagering in early January of a move towards 7 per dollar by mid-year, the yuan has defied pressure and gained around 2.5 percent this year.

That rebound was largely driven by progress in trade talks between Washington and Beijing and the People's Bank of China (PBoC) setting consistently higher mid-point reference rates.

The yuan was expected to gain 0.6 percent to 6.66 per dollar in a year, from about 6.70 on Wednesday, according to the latest poll of over 60 foreign exchange strategists taken over the past week.

That is a modest upgrade to last month's forecast.

"Trump's backing away from tariff escalation, previously implicit in our forecasts, means our USD/CNY projections have to be lower," noted Cliff Tan, East Asian head of global markets research at MUFG.

Market watchers have shifted their attention to the latest round of negotiations being held in Washington after both sides cited progress in discussions in Beijing last week.

"There will be a currency component in any ultimate U.S.-China trade deal and FX markets initially took that to mean USD/CNY has become a one-way bet – stronger yuan. But too strong a yuan may also make for awkward future currency diplomacy," Tan said.

Expectations for a stronger yuan are also partly driven by changing fortunes for the dollar.

The dollar's outlook darkened after the Federal Reserve last month abandoned projections for further interest rate hikes this year on signs of an economic slowdown.

That could help unwind last year's slide in emerging market currencies.

"The end of the Fed's tightening cycle now appears to be more clearly in sight, and indeed there is some risk it has already been reached. Overall, evolving Fed policy should become an increasing headwind for the U.S. dollar, and an increasing tailwind for the renminbi," said Erik Nelson, currency strategist at Wells Fargo.

Forecasts in the latest poll showed a complete shift from a January survey when a majority of strategists had predicted the yuan to have breached or to trade at 7 per dollar by mid-year.

In the latest poll analysts were mostly optimistic on the yuan and only four respondents still forecast it to reach 7 per dollar or weaker over the coming year, attributing that pessimism to an economic slowdown and more policy easing.

"We are extremely concerned about the ability of the Chinese economy to keep stimulating growth without a significant weakness in the value of the exchange rate," said Jane Foley, head of FX strategy at Rabobank who predicted the yuan to hit 7 per dollar rate by end-Sept.

"Trade deal might give some short-term celebration, but again in order to keep the economy growing at the sort of rate, that the government wants it to, then it is reasonable to assume that the yuan will slide below 7," said Foley, who was the most accurate foreign exchange forecaster on major currencies in Reuters polls last year.

'USE OF QUALITY SEED A MUST TO INCREASE PULSE PRODUCTION'

By APP Published: April 8, 2019

MULTAN: The use of low-quality seed is a major cause of the decline in the production of pulses in the country. An amount of Rs102 billion is being spent annually to import the commodity.

Besides, selection of marginal soil (less fertile-deserts), lack of mechanisation, water shortage, and poor marketing system are also some important factors, damaging pulse sector, said Arid Zone Research Institute (AZRI) Bhakkar Director Dr Khalid Hussain.

Talking to APP on Sunday, he said pulses are grown at an area of 3.2 million hectares in the country, but the major area is less fertile. The country faced a shortage of 275,000 tons of chickpea, 66,000 tons of moung bean, 166,000 tons of mash and 160,000 tons of lentil pulse annually.

Pakistan used to import these pulses, mainly from Australia and Canada, Dr Hussain. About per acre production of pulses in the country, the expert said that Pakistan was achieving 200 kilogramme per acre while Australia was getting 1400 per kilogramme. About the reason behind extremely low production, Dr Hussain said that the country was facing the issue of low seed quality. The funding on research on pulses was meager, he said. He hinted that Pakistan was spending a huge amount of Rs102 billion on the import of pulses annually.

Replying to a question, he said that how can Pakistan promote pulses, he recommended, they have to work on the availability of quality seed, selection of fertile land and improvement in marketing system to invite farmers attention towards the production of pulses.

About marketing, another expert on pulses Dr Ammar from the Muhammad Nawaz Sharif University of Agriculture observed that they should delay pulses imports and wait for the arrival of indigenous pulses because it would offer handsome price to our farmers.

"We would be focusing on protein-rich pulses", he remarked. When asked about pulses consumption in the country, he said that the consumption of pulses is on the rise. The growing population is an important factor behind the increase in consumption of pulses.

To a query how they can improve pulses production, Dr. Ammar suggested that pulse crop zones should be fixed. Similarly, quality seeds, agricultural mechanisation, and provision of the sprinkle system especially in the Thal area could help to get bumper production and save huge amounts, being spent on import of cotton.

NEWS COVERAGE PERIOD FROM APRIL 1st TO APRIL 7th 2019

GROWERS' BODY ASKS SINDH GOVT TO ENFORCE WHEAT PROCUREMENT POLICY

Mohammad Hussain Khan April 07, 2019

HYDERABAD: Sindh Abadgar Board (SAB) has lambasted provincial government for unnecessary delay in enforcing a wheat procurement policy despite the fact that farmers have already sold off almost half of the wheat crop in open market at much less rate than the grain's support price.

SAB vice president Mehmood Nawaz Shah, general secretary Dr Zulfiqar Yousfani, Irfan Jatoi and others said at a press conference at the local press club on Saturday after their monthly meeting that the government should come up with the policy as soon as possible.

Mr Shah said that Punjab government had announced its policy for procurement of wheat crop but Sindh government had not yet done it. Punjab had fixed wheat procurement target at four million tonnes and set up centres, he said.

In Sindh, he said, farmers had demanded that support price should be increased from Rs1,300 to Rs1,400 per 40kg in view of rising cost of inputs but it was not done. This year the crop had started reaching the market two months ago as Sindh was all set to harvest a bumper crop, he said.

He said that since the government was not buying the crop, its price was on the decline in open market, hitting Rs850 to Rs900 per 40kg nowadays. Cumulatively, he said, it was a direct loss of Rs25 billion to Rs30bn to farmers on the whole if they were to sell the crop at a lesser rate than the support price.

He said that in current conditions when Pakistani rupee was facing devaluation, the crop could become a profitable business for government if it started exporting it at the right time. If open market crashed, hoarders and middlemen would take advantage of it and consumers would once again not be able to have access to cheap wheat flour, he cautioned.

He disclosed that federal government had allowed export of wheat and if only 500,000 tonnes had been exported it would earn Pakistan government $120 million in foreign exchange given current rate of US dollar.

Mr Shah said that market indicators strongly suggested that the crop should be procured but the government was dithering over the issue. Nobody had stopped federal or provincial governments from exporting the crop, he said. He said that being strategic crop wheat needed to be stored as well. The crop had had healthy outlook because of perfect weather conditions which had also boosted per acre productivity, hence there would be surplus production of the crop in Sindh and Punjab.

He disagreed with the view that Sindh could not procure the crop because of huge carryover stocks from last year and said that Punjab also had carryover stocks yet the provincial government was set to procure four million tonnes.

He said that wheat crop was backbone of farm sector in the same way as agriculture was called backbone of the country's economy. It was wheat crop that had always ensured food security in the country and averted possible food crisis by bumper wheat production. That was why wheat crop had never been discussed over the past 20 to 25 years.

Dr Yousufani tried to dispel the impression that consumers would never benefit even if the crop's rate continued to drop. Hoarders and flour mill owners stocked the crop to exploit the situation when there was shortage of wheat for producing flour forcing consumers to pay heavily for wheat flour.

OVER 1500 PACKS OF COUNTERFEIT POWDERED MILK SEIZED

RECORDER REPORT 2019/04/07

PESHAWAR: Khyber Pakhtunkhwa Food Safety and Halal Food Authority (PKFA) seized more than 1500 packs of counterfeit powdered milk during a crackdown, here on Saturday.

A team of KPFA led by its director operations Khalid Khan Khattak, assistant director Aneela Mahboob and Food Safety officers Ahmad Ali Shah and Wasif Shah intercepted supply of counterfeit powdered milk in Pepal Pandi of the KP's capital city.

The authority's director (technical) Dr Syed Abdul Sattar Shah urged public, especially mothers to avoid feeding their infants with this product at the moment. He said there is n alternate of mother's feed.

Shah said it was a sign of danger because no private lab exists in KP province for such product. He said it may contain chemicals that directly strike infant's kidney. He directed this product should immediately be removed and necessary steps to be taken to intercept onwards supply.

Assistant director Aneela Mahboob said that an ordinary man cannot distinguish between the original and fake product. She said more than fifteen hundred packs of the product being seized in the current market crackdown. She said Peshawar market has been supplied in bulk with this product and it is a tougher task to recall the product from every shopkeeper. She revealed that massive awareness campaign is triggered via social media platforms to inform general public not to use this product till its clearance.

CALL FOR ADOPTING CLIMATE SMART AGRI APPROACH

RECORDER REPORT 2019/04/07

KARACHI: Climate smart agriculture requires adoption of a wide array of techniques for all crops to tackle climate change threats and enhance yields, said State Bank of Pakistan (SBP) in its recent report.

Pakistan is ranked among the top 10 most climate vulnerable countries according to the Long Term Climate Risk Index and the agriculture sector is affected by the short-term variability and longer-term climate changes.

Rapid population growth will lead to higher caloric demand and at the same time will be accompanied by rapid urbanization. In such situations, adaptation to climate change is needed and for agriculture it means focusing on farm management practices, proper fertilizer usage and adoption of heat/drought resistant varieties.

Climate Smart Agriculture is an approach used worldwide focusing on enhancing agriculture productivity and incomes while simultaneously building resilience to climate vulnerability and changes.

According to report, climate change has led to long term reduction in rainfall in semi-arid regions of the country and in November 2018, the Pakistan Meteorological Department issued a drought warning for Sindh and Balochistan due to below normal rainfall. This was the second warning of the year.

Irrigation water flows for Oct-Jan FY19 have been 20 percent lower than the 5-year average. Shortages and erratic nature of water has already been stressed upon in previous SBP reports.

Mean temperature of the country has increased by 0.5 degree Celsius in previous 30 years. By 2060, Pakistan's mean temperature is expected to rise by 1.4 degree Celsius to 3.7 degree Celsius, higher than the world average.

The manifestations of climate changes and variability are currently witnessed in the erratic nature of rains, higher temperature and reduced water availability.

The Food and Agriculture Organization's (FAO) International Model for Policy Analysis of Agriculture Commodities and Trade (IMPACT) calculates the percentage difference between climate change occurring scenario with and without climate change over the period 2020-2050 on trade, yields, cultivated area and livestock in Pakistan.

The crops at risk are wheat, maize, sugarcane and gram with the most negative impact, where yields of all crop are expected to decline.

The 2050 wheat projected area is expected to decline by 2.5 percent lower under climate change as compared to no climate change. Furthermore, through crop models predictions it is concluded that yields will reduce due to high temperature in arid, semi-arid and humid zones. The temperature changes have already effected wheat-sowing season, resulting in crop sowing delays.

According to report to tackle climate change threats and enhance yields, climate smart agriculture requires adoption of a wide array of techniques for all crops, from water saving and pest management to adoption of heat/drought resistant varieties of seed.

Several practices such as alternative wet and drying (AWD) of paddies helps save up to three irrigations as compared to continuous flooding, no-till rice and wheat systems are in practice where wheat is sown without tilling the land after rice, it added.

The FAO study for Pakistan highlights the main impediments to accepting the Climate Smart Agriculture practices which need to be addressed.

This includes adoption of several climates smart and yield increasing practices is low due to lack of knowledge and awareness. Extension services by the agriculture departments are still weak as many of the farmers are unaware of modern agro-chemical, crop seed varieties and adequate fertilizer use. Only 27 percent of total households surveyed in Punjab in 2014 had interacted previously with an extension agent.

In addition, lack of financing tools and credit disbursements for smart technology such as drip irrigation and high yielding seeds are low, resulting in disappointing uptake of several techniques and adequate quality seeds even when available.

KBP THREATENS TO GIVE PROTEST CALL

RECORDER REPORT | APR 7TH, 2019 | LAHORE

Kissan Board Pakistan (KBP) Secretary General, Chaudhry Shaukat Chaddhar has warned the government that the Board will give a protest call if issues being faced by the growers are not resolved at the earliest.

Shaukat Ali while talking to a delegation of farmers here on Saturday alleged that the government was not seemed serious in resolving the problems of the growers. Increase in agricultural inputs has hit the farmers hardly and it is the responsibility of the government to tackle the issue.

He said that the government should take steps on war footing to control the increase in the prices of agricultural inputs including fertilizer, seeds and pesticides. He said that the board will give a protest call and stage sit-in at all district headquarters and government will be responsible for the situation arising after this protest.

SAB DEMANDS EARLY ANNOUNCEMENT OF WHEAT PROCUREMENT POLICY

RECORDER REPORT 2019/04/07

HYDERABAD: Sindh Abadgar Board has demanded to Sindh Government to announce wheat procurement policy as delay in this regard creating unrest among the growers of the province.

Addressing a press conference here at Hyderabad Press Club on Saturday, the Senior Vice President Sindh Abadgar Board Mehmood Nawaz Shah informed that the executive meeting of SAB, which held today under his chair, has expressed grave concern over the delay in announcement of wheat procurement policy from Sindh Government.

He informed that the growers of the province has already competed wheat thrashing a month back and due to delay, they are being forced to sale their wheat at Rs900 per 40 kg instead of Rs1120 per 40 kg. He said that SAB has demanded early announcement of wheat procurement police of the provincial government with fixation of wheat price as well as opening of procurement centres so that the growers could save Rs25 billion, which they invested in wheat crop.

He informed that Punjab Government had already announced it's wheat policy and set procurement target as four million tons of wheat this year. In the past, he informed that Sindh Government had announced wheat procurement policy with fixation of rate and setting target of 1.4 million tons and opening of procurement centre before start of the month of April every year, but this year, the growers are still waiting the announcement of the government policy.

He held the corrupt practices in Sindh Food Department responsible in delaying announcement of wheat policy adding that such delaying tactics cause great losses to agriculture economy of Sindh and financial victimization of wheat growers.

He demanded the provincial government to announce the wheat procurement policy with immediate effect so that the wheat growers could take sigh of relief. Among others, Aslam Mari, Irfan Jatoi,zulfiqar Yousufani, Qazi Abdul Sattar, and Abdul Rehman Khatti were also present on the occasion.

'EAT ONE ROTI': PTI LEADER GIVES NOVEL IDEA OF OVERCOMING FINANCIAL CRISIS

Web Desk April 6, 2019

PESHAWAR: Speaker Khyber Pakhtunkhwa Assembly Mushtaq Ghani stated on Saturday that with the country undergoing a financial crisis, the public should survive by eating one roti instead of two.

During Khyber Union of Journalist's program 'Meet the Press', the provincial assembly speaker stated with the colossal debt that the country is presently under and the crisis it is going through, the public should survive by eating one roti instead of two.

He further added that soon a time will come where they will get a chance to eat not one or two but 'two and a half rotis'.

"If a person who eats two rotis in a day, brings the number to one then the next day he can afford to eat two to three roties," he stated.

Soon after his statement, ample criticism made way towards the speaker as social media users were unable to comprehend the logic behind his statement while many questioned how many rotis he has given up in this time of inflation.

FARMERS FORCED TO SELL WHEAT AT THROWAWAY PRICES AS GOVT INDECISIVE ON PROCUREMENT

Munawar Hasan April 7, 2019

LAHORE: Farmers are being forced to sell wheat crop at throwaway prices as the government is dragging feet on procurement of the staple food that has been ripened earlier this season due to dry weather and rising temperature, people familiar with the matter said on Saturday.

Dry weather and rising temperature led to early maturity of wheat in Southern Punjab and farmers have no choice but to sell their produce to private buyers as provincial food department is merely acting as a silent spectator.

Farmer Rao Afsar, belonging to Rajanpur district said wheat harvesting started around a week back. “We are selling wheat at around Rs1,150 / maund against the official support price of Rs1,300,” Afsar said. “We have no choice but to sell wheat to private buyers as the food department has done nothing so far for this year’s procurement drive.”

The farmer further said wheat grains turned golden in a short span due to steep rise in temperature, leaving a little room for farmers to delay harvesting.

Wheat harvesting has already kicked in several districts of the southern Punjab, including Bahawalnagar, Multan, and Rajanpur.

“It is feared that grains would start arriving in the market in bulk quantities if weather remains the same, multiplying problems for growers,” an agriculture expert said. “The Punjab Food Department is actually not decisive as far as starting of wheat procurement is concerned.”

Though the provincial chief minister earlier announced wheat buying from April 21, the food department in a message directed district administration and officials of the food directorate to start procurement from the last week of April. Ironically, the provincial department didn’t mention any date in a relevant print media advertisement.

The provincial food department directed deputy commissioners to start arrangements for wheat procurement campaign from 8 April. Registration of farmers would continue till third week of April, according to an official letter. Applications for bardana or gunny bags would be received between 8 and 17 April. Distribution of gunny bags would start from 22 April.

An estimate showed that private sector would end up procuring two million tons of wheat in the province this year. The provincial food department, on the other hand, planned to buy as much as four million tons of wheat with bank loans of Rs130 billion under the procurement drive 2019.

The experts said farmers would be at total loss as price would certainly crash in the absence of a major public sector’s buyer on time.

The government fixed wheat production target at 25.572 million tons during winter 2018/19. Of that, Punjab is expected to produce 19.5 million tons, Sindh (3.8mt), Khyber Pakhtunkhwa (1.36mt) and Balochistan (0.9mt).

Farmers also want to dispose produces as early as possible, fearing natural calamity in the form of high winds, hailstorm or rainy spells that would cause huge losses to standing crops.

Another farmer from Bahawalnagar Saifullah, who wanted to be quoted with single name, said reaping of wheat has began in the district for the last several days and about 2,000 tons of grains have already arrived in the market. “Farmers are hardly fetching Rs1,150 to Rs1,200 from the private sector,” he added.

Saifullah demanded of the government to direct the food department to immediately launch the procurement drive.

“Otherwise, wheat price would crash as hot temperature has led to maturity of crop at large scale.”

Wheat harvesting season is not less than a celebration for the farmers and that also creates temporary livelihood opportunities for labourers. "Delay in harvesting entails delayed income for them too."

DAIRY PRICES LIKELY TO RISE; FARMERS EXPECT BETTER BUSINESS IN SUMMER

Jan Khaskheli April 7, 2019

HYDERABAD: Summer is a season of hope and business for the milk vendors around the newly developing settlements in Hyderabad city.

Mahmood Arain, from one such settlement believes that summer was quite an exciting season for milk producers. The demand of milk increases for making a variety of ice creams and many other sweetened frozen foods, which people eat in summer as snacks to beat the extreme heat.

"These items generally are not used at a larger scale in winter. Thus, milk producers, as well as milk vendors enjoy summer as they meet the high demand of this produce during the season," he added.

Mahmood, being a traditional milk vendor, has 16 years experience of selling milk. He travels door to door twice a day to sell around 120 kilograms (60kg each in the morning and evening). He confided that sometimes the demand was even 80-100kg twice a day.

Like other milk vendors, he remains punctual when it comes to supplying milk daily even on public holidays, to his valued customers, including local ice cream vendors, dahi and lassi (yogurt) selling shops, and those who prepare a variety of sweetened frozen food items.

He shared several stories about the emerging daily challenges he faced as a milk vendor in this business.

"Wheat straw and green grasses are in short supply," he said, adding that the fodder shortage had increased the problems for the cattle farmers, who were facing huge losses.

He predicted that the increasing cost of fodder would soon impact the prices of milk. "The price of milk may go higher very soon," he added.

Presently, though wheat harvest has started and fresh wheat straw began arriving in the fodder markets, prices were still as high as Rs500 to Rs600 per maund. "The price of wheat straw will go up to Rs1,000 or more per maund soon. It will affect the milk prices," Mahmood said.

About the problems faced by milk vendors, he said that even though they bought fresh milk from the cattle farms or commission agents, sometimes it spoiled almost instantly due to the extreme heat, which results in disputes with customers. "We (milk vendors) have to bear this loss," he lamented.

Looking back, he said 22 years ago his family had a cattle farm with 40 buffaloes, and they supplied milk to vendors of neighbouring settlements in the city.

"We migrated from Nawabshah district almost 24 years ago with animals. We built our homes and cattle farm in the open and discarded area in this flourishing city. The business continued till the area was fully developed. Then the residents started crying out against the environmental impacts of the cattle farms," he shared.

The farm was shifted in another nearby area, but sadly, could not continue due to the increasing cost of feed and maintenance of animals. "We realised that the business was shrinking, so the younger members of the family started collecting milk from other cattle farms to supply in different areas," he said, explaining that since then the family had continued the same business, which was going smoothly.

Mahmood is familiar with all the ups and downs of milk production, and also buffalo-raising. According to him, breeding of buffalo mostly starts in the months of October and November. They continue giving milk for eight months. But for business purposes they were useful for four-five months, as after this period the yield begins to fall.

Individual farmers, who have one or two cows or buffaloes in villages, produce five to 10 litres of milk daily. They take their product to nearby tea stalls and local collection points where milk coming from different areas gets accumulated. Even sometimes, milk of sheep and goats goes at similar prices. During random interviews from milk vendors, it was learned that get questioned by customers about the purity of the milk production.

About the trend of using vaccinations supposed to multiply milk production, milk vendors said that some leading farmers experimentally started using Oxytocin injections for the first time for milk production during 2000. At that time, nobody thought of the impacts of this injection on human health.

Earlier, the vendors said that traders had devices to check the transparency of milk in major markets and collection points in both rural and urban areas. It helped catch farmers who used to mix water and powder in milk. Those devices were enough to check the authenticity of milk.

However, they said that no device was being used by the traders to check for any harmful impacts of the vaccines, which farmers use to increase production.

Milk vendors admitted that they faced a lot of suspicion from customers, who felt uncertain of the quality of the dairy supply.

There are 70 cattle farms in the newly established cattle colony in Hyderabad city. Each farm has 300-1,000 cattle heads. Out of these farms, only one farm is of specifically cows, where farmers sell milk to specific consumers. Besides this, there is the older and the largest cattle colony on Tando Mohammad Khan road in the city.

There is a huge network of milk companies and sweet manufacturers, who buy milk from leading cattle farms, but they do not ask milk producers about the use of injections or authenticity of the product.

Despite strict directions by the Supreme Court against the use of Oxytocin injections, cattle farmers continuously use the illegal drug to increase milk production in buffaloes. Despite the Supreme Court ban, the drug is available in the market, though farmers have to now bear the increase in cost.

A large number of farmers in villages near Hyderabad, the second largest city of the province, supply milk by mixing the produce from all the breeds – buffalos, cow, sheep and goats. Many of these village farmers do not use vaccines and supply organic milk to the market, but they get a lower price for their product.

There is a chain of business in dairy farming where cattle farmers get new high-yielding buffaloes from village farmers at a low rent of around Rs8,000-Rs10,000 per month. These commercial farmers keep animals at their farms for five-six months for getting milk, and return the buffaloes when yield falls.

Unaware farmers fail to understand the deteriorated health of their animals and the impact they suffered from the vaccines.

Farmers associated with the dairy sector also point to the use of unhygienic and impure fodder for the cattle, which in the long-run impacts the human health.

Livestock is considered the main source of livelihood in rural areas of Pakistan. Milk and other dairy products are a major source of nutrition for rural as well as urban population.

Prof Ismail Kumbher of Sindh Agriculture University Tandojam pointed out that the government had launched a huge dairy production project in Pakistan aiming to bring white (milk) revolution. But it could not continue due to reasons the authorities know better. He proposes the government to offer incentives to rural farmers to launch small entrepreneurship, with marketing awareness.

“It is the only way out to promote this ignored sector in terms of poor check and monitoring system,” the professor added.

BIO-PESTICIDE IMPORT TO HELP COTTON FARMERS

The Newspaper’s Reporter April 06, 2019

ISLAMABAD: The Cabinet Committee on Legislative Cases (CCLS) on Friday approved import of bio-pesticide ‘Gossy¬plure’ to help eradicate the population of pink bollworm that attacks cotton crop.

Punjab government and cotton growers had been urging for the bio-pesticide’s import which was barred due to some legal issues.

The CCLS approved the import of Gossyplure as a generic chemical under Form-16 of the Pakistan Agriculture Pesticide Act, 1971. Consequently, the Ministry of National Food Security and Research (MNFSR) removed its impediment in import.

However a rectification of the federal cabinet is still required for the decision to be implemented.

The economic loss inflicted by pink bollworm is heavier than the impact of any other worm. Depending on the extent of infestation and weather conditions, this pest can cause about 20 to 30 per cent crop loss. It is estimated that the yearly loss from pink bollworm in Pakistan is about one million bales.

Gossyplure, a pheromone named after its insect source, Pectinophora gossypiella (pink bollworm), attracts male pink bollworm moths. Pheromone dispensers set up in cotton fields compete with female moths for the males' attention, disrupting mating and reducing the population of this crop-damaging species.

In a statement, the MNFSR said the facilitation would help cotton farmers have access to the non-pesticide chemical for pink bollworm management.

Furthermore, allowing a generic name (Form-16) will detach it from the brand and be available in the market on competitive prices, it added.

Earlier, the bio-pesticide was registered on brand name of 'BP-Robe' and 'PB-Rope', with an average per acre price of the treatment set at around Rs2,500-3,000.

GOVERNMENT TO FORMULATE 'TRANSPARENT' WHEAT POLICY

MUSHATQ GHUMMAN | APR 6TH, 2019 | ISLAMABAD

The federal government has decided to formulate 'transparent' wheat procurement and export policy in consultation with the provincial governments next week, well-informed sources told Business Recorder. The decision has been taken at a high-level meeting presided over by Prime Minister Imran Khan.

In Punjab, Minister for Food has already been 'sidelined' after reports of 'inappropriate' measures taken by him with respect to appointment of some District Food Controllers (DFCs) and a couple of Deputy Directors. In discussions during the meeting, it was deliberated that inconsistency of economic policies over the previous years could not improve financial inclusion, resource mobilization and ease of doing business. Concerted efforts need to be made to enhance competitiveness in the system, which will improve investment climate in the country and encourage foreign direct investment, it was acknowledged.

During discussion on the issue of wheat crop, it was highlighted that a bumper wheat crop was expected this year. It was observed that proper and transparent arrangements should be made to procure wheat, so that farmers may get fair price for their crop.

Food Departments of provinces and other procurement agencies should provide gunny bags to farmers in a transparent and fair manner. It was mentioned that a comprehensive agriculture policy is needed to increase yields of five major cash crops, increase productivity of livestock and to ensure better integration for marketing agriculture produce in domestic and global markets. It was deliberated that quality seed and latest technologies in the cultivation of all major crops must be explored.

It was also observed that such measures will encourage the private sector and all related stakeholders to boost agriculture sector of the economy.

The National Food Security & Research Division in coordination with Finance Division, Commerce Division, all provincial governments and other relevant stakeholders, will hold a meeting next week regarding transparent wheat procurement and management/export of surplus wheat after accounting for strategic reserves of the country.

NISHAT DAIRY, TURKISH SÜTA TO PRODUCE, SELL PRODUCTS IN PAKISTAN

ZAHID BAIG 2019/04/06

LAHORE: Nishat Dairy (Pvt) Limited in collaboration with SÜTA, one of the largest milk and dairy products producer from Turkey, is going to produce, market, distribute and sell premium dairy products in Pakistan.

With major focus on pasteurized milk products, we are in the phase of deciding our product profiles, which hopefully will be on shelves next year. It is a 50-50 investment partnership both by Turkish and Nishat Group, said General Manager Nishat Dairy Pvt) Limited Hustam Jalal while talking to a select group of journalists during visits to the farms.

Louis Lategan, Farm Manager Nishat Agriculture Farming (Pvt) Limited, and Chaudhary Shafquat, Administration Head, were also present on this occasion.

Two to three places have been identified to set up the manufacturing plants which can be near Lahore or adjacent to the Nishat dairy farm. He said that agreements have been finalized and we are now deciding about the machines and other equipment of the plant, which will also decide the total volume of investment which at present is roughly nearly two billion rupees, Hustam Jalal added.

He said that UHT products can also be added to the product profile but no decision has been taken yet in this regard.

Talking about the dairy farm, he said that at present there are 5700 cows in the plant out of which 2700 are producing milk while by the end of this year this number will reach 3000. He said at present these cows are giving 80,000 litres per day milk. All the animals at the farm are of Pure Holstein Friesian breed and have been imported directly from Australia and The Netherlands and now homebred. They are kept under the best available state-of-the-art facilities and are fed with the high quality feed, which helps in achieving good health conditions as well as high milk yield of the animals.

However, he said that imported dry milk is still the biggest challenge in growth of Pakistani dairy industry while dairy farms are also not finding it feasible to do business at the cost which buyers are offering. He said this is the right time that Nishat Dairy decided to enter into next phase – launching own premier products. He claimed that the Turkish group is bigger than Nestle Pakistan and its collaboration will help providing Pakistani consumers better milk products.

Hustam Jalal further said that now there are many cows which have born here and they are performing well in local climate. He said that the farm used to keep female cows and sell males. “Now we have also decided to sell these locally born foreign origin animals with more milk yield to the local farmers from next year,” he added.

Talking about manure management, Hustam said that solid part is separated from liquid and later on used as fertilizer in the agricultural farm of the group. “It is best organic fertilizer and we are also planning to introduce granular fertilizer made out of cow dung very soon,” he added.

Throwing light on energy conservation measures taken by the Nishat Dairy, he said that they have not yet thought of using bio-gas but had set up a solar park of 1 mw power on the land within the dairy farm.

It is sufficient to meet our 80 percent requirement during summer season and produce surplus during winter which is added to the national grid through net-metering system.

"Interestingly when we had applied for net-metering, GAPCO people were not aware of any such scheme and their officials had training on our system after getting approval and meter from Islamabad," he claimed.

Journalists were also taken around the farm and shown different parts including areas of keeping animals, milking parlors, food storages etc.

POULTRY PRICES INCREASED BY RS30-40

By Aamir Shafaat Khan | 4/5/2019 12:00:00 AM

KARACHI: Amid low demand on account of closing marriage season in summer ahead of the month of Ramazan, poultry industry stakeholders have played havoc with the prices.

Dealersin various areas haveincreased broiler meat price by Rs30-40 per kg and are selling it at Rs350-360 per kg.

Live bird price which was selling at Rs230 per kg has been jacked up by Rs1020 per kg over the past few days.

Some retailers are seen demanding Rs400-420 per kg for meat and Rs240 per kg for live bird claiming it is `high quality` as compared to other retailers.

Like past practice, many retailers have displayed the official price list to avoid fine from government officials, but the list has so far proved to be just a piece of paper providing no relief to consumers.

Surprisingly, the official rate of meat and live bird is Rs301 per kg and Rs194 per kg respectively on which neither the live bird nor the meat is available.

Consumers are surprised over substan-tial increase in chicken rates during the summer when food consumption also comes down, while marriage season is also coming to an end before Ramazan which is starting from the first week of May.

Supply & demand However, outdoor dining between Fridays and Sundays remains as usual.

General secretary of the Sindh Poultry Wholesalers and Retailers Association Kamal Akhtar Siddiqui defended the price hike.

He said the supply from the poultry farms had dwindled against the ongoing demand.

Quoting different rates from markets, he said live bird price had surged to Rs200 from Rs160 followed by hike in meat rate to Rs280 from Rs230-240 per kg over the past 15-20 days.

He said the rupee devaluation against dollar in the interbank/open market rate coupled with rising diesel and LPG prices had nothing to do with the poultry price hike.

`Despite increase in rates, poultry is still cheaper than beef and mutton,` he said.

Irrespective of poultry rate fluctuation, owners of barbecue shops, fried chicken and biryani outlets have pushedup food prices, which they will not bring down whenever the live bird price f alls.

Owners of biryani outlets have increased per plate biryani price to Rs130-150 from Rs110-130, while average biryani plate of Rs80 is now being sold at Rs100.

Similarly, the price of one chicken tikka or a quarter broast (leg and chest piece) now hovers at between Rs180-220as compared to Rs160-200.

Vegetables rates In vegetables, some relief came in the shape of tomato and green chillies over the past two weeks while other green vegetables showed mixed price trend.

Tomato price has plunged to Rs50-60 per kg from Rs120-140 per kg.Green chilli rate has also come down to Rs140-160 per kg from Rs240-320 per kg.

However, the current rate of green chilli is still much higher as it is used to sell at Rs120-150 per kg a month ago.

The price of tinda (apple gourd)further has swelled to Rs160 per kg from Rs120 per kg while earlier in March it was selling at Rs50-60 per kg.

Lady finger/okra and bitter gourd (karela)are selling at Rs160 per kg against the price of Rs120 per kg of 15 days ago.

The rates of turrai (ridge gourd) and lauki (bottle gourd) have remained unchanged at Rs120 per kg and Rs80 per kg, respectively.

Earlier in March, turrai and lauki were selling at Rs80 per kg and Rs60 per kg respectively.

There was no change in the rate of peas, selling at Rs70-80 per kg which was available at Rs40-50 per kg in the first week of March. Good quality onion is selling at Rs40 per kg which was Rs30 per kg in March`s first week.

The price of potato, which crashed to Rs20 per kg in the second week of March, has recovered to Rs25-30 per kg.

No price change in the past two weeks has been recorded in carrot and aubergine, selling at Rs40 per kg and Rs50-60 per kg respectively. The same were available at Rs30 per kg and Rs40 per kg in first week of March.

RICE: TIME TO ADOPT SRI

2019/04/05

Pakistan’s rice is a highly export centric commodity, with an average 60 percent of total domestic production going towards export. Over the past three decades, focus of large-scale farming in the country has shifted increasingly towards paddy crop, with output recording consistent gains at an average of 2.16 percent per annum during the period.

Yet, compared to other major rice exporting countries, Pakistan's yield per hectare has inched forward very slowly at 1.66 percent per annum, and currently stands at an average of 2,500 kilos per hectare. In contrast, yield per hectare stands at over seven thousand in China, six in Vietnam, and four thousand in India.

As a result, despite being only second to cotton in its contribution to export, country's rice exports have remained stuck below 4 million tons over the last decade. In value terms, paddy crop exports have contributed less than $2 million on average, despite marginal improvement in per unit ton price fetched.

Since early 1990s, most countries have adopted System of Rice Intensification practices (SRI) known as SRI, that help increase productivity of land and water. Compared to other nations, Pakistan continues to rely on flood irrigation for paddy farming, which has often labelled 'virtual water export' due to high water footprint of the paddy crop.

Common SRI Techniques involve six elements that distinguish it from traditional practices. First, seedlings are transplanted at very early age; second, only a single seedling, instead of a handful is planted over each hill. Third, plants are spaced much wider apart in a square fashion. Fourth, and the most significant, water is applied intermittently to create wet-and-dry conditions, instead of continuous flood irrigation. Last two include rotary weeding to avoid soil erosion and use of organic fertilizers.

As is obvious, SRI techniques are neither capital intensive nor require significant investment in modernizing farm infrastructure, including canal to farmgate infrastructure which has become the most complaint of local farming community. The techniques are however more labour intensive as single seedling plantation and other practices require much greater care during and post sowing period.

SRI techniques have helped increased yields by 50 to 100 percent, according to one World Bank report, with greatest success in South Asian countries such as China, Indonesia, and Vietnam. The practices have also become equally popular in neighbouring India. And it is the SRI experience of Pakistan's forever frenemy that carries most lessons for us.

The success of SRI in India came on the back of wide-scale marketing and public awareness campaign undertaken by public and private sector organizations. Newspapers and TVCs accorded significant and disproportionate share to awareness campaign adverts, with private sector rice milling and exporting associations picking tab for funding.

Given SRI success not only in canal irrigated but also rain-fed regions around the world, it presents an obvious opportunity for Pakistani rice farmers to increase yield at a time of water scarcity, given its significant low-cost potential. However, for this to happen, rice milling and exporting associations will have to take stewardship to create farmer awareness. At the time of this writing, Pakistan has hundreds of operating rice mills, and tens of associations. Any takers?

70% OF LOOSE MILK IN PUNJAB POISONOUS FOR CONSUMPTION

By Rizwan Asif Published: April 5, 2019

LAHORE: As much as 70 per cent of loose milk sold in urban Punjab contains traces of harmful chemicals and bacteria, a report submitted by provincial authorities to Prime Minister Imran Khan has revealed.

Of the 601 samples of loose milk collected from Lahore, Multan, Faisalabad, Bahawalpur, Gujranwala and Rawalpindi, 422 were deemed unfit for consumption upon testing and found to contain traces of harmful chemical compounds like formaldehyde, ammonium sulphate, hydrogen peroxide, urea and others found in detergents. Formaldehyde, in particular, can cause stomach and heart problems and even blindness if ingested. The water used to increase the volume of loose milk was also found to contain traces of various germs and bacteria, including coliforms, and chemical and organic pollutants.

According to the report presented to the prime minister, the 'adulteration mafia' is also selling artificial powdered milk smuggled from Iran to meet the demand for milk in the cities, sources said. According to them, he was told that the mafia prepares milk by using a laundry washing machine to mix this powder, sold for Rs14 to Rs15, ghee and water. This artificial loose milk costs Rs18 per kg to make but is sold for Rs45 per kg to wholesalers, who in turn jack up the price to Rs75 per kg for consumers, the sources added.

Prime Minister Imran sought the report after being alerted by senior health experts and some parliamentarians of the health risks posed by adulterated loose milk being sold in the country's most populous province, sources told The Express Tribune. Upon reviewing the report, the premier directed senior Pakistan Tehreek-e-Insaf (PTI) leader Jahangir Tareen to collaborate with Punjab authorities on a pasteurisation policy inspired by the one used in Turkey.

Turkey made pasteurisation of milk mandatory in 1995 and banned sale of loose milk in 2008. To support enforcement of these laws, it made investments in public sector milk production and provide concessions to private sector milk producers. The steps resulted in a 90% increase in Turkey's milk and milk by-product exports.

The Punjab government intends to follow this model to curb adulteration of milk. A committee comprising Tareen, the Punjab food minister, the provincial food, livestock, finance, transport and industry secretaries, and the Punjab Food Authority director general will collaborate with industry stakeholders to devise a comprehensive pasteurisation policy which will eventually result in a ban on sale of loose milk in the province, sources said.

Some aspects of the policy being considered including labeling pasteurised milk in accordance with Punjab Pure Food Regulations 2018 and keeping pasteurised milk at 6 degrees Celsius till it reaches consumers. According to sources, the milk industry will be allowed a five-year business adjustment period once the new policy comes in force.

According to government research, Pakistan's milk industry produces 54 billion litres every year but only 10 per cent is sold in packaged form. Most milk is loaded into barrels with water and ice immediately after being obtained from buffaloes and supplied to cities via heavy road vehicles.

Nutrition experts warn that milk obtains from buffaloes is quick to spoil unless it is boiled to a certain temperature and allowed to cool rapidly.

Meanwhile, testing loose milk to determine whether it is made using powder or not is a costly and difficult procedure. The kit to detect whether milk has been adulterated with water costs Rs300 and can be used multiple times. But a kit for ascertaining whether milk is artificial costs Rs1,700 and can only used once. This is why the Punjab Food Authority (PFA) uses it less often and only on batches of 3,000 to 5,000 litres at a time.

Talking to The Express Tribune, PFA DG Capt (retd) Usman Younis said the Punjab livestock department is also preparing a long term policy to bridge the gap between milk supply and demand. He said PFA has also taken steps to curb adulterated milk production, inspecting 28 dairy production units of Punjab 63 times between 2017 and 2019.

"We issued 38 reform notices and penalties to 13 units, and sealed three of them. We also raided 2,241 milk shops this year, issuing reform notices to 1,755 and sealing 19. Violators were fined Rs972,600 in total," he said.

ECC ORDERS IMPORT OF 100,000 TONNES OF UREA

The Newspaper's Staff Reporter Updated April 04, 2019

ISLAMABAD: The Economic Coordina¬tion Committee (ECC) of the cabinet on Wednesday ordered immediate import of 100,000 tonnes of urea after it was informed that its market price surged to Rs1,850 as the sowing season had just begun.

The ECC meeting, which was presided over by Finance Minister Asad Umar, was informed that urea prices had gone up by Rs150 per 50-kg bag in March despite the official rates of Rs1,700 to Rs1,720, sources said.

The committee also directed the Ministry of Industries & Production to review price mechanism of fertiliser industry and asked the relevant authorities to check market manipulation activities in the fertiliser sector.

Finance minister defends rising inflation, hike in petroleum prices and speaks about delay in jobs creation, expected discovery of oil, gas reserves

It was also informed about the status of National Accountability Bureau (NAB) cases against seven persons allegedly involved in corruption in Pakistan Steel Mills. The interior division informed the ECC that their names had been recommended for placement on the Exit Control List (ECL).

The ECC also approved a series of supplementary grants but decided to maintain their secrecy until the coming budget when it would be placed before the parliament.

The statistics division gave a presentation to the committee about reasons behind 9.41pc increase in inflation and rising prices of various food items. The ECC decided to constitute a sub-committee, to be led by minister for national food security and research, to review the demand and supply situation of essential items and ensure price stability.

The ECC also accorded approval to a proposal of Ministry of Petroleum regarding Fuel Supply Agreement between Pakistan State Oil (PSO) and State Oil Company of the Republic of Azerbaijan (Socar). Socar had been participating in bids invited by the government entities for LNG imports but could not compete other traders due to its higher bids.

The ECC approval to the proposed agreement had been pending for the past six months. PSO and Socar had finalised a term sale and purchase agreement (TSPA) for supply of petroleum products under an inter-¬governmental agreement (IGA) signed by the two governments in February 2017.

Meanwhile, Finance Minister Asad Umar answering questions from journalists at a session defended the economic situation and the delay in the discovery of what was being dubbed as a jackpot in the form of discovering a huge reserve of oil and gas, according to Dawn.com

The session was broadcast live from social media accounts operated by the ruling Pakistan Tehreek-i-Insaf (PTI).

Mr Umar explained that work was under way. “The expectation is that a discovery, if made, will be significant,” he said, adding that there was deep offshore drilling being done some 250km from [the coast of] Pakistan.

“They have to drill 5,000-metre deep, of which, last I checked, they had drilled 3,500m. There was some delay due to a rocky formation due to which they had to change their approach. When they finally reach 5,000m, we will know what the find is. But we know that its potential is big. It’s a high-risk operation, and ExxonMobil invests when a potential find is massive. If oil is found, it will be a massive find,” the minister added.

Identifying several reasons why the economy is in a bad shape, the minister, however, said that there would be light at the end of the tunnel. “There are two reasons why we are in this mess. We have a budget deficit, and secondly, our external deficit,” he said.

“To resolve this you either need to increase exports or decrease imports. Our immediate action was to cut imports, which slows down the economy.”

Asked how the government will fulfil the promise of creating two millions jobs every year as growth has slowed down, Mr Umar acknowledged the criticism. “They say that if the economy does not grow at a seven per cent rate, two million jobs won’t be created. As a rule of thumb that [reasoning] is fine, but it [job creation] also depends on what our priorities are,” he explained. Tourism, small and medium enterprises, information technology, and housing were government priorities, and all these sectors had the potential of job creation, he said, while promising that there would be “growth from year three onward”.

About recent rise in petroleum prices, Mr Umar said: “I had never said that petrol should be Rs46. I had said that the tax [on petrol] should be lower than it was.” He said the Oil and Gas Regulatory Authority did the petrol price calculation. “When the new prices were recommended, the only thing the government did was reduce the recommended increase by Rs5,” he added.

When asked why another amnesty scheme was being announced for non-filers of tax returns contrary to his stated position on amnesty schemes in the past, the minister conceded that the idea of amnesty schemes was controversial and said it was the need of the time due to the prevalent system.

The finance minister also defended the government's decision to not rush into an International Monetary Fund (IMF) programme at the start of its tenure. However, he said, an agreement would be reached soon.

About rising inflation, the finance minister said the issue would be taken up in an upcoming meeting of the ECC. Mr Umar said: "When one attempts to move out of a balance of payment crisis, inflation rises. Ours [inflation in the PTI tenure] has increased but increased lower than theirs [in the first months of the PML-N tenure]. Moreover, in their government, inflation was borne mostly by the lowest income class. This time, the opposite has happened; the rich have suffered."

COTTON PRODUCTION FALLS

Parvaiz Ishfaq Rana April 04, 2019

KARACHI: The country produced 10.772 million bales up to April 1 recording a shortfall of 6.90 per cent over the corresponding period last year, according to the figures released by the Pakistan Cotton Ginners Association (PCGA) on Wednesday.

Punjab recorded a fall of 9.50pc to 6.622m bales as against 7.317m bales produced in the same period last year. Sindh too witnessed a fall of 2.45pc to 4.149m bales compared to 4.263m bales. Ginners are currently holding 809,195 unsold cotton stocks compared to 486,963 bales held in the same period last year.

The textile spinning industry purchased less cotton during the period under review at 9.963m bales as against 11.084m bales last year while exporters also booked smaller quantity of cotton at 102,330 bales as against 216,615 bales in the last season.

Stakeholders say the government needs to come up with an incentives package urgently for motivating growers to shift back to cotton crop by fixing indicative price for phutti (seed cotton).

For the last six years cotton crop has been a victim of neglect on part of successive governments particularly when cultivation area of the crop rapidly shifted to sugarcane farming.

Cotton growers have been using uncertified seed and poor quality pesticides which eventually led to reduced per acre yield. The huge import bill which has swelled over $1.2 billion could only be reduced once domestic cotton production has increased, cotton analyst Naseem Usman said.

UNLOCKING THE FARMING LAND POTENTIAL

BR Research April 4, 2019

It is said that real estate development in urban areas has converted the cities into "Plot-istan", as property has become the guaranteed form of investment where returns only point north. Plotting of prime land has no doubt become a bane; however, is nothing compared to the fragmentation of land seen in rural areas during past three decades.

According to figures based on last Agriculture Census of 2010, more than 80 percent of Pakistan's farmers own land size under 10 hectares (or 25 acres). In terms of aggregate land area, this represents more than 60 percent of country's farm lands.

Over the years, average farm size in the country has come down to less than 1 hectare, from 1960, when the number stood at barely over 2.6 hectares. Compare this to average farm size of 63 hectares in Brazil, and 179 hectares in USA.

While Pakistan's agriculture has long been dominated by small farmers, increasing population and large family sizes has led to splitting of land over multiple generations which has exacerbated the situation. Today, at 25 percent of total, farmers owning less than 0.5 hectares of land has become the largest group, barely enough land to even provide for an average family size of 6.5 persons.

With these statistics, it is no wonder that about two-thirds of Pakistan's agricultural community is classified as subsistence farmers, defined as "farmers who grow food crops to feed themselves and their families; the output is targeted for survival, with little or no surplus trade".

While agriculture's share in employment may stand at 42 percent, using the most conservative estimate of farmers with less than 0.5 hectares as the absolute level of subsistence, at least 11 percent of farmers make no contribution to agricultural value chain.

Thus, while "agri as the largest employer" has become a popular mantra for continued governmental support to the sector in the form of subsidized credit, a meagre canal water charge, subsidized electricity on tube well, and support price among others, only a marginal percentage of official support actually makes its way to the weakest segment of rural community.

Moreover, given the obvious correlation between farm holding size and productivity due to scale, it is no surprise that these subsistence farmers are unable to invest in yield improving tools to grow cash crops that contribute most to the agri-value add, such as cotton, rice or cane.

While the new government has hinted at imposing an "Agricultural Emergency" to arrest falling yields, nothing short of a radical rethink can usher in a revolution in a sector, which by the way, also consumes more than 90 percent of country's water sources.

Pakistan needs a consolidation of farming land to incentivize private sector investment in productivity tools such as mechanized agriculture, high-yield seeds, and water conserving infrastructure. Whether that may come in the form of cooperative, corporate or any other form is of course an open question. But the debate must begin, and now.

15 PERCENT OF MILK GO WASTED DUE TO LACK OF FACILITIES: DR MUMTAZ

RECORDER REPORT | APR 4TH, 2019 | KARACHI

Some 15 percent of total production of milk in Pakistan is wasted due to lack of storage, transport and proper cooling facilities, said President Pediatrics Association Dr Mumtaz Lakhani on Wednesday.

Talking to Business Recorder, Dr Lakhani quoted the statistics of Economic Survey of Pakistan (2015-16), that the annual milk production in Pakistan is more than 50billion litres, out of which only 45 percent of the milk is actually available for sale. “This automatically makes us lose roughly 50-60 percent of our potential income generation from the dairy industry,” she added.

Moreover, she said, 50 percent of the milk left after this is made available to the processing industry which is then processed into UHT, 40 percent into powdered milk and the remaining 10 percent into other by-products.

She said Milk is one of the main constituents of a balanced diet. It is a rich source of calcium and its regular intake is essential to have healthy bones and teeth.

“Milk provides essential vitamins such as vitamin D and phosphorous, which are also necessary for stronger bones. It is a great source of B vitamins that are known for supporting energy metabolism and growth. A vital component of a healthy diet, milk, contains vitamin A, which is essential for healthy skin and for a stronger immune system,” Dr Lakhani said.

She said milk is usually available in two formats – loose and packaged. Collected from dairy farms, the loose milk is delivered by the milkman to the doorstep as well as sold in milk shops. Contrary to the widespread belief, she said, the loose milk is natural and fresher in terms of taste, it tends to be highly unhealthy.

According to a survey by the Animal Husbandry and Veterinary Sciences, University of Agriculture, Peshawar, loose milk is a source of various diseases owing to the filthy housing system at dairy farms, unhygienic milking practices, dirty utensils, transportation and water adulteration. In addition to that, no scientific procedures are followed during milk collection, storage and transportation.

While highlighting the importance of nutrition, Dr Lakhani said, “The purity of loose milk is always doubtful owing to the fact that dairy farmers and milkmen dilute milk with water and add other substances in an attempt to increase the milk quantity.”

They resort to adding different harmful adulterants and chemicals to milk to increase its viscosity as well as to preserve its appearance, texture and odour to make it smell and taste like pure, natural milk.” Considering the fact that adulteration in loose milk has been going on without any check, milk has also emerged as the most unsafe drink with the least nutritional value and is considered simply harmful to health.

“There is a significant need to educate the common men about the risks associated with having unhygienic milk that can cause various diseases to the human body,” she concluded.

10.77 MILLION COTTON BALES REACH GINNERIES

RECORDER REPORT | APR 4TH, 2019 | MULTAN

Seed cotton (Phutti) equivalent to 10.77 or 10,772,306 bales have reached ginneries across Pakistan till April 1, 2019, registering a shortfall by 6.9 per cent compared to corresponding period of last year.

Out of total arrivals, over 10.76 million or 10,769,139 bales have undergone the ginning process, says a fortnightly report of Pakistan Cotton Ginners Association (PCGA) issued here Wednesday.

Arrivals in Punjab were recorded at over 6.622 million or 6,622,913 bales showing a 9.50 per cent shortfall and over 4 million or 4,149,393 bales in Sindh registering 2.45 per cent shortfall compared to corresponding period of last year.

Total sold out bales were recorded at over 9.9 million or 9,963,111 bales including over 9.8 million or 9,860,781 bales bought by textile mills and another 102,330 bales purchased by exporters.

As many as 809,195 bales were still lying with the ginneries as unsold stock. Sanghar district of Sindh continued to remain on top with cotton arrival figures of over 1.28 million or 1,289,369 bales while Rahimyar Khan district of Punjab secured second berth with arrival figure of 1.19 million or 1,193,298 bales and Bahawalnagar stood third with just over a million or precisely 1,007,221 bales. The statistics show the shortfall was witnessed in 25 cotton districts out of total 32 including 18 out of total 21 in Punjab and seven out of total eleven cotton districts in Sindh.

The report does not include cotton figures from districts of Kasur, and Sargodha. Only eight (8) ginning factories were now operational in the country including seven (7) in Punjab and one in Sindh. However, 28 factories were operational during corresponding period of last year including 22 in Punjab and six in Sindh.

RS290BN TO BE SPENT ON AGRI SECTOR

Amin Ahmed Updated April 03, 2019

ISLAMABAD: The government is planning to launch various projects in five key agriculture sectors — water, crops, markets, fisheries and livestock — amounting to Rs290 billion in five years, Secretary National Food Security and Research, Muhammad Hashim Popalzai said on Tuesday.

An important component of the projects to be launched in July is to increase yield of major crops — sugarcane, rice and wheat — and boost adoption of oilseeds.

The National Agriculture Emergency Programme aims to conserve and increase productivity of water; dramatically increase yields of major crops and boost adoption of oilseeds; harness untapped potential of fisheries; livestock initiatives for small and medium farmers; transform agriculture product markets; and increase access to finance.

Mr Popalzai said performance of the agriculture sector declined by 60pc in terms of budgeting and priority in development budget since devolution.

Federal and provincial allocations used to be around Rs40bn but post-devolution these have been reduced to Rs20-22bn, the secretary said.

During the fiscal year ending June 30 this year, the allocation is expected to remain at Rs20bn, he said, adding, “This amount should have been between Rs60-70bn if translated in dollar term.”

Though agricultural development and research has stagnated over the past several years, the decline in agriculture can be reversed in the short term, and to sustain agriculture growth, work on the long term strategy could be started without any delay, he stressed.

For the first time since devolution, the federal government’s share in eighteen projects of five key sectors of agriculture during the next five years will be Rs92.5bn.

The share of federal government in development of water sector will be Rs71bn; crops Rs1.65bn; fisheries Rs3.51bn; and livestock Rs1.32bn. The development of markets would be fully funded by Punjab since these would be developed in the province.

In water sector, the investment will be Rs218.5bn; in crops Rs44.82bn; development of markets Rs11.50bn, fisheries Rs Rs9.28bn, and livestock Rs5.60bn.

EXPORT OF WHEAT ALLOWED

ZAHEER ABBASI | APR 3RD, 2019 | ISLAMABAD

The federal cabinet Tuesday allowed export of one million tonnes of wheat and decided to rename Statistics Division as Social Protection and Poverty Alleviation Division and placed it under the administrative control of Ministry of Planning, Develop-ment and Reform.

This was stated by Minister for Information and Broadca-sting Chaudhry Fawad here on Tuesday while briefing the media persons about the decisions taken by the cabinet chaired by Prime Minister Imran Khan.

The information minister, however, stated that federal cabinet gave formal approval for renaming Statistics Division as Social Protection and Poverty Alleviation Division and placing it under the administrative control of Ministry of Planning, Development and Reform instead of Finance Ministry.

The minister said that the name of Benazir Income Support Programme (BISP) is not being changed and various initiatives launched by the present government including Sehat Card, Kafalat Programme and Sasta Ghar Scheme will be added to the BISP.

The minister said that Dr Sania Nishtar will be heading the new division and it will coordinate functions of different organisations under the newly launched Ehsaas Programme. The minister stated that financial aid is provided to the poor people through BISP, Zakat, and Pakistan Bait-ul-Maal, whereas under the new social welfare programme, new initiatives will be taken.

However, Minister of State for Revenue Hammad Azhar while speaking at a function stated that federal cabinet has decided that Statistic Division will no longer remain under the administrative control of Ministry of Finance because of its alleged involvement in manipulation of economic data and showing higher growth on the instructions of previous finance ministers.

The minister said that although the issue of difference between Foreign Minister Shah Mehmood Qureshi and Jehangir Tareen was not discussed in the federal cabinet, the Prime Minister has expressed his displeasure on bringing the internal party differences in public.

The Prime Minister directed the concerned ministries to prepare a complete roadmap on wheat, cotton and rice and stated that after a long time sugarcane growers got full payment of their crops. The minister further stated that Prime Minister Khan directed to evolve a policy on premium money charged (own money) on vehicles.

The minister said that Finance Minister Asad Umar would unveil Economic Roadmap for development of industries and other sectors and Power Minister Umar Ayub Khan will brief about steps with regard to energy sector. He said that efforts would be made to ensure that no load-shedding takes place in the next summer. The minister said that there are some very good things about the 18th amendment but at the same time some issues are required to be resolved regarding higher education and health as well as fiscal decentralisation to district level from the provinces.

He said that duration of military courts would be extended if a consensus is evolved with opposition; otherwise, it would not be extended, adding it is not necessary that the Prime Minister should meet the opposition leader for consultation with regard to appointment of members of Election Commission of Pakistan. The minister said this consultation could be held over telephone or by involving a third person.

The minister said that the federal cabinet allowed ban on showing Indian Premier League (IPL) matches as the Indian government’s policies against PSL and artists in the post-Pulwama incident compelled Pakistan to take the decision.

He said that so far 33 cabinet meetings were held and 607 decisions were taken and out of them 375 decisions were implemented while remaining are in the implementation process.

He said that the federal cabinet has approved appointment of Air Marshal Asad Malik as Chief Executive of Pakistan International Airlines (PIA), and boards of Pakistan Mineral Development Corporation, Oil and Gas Development Authority, Sui Southern Gas Company, and Sui Northern Gas Pipelines Ltd were reconstituted. Shamsuddin Sheikh has been appointed as Chairman PMDC and Qamar Javed Sharif as chief of OGDCL. Dr Shamshad Akhtar has been appointed as new head of SSGC and Syed Dilawar Abbas as the chief of SNGPL. The cabinet also approved extension in the licence of Vision Air International for one year and appointment of judges of various banking courts.

The minister stated that the federal cabinet approved Rs 57.3 billion for Khassadar of erstwhile Federally Administered Tribal Areas (FATA), apart from approval of Economic Coordination Council (ECC) decisions.

FARMERS ADVISED TO MAKE PLANS FOR RABI CROPS

RECORDER REPORT | APR 3RD, 2019 | KARACHI

The Met Office has asked the farmers to make irrigation plans for the Rabi crops as the dry weather is expected in the next 10 days. Weeds should be uprooted to help attain a maximum yield. It warned the farmers about an output loss if such unneeded plants continued to grow out in the standing crops. The Met said growers should also take steps to preserve their crops and nurseries from damaging impacts of the extreme cold weather.

In the next 10 days: Punjab may witness mainly a dry weather with an isolated rain-thunderstorm in Sargodha and Rawalpindi Divisions between April 5 and 10. Dry weather is also expected to prevail over Khyber Pakhtunkhwa with rain-thunderstorm in Malakand, Hazara, Peshawar and Kohat Divisions between April 5 and 10.

Sindh is likely to undergo mainly dry and hot weather till April 10. Baluchistan may also see widely a dry weather with chances of rain-thunderstorm between April 5 and 10. Weather in Gilgit-Baltistan is also expected to remain largely dry with rain-thunderstorm between April 5 and 10. However, Kashmir may witness mainly a cloudy but dry weather with rain-thunderstorm between April 5 and 10.

GOVT TO SPENT RS290BN ON 18 AGRICULTURE DEVELOPMENT PROJECTS

Fawad Maqsood April 2, 2019

ISLAMABAD: The federal government in collaboration with the provincial governments would spent Rs 290 billion on the development and uplift of agriculture, livestock sectors across the country under National Agriculture Emergency Program during next five years.

The amount would be spent on 18 different projects across 5 areas including increasing of per acre crop yield, water resources conservation, harnessing the potential of fisheries, livestock and increase access to finance, Secretary of Ministry of National Food Security and Research Dr Hashim Popalzai said while briefing to media here on Tuesday.

He said the projects were designed on cost sharing between provinces, federal and farmers, adding that out of the total allocated amount the federal government would provide Rs92.5 billion where as the rest would be managed by the provinces with their own resources. In order to design the projects, 23 working groups were formed with representation of federal, provincial governments and progressive farmers as well as other stakeholders which had held more them 50 meetings so far, he added.

He said the PC-I of these projects is being finalizing and it would be executed by the first month of next financial year, adding Galgit Baltistan and Azad Jammu and Kashmir would be accommodate by the federal government for promoting the agriculture sector in respective areas.

He said Rs 218 billion would be spent on water resource conservation, Rs 44.8 billion on the improvement of major crops per acre output including wheat, rice and sugarcane, where as Rs19.5 billion would be spent harnessing the true potential of fisheries. Dr Hashim said an amount of Rs5.3 billion would also be spent on the development of livestock and dairy development, adding that federal government would share Rs 71 million in water sector, Rs16.6 million in crop and Rs 3.5 million and Rs1.3 million in fisheries and livestock sectors respectively.

He said the federal government had established implementation units for these projects in order to create close coordination with the provincial governments and appointed coordinator, adding that a special unit for crops were also established in NARC.

He further informed that other units for water sector, fisheries development were also established for the swift implementation of these projects and getting the optimal results.

He said excessive wheat output was expected during this year, adding that there were about four million tons of carry forward stocks and the respective provinces were asked to export the stocks as the commodity was competitive as compared the international markets. He said about 200,000 tons of potatoes were also exported during this season, adding that it would help the farmers to compensate the losses.

MODEL DRIP IRRIGATION PROJECT LAUNCHED AT NARC

By Amin Ahmed | 4/2/2019 12:00:00 AM

ISLAMABAD: Though drip irrigation has gradually been braced by progressive farmers at some scale, the adaptation of this water-saving technology in the waterstressed regions of the country has been hampered by its high costs and lack of awareness.

According to Dr Munir Ahmad, Director of Climate Change, Alternate Energy and Water Resource Institute at the National Agriculture Research Centre (NARC) Islamabad, only 40,000 acres in the country is under drip irrigation.

In contrast, the total irrigated area in Pakistan is estimated to be 20 million acres.

A model pilot project has been launched at NARC to advise farmers on the efficient use of water.The solar-powered project spreads over seven acres and comprises three components: citrus orchard on one acre, sprinkler orchard on 2.5 acres and raise bed on 2.5 acres.

As part of its `Caring for water initiative` Nestle, one of the largest multinational food companies, has made an investment of Rs4.5 million in the project to promote the drip and sprinkler technology, said an official of the company.

The firm has already launched an agricultural efficiency project in Sheikhupura in collaboration with the Punjab government which has the potential to help save 54 million litres of water annually.

Talking to a group of newsmen during a visit to the pilot project, Dr Munir Ahmad said the institute had been mandated to develop and disseminate science-based effective technologies and innovative practi-cal management of water, energy and resources in collaboration with provincial and national research and development organisations.

In view of the ef fects of climate change on agriculture, there is a need to bring high value crops under sprinkle and drip irrigation as well as solar pumping irrigation, he said.

Farmers in water-stressed regions of Balochistan have taken keen interest in the drip irrigation technology and have been visiting the pilot project to gain knowledge to adapt it to promote agricultural productivity.

High cost of imported valves, pipes, tubing and emitters from China is the major hindrance in the way of promoting drip and sprinkle irrigation.

Dr Ahmad suggested that the government should seriously consider encouraging the private sector to produce drip irrigationdevices locally that can help introduction of drip irrigation at a massive scale, he said.

In the absence of local industry manufacturing drip irrigation devices, there is less availability of skilled manpower since the technology requires sediment-free clean water and hindrances in agronomic practices.

He said proposals had been submitted to the prime minister`s task force on agriculture and the recent measures to promote agriculture such as green technology would boost introduction of drip irrigation.

Explaining advantage of drip and sprinkle irrigation, Dr Ahmad said 40 per cent of irrigation water can be saved through this technology compared to flood irrigation.

The technology also helps ef ficient utilisation of fertilizer whereas crop yield increases by up to 40pc and water application uniformity reaches over 90pc, he said.

RURAL AREAS IN SOUTH ASIA CAN BECOME HUBS OF INNOVATION, SAYS REPORT

Amin Ahmed Updated April 01, 2019

ISLAMABAD: Despite political instability, several recent policies have created a framework for agricultural reform and rural revitalisation in Pakistan, according to a global food policy report.

The ‘2019 Global Food Policy Report’ — released by the Washing¬¬ton-based Inter¬national Food Policy Research Institute (IFPRI) — says that rural transformation in South Asia is at a crossroads but in just under a decade rural areas could become premier hubs of innovation.

It recommends revitalising rural areas with a focus on five building blocks: creating farm and non-farm rural employment opportunities, achieving gender equality, addressing environmental challenges, improving access to energy and investing in good governance.

Rural areas remain underserved compared to urban areas and face a wide array of challenges across the globe: environmental crisis in China, severe agrarian crisis in India and acute shortage of jobs for the growing youth populations in Africa.

Recent policies have created a framework for agricultural reform and rural revitalisation in Pakistan

To overcome these challenges, the report calls for rural revitalisation, highlighting policies, institutions, and investments that can transform rural areas into vibrant and healthy places to live, work and raise families.

The report says agricultural livelihoods still provide more than 43 per cent of employment, meaning that most jobs in the region are in the informal sector.

It emphasised that implementing a “decent employment agenda” will require improving rural livelihoods. The predominance of smallholder farming communities, their increasing political voice and national commitments to SDGs are prompting governments in the region to emphasise inclusive rural development strategies.

Marked by the deepening cycle of hunger and malnutrition, persistent poverty, limited economic opportunities, and environmental degradation, rural areas continue to be in a state of crisis in many parts of the world, threatening to slow the progress toward the Sustainable Development Goals, global climate targets, and improved food and nutrition security, the report says.

A majority of the world's poor live in rural areas: rural populations account for 45.3pc of the world's total population, but 70pc of the world's extremely poor. The global poverty rate in rural areas is currently 17pc, more than double the urban poverty rate of 7pc.

Looking forward to 2019, the report says the prospects for rural development are encouraging. Across Asia, inclusive employment growth, continued agricultural productivity growth, and strengthening of the agriculture-based rural non-farm economy will be essential to ensure inclusive rural transformation. However, the region remains poorly integrated and is not taking advantage of its cultural affinities, common geography or the advantages of proximity, the report points out.

In Pakistan, despite political instability, several recent policies have created a framework for agricultural reform and rural revitalisation. These include the 2018 National Food Security Policy and National Water Policy, the 2012 National Climate Policy and enabling legislation of 2017, the 2018 Provincial Agriculture and Water Policies, and the National Drinking Water Policy.

Despite an acceleration of urbanisation in recent years, South Asia's demographic transition has been slow and the region remains predominately rural — 67pc of the population lives in rural areas. Although rural poverty has declined sharply, one-fifth of South Asia's rural population remains poor.

The structure of South Asia's national economies has changed dramatically in recent decades, marked by a sharp decline in the share of the agriculture sector. Agriculture now accounts for less than 16pc of regional gross domestic product (GDP) in South Asia.

LUCRATIVE PACKAGE FOR FARMERS IN NEXT BUDGET: QAISER

The Newspaper's Correspondent Updated April 01, 2019

SWABI: National Assembly Speaker Asad Qaiser said on Sunday that a lucrative package would be announced by the Pakistan Tehreek-i-Insaf government for the country's farmers in the upcoming federal budget.

Talking to mediapersons here, he said that the government had been giving great importance to the farmers as they could enhance production if their genuine demands were fulfilled. He said that due status would be given to the farmers and package would be only for the true peasants.

Answering a question, he said that the previous governments had failed to give due importance to the agriculture sector.

NA speaker says govt giving importance to agriculture sector

The NA speaker said that a package would also be announced for the youth who were the future builders of the country.

He added that Prime Minister Imran Khan had already announcedestablishment of a separate ministry for poverty alleviation.

"The ministry would give special importance to the females to free them from the clutches of poverty," he said.

Mr Qaiser said that the government had presently focused its attention on strengthening the country's economy which was a prerequisite for prosperity. He said that the government had already taken steps for boosting the country's economy.

YASIR'S FATHER OVERJOYED: Syed Khaki Shah, father of spin wizard Yasir Shah, has said that his son is the first personality of Swabi district to get Sitara-i-Imtiaz.

Talking to Dawn on Sunday, Khaki Shah said as Yasir was in the UAE in connection with five-match One Day International Series against Australia, he received the award conferred on him by Governor Shah Farman, on behalf of President Arif Alvi.

"There was no limit of my joy when I was receiving the award on behalf of my son. It was really great honour for me and my family and the credit goes to Yasir Shah who enabled us to have such dignity and honour," said Khaki Shah.

He added that his son had worked very hard, built up his cricket career with unabated struggle and practice and finally got the award. Yasir Shah, a resident of Sairi village of Swabi, was awarded Sitara-i-Imtiaz in acknowledgment of his extraordinary performance in the field of cricket in a short span of time. Yasir is the second bowler in the cricket world to take fastest 100 wickets and the fastest to complete 200 wickets haul.

PEACE WALK: Speakers at the end of a peace walk said that people from all walks of life should play their role in eradication of drugs from the society.

The walk against drug menace was held in Yar Hussain by members of the civil society and local jirga.

They said that if society made joint efforts the sale and use of drugs could be easily controlled.

THOUSANDS MARCH IN SPAIN TO SEEK MORE HELP FOR RURAL AREAS

Agencies April 01, 2019

MADRID: Thousands of Spaniards gathered in Madrid on Sunday to demand that the government take steps to curb the depopulation of rural areas.

Sunday's march under the slogan "The Revolt of the Emptied Spain" was organised by grassroots groups from rural areas in the southern European Union nation.

In Spain, 90 percent of the population is now concentrated in 30 percent of the country's territory, namely in Madrid and the coastal areas. That leaves 10 percent of its people spread over large swaths of the interior.

On Friday, the government announced measures to improve internet networks in the countryside.

The march comes before Spain's April 28 general election, when rural areas could play a key role in deciding if the Socialists stay in power. Spanish election law gives more weight to underpopulated areas.Of the 350 parliamentary seats at stake, 101 represent sparsely populated provinces.

The main parties in the April 28 vote, aware of rural voters' anger, were all represented at the march dubbed the "Revolt of an Emptied Spain".

Ministers from the ruling Socialist party included economy chief Nadia Calvino, Environment Minister Teresa Ribera and Agriculture Minister Luis Planas.

The Socialist party has pledged to support professional training and internet access in rural areas.

The centre-right Ciudadanos party has proposed sharp tax cuts for the residents of towns with fewer than 5,000 residents. Its leader Albert Rivera also took part in Sunday's march.

Police counted around 50,000 along the main march route, while organisers estimated turnout at nearly twice that.

"This Spain, the emptied Spain, wants its voice heard," the organisers' manifesto said.

The Economic and Social Council of Spain, a body that advises the government on economic and labour issues, said in a report in early 2018 that the country counts around 3,900 villages with fewer than 500 residents.

Of those, nearly one-third have fewer than 100 inhabitants and face "maximum risk of extinction", it said.

Two of the provinces most hit by urban drift are Teruel in the east and Soria, north of Madrid.

In Teruel, "bank branches have disappeared," said Josefina Soriano of the advocacy group "Teruel Exists".

"There are elderly people who have to ask a neighbour to go to the (nearest town) to withdraw money for them," Soriano said.

Angel Fernandez, a Soria farmer, said: "The province is dying. Despite its great potential, they're leaving us without trains, without highways."

INTEREST RATE TIGHTENING AND RUPEE'S HEALTH

Mohiuddin Aazim Updated April 01, 2019

The recent tightening of the interest rate should help rein in galloping inflation in coming months. However, the rupee may continue to remain under pressure as external-sector fundamentals will take more time to improve even after we enter a loan programme with the International Monetary Fund (IMF).

In March alone, the rupee lost 1.4 per cent value to the dollar as end-quarter external debt servicing peaked, bringing its total loss against the greenback to 15.9pc in the first nine months of 2018-19.

Despite the tightening of the policy rate by 375 basis points so far — from 7pc at the close of the last fiscal year to 10.75pc now — not only the rupee has lost 15.9pc value against the dollar in the first nine months of 2018-19 but also its stability remains uncertain. The reason is that the improvement in fundamentals of the external sector has remained limited. Merchandise exports in July-February totalled $15.1 billion after a year-on -year increase of 1.85pc.

But despite a 6pc decline, the import bill is still at $36.6bn. So we have a trade deficit of $21.5bn. It is down 11pc from a year ago. But in terms of volume, it is still too large — and even home remittances of $14.3bn received in July-February fall too short in fixing this deficit, notwithstanding the fact that at this level remittances show about 12pc year-on-year increase.

The problem is with the volumes of foreign exchange inflows, not of the growth trend. Prime Minister Imran Khan and Finance Minister Asad Umar keep telling us that brighter times are ahead and lots of foreign investment is in the pipeline. Unless that investment actually starts flowing in, the foreign exchange crunch will likely persist not only during this fiscal year but also perhaps in the next few years.

The rupee lost 1.4pc value to the dollar as external debt servicing peaked, bringing its total loss against the greenback to 15.9pc in the first nine months of 2018-19

That's the view the IMF has also taken. Once we enter into the Fund programme, the government will have to take politically tough measures, like taxing the big and the powerful that are still out of the tax net and containing its development and non-development spending to keep the fiscal deficit in check. Besides, the central bank will have to discontinue the old practice of providing cushion to the rupee through interventions in the foreign exchange market. Meanwhile, the cost of external debt servicing can only be expected to grow further after borrowings of $9.2bn from friendly countries in the first three quarters of this fiscal year. In the first half of the year, Pakistan spent $5.36bn on the servicing of external debt. External debt servicing had consumed $7.49bn in 2017-18, according to the latest data released by the central bank.

When this write-up is published on April 1, prices of petrol and other fuel oils will have gone up. Energy prices have been on the rise because international oil rates have remained higher than last year's. Besides, even our populist government could not dare reduce the amount of taxes and duties.

The government could not do this to avoid taking a hit on revenue generation. Tax collection is already low.

"In view of the shortfalls in revenue collection and escalating security-related expenditures, it is most likely that the target for the fiscal deficit would be breached," said the State Bank of Pakistan (SBP) on March 29 when it raised its policy rate by 50 basis points to 10.75pc.

The interest rate hike comes amidst continuing underlying inflationary pressure, a larger fiscal deficit (2.7pc of GDP in the first half of 2018-19 against 2.3pc a year ago) and a high current account deficit despite some improvement. The current account deficit narrowed to $8.8bn in July-February from $11.4bn in the corresponding period of the preceding fiscal year. But it still poses a challenge as the improvement has come in the backdrop of $9.2bn foreign funds from friendly countries — China, Saudi Arabia and the United Arab Emirates.

We had to resort to this foreign exchange funding, which carries both economic and political costs, in our quest to avoid a free fall of the rupee. Despite that, the rupee has lost 15.9pc to the dollar so far in this fiscal year. On March 25, SBP's foreign exchange reserves stood at just $10.7bn.

Pakistan is likely to sign a balance-of-payments support deal with the IMF in mid-April. Hopefully, the first IMF loan tranche will come in before June. That will help reduce external debt servicing problems in the April-June quarter besides setting the country on the course of prudent fiscal and monetary management for stabilising the faltering economy.

During his visit to Pakistan in the last week of March, IMF Mission Chief Ernesto Ramirez Rigo met several federal ministers and senior officials. In fact, he met SBP Governor Tariq Bajwa and other senior central bankers ahead of the monetary policy committee meeting.

Whenever the IMF agrees to a bailout package, its demands include the tightening of interest rates. This time, too, the Fund is pushing for the continuation of a tight monetary regime.

The Fund also wants to see our central bank more autonomous and foreign exchange regime freer. It is pressing the SBP to even make inflation targeting a core objective of monetary policy. The SBP decision to raise the policy rate by 50bps from April 1 shows it prefers inflation-fighting to facilitating economic growth.

The central bank has projected 3.5-4pc economic growth in the current fiscal year, far lower than the last year's revised growth of 5.22pc. Lower economic growth means a loss of jobs and a fall in disposable incomes. Both things are going to erode political capital of the PTI.

AQUACULTURE CAN UPLIFT THE ECONOMY OF COASTAL BELT

Younus Sandeela Updated April 01, 2019

Pakistan's coastal belt that stretches over a thousand kilometres has a lot more to offer than scenic beauty and deep ports. Climatic conditions in the area are extremely suitable for modern aquaculture. Exploiting its potential will not only revolutionise the local economy but also contribute towards GDP growth.

Currently, aquaculture in the region is restricted to conventional farming of carp. Due to its very high bone-to-flesh ratio, carp is not a preferred fish and has almost no demand in high-paying markets. The Indian subcontinent and certain parts in Eastern Europe are the only regions where people still consume carp. Another disadvantage of carp is that it is one of the slowest-growing commercially farmed fish species.

Almost all warm water fish grow in hot weather conditions. The moderate climate of Pakistan's coastal region characterised by short and mild winters means better weight gain for longer-duration production cycles of catfish, tilapia and sole. It also means a higher number of harvests in a given year for shrimp and lobster that require a shorter duration.

A good part of this coastal stretch falls within the famous Keti Bandar-Gharo-Hyderabad wind corridor. Even the areas that do not directly fall within the corridor receive significant breeze throughout the year. This means natural oxygenation in ponds that, in turn, means lower dependency on artificial aeration and a reduced risk of mortality because of the sudden drop in the oxygen level in ponds.

Setting up hatcheries and feed mills will have to be a key part of the development plan

Many regional countries with similar climatic conditions have successfully built their aquaculture along modern lines and are earning huge volumes of foreign exchange through exports. Policymakers should study the models of Thailand, Vietnam, Malaysia and Iran to capitalise on this natural advantage.

A well-thought-out strategy is needed to build this sector. In the first phase, some basic steps should be taken without changing the existing model to enable fish farmers to move from low-paying and slow-growing carp towards better-paying and fast-growing catfish, sole and tilapia. This can be achieved by imparting basic training to farmers. They can earn substantially more than they currently do without investing heavily in altering the basic infrastructure. However, the government will have to take some measures urgently to build hatcheries and feed mills for the targeted species.

Many high-value fish like sole (channa marulius), Indus catfish and wallago (Jarka in local language) are found in Indus waters. Farmers get happy if a few of them somehow manage to sneak into their ponds — except for wallago because it is extremely aggressive in nature — as they fetch at least three times the price of the most-prized carp, Roho.

Many farmers intentionally mix a small number of these carnivorous fish with carp. They do it once the carp grows big enough so that smaller carnivorous fish cannot harm it. However, as there are no hatcheries or feed mills for these fish, exclusive farming of these varieties is not possible at present. Setting up hatcheries and feed mills for such kinds of fish will, therefore, have to be a part of the development plan in the first phase.

Another factor that favours a move towards the farming of these high-value carnivorous fish is that the Indus water particularly close to the delta region is infested with wild tilapia. Carp farmers have a tough time trying to control wild tilapia from finding its way into ponds. It aggressively competes with carp for feed. This further slows down the growth rate of carp.

Unlike carp, tilapia breeds extremely well in still waters. Hence, it easily outnumbers the former in ponds. This problem can turn into a huge advantage once carp is replaced with carnivorous fish like sole and catfish. Wild tilapia entering ponds becomes natural feed for carnivorous fish, which keeps the cost of artificial feeding in check.

Once farmers shift towards farming high-value fish, they will also be able to increase fish density in ponds. Unlike extensive farming which depends entirely on natural feed available in ponds, fish is provided with artificial feed in semi-intensive or intensive farming. Hence, a higher number of fish can be farmed as long as it is properly fed. The problem with increasing the number of carp and feeding it artificially is that the wild tilapia present in ponds eats away a good part of this expensive feed. Shifting from carp to catfish and sole farming increases the farmers' revenue in two ways. One, fish fetches a higher price; and two, a higher number of fish can be kept in a given pond, which leads to a higher per kilogram value for farmers.

In the second phase, farmers in the coastal belt can be encouraged to farm species like shrimp, lobster and crabs. The climate along the coastal belt is extremely conducive for this kind of high-value aquaculture. Barring efforts by a few investors who experimented with shrimp farming, no concerted efforts have been put in by the government to develop this extremely lucrative sector. A lack of locally available seed and feed was the main cause for the limited success of these investors. This increased not only their production cost but also the operational risk because the seed airlifted from places as far away as Thailand was prone to high mortality in transit.

The need for moving towards high-value aquaculture emanates from depleting water resources. We must be conscious about the value derived from each litre of water consumed. Per-litre returns in extensive carp farming simply do not justify its continuation. We should soon move towards the intensive farming of high-value aquaculture. Otherwise, we may be forced to abandon aquaculture in the already water-deprived coastal belt.

The government will have to play a proactive role to fully exploit the aquaculture potential. Ensuring seed and feed availability for new high-value species through developing hatcheries and feed mills as independent businesses in the private sector may require an incentive package to attract investors. Many well-established processing units are present in the marine fisheries segment in Karachi. The same can be used to cater to the needs of inland fisheries as well. Building these support businesses will be critical for the overall success of the aquaculture sector.

AGRICULTURE IS IN TROUBLE

From the Newspaper Updated April 01, 2019

The agriculture sector is in trouble. The government admits that the sector cannot grow more than 1.9 per cent in the current fiscal year.

We know that because the government shared this number with the media after the recent approval of the 12th five-year plan. It also envisages 4pc economic growth for this year. Towards the end of the PML-N’s five-year term, policymakers had set targets of 3.8pc and 6.2pc for agriculture and economic growth.

So either policymakers were too optimistic at that time or the political transition has proved to be too depressing for agriculture.

The recently released second quarterly report of the State Bank of Pakistan (SBP) does not project a growth rate for agriculture. But it says that overall economic growth will remain in the range of 3.5pc and 4pc. The SBP report says outputs of three key crops — cotton, rice and sugar cane — have been in decline. It casts doubt on the likelihood of achieving the wheat target of 25.6 million tonnes as well. The report informs us that all minor crops, minus gram and sunflower, have shown a declining trend in output.

The sector is facing problems because of a number of reasons, such as a water shortage, shrinking of the area under cultivation and higher costs of inputs

We know that it is in trouble due to a shortage of water and the resultant shrinkage of the area under cultivation. Other reasons include higher costs of inputs after the rupee depreciation, an uptick in headline inflation, little inter-provincial coordination and strained relations between Sindh and the federation.

The central bank report does not shed light on the performance of livestock, fisheries and poultry sub-sectors that are also a part of agriculture. But it is hard to assume that the livestock sector can grow at a time when there is not enough water for crops and slower economic growth has reduced people's disposable income.

The performance of the livestock sector will become known after the release of the Economic Survey of Pakistan before the close of the fiscal year in June. The same is true for poultry. But seafood exports always give us a clue about the output of the fisheries sector. In the first eight months of this fiscal year, export volumes of seafood have declined about 2pc to 111,000 tonnes. By the way, meat exports increased 10pc to 39,500 tonnes during this period, but that alone does not indicate output growth in the livestock sector.

After stating that agriculture will grow just 1.9pc in 2018-19, policymakers have set agricultural growth targets of 3.2pc for 2019-20, 3.7pc for 2020-21, 3.9pc for 2021-22 and 4pc for 2022-23.

The way the federal government has strained its relations with Sindh, the country's second largest agricultural hub, should be a cause for concern. We need more transparency on agricultural cooperation between Pakistan and China under the CPEC to achieve these growth rates. It is necessary so that the provinces can develop their annual agriculture development plans accordingly.

Politically sensitive topics, like the new National Finance Commission (NFC) award, judicious distribution of irrigation water among the provinces and speculations about a possible repeal of the 18th Amendment to the Constitution, will continue to affect the performance of agriculture in years to come. Under the 18th Amendment, agriculture is a provincial subject, although there is a genuine need and scope for better coordination between the provinces and the federation.

On March 18, Prime Minister Imran Khan approved a national agricultural emergency programme of Rs290bn to fulfil his pre-poll promise of revolutionising the sector. Next day, the National Assembly's special committee on agriculture held its maiden meeting and elected the speaker of the assembly, Asad Qaiser, as its chairman.

This emergency programme is to be implemented over a five-year period. It is aimed at boosting agricultural research and overcoming the shortage of certified seeds and lack of proper storage facilities besides promoting technological advancement, economisation in the use of water for agriculture and import substitution in the edible oil sector.

Since all the four provinces are represented on the parliamentary committee, one can expect that it can come up with an implementable road map for agriculture growth.

All sub-sectors of our agriculture continue to suffer from low productivity. In the crops sector, per-hectare yields are far less than those in other countries. One of its reasons, according to a recently released World Bank report, is a consistent disparity between the crop yields of rich farmers and poor farmers in Pakistan.

"An increasingly unequal distribution of landholding and failure to reform a land tenure and agriculture system that significantly favours large landlords" has given rise to a politically influential landholding class, according to the report titled Pakistan@100: Shaping the Future.

Agriculture may not grow at a sustainable high rate unless this problem is addressed. Can the government do this? Will it be able to garner support from the provinces in so doing? Only time will tell.

In the current environment of political confrontation and uncertainty, it seems too difficult.

With energy prices shooting up every month as old subsidies go and oil prices rise, prices of agricultural inputs, including seeds and fertilisers, will likely continue to increase. Currently, this is a major concern for farmers.

Water shortages may become more acute as no initiative has been taken in the past eight months for building small dams and rainwater reservoirs.

If the country faces a super flood due to the faster melting of glaciers and increased mercury level, as the Federal Flood Commission fears, agriculture will suffer more. —MA

'PAKISTAN RANKS FIFTH IN GLOBAL MILK PRODUCTION'

RECORDER REPORT | APR 1ST, 2019 | SIALKOT

Dairy and livestock sector has great potential to accelerate the pace of economic development of Pakistan. The Cheese production is an emerging sector for domestic and international investment. Small and Medium Enterprises Development Authority (SMEDA) has prepared and published "cheese" value added dairy product-prospects for Pakistan.

Official sources told Business Recorder on Sunday that rank of Pakistan is fifth in global milk production with over 50 billion litres annually. It is estimated that annual demand of cheese is more than 5,000 tonnes in the country whereas local production remains at around 3049 tonnes and cheese production is emerging as an important potential sector investment. SMEDA in this regard has prepared and published Cheese Value Added Dairy Product-Prospects for Pakistan with the objective to evaluate investment potential of this sector and disseminate information for local and international investors to make future investment decisions.

The report has been prepared in consultation with stakeholders and development experts and has been reviewed by technical experts. The study conducted by SMEDA will be helpful for the domestic and international investors to come forward and take initiative for investing in this emerging potential sector, sources added.

Meanwhile, Ch Altaf Ahmed and Muhammad Bashir, progressive stakeholders engaged with dairy and livestock sector, while expressing their views said that it is high time for the government to take drastic steps for the promotion of cheese sector at gross roots level and announce special incentives for the purpose.

PFA TO CRACK DOWN ON SALE OF OPEN MILK ACROSS PROVINCE

By Asif Mehmood Published: April 1, 2019

LAHORE: The Punjab Food Authority (PFA) has initiated work on a project in order to ensure that people across the province are provided pure and safe milk.

During the first phase, the provincial capital will serve as a model city, free of contaminated and adulterated milk. The sale of open milk will be banned and only pasteurised milk will be available. However, the deadline for the ban has not yet been announced.

A meeting was also chaired in this regard a few days ago. The Punjab Food Minister Samiullah Chaudhry, Punjab Livestock Minister Sardar Hasnain Bahadur Dreshak, and PFA Director General Muhammad Usman were present during the meeting.

Several decisions regarding the ban on the sale of open milk were taken during the meeting while responsibilities were also assigned to the departments concerned. Further, plans for setting up pasteurisation units were also discussed.

The Punjab food minister stated that after making Lahore a model for banning the sale of open milk, the crackdown will also be extended to other parts of the province.

Punjab Livestock Minister Sardar Hasnain Bahadur Dreshak said that banning the sale of open milk is the only way to stop the adulteration mafia. “Eliminating adulterated milk will directly benefit farms which produce pure milk,” he said.

PFA Director General Muhammad Usman revealed that pasteurisation units will be set up in Lahore. The pasteurised milk will be packed after a laboratory reviews. In this manner, the business of selling adulterated and contaminated will slowly be eliminated while the sale of open milk will be eradicated in Punjab by 2020, he said.

Work on the project will begin after consultation with all the departments concerned as soon as the plans are completed.

In addition to this, a public awareness campaign will also be initiated across the province. The decision to ban the sale of open milk in Punjab was taken by the previous government in 2017 and 2020 was set as the deadline for this initiative. The current government is forwarding the initiative.

Experts say that pasteurisation is a process whereby milk is heated to a certain temperature for a short amount of time which kills off all the germs and impurities which can be harmful for human health. The milk is then cooked down, packaged and supplied to the market.

Experts add that pasteurisation also protects us from food and water borne disease. However, those selling milk argue that boiling the liquid affects the taste and the freshness.

UN TO LAUNCH DECADE OF FAMILY FARMING NEXT WEEK

Amin Ahmed Updated May 26, 2019

ISLAMABAD: The United Nations is launching next week a Decade of Family Farming (2019-28) which provides a unique opportunity to ensure food security, improve livelihoods, better manage natural resources, protect the environment and achieve sustainable development, particularly in rural areas.

Data compiled by the Food and Agriculture Organisation (FAO) says family farms produce more than 80 per cent of the food in the world and they occupy around 70 to 80pc of farmland worldwide. Women hold only 15pc of farmland, while they provide almost 50pc of farm labour. More than 90pc of farms are run by an individual or a family who rely primarily on family labour. There are more than 600 million farms in the world today.

A 'Global Action Plan' fuelled a robust process of political dialogue among the 197 member states of the FAO, involving all relevant actors, which resulted in the formulation of national and regional policies, programmes, activities and institutional arrangements in support of family farming. The official ceremony for launch of the decade is taking place at FAO headquarters in Rome on Monday.

The purpose of action plan is to mobilise concrete, coordinated actions to overcome challenges family farmers face, strengthen their investment capacity, and thereby attain the potential benefits of their contributions to transform societies and put in place long-term and sustainable solutions.

The Global Action Plan aims at accelerating actions undertaken in a collective, coherent and comprehensive manner to support family farmers, who are key agents of sustainable development.

Family farmers hold unique potential to become key agents of development strategies. Family farming is the predominant form of food and agricultural production in both developed and developing countries, producing over 80pc of the world's food in value terms. Given the multidimensional nature of family farming, the farm and family, food production and life at home, farm ownership and work, traditional knowledge and innovative farming solutions, the past, present and future are all deeply intertwined.

To feed the world and do it sustainably, an urgent and radical shift in our food systems is necessary. To be effective, transformative actions must add-ress a complex set of interconnected objectives encompassing economic, social and environmental dimensions.

Family farmers — including pastoralists, fishers, foresters, indigenous people and other groups of food producers — are at the heart of this issue. They provide the majority of the world's food, are the major investors in agriculture and the backbone of the rural economic structure.

SINDH FOOD DEPT EMBROILED IN MEGA CORRUPTION SCAM INVOLVING WHEAT PROCUREMENT

Mohammad Hussain Khan Updated May 26, 2019

HYDERABAD: A multi-billion-rupee scam involving procurement of wheat and misappropriation of jute bags, also called bardana, has hit the Sindh food department after hundreds of thousands of such bags are either simply missing/ misappropriated or stuffed with chaff, it emerged on Saturday.

The scam invited the attention of the National Accountability Bureau (NAB), which first sealed and then unsealed several warehouses in upper Sindh's Larkana and Sukkur regions after counting.

Inquiries by Dawn revealed that apart from the apex anti-graft watchdog, the Sindh Anti-Corruption Establishment (ACE) also lodged FIRs in Dadu, Sanghar and Karachi against flour mill owners, food officials and other private persons, including middlemen or other beneficiaries.

The food department is yet to come on record to share official figures regarding this massive financial bungling.

NAB's inquiries are likely to culminate into a reference against unscrupulous elements including private persons and food department officials.

Around 2-2.5m jute bags are either missing or misappropriated from warehouses

NAB initiated action in Sukkur, Ghotki, Naushahro Feroze, Khairpur, Jacobabad, Qambar-Shahdadkot and Kashmore.

Sources in the Sindh food department told to Dawn that NAB had not shared anything with them, but it appeared that between two million to 2.5m bags were either missing from warehouses or misappropriated.

They said that the only figure available was of 194,000 bags, which according to the ACE's findings were misappropriated in Dadu district.

NAB had investigated the position of 2017-18 wheat crop's stocks in godowns of Sukkur and Larkana regions. This year, the Sindh government has not yet decided to procure wheat considering the commodity's large carryover stocks.

NAB intervened to look into available wheat stocks of Sindh for 2017-18 crop season following receipt of a complaint before Ramazan that wheat bags had been missing in warehouses.

"We checked warehouses first in Sukkur in the presence of magistrates following the complaint," said a NAB source. Then, he added, similar surprise visits were paid to warehouses in other districts as well and this led to a proper investigation.

NAB completed counting of bags and the difference of missing bags was brought on record to thwart any attempt by food officials to purchase wheat from market and meet the difference. It also found out wheat bags were placed in columns and rows.

Adulterated wheat (mixed with chaff and husk) was kept in midst of bags to dodge investigators. The probe by and large involves wheat season of 2017-18 but in Larkana region's procurement centres like Nairabad, Warah and Kambar crops of 2013-14, 2014-15, 2015-16, 2016-17 and 2017-18 seasons were not found.

"Only in Sukkur Rs2bn losses were assessed in terms of missing bags", disclosed the NAB source. "There are reports food officials were trying to buy wheat to meet deficit of bags in official record but it is not possible. A reference is quite likely relating to financial malpractices," he said.

Around 25 mills in Ghotki and 18 in Sukkur were also sealed off and then unsealed following verification of stocks.

Food department preserves wheat on private premises like flour mills also. It is often released to same mills on a credit basis for wheat flour production. During the last crop season, the food department had procured 1.4 million tonnes of the crop when it had around 300,000 tonnes of carryover stocks.

NAB, for instance, has estimated the value of wheat at Rs966.044m towards difference/shortage of 125,940 jute bags of 100kg and 342,609 50kg bags in Khairpur district.

A shortage of 2,059.099 metric tons of wheat of five crop seasons was missing in 6,888 jute bags of 100 kgs and 14,318 polypropylene (PP) bags of 50 kgs in procurement centre Qambar as well.

The ACE also completed an inquiry regarding Sanghar's six talukas where FIRs were lodged for each taluka, involving Rs1.46bn misappropriation.

The ACE lodged the cases following completion of its findings in which it determined a loss of Rs461.125m in Shahdadpur taluka; Rs455.78m in Sinjhoro, Rs460.2m in Tando Adam; Rs150m in Khipro; Rs105.25m in Jam Nawaz Ali and Rs121.69m in Sanghar taluka in Dec 2018.

"Around 1.7m wheat bags were procured officially in Sanghar. But most of the bardana went to middlemen and those who don't own land or were traders. Some traders were based in Punjab as per banking transactions," said ACE official Zamir Abbasi.

The Rs1.46bn misappropriation includes cost in the heads of support price, incidental charges, cost of jute bags, transportation.

These cases were lodged against deputy director-food, Hyderabad, district food controller (DFC) Sanghar, godown in charges and middlemen.

"Fictitious forms-VII [a piece of revenue document] were produced to supply wheat and get support price of Rs1,300. This document is mandatory to get the support price," Mr Abbasi said.

Likewise, 194,000 wheat bags were missing, which involved the misappropriation of Rs660m.

Resultantly, two flour mill owners (whose pre-arrest bail rejected recently), nine godowns in charges, Dadu deputy commissioner and deputy director, Jamshoro were nominated in the case.

Mr Abbasi said around Rs5bn was returned to the food department by millers, who got wheat on a credit basis. "These millers were provided wheat on a credit basis although there was no government policy to this effect," he remarked.

Now, 45 mill owners, the DFC concerned and others face charges.

The DFC-Malir, in his May 6 letter, informed the ACE that Rs4.971bn was recovered and a balance of Rs502.099m was pending for which cheques were given and being deposited.

The letter said 1.682m bags were issued in one month on credit in Malir and East districts for wheat worth Rs5.473bn.

The ongoing NAB investigation and registration of cases by the ACE clearly show how skewed and tainted the wheat procurement process in Sindh is. The procurement is all about support price of wheat, which has been Rs1,300/40kg for the past several years.

This subsidy is given from taxpayers' money by the government and it is primarily meant for farmers but it hardly reaches to them due to institutional leakages and lapses in process.

Gunny bags are doled out only among political, non-political, influential landowners and government functionaries, who own land. Small farmers with 16 and 25 acres or lesser landholdings end up running from pillar to post to get bags in anticipation of the official support price.

A farmer provides his land's document to show cultivation of wheat and to pay challan for bardana so that wheat could be supplied to the procurement centre. An amount of Rs125 is charged towards 100 kg jute bag and Rs60 for polypropylene bag. A farmer is bound to supply wheat to the procurement centre but they are forced to transport it to warehouses on their own.

"The cost towards transportation of wheat from procurement centres to godown by us is stomached by officials," said Nadeem Shah, an old wheat grower.

He complained that a deduction of around 2.5kg was made by officials on 100kg bag in addition to the weight of the jute bag.

"It is good that the Sindh government is not procuring wheat this year. Quantitative ratio of farmers getting support price is always negligible because bardana is not supplied to them," he said.

He claimed that offloading of wheat was to be done by food department workers but the cost was borne by farmers.

"We indeed require putting things on a right track so such lapses would not occur and a transparent procurement of wheat is ensured. To achieve the goal, this exercise should begin from at the time of cultivation of the wheat crop so that documents' verification can easily be done and when procurement season starts genuine farmers are facilitated in terms of supply of bardana," said a Karachi-based source.

Until recently, growers had been holding protests to press the government to procure their crop. But the government remained indecisive amid reports that the food department had moved a summary asking it to allow the procurement. The wheat crop season had almost been completed.

An illegal economy is in fact thriving behind the process of wheat procurement. As the season begins, food officials provide bardana to middlemen or traders, who purchase wheat at Rs1,050 to Rs1,110 per 40kg from growers and then sell it to the food department at the official price of Rs1,300/40kg.

The differential amount, which is pocketed by a nexus of officials and traders, is in addition to offloading and transportation charges that are to be paid by the department but practically borne by growers.

NUTRITIONAL CHALLENGE: UNCERTAIN FUTURE OF FOOD FORTIFICATION PROGRAMME

By Rizwan Asif Published: May 26, 2019

LAHORE: Pakistan is known for its mouth-watering, traditional food that comes in a wide variety of vegetarian and non-vegetarian choices. However, owing to poverty and lack of access to healthy food, the country is ranked the second most malnourished in Asia, as per the International Food Policy Research Institute (IFPRI).

In order to overcome the major public health challenge of micronutrient malnutrition, the previous governments of Pakistan, together with the funding of international institutions, initiated the ongoing Food Fortification Programme (FFP). Under the initiative, the concept of 'fortified flour' was introduced.

However, the incorrect policies of authorities, lack of research and strong reservations of public departments and industries at large, made it very difficult for the programme to achieve its goals.

The Pakistan Flour Mills Association and the Punjab Food Department termed the flour fortification process 'unsatisfactory' and suggested that a nutrition survey be carried out in Punjab's urban and rural areas. The objective was to determine which nutrients are lacking among consumers.

According to details obtained by The Express Tribune, the Food Fortification Programme was initiated in 1998 and popularly known as the Foladi Aata (iron-containing flour) plan. An international nongovernmental organisation started working with the Pakistan flour mills association and factory owners were made an offer to install micro feeders on their plants to get the pre-mix free of cost.

From 2000 to 2003, more than 300 flour-mill owners installed micro feeders in their mills on a self-help basis and started preparing fortified flour. However, during the tenure of former president Pervaiz Musharraf, the project became stagnant after the introduction of the district system.

In later years, different governments and NGOs tried to continue the project, but remained unsuccessful. A few years ago, the previous government, through the British government's programme UK Aid, stepped up their efforts to eliminate the food crisis in Pakistan. As a result, a national fortification alliance, under the federal health department, was formed and the Food Fortification Programme started anew.

As per the project requirement, a decision was taken to install free-of-cost micro-feeders in flour, oil, and ghee mills across all the provinces of Pakistan. The micro feeders, which were originally worth Rs700,000, were bought with the funding of the British government and are currently being provided to mill owners to include the pre-mix in flour.

Even though the provision of fortified flour would have considerably helped to alleviate the nutrition deficiency among the population, various hindrances, together with criticism from certain bodies, slowed down the project.

According to the data published by the FFP, out of more than 1,000 mills in the country, 477 started flour fortification. The report further said that in Pakistan, only 12% of the overall flour is fortified.

The FFP's website's data states that 386 flour mills in Punjab are producing fortified flour, while there are 34 such mills in Sindh, 24 in Khyber-Pakhtunkhwa and 33 in Islamabad. In Balochistan, none of the flour mills has started producing fortified flour.

It is worth noting that the current food fortification programme relies on data obtained through the national nutrition survey conducted in 2011.According to the country's industrial organisations, the survey was "incomplete and unrealistic."

According to the mentioned nutrition survey, five million children below the age of five die in Pakistan every year and 250,000 of them are lost to food shortages. The survey report said that 44% of children in Pakistan have iron deficiency, while 54% suffer from a lack of the Vitamin A. Another 40% are Vitamin D deficient.

Similarly, half of the female population in the country is anaemic, while 37% of pregnant women suffer from iron deficiency. Also, 46% and 69% of the country's women are Vitamin A and Vitamin D deficient, respectively. Consequently, newborn babies birthed by nutrition-deprived mothers have weaker brains and are prone to other diseases.

Under Vision 2025, the current government intends to make the country 'hunger-free' and to that end, claims were made to eliminate food shortage, together with the introduction of new laws on federal and provincial levels to tackle the issue.

However, except for Punjab, there has been no progress in other provinces at all. The Pakistan standards and quality control department has set criteria for flour fortification according to which, in one ton of flour, 250 grams of pre-mix is added. The premix comprises folic acid, iron, and vitamin B-12.

International institutions involved in the project, however, have differences with local industries in Pakistan. A few days ago, the Pakistan flour mills association protested against Tauseef Janjua, the Pakistan representative of international institutions involved in the project. According to the flour mills association, Janjua has been harassing flour mill owners and has been compelling them to fortify flour even though the pre-mix provided by international institutions has expired. As a result, flour mills have now purchased their own pre-mix for the process of fortification.

Speaking to The Express Tribune, Pakistan flour mills association group leader Asim Raza said that women and children do face an acute lack of nutrition, but using a uniform approach to tackle the issue across the board is not the solution.

"In many of the areas of Punjab, residents don't face deficiencies," he said. "The government should, therefore, conduct an implementable and authentic national nutrition survey on the basis of which it should be decided which area lacks which nutrient and how fortification should be carried out."

Asim Raza added that efforts were made to exert governmental pressure on flour mill owners, but it was resisted.

"We want to improve the health of the Pakistani nation, but it is important that governmental and international authorities take measures based on authentic facts and figures."

When contacted, secretary food Punjab, Naseem Sadiq said that in order to reap maximum benefits of the FFP, a mapping must be carried out on the district level because the wheat/grains of each area are different.

"People belonging to different areas lack different nutrients in their bodies," Sadiq said. "The current fortification programme has been designed by keeping the urban population in mind, whereas more than 60% of the population lives in rural areas. Therefore, a new survey must be conducted in rural areas to find out about deficiencies prevalent among people over there."

He said that the desired objectives of the programme will not be achieved by implementing a Europe-tailored programme in Pakistan, especially in Punjab.

"People in every area have different eating habits and things are changing. Fifteen years ago, one person used to consume 1.25 kg flour per month, while nowadays, they consume seven kg flour in the form of rotis.

When contacted for a comment, Janjua – the focal person for international institutions — said that he doesn't have anything to say at the moment, however, he added that his communications department will get back to The Express Tribune later.

Published in The Express Tribune, May 26th, 2019.

POULTRY SECTOR DEMANDS TAX REMOVAL ON FEED CONTENTS

By Our Correspondent Published: May 26, 2019

ISLAMABAD: The national and international compliance standards of chicken products are giving a tough time to Pakistan in the standard-conscious world, stated the Poultry Association of Pakistan.

A delegation of the association, in a meeting with Adviser to Prime Minister on Commerce, Textile and Industry Abdul Razak Dawood, discussed the performance of the poultry sector, its potential and how it could be made more efficient and competitive. Locally-produced feed contents should be free from sales tax, the association suggested. It will reduce feed cost, turning the sector more competitive. They highlighted the need for chicken vaccines, important for the sector's growth, to be allowed at zero import duty.

Appreciating the performance of the poultry sector, the adviser emphasised that poultry producers should be more aggressive while making inroads into the regional market. "Pakistan needs to capitalise on the global Halal market," he said. He assured the association that their proposals, related to tariff, taxation and facilitation, would be analysed and considered for implementation in order to help the sector grow.

"Major food players like Cargill are enhancing their presence in the Pakistani market and our poultry players need to capitalise on it," Dawood said.

Cargill, the global agro-giant, has pledged to invest more than $200 million in Pakistan over the next three to five years. Commercial poultry in Pakistan, which was established in 1962, is one of the largest agro-based segments having an investment of more than Rs750 billion.

There are over 15,000 poultry farms spread in rural areas across the country. The capacity of farms ranges from 5,000 to 500,000 broilers.

Annually, Pakistan produces around 18,000 million eggs and over 2,250 million kilogrammes of chicken meat. It shows that there is a huge potential for the poultry sector to cater to domestic and export sectors.

UNHYGIENIC MILK WASTED, ADULTERATORS HELD

Our Correspondent May 26, 2019

MANSEHRA: The district administration and food department, in a joint operation on Saturday, have arrested over a dozen adulterators and wasted a large quantity of unhygienic milk.

A joint team led by Assistant Commissioner Ali Sher and Assistant Food Controller Shaukat Sultan, intercepted vehicles through which milk was being supplied to commercial and domestic consumers in the city and its suburbs.

Sultan told reporters that milk weighing hundreds of kilograms was thrown in drain after it was proven injurious to health through a mobile milk laboratory that had arrived in Mansehra from Peshawar.

“The food department has zero-tolerance for adulterators and vendors who mix chemicals in milk and thus play with the lives of people,” said Sultan.

SINDH WHEAT GROWERS COUNT RS20 BILLION LOSSES

Shahid Shah May 26, 2019

KARACHI: Sindh’s wheat growers have suffered losses of more than Rs20 billion, as market prices fell in the province after Sindh government failed to provide support price to farmers, growers have said.

Majeed Nizamani, president, Sindh Abadgar Board, told The News that growers faced a loss of around Rs300/40kg. “The province is having a bumper crop of around 4.2 million tons this year,” he informed.

Sindh cabinet had decided not to purchase wheat from growers and export 0.5 million tons of wheat this year out of 0.8 million tons.

The Sindh Food Department had cited the reason that it took loan from different banks of Rs135 billion for the purchase of wheat in the province, of which Rs100 billion were not paid so far.

Agriculture Policy Institute (API), formerly known as Agriculture Prices Commission of Pakistan, notifies the indicative prices of commodities, while the provincial governments provide support to the growers by controlling the prices in the market, called support price.

They do it by procuring certain quantity when prices fall below that price.

Besides, food departments procure wheat to maintain food security.

Growers said that support price of the government controlled the price in the open market, and traders purchased the commodity on no more than a difference of Rs25/40kg, but due to unavailability of support price, average selling price of wheat was Rs1,000 in the province against support price of Rs1,300/40kg.

“It is not wrong if I say we lost more than Rs20 billion this year,” Nizamani said.

It was a privilege of the Sindh government to procure or not to procure wheat from the growers, but maintaining the support price secures the farmer.

“Whatever quantity it procured, we never objected, as it controlled the market prices and traders were unable to exploit the growers,” he said.

The provincial government had procured only 1.4 million tons last year out of 3.6 million tons at a support price of Rs1,300/40kg.

This year, Punjab is procuring 4.0 million tons. Pakistan Storages and Supplies Corporation (Passco) will also purchase wheat in Punjab.

They will give additional Rs100 per bag to farmers to take wheat to the procurement centre.

Earlier this week, Sindh Food Department banned the inter-district movement of wheat in the province. Growers said it would not benefit the growers, as harvesting was almost over and very little quantity of wheat was left with the growers. However, they suspected shortage of wheat with the government alleging theft of more than 100,000 tons from the government warehouses.

“Either mud is filled in the bags or they are empty,” Nizamani said.

Mehmood Nawaz Shah, a grower leader, said Sindh government could have exported the wheat, as international prices had gone up and rupee had devalued in the country.

Government never stopped procurement in last 20 years, it did stop during the government of Pervez Musharraf, which created the issue of food security, as fewer growers sowed wheat next year, Shah said.

The country had to import wheat from Russia and Ukraine.

Despite of decrease in wheat prices in the province, prices of wheat flour have increased in the retail market.

Farid Qureshi, secretary general, Karachi Retail Grocers Association said flour price increased by Rs2 per kg before Ramazan. “They (mills) say they will further increase the prices in coming days,” he informed.

PUNJAB CABINET ENDS REBATE ON SUGAR EXPORT

THE NEWSPAPER'S STAFF REPORTER Published May 25, 2019

LAHORE: The Punjab cabinet on Friday abolished subsidy as well as rebate on export of sugar in a bid to stabilise sugar prices in the province.

The cabinet meeting chaired by Chief Minister Usman Buzdar also decided to give two kilo sugar per individual consumer in Ramazan bazaars across the province. The Ramazan bazaars will be converted into Eid bazaars from 21st of Ramazan. For Eid bazaars, the Punjab government has provided a subsidy of Rs20 million.

In the light of the directions of the Supreme Court, the cabinet meeting approved fixing levy of Re1 per litre as aquifer tariff (water charges) on water bottling and beverage companies extracting groundwater. Wasa, local government and the irrigation department will issue notifications in this regard.

The cabinet decided opening a separate account for the money collected under this head besides devising a comprehensive mechanism for receiving and utilisation of water charges.

The cabinet meeting approved extending jurisdiction of the Fort Munro Development Authority to include whole Tribal Area of Dera Ghazi Khan and renaming it as "Koh-i-Suleman Development Authority".

The School Education Department apprised the cabinet members of amendments to the transfer policy of teachers. A detailed briefing will also be given to the parliamentary party about the e-Transfer Policy 2013.

The cabinet decided amending the LDA laws with regard to utilisation of land for marquees, marriage and banquet halls. The meeting expressed its satisfaction over the achievement of wheat procurement target.

The cabinet also discussed audit reports of C&W, housing and urban development and public health engineering, irrigation, LG&CD departments and Infrastructure Development Authority Punjab for the audit year 2018-19; reports on biannual monitoring on the implementation of seventh National Finance Commission Award for the periods from July to December 2016, January to June 2017 and July to December 2017; regularisation of support staff of the Punjab Revenue Authority; resource mobilisation proposals for financial year 2019-20; and appointment of the Punjab Pension Fund general manager.

COTTON, CONSTRUCTION DRIVE DOWN GDP GROWTH

Khaleeq Kiani Updated May 25, 2019

ISLAMABAD: At least three important factors caused a crucial setback to the country's dismal economic growth rate this year even though major contributors to GDP missed their targets.

Informed sources told Dawn that during a presentation on the performance of macroeconomic indicators, the Annual Plan Coordination Committee (APCC) was informed on Thursday that the most crucial setback was about 17.5 per cent fall in the production of cotton crop this year owing to two consecutive years of water scarcity.

Major crops including wheat and construction sector were the two other key factors pulling down the growth rate. Pakistan GDP growth rate is estimated to have stood at 3.28pc during current fiscal year, missing a 6.2pc target by a wide margin. One area that extended a crucial helping hand to industry, on the other hand, was almost 41pc growth in electricity generation and gas distribution against its targeted growth of just 7.5pc.

The sources said the meeting was informed that agriculture sector posted a growth rate of just 0.8pc against a target of 3.8pc. Important crops were estimated to grow by 3pc but these actually posted a fall of 6.5pc.

Cotton ginning was targeted to go up by 8.9pc by its output actually fell down by 12.7pc when compared to last year. That meant the combined impact was negative 21.5pc. It was reported that there was massive decline in cotton out as total cotton output stood at 8.98m bales against a target of 14.37 million bales set for the current fiscal year.

The decline in cotton production was attributed to shortage of irrigation water, use of lower inputs – inferior quality of seeds, fertiliser at early stage of crop and reduction of 12pc in sown area.

Wheat crop production increased minimally by 0.5pc compared to the last year but fell significantly behind target due to wheat diseases such as rust and smut affecting the overall yield as per acre of the crop and then a last phase adverse weather conditions.

It was reported that initial estimates put the total wheat output at 24.268m tonnes during the just concluded crop season against a target of 25.56m tonnes. About 1.213m tonnes were reported to have lost due to recent adverse thunderstorms and rains in Punjab and the arid zones.

Some participants were of the view that losses in Punjab appeared to be on the higher side and would be known after a couple of weeks because crops in many parts were still in the open fields.

The meeting was informed that production of rice registered a decline of 3.3pc, whereas production of sugarcane also reduced by 19.4pc over the last year's production. The area sown for rice and sugarcane also decreased by 3.1pc and 17.9pc respectively. All these factors contributed to the decline in projected growth target of agriculture sector.

The APCC was reported that 'other crops' output also fell short of targets as they posted a growth of 1.9pc against 3.5pc. The growth in fishery was recorded at 0.8pc against the target of 1.8pc for the current fiscal year and growth in forestry stood at 6.5pc against a target of 8.5pc.

The details presented to the APCC also showed a poor performance in other sectors. The overall industry grew a paltry 1.4pc against a target of 7.6pc and perhaps major contribution came from construction sector that is believed to be supporting about 40 allied industries.

The construction sector posted a reduction of 7.6pc compared to a target of 10pc increase. The mining and quarrying sector also showed a negative growth of 1.9pc against its growth target of 3.6pc.

Large-scale manufacturing provisional growth was estimated at negative 2pc against the target of 8.1pc while provisional growth in services sector was estimated at 4.7pc from 6.5pc target.

COTTON CROP PRODUCTION REGISTERS 17.4 PERCENT FALL

ZAHEER ABBASI | MAY 25TH, 2019 | ISLAMABAD

Cotton crop has registered a fall of 17.4 percent in its production and consequently it contributed in decline of agriculture sector's growth to 0.8 percent against the target of 3.8 percent for the current fiscal year. Sources said that a meeting of the Annual Plan Coordination Committee (APCC) was informed on Thursday that there has been a massive decline which led to downward revision in production to 9.86 million bales from 14.37 million bales target set for the current fiscal year.

The decline in cotton production was attributed to shortage of irrigation water, use of low inputs, interior quality of seeds, fertilizer at early stage of crop and reduction of 12 percent in sown area. Wheat crop production increased minimally by 0.5 percent compared to the last year due to wheat diseases such as rust and smut affecting the overall yield as per acre of the crop.

The meeting was informed that production of rice registered a decline of 3.3 percent, whereas production of sugarcane also came down by 19.4 percent over the last year's production. The area sown for rice and sugarcane also decreased by 3.1 percent and 17.9 percent respectively.

The APCC was told that all these factors were responsible for decline in projected growth target of agriculture sector. The government has revised downward agriculture sector's growth target to 0.8 percent for the current fiscal year from 3.8 percent growth target set in the budget, following important crops registered a negative growth of 6.5 percent against the target of 3 percent.

The APCC was further informed that growth of other crops has also been revised downward to 1.9 percent against 3.5 percent target, cotton ginned negative 12.7 percent against 8.9 percent target, growth in fishery was recorded at 0.8 percent against the target of 1.8 percent for the current fiscal year and growth in forestry was registered at 6.5 percent against the target of 8.5 percent for fiscal year 2017-18.

The details presented to the APCC also revealed dismal performance by other sectors as well during the current fiscal year as growth in mining and quarrying was revised downward to negative 1.9 percent from 3.6 percent target.

Large scale manufacturing provisional growth was estimated negative 2 percent against the target of 7.8 percent while provisional growth in services sector was revised downward to 4.7 from 6.5 percent target.

PUNJAB CABINET TO TAKE UP SUBSIDY ON SUGAR EXPORT, LEVY ON WATER

The Newspaper's Staff Reporter May 24, 2019

LAHORE: The Punjab government is holding its 11th cabinet meeting on Friday (today) and taking up the crucial 'subsidy on export of sugar' as well as levy of Re1 per litre as aquifer tariff on water bottling and beverages companies across the province – on account of extraction of ground water in compliance with the orders of the Supreme Court.

The cabinet meeting, to be presided over by Chief Minister Usman Buzdar, is also scheduled considering extending jurisdiction of Fort Munro Development Authority to include whole tribal area of Dera Ghazi Khan and renaming it as "Koh-i-Suleman Development Authority".

The school education department will present amendments to Transfer Policy of 2013 for consideration and approval.

The finance department has five-point agenda for the consideration of the cabinet – audit report on the accounts of the C&W, HUD & PHE, Irrigation, LG&CD departments and the Infrastructure Development Authority Punjab for the audit year 2018-19; reports on biannual monitoring on the implementation of seventh National Finance Commission Award for the periods from July to December 2016, January to June 2017 and July to December 2017; regularisation of support staff of Punjab Revenue Authority; resource mobilization proposals for financial year 2019-20; and appointment of general manager Punjab Pension Fund.

TWO FOOD OFFICIALS, 15 OTHERS FLEE COURT AFTER REJECTION OF BAIL PLEAS

THE NEWSPAPER'S STAFF CORRESPONDENT Published May 24, 2019

HYDERABAD: An inspector was arrested and two senior food officials as well as all other accused in a Rs1.46bn bardana (gunny bags) fled the court of the special anti-corruption judge (provincial) on Thursday when their pleas for pre-arrest bail were rejected.

Fifteen applicants, including an acting deputy director and the district food controller of Sanghar, Ali Asghar Naich and Munawar Hussain Arain, respectively, had sought pre-arrest bail in the 2018 scam through Advocate Farhad Ali Abro. The lawyer also represented another six private persons.

All the accused were booked for allegedly misappropriating bardana meant for distribution among wheat growers.

According to the Anti-Corruption Establishment (ACE), the accused were involved in the Rs1.46bn bardana. It had registered six cases pertaining to the stocks provided for distribution among growers in six talukas of Sanghar district.

A number of private persons, including some landowners who were also booked in the FIRs had filed applications for bail applications which were rejected by the court.

Earlier, Advocate Abro contended that gunny bags were available in Sanghar and the required accounts-related sheets were made available to the ACE. He said that payments were made and counting of gunny bags was also done accordingly.

ACE officials present on the court premises tried to arrest the accused soon after rejection of the bail applications. However, only one food inspector, whose name could not be ascertained, could be arrested. ACE sources said that they wanted to arrest Ali Asghar Naich, Munawar Arain and an assistant food director.

SLUMP IN SEAFOOD EXPORT CONTINUES IN JULY-APRIL

RECORDER REPORT | MAY 24TH, 2019 | KARACHI

Slump in Pakistan's seafood export continues to $348.484 million in July-Apr 2018-19, down by 6.21 percent, official figures said. The continuing fall in the seafood export now comes to the tune $23.064 million in July-Apr 2018-19 from $371.548 million in July-Apr 2017-18, Pakistan bureau of Statistics shows.

Seafood export volume also scaled down to 153,061 metric tons in July-Apr 2018-19 from 163,632 metric tons in July-Apr 2017-18, indicating a fall of 6.46 percent or 10571metric tons.

In Apr 2019, Pakistan suffered 2.40 percent or $1.345 million fall in the seafood export to $54.589 million from $55.934 million in Apr 2018.

In term of quantity, Pakistan witnessed a fall of 6.16 percent or 1589 metric tons to 24,224 metric tons in Apr 2019 from 25,813 metric tons in Apr 2018.

AVANT-GARDE BUDGET PROPOSALS-III: TAPPING THE REAL POTENTIAL

HUZAIMA BUKHARI AND DR IKRAMUL HAQ | MAY 24TH, 2019 | ARTICLE

A country's tax gap is measured by the amount of tax that remains uncollected due to non-compliance with tax laws. 'Pakistan Tax Gaps: Estimates by Tax Calculation and Methodology' (http://aysps.gsu.edu/isp/files/ispwp0811(1).pdf), a joint study of Federal Board of Revenue (FBR), Andrew Young School of Policy Studies at Georgia State University and World Bank, provides in detail, tax gaps by type of tax and describes the methodologies and data used for such estimates. The report released in December 2008 under the name of Rubina Ather Ahmad (FBR) and Mark Rider (Andrew School) warns that views expressed "are of the authors and not of the Government of

Pakistan." It is shocking that FBR on the dictates of World Bank initiated this study and when final report was released it disassociated itself-this is typical of our government-always non-committal and hesitant to take any responsibility. After disowning this report, in 2019, FBR is still struggling to bridge the large tax gaps which are the direct result of its persistent inefficiency, incompetence and rampant corruption.

For fiscal year 2004-2005, according to this report, Pakistan's federal tax gap was Rs. 409.5 billion or approximately 69% of actual tax receipts of Rs. 590.4 billion. Terming this as "conservative estimate", the report claims direct tax gap at Rs. 262.8 billion (around 143% of actual collection of Rs. 183.1 billion) and indirect tax gap at 146.7 billion (36% of actual tax collection of Rs. 407 billion). In 2008, the data selected was for fiscal year 2004-2005 and tax gap was estimated at 45%. Since then tax gap has increased significantly and it can safely be concluded that it is not less than 80% of actual tax collection. This report and many others do not take into account the real tax potential of Pakistan and therefore estimates of tax gaps are under-assessed.

The real tax potential of Pakistan, by a very conservative estimate, is Rs. 8000 billion. However, the target for the current fiscal year at the time of budget announcement was fixed at Rs. 4435 billion. It was later reduced to Rs. 4398 billion but yet FBR is finding it difficult to meet-the shortfall for first ten months is Rs. 357 billion! From July 2018 through April 2019, FBR provisionally collected Rs. 2993 billion in taxes as against Rs. 3350 billion ten-month target

Who is responsible for the prevailing pathetic state of affairs? Our debt burden is increasing monstrously, fiscal deficit is getting beyond control, inflation is crushing the poor, taxes are being evaded and avoided by the rich and whatsoever little is collected, is mercilessly wasted by those who matter in the land. Debt burden under the previous regime witnessed a rising trend and reached a new high of 75% of GDP due to a widening budget deficit and fall in tax receipts. The financing of fiscal deficit through domestic channels by the present government of PTI is also alarming as highlighted by the State Bank of Pakistan in its report that has raised concerns regarding debt sustainability of the economy. A heavy reliance on expensive short-term debt has increased the debt servicing burden of the country. Pakistan has been reeling under a revenue deficit for the past many years, implying that a larger part of public borrowings, which financed the government's current expenditures, did not add to the repayment capacity of the economy.

In view of the size and magnitude of public debt, a high fiscal deficit for 2018-19 is inevitable. Fiscal deficit even in 2012-13 reached 8.5% of GDP, against the original budget target of 4%, reflecting both revenue and expenditure slippages, including higher subsidies mainly to clear arrears in the power sector-the situation since then has been worsening. Collection by FBR in the past included substantial amounts not due (obtained as advance) and withholding of genuine refunds of billions of rupees. Ex-Finance Minister, Ishaq Dar, now a fugitive, while addressing Chief Commissioners' Conference on April 15, 2014 praised Chairman and his team for growth of 17% in revenue, but never bothered to investigate the allegations of highhandedness in showing "higher" (sic) collection. Dar, an experienced chartered accountant, knew fully well how fudging of figures was being done under his nose. During his previous tenure as Finance Minister as well, Pakistan was found guilty of figure fudging and Shaukat Aziz admitted that Pakistan had to pay a fine to IMF for such lapses-A history of figure fudging by Dr Pervez Tahir, The Express Tribune, July 28, 2011.

It is a great tragedy that while the country is caught in a debt trap, the rich and the mighty are not only refusing to pay due taxes, but are also living an emperor-like life at the taxpayers' expense and on borrowed funds. They are the de facto beneficiaries of the State's resources-generated mainly by the landless tillers, industrial workers, professionals and white-collared employees. Unfortunately, like their predecessors, PTI Government is also giving them more tax incentives, immunities and amnesties.

Pakistan is not a poor country-the State's kitty is empty because of the unwillingness of the rich to pay taxes, colossal wastage of taxpayers' money on unproductive expenses and non-exploitation of vital natural resources. Absentee landlords (they include mighty generals who have been allotted State lands under one pretext or the other during the last many decades) have been resisting proper personal taxation on their enormous income and wealth. An unholy anti-people alliance of the trio of indomitable militro-judicial-civil complex, corrupt and inefficient politicians and greedy businessmen-controlling and enjoying at least 90% of the State resources-contribute lower than 2% towards the national revenue collection. This tax gap has not at all been discussed in 'Pakistan Tax Gaps: Estimates by Tax Calculation and Methodology', a study which is nothing but an eye wash.

The gigantic and useless government apparatus-doing nothing for public welfare-is also busy wasting whatever taxes are collected. The army of ministers, state ministers, advisers, consultants, high-ranking government servants (sic) is not willing to cut down their perquisites and privileges. They are not ready to live like the common man by surrendering unprecedented perks and privileges they are enjoying at the cost of taxpayers' money. For their luxurious life they are burdening the poor, property-less masses with more and more taxes. Time and again we have made a case for monetizing all perks and perquisites and right-sizing of government departments and corporations, but civil-military complex and their cronies in politics are not ready for such reforms.

The existing exploitative, rotten, regressive, ill-directed and unfair tax system is widening the existing gulf between the rich and the poor-leading to gang wars, crimes, commotions and break down of the entire society. The sole emphasis on regressive indirect taxes [even under the garb of income taxation through presumptive and minimum tax regimes on goods and services] without evaluating their impact on the economy and lives of the poor masses and lack of political will to tax the rich and mighty, is the real dilemma of our State-not scarcity of resources or narrow tax base (nearly 95 million active mobile users are paying exorbitant sales tax at 19.5% and 12.5% income tax). Equity demands higher taxes from those who have higher incomes and wealth, but in Pakistan since 1991 all tax policies have been aimed at decreasing tax burden on the rich but increasing its incidence on the poor.

The realistic and correct working of tax gaps in Pakistan is not possible unless the quantum of loss of revenue of trillions of rupees caused by all governments since the first military era of Ayub Khan is not taken into account. Successive governments-civil and military alike-have extended unprecedented exemptions and concessions to the rich and mighty, some of which are mentioned below:

* Ayub Khan, Ziaul Haq and Musharraf abolished all the progressive taxes, e.g., Estate Duty, Gift Tax, Capital Gain Tax on immovable property and Wealth tax etc.

* The historic decision of taxing "agricultural income", passed by the Federal Parliament in the shape of Finance Act, 1977, was thwarted by the military regime of Ziaul Haq. Through this law, the Parliament amended the definition of "agricultural income" as contained in section 2(1) of the Income Tax Act, 1922 then in existence, to tax big absentee landlords. This was a revolutionary step to impose tax on agricultural income for the first time in Pakistan, but foiled by a military dictator, supported by Mullahs, who were funded by big landlords and businessmen. It is now well-established

that pro-people economic policies of the Bhutto regime posed a great threat to neo-imperialists and their gumashtas in Pakistan.

* Zia's rule continued for 11 long years and that of General Musharraf for nearly 9 years, but absentee land owners (including mighty generals who received state lands as gallantry awards or otherwise!) did not pay a single penny as agricultural income tax.

* Taxation of "agricultural income" is the sole prerogative of provincial governments under the 1973 Constitution of Pakistan ("the Constitution"). All the four provinces have enacted laws to this effect, but total collection in 2013 was less than Rs 2 billion (share of agriculture in GDP in 2013 was about 22%).

* Non-taxation of long-term capital gains at stock market-exemption is meant for the rich and mighty and not for the small investors who lose more money than they make due to manoeuvrings of big players-caused annual loss of billions of rupees to the national exchequer [loss from 2007 to 2013 alone was more than Rs. 512 billion as admitted by the government in Economic Surveys of Pakistan]. Full and proper taxation of the big sharks is still a distant dream due to influence of the mighty whose benami accounts are managed by big brokerage houses. Annual tax gap under this one head alone is Rs 125-200 billion.

* Tax losses for exempting (in fact not taxing) speculative transactions in real estate are to the extent of billions of rupees per annum. According to Economic Survey of Pakistan 2012-13, the loss for fiscal year 2011-12 was Rs 700 billion.

* Multi-National Companies (MNCs) through abusive transfer pricing mechanism allegedly deprive Pakistan of tax loss of over Rs. 200 billion every year.

* The Wealth Tax Act, 1963 was abolished through the Finance Act 2003 on specific demand of Shaukat Aziz before taking charge as Finance Minister of Pakistan. He was fully aware of the fact that by virtue of his status as resident in Pakistan, his world assets would attract provisions of the Wealth Tax Act culminating into substantial tax liability annually. Repeal of this progressive law, especially suitable to Pakistan where enormous assets are created without showing income, was shown to be justified despite tremendous revenue losses, distortion in the social set-up and the resultant misery inflicted on the majority of the people of Pakistan. From 2010, the right to levy wealth tax, to the extent of immovable property, is devolved to the provinces and they are least pushed to tax the rich landowners as they dominate the Parliaments.

* In 2002 before its abolition, wealth tax was the only progressive tax left in Pakistan with tremendous potential for growth, if exemption given to the rich absentee landlords were scrapped. This became obvious immediately after its repeal when billions of rupees (estimated at US$ 60 billion) started pouring in from all over the world, remitted by all and sundry without any fear of being investigated, courtesy amnesty given under section 111(4) of the Income Tax Ordinance, 2001. Influx of enormous wealth was directed to the stock exchanges and real estate markets where hungry sharks continued to devour the small investors through unholy manoeuvrings; or was used to artificially enhance prices of immovable property. With no wealth tax to pay, both these avenues helped to increase individual wealth but dreadfully stripped the entire nation of its right to live in peace and economic prosperity.

* From 2003 to 2018, according to a conservative estimate, we have lost Rs 400 to Rs 500 billion worth of wealth tax that could have been imposed on unaccounted/untaxed wealth amassed by those already enjoying the privileges of a luxurious life.

* Section 111(4) of the Income Tax Ordinance, 2001 protects tax evaders as they can whiten untaxed income through an extremely simple and easily available procedure by going to a money exchanger and getting fictitious foreign remittance in his account after paying a nominal premium of 1% to 2% of the entire proceeds! The loss caused due to this provision alone in the last five years is nearly Rs 275 billion.

The above are just a few areas showing how much tax loss we have been incurring perpetually. In 'Pakistan Tax Gaps: Estimates by Tax Calculation and Methodology', no effort was made to take into account all these factors to correctly determine total federal tax gap.

'MINIMUM PASTEURIZATION LAW COMING INTO FORCE BY JULY 2022'

BR Research May 24, 2019

An interview with Sulaiman Sadiq Monnoo, Senior Vice Chairman PDA

Mr. Sulaiman Sadiq Monnoo is the Senior Vice Chairman at Punjab Diary Association, which aims to empower and develop the small dairy farmers based on "one herd concept". Mr. Sulaiman Monnoo is a business graduate with over 18 years of work experience and extensive knowledge of all current economic, social and regulatory issues. Possessing vast managing directorship and CEO experience, Mr. Sulaiman Monnoo is also the CEO of Dairyland (Pvt) Limited.

Following are the edited excerpts of a quick conversation with Mr. Sulaiman Monnoo regarding the dairy sector of Pakistan:

BR Research: Since dairy and livestock is a provincial subject, what is your assessment of the capacity of relevant provincial departments and the progress each province has made towards dairy and livestock development?

Sulaiman Sadiq Monnoo: The dairy sector is an important player in Pakistan's economy that is primarily agriculture based. It represents 95 percent of the informal sector i.e. loose milk, and 5 percent of the organized sector i.e. packaged milk. The contribution of agriculture sector to Pakistan's Gross Domestic Product (GDP), with its declining trend, still stands at 23 percent. Some 30–35 million of the rural population is engaged in raising livestock and it derives 30–40 percent of its income from this sector.

The provincial dairy and livestock departments are important in this regard with each department facing different challenges and varying capacity to address them. However, there is a need to ensure policy alignment among the federal and provincial Dairy and Livestock Development Departments to help the dairy industry meet its full potential.

BRR: What does market research say – what kind of milk do Pakistanis prefer – high fat or low fat – and are the trends changing?

SSM: If we look at the market share for a proxy of preference, full cream is more than 99 percent of the packaged UHT category whereas low fat continues to be a niche offering (2.8 percent value share of all branded milk) with not an impressive growth. Though as per modern and changing health preferences, the trend is moving towards the consumption of low-fat milk in some sections of the population in the urban areas only. Health-conscious urban citizens are changing their milk consumption habits. However, the overall trend of milk used in tea is for high-fat milk in urban and rural areas equally.

BRR: Which model works best for Pakistan? UHT or pasteurized? And why?

SSM: The answer to your question lies with the processed milk whether pasteurized or Ultra High Temperature (UHT) treated. Being very rich in nutrients, milk is not only a source of health for human beings but provides an ideal growth environment for many micro-organisms.

There are effective control measures that can minimize the risk to human health, key among then is pasteurization and/or UHT. Pasteurization is a process that involves heating milk at a particular high temperature for a required time to ensure killing of harmful bacteria that can cause severe damage to human health. Originally designed to ensure adequate destruction of common pathogenic micro-organisms, pasteurization can extend the shelf-life of milk by destroying almost all yeasts, molds and common spoilage bacteria.

However, keeping Pakistan's climatic conditions and prolonged summers in mind with the consumer base widely spread across the country while the milk collection is mostly centered in Punjab, UHT is considered to be more suitable. As pasteurized milk requires very robust supply chain to maintain the temperature at around 40C, it becomes less feasible to market it to the masses. UHT is same as pasteurization; the only difference lies in the degree of temperature and the duration at which the milk is heated. UHT milk with aseptic packaging proves to be an optimum option for us as it can allow for the milk to be transported over long distances at ambient temperatures. The shelf-life of pasteurized milk is 7 days compared to 3 months of UHT Milk. UHT is also a better proposition for countries with similar climate conditions such as Turkey, Mexico, Spain etc.

BRR: Whose interest does your association represent; is it only UHT or pasteurized as well?

SSM: The Pakistan Dairy Association represents the organized milk sector. Despite being the fourth largest milk producing nation, only 5 percent of milk is processed and packed, rest of the 95 percent is unprocessed, unregulated and untaxed. PDA is an association that aims to promote and advocate the interests of the processed milk industry, whether UHT or pasteurized. PDA also represents the corporate farms and other dairy processors who are equally important in the overall growth of dairy sector.

BRR: Why is the UHT dairy milk industry not comfortable with the label on the pack that UHT is produced from powdered milk – there are many countries where this is being practiced – KSA & UAE being the nearest regional example.

SSM: The processed industry follows the national regulations, which suggest milk to have 8.5 percent Solid Non Fats (SNF) and 3.5 percent fats. However, most of the industry players collect milk from small and medium farmers who have their own set of challenges like unable to provide quality feed to animals; SNF ratio in milk lower than the required minimum level, etc. Also, due to the variance during flush and lean seasons, sometimes milk processors have to add skim milk powder to meet minimum SNF requirement in finished product.

In comparison, most of the loose milk available in the market is unregulated and does not comply with the minimum required criteria. The loose milk sellers add substandard substances to make up for the milk compositional requirements.

In GCC/Middle East, there are two sets of requirement. One is made from fresh milk while the other one is re-constituted. The reconstituted milk is completely produced from powder by adding water in it, which makes it binding on them to use the labeling accordingly. While the finished product milk produced from fresh milk has no binding to declare “re-constituted milk” on the label.

BRR: Even if loose milk pricing is de-regularized, the fact of the matter is that Pakistani livestock has very low yields which makes it difficult to invest in corporate farms (for UHT or pasteurized milk). This then means we have to improve our livestock. But that is a long-term process. Yet if we import cows on a large scale it would inflate our import bill – so what is the solution – insemination or embryo transfer?

SSM: Dairy industry is in the favour of de-regularizing and de-capping of milk prices as this will incentivize investments in the sector. To answer the other half of your question; it is important to understand that we have three distinct segments of milk farming in Pakistan. It is difficult to club it together as the economic and commercial rational of each segment differs widely.

Small hold farmers (having 2-3 animals) use traditional farming practices. Training and education related to animal husbandry, feed and nutrition would be essential for them to improve the yield. We have case studies suggesting over 25 percent improvement in less than 6 months by just giving basic education.

The mid-size or progressive farmers (having 20 milking animals) have understanding of breed and feed of the animal. For them, education and support related to artificial insemination, modern milking methods, feed, animal comfort etc. will be instrumental in improving the yield. The potential of improved yield per animal is again over 25 percent here.

The mega farms, which are mostly mechanized for imported pedigree and are owned by big industrialists, are generally competitive in terms of milk production but they are at daggers drawn with the regulatory and taxation regime. They will grow if there is enabling environment and support available to them. Plus, it is still a better option to import animals gradually than importing milk every year in terms of its impact on our exchequer.

BRR: Why Harmonization of Food Standards is required in Pakistan?

SSM: We believe that there should be one food standard i.e. National Food Standard, formulated after due consultation and consensus of all the provincial authorities, and notified by the federal government. However, the implementation (registration, licensing, and enforcement) of the same standard should remain a provincial subject. From industrial point of view, this will help in ‘ease of doing business’.

Given due importance to the subject, the issue of Harmonization of Food Standards has been taken up to the Council of Common Interest (CCI) where all chief ministers agreed to have one food standard across the country. Same has been discussed in the recent cabinet meeting. We're hoping that this will soon be converted into a legal framework by the Ministry of Law and Justice.

BRR: We are told that the government has met twice with dairy and livestock industry stakeholders in Islamabad. What is the expected policy direction the government is thinking about?

SSM: As referred by the Prime Minister is his recent speech, about 75 percent of the loose milk is not safe for human consumption in Pakistan with one city identified as selling a milk like substance having no ingredients of milk but detergent and chemicals. The government also realizes that there is a serious need to bring the dairy farmers into the formal eco-system where they can work in partnership with companies to improve milk yield and health of the livestock in order to ensure quality milk supply.

In this regard, we have had positive meetings with Abdul Razak Dawood, where we proposed the revival of dairy sector by highlighting importance of zero rated taxing, harmonization of food standards etc. I think in the coming budget, we will be able to see some major changes in terms of fiscal policy and food policy towards the dairy industry.

We also meet with the relevant federal and provincial food authorities periodically to share our concerns and bring alignment to serve our consumers.

BRR: Tell us about the Punjab pasteurization law – when is it being enforced?

SSM: It is very important to set up a legal framework through introduction of a minimum pasteurization law for milk sales (even in the open market) to ensure consumer protection. Since the Punjab Food Authority (PFA) is very active in introducing legislation to protect the health of citizens, a pasteurization law could make a big difference. As per PFA regulations 2018, the implementation of Minimum Pasteurization Law is coming into force by July 2022. But I think now they want to expedite it based on government's priority of improving the overall public health.

BRR: How critical is it to develop the packaged meat industry to develop the packaged milk industry?

SSM: Pakistan's livestock sector has a lot of untapped potential and its efficiency should be expanded to fulfill a growing demand for milk and meat to improve the public health indicators. Despite being among the largest milk producing countries and having the largest number of milk producing animals, Pakistan faces severe malnutrition followed by shortage and poor quality of milk. It is estimated that only 45 percent of the milk produced is actually available for sale.

The packaged milk industry faces many problems that restrain its growth but the packaged meat industry is still very small and if serious steps are taken to develop it, it could really boost the packaged milk industry.

BRR: What tax reforms do you propose to strengthen the dairy industry?

SSM: Improper taxation is hurting the dairy industry with high prices of final products leading to a decline in the demand of the dairy items. It is obvious that the burden of price hike is shifted towards the consumers. In order to address this issue and provide some relief to the sector, the government should review its fiscal policy towards dairy industry; no duty or sales tax on animal feed, zero rating on local semen production, no sales tax on local and imported semen, and zero rated tax policy on dairy products.

NO BAN IMPOSED ON INTER-PROVINCIAL MOVEMENT OF WHEAT: PUNJAB GOVERNMENT TELLS KPK

FAZAL SHER | MAY 24TH, 2019 | ISLAMABAD

The Punjab government has informed Khyber Pakhtunkhwa (KPK) government that it has not imposed any ban on inter-provincial movement of wheat following a decline in wheat output due to recent rains. A senior official of KPK agriculture department said that food department of Punjab has written a letter to KPK food department stating that it has not blocked supply of wheat to KPK and the media reports regarding the ban are false.

“Private trade of wheat is continuing between the two provinces and food department of KPK will also purchase wheat from the Punjab government,” he told Business Recorder. He said that under Article 151 of the constitution, provinces cannot impose a ban on movement of edible commodities throughout Pakistan.

Article 151 of the constitution pertaining to inter-provincial trade stipulates: “Subject to clause (2) trade, commerce and intercourse throughout Pakistan shall be free. (2) 1[Majlis-e-Shoora (Parliament)] may by law impose such restrictions on the freedom of trade, commerce or intercourse between one province and another or within any part of Pakistan as may be required in the Public interest.(3) A provincial assembly or a provincial government shall not have power to-(a) make any law, or take any executive action, prohibiting or restricting the entry into, or the export from, the province of goods of any class or description”.

Another official of Ministry of National Food Security and Research said that recent rains damaged 1.2 million tons of wheat across the country; and added that there is no provision in the constitution to block supply of wheat but in the past Punjab government had stopped supply of grain to KPK with the objective of stopping its smuggling to Afghanistan.

He said that Pakistan Agricultural Storage & Services Corporation (PASSCO) and provincial food of KPK will procure wheat. Wheat review committee in its meeting on February 13, 2019 agreed that PASSCO and provincial food departments will procure 6.90 million of tons of wheat, he said.

Pakistan Space and Upper Atmosphere Research Commission (SUPARCO) crop situation report notes that rain spell/hailstorm during 15 to 17 April, affected wheat crop to varying extent from lodging to post-harvest losses particularly in Punjab and Khyber Pakhtunkhwa Provinces. Rain spell/hailstorm damages were significant enough to reduce size of the crop from last year.

Federal Committee on Agriculture (FCA) during its previous meeting held in April fixed wheat crop production target at 25.51 million tons from an area of 8.833 million hectares during Rabi 2018-19. Out of 25.51 million tons, Punjab was projected to produce 19.5 million tons, Sindh, 3.800 million tons, Khyber Pakhtunkhwa, 1.362 million tons, and Balochistan will produce 0.900 million tons. The national requirement of wheat is 25.8 million tons including 1 million tons strategic reserves and 0.5 million tons for seed and feed purposes.

US UNVEILS $16BN AID FOR FARMERS HURT BY CHINA TRADE WAR

Parvez Jabri May 24, 2019

WASHINGTON: The United States on Thursday unveiled a new $16 billion aid package to help farmers caught in the crossfire of President Donald Trump's trade war with China.

Agriculture Secretary Sonny Perdue said the bulk of the funds will go to direct payments to farmers, while a small portion will be used to purchase food to use in US aid programs like food banks and school lunch programs.

"The plan we are announcing today ensures farmers do not bear the brunt of unfair retaliatory tariffs imposed by China and other trading partners," Perdue told reporters in a conference call.

"Farmers would rather have trade than aid but without the trade they are going to need some support."

Trump's aggressive tariff strategy, especially against China, has drawn stiff retaliation from Beijing and others designed to hit the US where it hurts: farm country.

Soybeans and pork have been primary targets, but many other crops have suffered directly or indirectly.

Soybean exports to China fell 75 percent in 2018, according to Commerce Department figures.

The Trump administration ramped up the aid from the $12 billion provided last year.

There were high hopes early this month that a resolution with China was within striking distance, but that optimism largely evaporated when Trump said Beijing had backed away from commitments considered already settled.

He more than doubled existing punitive tariffs on $200 billion in Chinese goods, and threatened to hit all the goods that had been spared so far.

"China hasn't played by the rules for a long time and President Trump is standing up to them, sending the clear message that the United States will no longer tolerate their unfair trade practices," Perdue said.

The tariffs collected by the US Treasury will indirectly support the farm aid, he said.

The US Department of Agriculture will calculate damage done by the retaliation, and officials said the first of three payments is expected to go out in July or August.

Perdue said the size of the aid will be "heavily skewed" towards the first payment, while the others will depend on the market and the status of the trade talks.

But reaching an agreement now "depends on China.

USDA officials said the amount each farmer receives will be based on the damage calculated to each US county, with equal payments made to all farmers based on the acreage planted, regardless of crop, to prevent distorting planting decisions.

Crops covered include alfalfa, barley, canola, corn, lentils, rice, peanuts, chickpeas, sorghum, soybeans, sunflower seed and wheat.

Dairy and pork producers, as well as growers of cherries, cranberries and nuts, also will receive support, officials said.

AGI, PAD SIGN CONTRACT

RECORDER REPORT | MAY 24TH, 2019 | LAHORE

Askari General Insurance (AGI) and Punjab Agriculture Department (PAD) on Thursday signed a contract to extend insurance coverage to growers of 18 districts of the province for Kharif crops under ‘Crop Insurance Programme’ of the provincial government.

Under this agreement grower having up to five acres of land will be given 100 per cent subsidy on the premium while growers having five acres to 25 acres of land will be given 50 per cent subsidy on the premium of their crop insurance.

The project was launched two seasons back from four districts on pilot project has been extended to 18 districts this season and in the fourth phase will cover the growers of the whole of the province.

Speaking on this occasion, Malik Nauman Ahmad Langrial regretted that the agriculture which was the mainstay of Pakistan’s economy had been neglected during the last ten years. He said that the present government by signing this agreement was materializing its promise of giving protection to the farmers especially small growers.

He said that crops of the growers will be protected against any untoward and it will also help the farmers in meeting the negative challenges being inflicted by the climate change on their crops.

BUYING WHEAT FROM OPEN MARKET: PFMA ACCUSES FOOD DEPARTMENT OF FLOUTING AGREEMENT

RECORDER REPORT | MAY 24TH, 2019 | LAHORE

The Pakistan Flour Mills Association (PFMA-Punjab) has accused the provincial food department of flouting the agreement reached between the Chief Secretary Punjab and the millers for allowing the industry to buy wheat from the open market.

It alleged that over 100 vehicles loaded with grains have been impounded by the food department near Mianwali due to which respective mill owners are facing heavy expenses under the head of vehicles’ fare.

PFMA Punjab Chairman Habib ur Rehman Leghari, Group leader Asim Raza Ahmad and others in a joint statement issued here on Thursday claimed that they had informed the Chief Secretary Punjab, Secretary Food and Director Food Punjab about the development in writing. They said that they have made it clear that flour supply under Ramazan package can get disturbed if the department officials continue impounding vehicles of the mills.

Habib Leghari said that the millers had held a meeting with the Chief Secretary Punjab some days back and the Chief Secretary had assured that mills can buy wheat from the open market and department will not impound mills' vehicles. He said that Director Food Punjab and PSO to Chief Secretary were nominated as focal person to resolve the issues being faced by the mills. However, he alleged that situation still persists as DFC Mianwali and DD Sargodha is still impounding the vehicles going towards Rawalpindi. He claimed that a crisis like situation may occur in twin cities if wheat is not allowed to be transported. He also claimed that food department officials were also not responding to their phone calls.

Leghari said that flour mills were buying wheat at Rs1350 per maund while after adding transportation charges it is costing them at Rs1400 per maund. He claimed that food department officials after impounding mills' vehicle make a bill at the rate of Rs1300 per maund and that too in the name of the driver thus causing loss of millions to the mills. They claimed that they had informed the officials in writing and responsibility of any crisis would lie on the food department.

HYDERABAD COURT REJECTS BAIL PLEAS OF FOOD OFFICIALS BOOKED IN CORRUPTION CASE

By Our Correspondent Published: May 24, 2019

HYDERABAD: In the Rs1.78 billion wheat scam, the Hyderabad Special Anti-Corruption Court rejected on Thursday the bail applications of food officials and private persons after which the Anti-Corruption Establishment (ACE) arrested two persons from outside the court, including one of the 17 food officials charged in the FIRs.

Sanghar district ACE lodged six separate FIRs against food officials and 100 private persons last week. Food Department Deputy Director Ali Asghar Naich, Sanghar District Food Controller (DFC) Muhammad Munawar Arain, Assistant Food Controller Jam Abid Ali and several in-charges and food inspectors deputed at some 40 food centres in Sanghar have been booked.

DFC Arain confirmed while talking to The Express Tribune that their bails have been rejected. He told that they have not still filed bail plea in Sindh High Court because they could not get copy of the Anti-Corruption Court's order. Still the ACE failed to arrest the accused.

The food officials allegedly sold wheat bags to agents and traders illegally last year. The provincial government through the food department distributes the bags, which are also called gunny bags or gunny sacks, among wheat farmers for official wheat procurement. Sanghar was reportedly allocated 1.7 million wheat bags of 100 kilogramme each in the previous year.

Sindh government bought wheat in 2018 at the rate of Rs1,300 per 40kg from the farmers. However, taking advantage of the government's procurement delay, traders and agents bought wheat at around Rs1,000 to Rs1,100 per 40 kg rate from the farmers and later sold the same wheat to the government at Rs1,300 rate.

Under the law, the food department cannot distribute or sell empty wheat bags to traders because the bags are meant for distribution among genuine wheat growers.

ACE Sanghar Circle Officer Yar Muhammad Rind when asked, did not disclose the names of the two arrested persons. He avoided to explain why the food officials have not been arrested.

GST ON SUGAR MAY BE INCREASED

By Our Correspondent Published: May 24, 2019

ISLAMABAD: The federal government has permitted an increase in the general sales tax (GST) on sugar in the budget for fiscal year 2019-20.

Additionally, it has also agreed on imposing federal excise duty on gas besides levying sales tax on the electronics and print industry and hiking additional customs duty in the next fiscal year.

In this regard, a high-level meeting took place at the FBR in which the proposal for imposing new taxes, amounting to Rs334 billion, was discussed. The breakdown suggests the imposition of Rs150 billion in sales tax, Rs95 billion in customs duty and Rs150 billion in federal excise duty in the upcoming budget.

After approval from parliament, there will be a hike in prices of sugar, gas and other commodities. During the meeting, it was also decided to raise the federal excise duty on cigarettes and beverages.

Furthermore, it was agreed to impose 5% customs duty on imported LNG, which presently enjoys 3% relaxation. Hence, the relaxation will be withdrawn and gas, electricity and industrial commodities will become costly. However, the relaxation in customs duty on the import of plant and machinery by exporting industries will continue. Final decision will be taken after approval of the finance adviser.

Special preference will be given in the federal budget to measures which will help raise revenues. To achieve this, the relaxation in the GST on sugar will be withdrawn and sales tax will be imposed at the market rate. The retail price tax system will be introduced for the electronics and print industry and sales tax will be imposed according to wholesale prices of commodities in related industries.

A proposal was also discussed to introduce the Unified Value Added Tax (VAT) along with the suggestion of imposing federal excise duty on gas due to which the revenue could rise up to Rs60 billion. Similarly, the hike in taxes on cigarettes and beverages will add Rs37 billion to the revenues. Apart from this, there was also a recommendation to end the withholding tax relaxation for the cottage industry, which would fetch Rs10 billion in sales tax.

Furthermore, the introduction of Point of Sales system for the wholesale market was also discussed. Following its implementation, it is expected to bring Rs10 billion in sales tax.

RESTORATION OF RD ON COTTON IMPORT RECOMMENDED

NAVEED BUTT | MAY 23RD, 2019 | ISLAMABAD

A meeting regarding budget proposals for agriculture development has recommended that the regulatory duty on cotton import may be restored to prevent the massive import and dumping of cotton, and enable the farmers to receive international parity price.

The panel also expressed serious reservations over the hike in price of fertilizers during the last two years and the subsequent profitability of fertilizer companies. The members strongly recommended the need for a stringent price regulation mechanism to control the price of agricultural inputs.

Speaker National Assembly Asad Qaiser presided over the second meeting of a series of pre-budget discussions on budget proposals for agriculture development on Wednesday. The matters of minimum support price for major crops, access to credit, regulatory duties on import, production and distribution of biotechnology seeds, taxation on agriculture machinery, import duties on fertilizers and pesticides, and allocation for agriculture research came under discussion.

The speaker highlighted that Pakistan’s economic turnaround was contingent upon revitalisation of agriculture and that incentives, concessions, reduced cost of production and enhanced farmers profitability should guide the budgetary decisions. He instructed the ministries concerned to extend maximum relief to the farmers. He was chairing a meeting regarding budget proposals for agriculture development here at the Parliament House.

The meeting held was a continuation of a series of discussions on the recommendations of the Special Committee on Agricultural Products. The panel was comprehensively briefed by the officials from the Ministry of Finance, Commerce and National Food Security & Research respectively.

Advisor on Commerce Abdul Razzak Dawood submitted that the main reasons for failure to fetch international parity price is the quality of seeds, excessive use of pesticides, and contamination. Endorsing the committee’s recommendation, Minister for National Food Security and Research Sahibzada Mehboob Sultan remarked that revival of cotton as Pakistan’s strategic crop is not possible without an assured indicative price in line with the international parity price. The advisor on commerce assured the committee that he will come out with a viable plan after consultation with the Ministry of National Food Security and Research.

Syed Fakhar Imam argued that given the lack of any meaningful incentives particularly the indicative price, not only has Pakistan’s cotton production and land under cultivation being shrunken but also the country continues to cede space to regional competitors.

The speaker National Assembly questioned as to how Pakistani farmers would compete with the regional competitors when the input cost continue to rise unabatedly in Pakistan and the competitors continue to dole out massive subsidies to the farmers.

The Ministry of Finance opposed the proposal of the Ministry of National Food Security and Research to tax the supply of imported and locally manufactured tractors as doing so would jeopardise the thriving localisation of tractors in Pakistan. On the matter of allocation of fund for agriculture research, Hammad Azhar remarked that the proposed recommendation should be integrated in the potential agriculture policy of the new government and further added that the multilateral donors and lending agencies would provide sufficient grants for uplifting agriculture research in Pakistan.

On the questions of subsidies and mark-up rate on agricultural loans, Hammad Azhar remarked that given the limited fiscal space, the provincial government should share responsibility and make concessional allocations to banks for agricultural loans.

The committee also opposed the recommendation of the Ministry of National Food Security and Research to revise taxes on the import of skimmed milk powder (SMP) and whey powder on the grounds that this would raise the price of milk for the poor people in the country.

The meeting was attended by Minister for National Food Security and Research Sahibzada Mehboob Sultan, State Minister for Revenue Hammad Azhar, Advisor to PM for Commerce, Industries Production & Investment Abdul Razzak Dawood, Asad Umar, Syed Fakhar Imam, Shandana Gulzar Khan, Sana Ullah Masti Khel, Malik Muhammad Ehsan Ullah Tiwana, Riaz Fatyana, and Faizullah Kamoka.

FARMERS` BODY SEEKS SPECIAL PACKAGE, SUBSIDY IN BUDGET

By Our Staff Correspondent | 5/22/2019

HYDERABAD: Representatives of the Sindh Abadgar Ittehad (SAI) have demanded of the federal government to announce a special package for the agriculture sector, subsidy on farm inputs and withdrawal of general sales tax (GST) on agriculture sector in the forthcoming budget.

Speaking at a press conference here onTuesday at the local press club, SAI president Nawaz Zubair Talpur and Mohammad Javed Rear said that in his address to the nation, Prime Minister Imran Khan had promised that he would announce subsidy on fertilizer but he did not fulfil it.

They said the Punjab government had announced subsidy for its farmers, but the Sindh government did not of fer such facility.

Last year urea fertilizer bag had been sold at Rs1360 and now it was being sold for Rs1800, he added.

They said the cost of a tractor had increased from Rs1.7 million to Rs2.1 million and added that situation would aggravate after announcement of budget.

They said Pakistan used to be the fourthlargest exporter of cotton in 2004, but now it was the fifth largest importer of cotton due to failed policy of the federal government after 2010 onwards.

They threatened to stage a historic sit-in in Islamabad in collaboration with other Pakistan-level farmers` bodies if their demands were not met.

They said they were coordinating with the Punjab-based Pakistan Kissan Ittehad and other organisations.

They said that wrong and anti-agriculture policies of the Sindh government had made lives of people associated with agriculture miserable.

They said that by not procuring wheat crop the Sindh government had causedbillions of rupees losses to farmers. They said that similar situation was seen in the sugar cane sector and their organisation had moved the Sindh High Court for payment of quality premium over and above the actual cost of sugar cane by factory owners.

They said factory owners were not paying quality premium since 1999 and liabilities of quality premium now run into billions, adding that the government was apparently not interested in implementing the Supreme Court judgement concerning payment of quality premium.

They said they would organise farmers and haris in Sindh for payment of liabilities to sugar cane growers by factory owners.

PFMA SINDH SEEKS REMOVAL OF 67 PERCENT IMPORT TARIFF ON WHEAT

MUSHTAQ GHUMMAN | MAY 22ND, 2019 | ISLAMABAD

Pakistan Flour Mills Association (PFMA) Sindh has sought removal of 67 percent import tariff on wheat, saying that the current trends can lead to a crisis in the country. The Association has put forward its demand to the federal government at a time when both the governments of Punjab and Sindh have imposed inter-provincial ban on movement of wheat. The Punjab government has even informally imposed ban on inter-district movement of wheat due to which wheat of flour mils coming from other districts is being disrupted by the district administration causing panic in the market and increase in the price of the commodity.

District management which is in a panic due to the current situation is flouting the instructions of Chief Secretary Punjab and Secretary Food of Punjab. Recently, the Deputy Commissioner, Attock registered an FIR against an officer of Food Department on the plea that he ordered release of detained wheat trucks of flour mills while the officer had merely implemented the instructions of Secretary Food.

The representatives of PFMA Punjab met Chief Secretary Punjab, Yousuf Naseem Khokhar a couple of days ago and apprised him of current situation of wheat supply in the province and blockade of flour mills wheat by the district administration especially in Rawalpindi Division.

According to Chairman PFMA, Sindh, Javed Yousuf, Pakistan’s wheat crop has been partly affected by weather conditions this year on the one hand while on the other due to depreciation of Pak Rupee there has been an increase in wheat flour value added product exports which is a good thing as flour mills idle capacity is being utilized.

However, this is impacting on local prices to an extent that current wheat price is at Rs 1350 per 40 kg which is above the support price. “We suspect wheat prices will go up further as export grows with more depreciation,” said the Association, adding that since wheat flour is a sensitive commodity, its high price will create social issues.

There are apprehensions that hoarders will take advantage of the situation and local consumers, flour industry and exports will suffer in the process. “To ensure food safety and to maximize the flour and value added exports, we recommend that the government should remove 67 per cent tariff on wheat imports. The current landed cost of imported wheat is the same as wheat support price so there is no risk to farmers' community," the Association added.

Javed Yousuf further stated that import tariff had been imposed when Pak Rupee was under Rs 100 to a dollar with the recent depreciation there is no reason to continue with import tariff on wheat import.

SINDH GOVERNMENT URGED TO ANNOUNCE SPECIAL AGRICULTURE PACKAGE

RECORDER REPORT | MAY 22ND, 2019 | HYDERABAD

Sindh Abadgar Itehad (SAI) president Nawab Zubair Talpur has demanded Sindh Government to announce special agriculture package in the annual budget order to facilitate the growers and agriculture of the province. Addressing the press conference here at Hyderabad Press Club on Tuesday, he said ineffective policy adopted by the Sindh Government is destroying the agriculture sector as well as causing numerous issues for growers of the province.

Under special agriculture package, he demanded that the provincial government should grant subsidy on fertilizers and agriculture equipments and also withdraw the general sales tax on agriculture. If the government avoids announcing special agriculture package, the SAI would stage sit in and protest for the acceptance.

He said the Prime Minister Imran Khan had announced subsidy on fertilizer but the same was not granted in Sindh as a result of which the price of urea fertilizers has reached to Rs 1800 per bag as compared to rate of Rs 1360 per bag which fixed in last year. Similarly, he said the price of tractor had reached to Rs 2.1 million as compared to last year price of Rs 1.7 million.

If the provincial government failed to take sincere measures for strengthening of agriculture sector, he informed that Sindh Abadgar Itehad would launch massive campaign after Eidul Fitr for acceptance of genuine demands of the growers.

CHINESE TEAM HANDS OVER HYBRID RICE SEED TO PU

RECORDER REPORT | MAY 22ND, 2019 | LAHORE

A team of China's Wuhan University has handed over hybrid rice seed to Punjab University for hybrid rice breeding in Pakistan, which would bring revolution in agriculture sector. In this regard, a ceremony was held at PU Vice Chancellor's office here on Tuesday.

PU VC Prof Niaz Ahmad Akhter, Zhiyong XU and Airu Zhu from Wuhan University, China, External Linkages Director Prof Dr Kanwal Ameen, Institute of Agricultural Sciences Director Prof Dr Muhammad Saleem Haider, Assistant Professor Dr Muhammad Ali and others were present.

PU VC Prof Niaz Ahmad said that Punjab University would play its role for betterment of society as well country.

He said that PU was promoting such research projects which would leave positive impact on society and country. IAGS Prof Dr Saleem Haider said that PU would experiment the hybrid breeding of rice at local level and its adaptation.

FRENCH COMPANY SEEKS PARTNERSHIP IN AGRICULTURE, I-TECH SECTORS

RECORDER REPORT | MAY 22ND, 2019 | LAHORE

CEO of French I-tech Company Xona Blue Riadh Boukhris in his meeting with the Punjab Minister for Trade and Industry, Mian Aslam Iqbal, here on Tuesday said that Punjab is an attractive place for investment and his organisation is desirous of partnership in agriculture and I-tech sectors.

Both discussed various matters including opportunities of investment in the province of Punjab.

CEO of Dawn Bread, Anwar Hussain Khan also met Mian Aslam Iqbal and discussed matters of mutual interest. Anwar Hussain Khan informed the minister about the establishment of a new unit in Muridke and showed interest for setting up another industrial unit in M-III industrial estate Faisalabad for which land has been acquired.

Mian Aslam Iqbal said on the occasion that vast opportunities of investment exist in agriculture, IT and other sectors. He said that trained human resource is being prepared to meet the needs of the industry as more than 400 technical education institutions along with two technical universities are engaged in imparting technical education to the students.

MILLS ALLOWED TO BUY WHEAT FROM MARKET

The Newspaper's Staff Reporter May 21, 2019

LAHORE: The Punjab government has allowed flour mills to procure wheat from the open market with the condition that they will pay the officially fixed price of the produce to the farmers.

The permission was granted in a meeting between Chief Secretary Yousaf Naseem Khokhar and a delegation of the Punjab chapter of Pakistan Flour Mills Association on Monday.

The millers, led by Asim Raza, Mian Riaz and Iftikhar Mattoo, informed Mr Khokhar of the problems being faced by the flour milling industry. This included the restrictions on directly purchasing wheat from farmers by the millers.

They also expressed concern at the reported permission to animal feed mills for procuring wheat from the open market and impounding of vehicles carrying wheat consignments of the flour mills.

The chief secretary was quoted as telling the delegation that the government would resolve genuine problems of flour millers however, it had to regulate prices of flour in the market as well.

He said the official wheat procurement target would be achieved in any case, adding that the flour mills could purchase wheat from market at the price fixed by the government.

He said that rights of farmers would be protected and purchase of wheat from farmers would be ensured at the price fixed by the government.

On millers' complaint against food department staff, the chief secretary directed the food secretary to set up a special cell at the department to address complaints of the millers as well as of farmers.

An official told Dawn that no vehicle of the millers was being confiscated as was claimed by them.

According to him, only those vehicles, suspected of carrying the flour for smuggling the commodity out of the country, were being impounded.

He said that feed mills were not allowed to purchase wheat and they would be allowed to enter the procurement arena after the government complete its official target of procuring the grain that is four million tonnes.

Meanwhile, a meeting of the cabinet committee on wheat procurement was held at the Chief Minister's Secretariat here which reviewed the ongoing wheat procurement campaign.

Chaired by Food Minister Samiullah Chaudhry the meeting was informed by Chief Secretary Yousaf Naseem Khokhar that the wheat procurement target was being successfully achieved.

BULGARIA TO IMPORT RICE, COTTON

The Newspaper's Staff Reporter Updated May 21, 2019

ISLAMABAD: Bulgarian Minister for Economy Liliya Ivanove on Monday expressed her country's keen desire to import rice and cotton from Pakistan.

During the second meeting of Pakistan-Bulgaria Inter-Ministerial Commission, Ivanove stated that Bulgaria is looking forward to extensive cooperation in the field of agriculture including sustainable imports of cotton and rice from Pakistan.

Bulgarian ambassador to Pakistan, who accompanied the minister for economy, offered cooperation in the field animal's medicines of which Bulgaria is quite famous for.

Islamabad exports cotton fabrics, synthetic fabric, chemical materials and products, sports goods and toys to Bulgaria.

Pakistan-Bulgaria cooperation in the areas of agriculture covers livestock and buffalo breeding, food processing, food safety and phytosanitary measures, and this is included in the agenda of the inter-ministerial commission meeting which will conclude on Tuesday.

Minister for National Food Security and Research Mehboob Sultan said that the two sides will follow up cooperation in the areas being identified.

The minister said that Pakistan is world's 5th largest milk producing country and since Bulgaria has developed its strength in various areas of agriculture including livestock and animal breeding and both countries could mutually benefit in this sector.

SINDH IMPOSES BAN ON INTERPROVINCIAL MOVEMENT OF WHEAT

The Newspaper's Staff Reporter Updated May 21, 2019

KARACHI: The Sindh government has decided to impose ban on interprovincial movement of wheat in anticipation of the grain's shortage and resultant price hike of flour in the province.

Sindh Minister for Food Hari Ram Kishori Lal said on Monday that the decision was taken over apprehensions expressed by Pakistan Flour Mills Association South Zone about depletion of wheat stocks in Sindh and its proposal for banning wheat purchase by feed mills.

"In order to stop flow of wheat stocks from Sindh to other provinces, the home department as well as commissioners and district administrations have been directed to ensure restriction on movement of wheat from Sindh," said the minister.

Mr Lal pointed out that current wheat crop in Punjab had suffered widespread damage in rains, which frustrated the provincial government's plans to achieve its procurement target of the grain.

Besides, he said, there were reports that 10,000 metric tonnes of wheat was being transported from Sindh to Punjab daily, hence the Sindh government decided to ban its interprovincial movement.

The Punjab government, too, had banned movement of wheat to stop its transportation from the Punjab to Khyber Pakhtunkhwa and Afghanistan, he said.

Meanwhile, Sindh Abadgar Board member Gada Hussain Mahesar said in a statement that a bumper crop was being expected to yield 6.2 million tonnes of wheat during the current season but surprisingly the Sindh government had neither announced a procurement policy nor fixed official rate of the grain as yet while the process of threshing had already picked up momentum.

He appealed to the government to lift ban on interprovincial movement of wheat and said that if the government could not afford to open procurement centres it should allow the grain's movement to save growers from further financial losses.

He said that growers, under the obtaining conditions, were forced to dispose of their produce to local traders at much lower rates ranging from Rs1,050 to 1,120 per 40 kilogramme while the official procurement rate in Punjab was Rs1,350 per 40kg and the Punjab government had opened procure-ment centres across the province to buy wheat.

He pointed out that growers, who had invested their hard-earned money in the cultivation of the crop in hope of having a rich harvest should not be deprived of legitimate benefit.

WEEKLY COTTON REVIEW: PRICES SHOW DOWNWARD TREND

NASEEM USMAN | MAY 21ST, 2019 | KARACHI

Dollar is on all time high but the prices of cotton shows down ward trend. Satisfactory increases in sowing of cotton. Rains will be beneficial for the crop. Waiting for government's cotton policy.

In the local cotton market during last week the bearish trend was seen in the market. Big textile groups had bought cotton from local and international markets according to their needs. Similarly other mills are buying cotton according to their needs. The ginners had left the stock of 4lac bales while it is expected that new cotton season will start from June. A ginner of Sanghar had done a deal of buying of 5 trollers of Banolla at the rate of Rs 1675 per maund on the condition of its delivery in June. The prices of cotton in Sindh and Punjab are Rs 7000 to 8900 per maund.

The Spot Rate committee of Karachi Cotton Association had decreased the rate by Rs 150 and closed it at Rs 8600 per maund. During the last week price of Dollar increased because of the speculations that increasing the price of dollar is a condition of IMF deal. It is expected that price of Dollar will reach Rs 160 to Rs 165 till the end of this fiscal year. On Friday the interbank rate of dollar reach at Rs 149 which is all time high while market sources are claiming that price of dollar will increase in coming days. Due to increase in the price of dollar the prices of all goods will be increased. The ginners had decreased the selling of cotton on the hope that prices of cotton will also increase because of increase of the price of dollar. While the textile and spinning mills owners are expecting that exports will increase but experts were of the view that importers don't give full benefit to the exporter and they demand discount.

On the other hand due to the increase in the price of dollar the prices of commodities are increasing especially due to increase in the prices of energy and increase in inter bank rate the cost of doing business has increased which resulted in a negative impact on exports. As a result of which exporters can not take full benefit of increase in the prices of dollar. Although the rate of dollar has an impact on the prices of cotton, cotton yarn and textile products due to which fluctuation was seen in their prices.

Moreover, trade war between China and America intensifies which is negativity effecting the world wide trade and crisis like situation arises in the world economy which has a negative impact on the cotton and textile products also.

Due to bearish trend in international cotton market the Rate of Promise (Waday Ka Bhao) of New York Cotton Market decreased and reached at 65 American Cent which is lowest in three years.

In the same way rates of cotton decreased in India although the initial estimate of cotton production in India is 3 crore 65 lac bales but it is expected that it will be 50 lac bales less and the production is expected to be 3 crore 15 lac bales. Despite of estimates of decrease in cotton production the prices of cotton are decreasing instead of increasing. The rates of cotton in China also decreased.

Chairman Karachi Cotton Brokers Forum told that according to the information received from the cotton production areas of lower Sindh the sowing of cotton is increasing and the position of crop is satisfactory. While sowing was effected in different areas of Punjab due to rains but there is a plenty of time for sowing and the rains will have positive impact on the crop. The government departments are also trying to increase the production of cotton. Up till now it is hoped that sowing area will be increased in the new season.

The government up till now has not announced the cotton policy while Prime Minister Imran Khan had announced his resolve of achieving production of 1 core 50 lac bales. At that time the department of Agriculture and Food Research has announced to fix the price of cotton seed at Rs 3500 per 40 kg and hinted of buying 5 lac bales through TCP. It is expected that sowing of cotton will be completed till the end of May and still the Cotton policy is not announced. The sowing can be extended till June in Punjab due to rains.

Moreover, Pakistan Cotton Ginners Association has released the statistics of the production of cotton till May 15 according to which 1 crore 7 lac and 78 thousand bales were produced in the country which is seven percent less as compared to last year.

The government has announced to give subsidy on fertilizer and seed in order to increase the production of cotton because it is considered as a back bone for the economy of the country.

AGRICULTURE: A SAD STORY OF AGRICULTURAL INPUT PRICING

From the Newspaper Updated May 20, 2019

The rupee lost 16 per cent value against the dollar last fiscal year. It has lost another 16.4pc so far in 2018-19.

In the last fiscal year, domestic prices of petrol and high-speed diesel increased 26pc and 29pc, respectively. Their prices have surged 18pc and 17pc, respectively, since the beginning of 2018-19.

The rupee depreciation and the increase in oil prices resulted in a sharp rise in the rates of agricultural inputs in both 2017-18 and 2018-19. Since the rupee's value began falling and oil prices started rising in the second half of 2017-18, the agriculture sector's growth remained subdued and grew only 3.8pc last year, according to provisional estimates.

Governments love to incentivise the crop output, but seldom introduce and implement plans for promoting local industries engaged in the production of seeds, insecticides and pesticides

Now 2018-19 is the first fiscal year in which we are witnessing a fuller impact of the rupee depreciation as well as the increase in oil prices. Their lagged impact will be felt by the agricultural sector in the next fiscal year too even if the rupee's value and oil prices remain intact until June.

Initial estimates put agricultural growth during this fiscal year at about 1pc, according to a Dawn report. Doubling or tripling this growth rate in 2019-20 will require extraordinary measures regardless of the low-base effect.

It is true that the PML-N government kept the rupee overvalued throughout its term. This necessitated heavy doses of correction in the final days of its government, under the interim government and during the first year of the PTI government. It is also true that the uptrend in international oil prices is a recent phenomenon — and this is one reason for escalated local prices.

But the problem in revenue generation that the government is facing is unprecedented. This is one reason for higher fuel prices. It is forcing the government to levy higher taxes on fuel. May 5 onwards, the government increased sales tax on different kinds of fuel by 4-10pc.

Keeping this backdrop in mind, let’s see how the prices of agricultural inputs have behaved in the past one and a half years, making the lives of millions of poor farmers miserable.

According to the Pakistan Bureau of Statistics (PBS), average monthly prices of two widely used fertilisers — nitro phosphate and diammonium phosphate (DAP) — shot up to Rs2,832 and Rs3,547 per 50kg in April, which shows an annual increase of 11.8pc and 10.2pc, respectively.

Similarly, prices of Kisan and Sona Urea also increased to Rs1,788 and Rs1,820 per 50kg, respectively, in April. This reflects an annual increase of 25.6pc and 23.8pc.

Farmer lobbies allege that the actual increase is much higher than the one shown in PBS data. Official statistics rely on the prices mentioned by manufacturers and seldom reflect the gap between official and actual prices.

Farmers kept protesting against higher fertiliser prices during the last fiscal year as well. Their representatives claimed that fertiliser prices registered a 10-20pc increase in 2017-18. But the manufacturers rejected those claims, saying the price hike was 5-10pc. Verifying the two claims is difficult since the PBS had not started reporting fertiliser prices at that time.

Prices of seeds and pesticides for food and non-food crops, electricity and gas costs, abiyana or water charges, hourly charges of rented tube-wells, tractors and harvesters and wages paid to hired hands make up the overall cost of agricultural inputs.

Due to the rupee depreciation, the cost of imported seeds and pesticides has gone up. Elevated headline inflation has pushed up the prices of locally produced seeds and pesticides. Electricity and gas charges are much higher than a year ago as the government revamps and cuts subsidies. Utilisation charges for rented tube-wells, tractors and agricultural machinery have been on the rise.

The cost of transportation is also up. The average price of CNG, which is widely used in rural and urban transportation, has gone up about 23pc in a year. It rose from 75.18per kilogram in May 2018 to Rs92.33 last month, according to PBS data.

To add insult to injury, there is no system in place to track exclusively the change in the prices of agricultural inputs. The authorities concerned continue to rely on some relevant items included in the shallow baskets of inflation indices. Farmers’ lobbies don’t usually present details of how a weaker rupee and higher inflation are playing havoc with the agricultural inputs.

Rising input prices of food crops coupled with a weaker and less-transparent system for intervening in agricultural markets push up the rates of food items. Just look at the prices of wheat flour and its by-products. From the last week of April to mid-May, flour millers in Sindh raised their prices by Rs3-Rs3.5 per kilogram, according to a Dawn report.

One of the reasons why agricultural input prices rise too sharply whenever the rupee gets weaker is that domestic industries have not been developed adequately. Governments love to incentivise the crop output but seldom introduce and implement plans for promoting local industries engaged in the production of seeds, insecticides and pesticides or even simple farming tools and implements like threshers and sprinklers.

As all eyes are set on an IMF-dictated federal budget next month, the government may not find it easy to announce farmer-friendly measures. Provincial governments, too, will have a chance to do so only if they get more serious about keeping their financial houses in order.—MA

TCP UREA IMPORT CONTRACT MAY GO TO LOWEST BIDDER

RIZWAN BHATTI | MAY 20TH, 2019 | KARACHI

In response to the Trading Corporation of Pakistan's urea import tender, some seven international suppliers have evinced interest to supply the commodity at a price ranging from $ 301.70 to $ 309.91 per metric tons. Sources told Business Recorder on Friday that so far no decision has been made on the urea import tender as bids validity is for 13-day and the price evaluation committee is evaluating the received bids.

Following the directives of the cabinet's Economic Coordination Committee (ECC), on April 17, 2019, state-run grain trader invites bids for supply of 100,000 metric tons (10 percent more or less at seller's option) urea fertiliser granular (prilled or both) in bulk through import from worldwide sources on Cost and Freight (C&F) basis to avoid shortage in the country.

According to TCP, an international urea import tender for the supply of 100,000 metric ton was opened on Friday. Nine international bidders/suppliers participated in the tender and quoted prices ranging from $ 301.70 to $309.91 per metric ton. Out of nine bidders, two participants i.e. M/s Quantum and M/s Keytrade submitted regret letters.

The lowest bid was submitted by M/s Ameropa Asia, which offered to supply 100,000 tons of urea at $ 301.70 per metric tons. The lowest bid is responsive and according to the tender's prescribed terms and conditions; therefore, it seems most likely the price evaluation committee would finalise the deal with the first lowest bidder.

According to the tender's details made available to Business Recorder, M/s Sumsung was the second lowest bidder, which offered to supply at $ 303.56 per metric ton.

M/s Agrifert Liven quoted a price of $ 303.75 per metric ton, M/s Midgulf $ 304.95 per metric ton, M/s Aries $ 304.97 per metric tons, M/s Megabills $ 308 per metric ton and M/s Dreymoor agreed to supply the required quantity at $309.91 per metric tons.

As per new tender terms and conditions, urea to be supplied strictly in accordance with the standards and specifications prescribed by Pakistan Standards & Quality Control Authority (PSQCA) and Import Policy Order. Unloading and transportation of imported urea will be handled by National Fertiliser Marketing Limited.

NEWS COVERAGE PERIOD FROM MAY 13th TO MAY 19th 2019

IMPORTED FOOD ITEMS TO GET MORE COSTLY

Aamir Shafaat Khan Updated May 19, 2019

KARACHI: Perturbed by soaring dollar prices, many importers of food items have put on hold sales of foreign goods in the market while others continue business as usual under a long-term commitment with foreign buyers.

Talking to Dawn Karachi Wholesalers Grocers Association (KWGA) Patron-in-Chief Anis Majeed said the uncertain rupee-dollar parity would hit masses badly due to rising cost of imports.

“We are clearing our goods from the port and moving these to godowns. However, we are not bringing any of these items in the wholesale market due to unfeasible cost,” he said.

“If the landed cost of imported goods is higher as compared to low prevailing market rates then traders cannot afford to suffer any losses,” he added.

The KWGA chief said imports of items including pulses are continuing. “However, our members have slightly slowed down on fresh commitments from foreign suppliers for pulses and other items hoping for some stability in rupee-dollar parity,” he said.

Chairman Pakistan Vanaspati Manufacturers Association (PVMA) Tariq Ullah Sufi said imports of palm oil are going on. “We have maintained our pace of entering fresh commitments of palm oil. If rupee continues to lose its strength against the dollar then it may cause some fall in the volume of palm oil imports.”

While pointing out one negative impact under volatile exchange rate, he said, “We are considering taking back Rs5 per kg/litre discount of ghee and cooking oil in the next week due to cost escalation in palm oil imports.” The ghee and cooking oil industries had announced the said discount ahead of Ramazan.

The PVMA chairman said he had cleared palm oil at Rs146 to a dollar on Friday which is now at Rs151.

Falling rupee value against the greenback may pose serious challenges for unbranded manufacturers as price hike in ghee and cooking oil would intensify market competition, thus creating problems for many manufacturers, Mr Sufi added.

Nasir Arain, marketing manager at a fast moving consumer goods (FMCGs) importing company said, “We have no option. We are bound to clear goods from the port as per commitment with foreign buyers otherwise holding goods’ clearance means soaring demurrages.”

He said many importers have been working with foreign suppliers under six months or one year agreement of import and at this stage we cannot take an adverse decision.

The price of imported FMCGs had surged by 15-20 per cent despite the fact that one dollar is now equal to Rs151 which was Rs110 in January 2018, said Arain.

"We cannot pass on full impact of rupee devaluation as buying power of people has shrunk by 40-50 per cent in the last 14 months," he said.

Chairman Pakistan Tea Association (PTA), Mohammad Shoaib Paracha said "Our members are clearing their stocks from the port. New orders are also being placed. Being an essential item, import of tea will continue."

On impact in value of one dollar surge to Rs151 from Rs141 in the last few days, he estimated increase in landed cost of imported tea by Rs35-40 per kg.

He feared decline in tea imports in case dollar continues to overwhelm rupee in future, adding "Much would also depend on international tea prices."

UK-PAK SCIENTISTS RESOLVE TO PRODUCE BIOPESTICIDES IN PAKISTAN

RECORDER REPORT 2019/05/19

LAHORE: Scientists and researchers from Pakistan and UK resolved to develop bio-control strategies and produce biopesticides in Pakistan besides developing smart surveillance system for crop pests, disease monitoring and forecast in order to face the food challenges.

The resolve came after discussion at a two-day workshop which was hosted by Swansea University (UK) to address the growing issues of food safety and security. Workshop was organised together with UK-Pakistan Science and Innovation Global Network (UPSIGN).

In Pakistan, University of Veterinary and Animal Sciences (UVAS), Lahore hosted the workshop. Over 30 senior scientists from top UK universities, research institutes and industry partners took part in the discussions. Similar number of scientists and academic colleagues from various Pakistani universities and research institutes joined the discussions through a video link.

Prof Dr Tariq Butt who leads natural products group at Swansea University was the host of the workshop in UK Dr Mamoona Chaudhry from UVAS is leading the Animal Health group and Dr Waqas Wakil from University of Agriculture (Faisalabad) is leading Biopesticides group in Pakistan.

Pakistan has a growing population reaching 220 million and its quarter of GDP is driven from agriculture including livestock. Agriculture and livestock are the main pillars of food security, major source of employment for rural population and provide huge opportunities for women engagement. More than 60% of the rural population is facing serious threats to its food security due to climate change, which is putting huge impact on transmission dynamics of diseases and habitat expansion of new insect pests.

The country is losing more than 40% of its agriculture produce due to both pre- and post-harvest losses. Traditionally, the farmers in Pakistan heavily rely on pesticides to avert the losses mainly due to their quick knockdown effect but due to societal concerns of these chemicals and phase out of old chemistry insecticides, biopesticides are gaining importance in organic agriculture by replacing these noxious chemicals.

Unfortunately, in Pakistan not a single registered biopesticide is available compared with India where almost 957 registered microbial formulations available contributing ~5% of the Indian pesticide market.

Livestock diseases are also causing huge economic losses due to reduced productivity and mortality. Mycotoxins in food products are a major safety concern both for local and international markets, limiting the country's export.

Through series of discussions with Pakistani partners, the group agreed to find solutions to highlighted food challenges.

The group decided to collaborate to deliver following solutions through bringing appropriate organisation on board from the UK and Pakistan; Smart surveillance system for crop pests and disease monitoring and forecast. Using on ground and remote sensing technologies including UAVs, and satellites, Developing Biocontrol strategies and produce biopesticides in Pakistan (growing demand), IPM solutions to reduce the over use of chemicals for pests and disease for reducing MRLs and impact on the environment, Reducing post-harvest losses and addressing the issue of food safety due to mycotoxins, smart monitoring of livestock diseases communicable to humans (zoonotic diseases), and addressing the issue of Anti-microbial resistance Prof Dr Muhammad Ashraf, Vice Chancellor, University of Agriculture (Faisalabad) congratulated the core team of UPSIGN scholars and innovators forum on holding this meeting simultaneously at Swansea and Lahore. He also admired the initiative of Pakistani diaspora in UK to establish consortiums with Pakistani scientists/academia which will bring their cutting-edge research back for Pakistani people to meet the challenges of food security in the country.

The UPSIGN Chairman Prof Dr Jawwad Darr appreciated the efforts from both countries and offered all kind of support to develop consortiums going forward to address the UN Sustainable goals of addressing hunger, poverty, women development and education.

PRICES OF VEGETABLES, FRUITS WITNESS DECLINE

ABDUL RASHEED AZAD | MAY 19TH, 2019 | ISLAMABAD

Prices of perishable kitchen items including vegetables, fruits and chicken witnessed a decline, while prices of pulses, sugar, wheat flour witnessed an increase during this week past as compared to preceding week, a survey conducted by Business Recorder revealed here on Saturday.

During the week under review, vegetable prices witnessed a declining trend as onion price came down from Rs 220 to Rs 200 per 5kg which were being sold at Rs 45-50 against Rs 60-55 per kg in the retail market, tomatoes price went down from Rs 230 to Rs 180 per 5kg which were being sold at Rs 45 per kg against Rs 50-55 per kg in the retail market while potatoes price remained unchanged at Rs 120 per 5kg which were being sold at Rs 25-30 per kg in the retail market.

Local garlic price remained stable at Rs 450 per 5kg in the wholesale market which was being sold at Rs 130 per kg in the retail market, Chinese garlic price went down from Rs 800 to Rs 650 per 5kg which was being sold at Rs 180 against Rs 210 per kg in the retail market, ginger price remained stable at Rs 800 per 5kg in the wholesale market which was being sold at Rs 210 per kg in the retail market.

Capsicum price went down from Rs 150 to Rs 130 per 5kg which was being sold at Rs 35 against Rs 40 per kg in the retail market; yam (arvi) price went down from Rs 400 to Rs 275 per 5kg which was being sold at Rs 65-70 against Rs 90 per kg in the retail market; China carrot price went up from Rs 120 to Rs 150 per 5kg which was being sold at Rs 40 against Rs 35 per kg in the retail market.

Cucumber price went down from Rs 100 to Rs 80 per 5kg which was being sold at Rs 20 against Rs 25 per kg in the retail market, cauliflower price went down from Rs 250 to Rs 200 per 5kg which is being sold at Rs 55 per kg against Rs 65 per kg in the retail market, cabbage price went down from Rs 250 per 5kg to Rs 200 per 5kg which in retail market was being sold at Rs 50 per kg against Rs 60 per kg, lemon price reduced from Rs 1,300 per 5kg to Rs 1,100 per 5kg in wholesales market which in retail market was being sold at s 250 per kg against Rs 330-350 per kg.

Pumpkin price went down from Rs 250 per 5kg to Rs 225 per 5kg which in retail market was being sold at Rs 55 per kg against Rs 60 per kg, Brinjal price went up from Rs 125 per 5kg to Rs 150 per 5 kg which in retail market was being sold at Rs 40 per kg against Rs 35 per kg, and tinda price went down from Rs 150 per 5kg to Rs 120 per 5kg which in retail market was being sold at Rs 40 per kg against Rs 45 per kg. Okra price went down from Rs 450 per 5kg to Rs 300 per 5kg which in retail market was being sold at Rs 75 per kg against Rs 120 per kg, bitter guard price went down from Rs 250 per 5kg to Rs 200 per 5kg which in retail market was being sold at Rs 55 per kg against Rs 65 per kg, peas price went down from Rs 450 per 5kg to Rs 400 per 5kg which in retail market were being sold at Rs 90-100 per kg against Rs 120 per kg.

Chicken price witnessed a reduction as chicken was available at Rs 5,700 per 40kg against Rs 6,000 per 40kg which in retail market was being sold at Rs 160 per kg against Rs 170 per kg, while chicken meat was being sold at Rs 250 per kg against Rs 260-300 per kg. Eggs price remained stable at Rs 72 per dozen in wholesales market which in retail market were being sold at Rs 84 per dozen.

Prices of pulses witnessed another increase during this week as fine quality white lentil (Maash) was available at Rs 200 per kg against Rs 190 per kg while its normal quality was being sold at Rs 160-170 per kg against Rs 150-160 per kg, good quality grams at Rs 200 per kg and normal quality grams at Rs 160 per kg, kidney bean (Lobia) was available in the range of Rs 130-170 per kg, green gram (Moong) at Rs 155 per kg against Rs 140 per kg and red lentil (Masoor) was being sold at Rs 160 per kg against Rs 150 per kg.

The survey observed no changes in the prices of cooking oil, tea, spices and milk as good quality cooking oil was available at Rs 1,050 per 5 litres, Lipton Yellow Label tea 200 grams pack was available at Rs 210 per pack and fresh milk was available at Rs 110 per liter while yogurt price jumped up from Rs 120 per kg to Rs 140 per kg.

Wheat flour was available at Rs 785 per 20kg bag, 50kg sugar bag at Rs 3,300 against Rs 3,250 per bag, best quality basmati rice at Rs 160 per kg, while normal quality rice was available in the range of Rs 135-145 per kg.

GROWERS MOVE SHC AGAINST NON-PAYMENT OF LAST 20 YEARS' QUALITY PREMIUM

Jamal Khurshid May 19, 2019

A body of growers on Saturday filed a petition with the Sindh High Court (SHC) seeking action against sugar mills' owners for not paying quality premium to the growers for the crushing seasons of the last 20 years between 1998-99 and 2018-19, and the minimum procurement price of sugar cane at Rs182 per 40 kilogrammes (kg) to the growers for the 2018-19 crushing season.

The Sindh Growers Alliance submitted in the petition that the sugar mills' owners were liable to pay the growers the quality premium at the end of the crushing season at such rates as may be determined by the government in proportion of the sucrose recovery of such factory in excess of the base level sucrose contents, viz. 8.7 per 40 kg.

Petitioner's counsel Syed Mureed Ali Shah submitted that the sugar mills had gone in litigation against the raise of 32 paisa per 40 kg to 50 paisa per 40 kg and obtained stay from the higher judiciary.

The counsel submitted that the Supreme Court had dismissed the petitions of the sugar mills on March 5, 2018 and observed that the grant of quality premium was just and fair based on statutory provisions.

He argued that the apex court held that the impugned notification was validly issued and observed that in the future, a notification as per the past practice for payment of quality premium should be issued along with the notification of fixation of the minimum procurement price of sugar cane and the same should be paid to the growers not later than two months after the crushing season was over.

He submitted that the Sindh government had issued a notification in compliance with the Supreme Court order and directed the sugar factories in the province to pay quality premium to the cane growers at the end of the crushing season 2018-19 at the rate of fifty paisa per 40 kg cane for each 0.1 per cent of excess sucrose recovery above 8.7 per cent determined on the overall sucrose recovery basis of each mill.

The lawyer said despite the SC judgment, the sugar mills had miserably failed to pay quality premium to the sugar cane growers for the crushing seasons from 1998-1999 to 2018-19 and it was clearly proved beyond any doubt that 37 sugar mills were actively involved in continuously violating, disobeying, obstructing and making mockery of the judgment of the SC and they were liable to be punished for violating the court orders.

The SHC was requested to punish the sugar mills' owners for not paying quality premium to the growers for the crushing seasons between 1998-99 and 2018-19 in violation of the court orders and direct the government to implement its notification and take coercive action against the respondents.

FOUR FISHERMEN RELEASED BY INDIA REUNITE WITH FAMILIES

The Newspaper's Staff Reporter Updated May 18, 2019

KARACHI: In reply to Pakistan's goodwill gesture of releasing 360 Indian fishermen last month, India has reciprocated by releasing six Pakistani prisoners, who reached Karachi on Friday.

Four of the returning men are fishermen belonging to Jati, Sujawal district, while two are civilians who got into trouble in India after their visas expired.

All crossed over to Pakistan recently via the Wagah border. The fishermen reached the Edhi Foundation head office near Tower in the morning, where their families were already waiting impatiently to be reunited with them.

Over 100 Pakistani fishermen are still languishing in Indian prisons

The fishermen — Ghulam Mustafa, Ali Mohammad, Sher Ali and Saddam Hussain — had unknowingly drifted over to Indian waters during a fishing expedition in the monsoon months of June and July last year.

On the occasion, Fishermen's Cooperative Society chairman Abdul Berr said that India's reply to Pakistan's releasing so many fishermen earlier showed their lack of compassion. "It is like a drop in the ocean," he said.

There are currently 102 Pakistani fishermen locked up in Indian jails, and there are 24 more, who have been lost at sea during a recent storm.

"We fear that the 24 fishermen, who have been missing since the storm, may also have been picked up by the Indian forces and it could be that they are also languishing in Indian jails now though there has been no word from India about them so far," Mr Berr added.

Edhi Foundation chairman Faisal Edhi said that the fishermen in Indian jails should also be released by India and brought back.

He added that it was a terrible practice by both India as well as Pakistan to confiscate fishing boats after arresting the fishermen.

"And the boats on which their bread and butter depends are never returned even after the fishermen are released," he said.

It was mentioned that there are some 132 Pakistani fishing trawlers rotting away in India currently.

HIKE IN UREA PRICES TERMED 'UNJUSTIFIED'

MUSHTAQ GHUMMAN | MAY 18TH, 2019 | ISLAMABAD

Secretary Industries and Production Aamir Ashraf Khawaja said on Friday that some portion of the recent increase in urea prices is unjustified as prices have touched Rs 1900 per bag in some parts of the country. He was responding to the questions of parliamentarians at a meeting held in Parliament lodges. Parliamentarians were in an uproar at the fertilizer industry increasing prices of urea and DAP without any justification.

Secretary Industries informed the committee that the Ministry held at least three meetings with the representatives of fertilizer industry as it has to submit a report to the Economic Coordination Committee (ECC) of the Cabinet. "We have witnessed an increase in urea prices by Rs 230 per bag in two phases ie Rs 140 per bag in the first go and Rs 90 in the second go. Urea prices have increased to Rs 1850-1900 per bag in far flung areas," he added.

According to the Secretary Industries, technical people of the Ministry and fertilizer industry held meetings to jointly work out the price. He said, the working done by both the teams indicate that some increase in urea prices is defensible but some increase is unjustified, adding that the Ministry is not satisfied with the justification given by the fertilizer industry. Secretary stated that the Ministry will submit the report before the cabinet and take action accordingly.

He argued that since privatisation and deregulation of fertilizer sector, the issue of price exists. Government imports urea and sells it to farmers at subsidized rates. Rana Ishaq Khan, Member National Assembly proposed that those fertilizer factories involved in overcharging farmers should be identified and blacklisted.

Recently, Abdul Razak Dawood, Prime Minister Advisor on Industries and Production also expressed annoyance at the local fertilizer industry for increasing urea prices by Rs 90 per bag to Rs 1,830 per bag in April 2019 from Rs 1,740 in October 2018.

PFMA PUNJAB THREATENS TO STOP FLOUR SUPPLY TO MARKET

RECORDER REPORT | MAY 18TH, 2019 | LAHORE

Pakistan Flour Mills Association (PFMA) Punjab while demanding for changing the sitting Provincial Secretary Food has threatened to stop supply of flour in the market after three days if their demand is not accepted. The demand was raised by PFMA Punjab Chairman Habib ur Rehman Leghari, Group leader PFMA Asim Raza Ahmad and others after an emergent meeting of the Association held here on Friday.

The meeting reviewed the situation arising out of what it claimed impounding of vehicles carrying wheat bought by the flour mills. PFMA Punjab Chairman also claimed that wheat price had reached Rs 1450 per maund in the open market because of the tactics being adopted by the provincial food department. He also hinted at a possible flour crisis in the province and said if mills stopped supplies then there would also be no availability of flour in Ramzaan bazaars.

Members of the Association also presented keys of their mills to the PFMA Chairman on this occasion symbolizing their solidarity with the call of the Association. PFMA members also demanded that the feed mills should be stopped from procurement of wheat and only flour mills should be allowed to buy wheat from the open market. It may be added here that the PFMA Punjab was protesting over stopping their wheat-carrying vehicles by the officials of the food department saying the department had resorted to those immoral tactics to meet its procurement target assigned by the provincial government.

They were of the view that wheat with mills can also be considered as the stock of the food department as the department had to release wheat to mills from its stocks when mills exhaust their buying and government start issuing wheat from the government stocks for smooth supplies of flour in the market.

COTTON MARKET: BINOLA NEW CROP AVAILABLE AT RS 1675 PER MAUND

RECORDER REPORT | MAY 18TH, 2019 | KARACHI

Trading activity improved further on the cotton market on Friday as mills indulged in panic buying owing to soaring dollar's rate versus the rupee, dealers said. The official spot rate was unmoved at Rs 8650, they added. In the ready session, over 8000 bales of cotton changed hands between Rs 8750-8800, they said.

Market sources said that dollar's higher rate forcing mills to make fresh buying of cotton at the present levels. Cotton analyst, Naseem Usman said that Sanghar ginning factory sold Binola new crop for June 2019 delivery at Rs 1675 per maund. Other brokers said that cotton prices likely to go up in the coming days. Cotton sowing is on full swing in both Sindh and Punjab, they added.

Adds Reuters: Cotton prices inched up on Thursday as investors covered short positions as rally in global equities and grains market improved market sentiment, while US-China trade war worries limited gains. The most-active cotton contract on ICE Futures US July settled up 0.45 cent, or 0.7 %, at 66.80 cents per lb.

Total futures market volume fell by 9,498 to 22,739 lots. Data showed total open interest gained 1,129 to 215,831 contracts in the previous session. Following deals were reported: nearly 2200 bales of cotton from Dherki sold at Rs 8750-8800 and 6000 bales of cotton from Rahim Yar Khan at Rs 8750, they said.

NA BODY DIRECTS BETTER CROP INSURANCE

The Newspaper's Staff Reporter Updated May 17, 2019

ISLAMABAD: Expressing serious concerns over ineffective crop insurance schemes offered to famers in the country, the National Assembly Standing Committee on Commerce and Textile on Thursday asked the commerce ministry and National Insurance Company Limited (NICL) to come up with better packages.

The committee, led by its chairman MNA Naveed Qamar, was reviewing crop insurance schemes to suggest measures for helping farmers.

The committee was informed that although standing wheat crop had been damaged due to hailstorms in April, sufficient stocks are available from the previous harvest for consumption in the country.

Mr Qamar opined that wheat should be deregulated and grading of the crop is necessary. He stressed the need to change the policy regarding sugarcane, adding that it is high time to invest in other crops.

For date crop, the standing committee asked the ministry to resolve the issue of running finance and remittance by taking farmers into confidence. The committee also recommended that more crops covered by Zarai Taraqiati Bank Limited.

Adviser on Commerce to Prime Minister Razak Dawood briefed the committee on Strategic Trade Policy Framework (STPF) 2019-24. He said the policy objectives of STPF are to make the exports a driver of economic growth, transition from factor-driven to efficiency-driven exports in the short to medium term.

He said the policy will also ensure innovation driven exports in the long-term, improve competitiveness and efficiency of industry especially export-oriented sector by reducing input costs and increasing productivity, attract efficiency-seeking investment into export-oriented production.

Mr Dawood said the proposed policy will reduce relative “disincentive” for exporting activities by reducing structural anomalies, and to improve the trade ecosystem by increasing institutional efficiencies and reducing cost of doing business.

The meeting was attended by parliamentarians including Ali Khan Jadoon, Muhammad Yaqoob Sheikh, Muhammad Asim Nazir, Ahmed Hussain Dehar, Mian Muhammad Shafiq, Wajhia Akram, Sajida Begum, Tahira Aurangzeb, Shaista Pervaiz and Syed Javed Ali Shah Jillani.

13 FOOD OFFICIALS, TRADERS BOOKED IN WHEAT SCAM

A Correspondent May 17, 2019

DADU: Eleven officials of food department posted at district food controller’s office and two well-known traders of the area were nominated in seven FIRs lodged by Anti-Corruption Establishment (ACE) on Thursday on charges of embezzling 194,000 wheat bags whose total worth came to around Rs431 million.

The suspects, who included deputy director of the Hyderabad range of food department Salimullah Siddiqi, Dadu district food controller Ali Mohammad Mugheri, food inspectors Ali Asghar Panhwar, Ghulam Mohammad Kakepoto, Ghulam Murtaza Butt, Allah Bachayo Panhwar, Farooq Ahmed Khoso, Munawwar Ali Virk, Inaam Hussain Abro, Muzaffar Jesar, head clerk at Dadu district controller’s office Gulshan Solangi and wheat traders Moharam Pechuho and Mohammad Hussain Khokhar, were accused of embezzling the wheat bags stored at the department’s godowns in Pat Sharif, Jhaloo, Sita Road, Khairpur Nathan Shah, Radhan, Johi, Dadu and Phakka towns.

ACE Jamshoro range deputy director Noorullah Shaikh said that inquiries found that the suspect officials had purchased wheat from different areas of Dadu district in last procurement season and misappropriated 194,000 wheat bags. He had formed two teams to arrest the 11 officials and the two traders, he said.

FOUR MILLION TONS OF WHEAT TARGET TO BE ACHIEVED EASILY: MALIK ANWAR

RECORDER REPORT | MAY 17TH, 2019 | LAHORE

Punjab Revenue Minister Malik Muhammad Anwar has said that the PTI-led government will achieve wheat procurement target of 4 million metric tonnes for the 2019-20 crop with financial limit of Rs130 billion, adding that the wheat procurement process is being conducted smoothly in the province.

The Provincial Revenue Minister said that wheat crop has suffered a setback due to recent rains followed by thunderstorm and about 5 percent losses were caused to overall production. He informed that losses in Punjab appeared to be on higher side and would be known after two to three weeks because crops in many parts are still in the open fields. Malik Anwar said that all the district revenue officers were directed to complete assessment of losses caused to wheat crops in the province and submit their reports to the govt so that the farmers suffering from damage of crops can be compensated to the optimal level. He asked them to address the complaints of farmers promptly. Commenting on tax amnesty scheme introduced by the present govt, the revenue minister said that this scheme which was finalized after consultation with stakeholders would help in raising billions of rupees, besides promoting documentation of the economy.

GOVT APPROVES 5.15M TONNES WHEAT PROCUREMENT, SUPPLY OF ANOTHER 150MW TO KE

Khaleeq Kiani Updated May 16, 2019

ISLAMABAD: The Economic Coordination Committee (ECC) of the cabinet on Wednesday approved Rs158 billion wheat procurement plan and 150MW additional power supply to K-Electric from the national grid.

Adviser to Prime Minister on Finance, Revenue and Economic Affairs Dr Abdul Hafeez Shaikh presided over the meeting that did not approve about Rs118bn electricity subsidy to industrial consumers for want of further deliberations.

Sources told Dawn that the meeting was informed that wheat crop had suffered a setback due to recent rains and thunderstorms and about 5 per cent losses are initially estimated to have been caused to the overall production.

ECC gives Rs1.8bn additional subsidy to ex-Fata tribal agencies for Ramazan

In his presentation, the secretary, ministry of national food security and research updated the meeting about the availability of wheat in the country saying total stocks stood at 5.328 million tonnes as of May 13. It was reported that initial estimates put the total wheat output at 24.268m tonnes during the just concluded crop season against a target of 25.56m tonnes. About 1.213m tonnes were lost due to recent adverse weather conditions.

Some participants were of the view that losses in Punjab appeared to be on the higher side and would be known after 2-3 weeks because crops in many parts were still in the open fields. The meeting was informed that the wheat procurement process was being conducted smoothly by the provincial government (Punjab) and Passco. The committee approved the proposed wheat procurement target of 5.15m tonnes for the 2018-19 crop with financial limit of Rs158.5bn.

The ECC approved additional power supply of 150MW from the national grid to the KE so as to address power shortage in Karachi. An official said the KE would get additional power supply of 150MW for two years at the average basket price at which the Central Power Purchasing Agency (CPPA) was supplying electricity to other distribution companies. The average basket currently stands at about Rs9.89.

Responding to a question, an official said the KE should have been given additional supply from the national grid at marginal cost – significantly higher – but a 2007-08 decision of the federal cabinet became the stumbling block that ordered treatment of KE at par with distribution companies of ex-Wapda. The relevant authorities did not want to follow a lengthy process for amending the old cabinet decision. With this, the KE's intake from national grid would now stand at about 800MW.

The Karachi-based private power utility is facing about 500-600MW shortfall in peak summer months and had been pursuing the federal government for additional supply from the national grid including from Karachi-based nuclear power plants to meet peak demand and minimise public sufferings. It has been trying to secure about 500MW from the national grid in view of its inability to overcome capacity constraints on its own. The KE would be provided with additional supply through 132kv existing transmission line from three wind power plants in the Gharo area namely Dawood Hydro China, Zephyr and Tenaga (50MW each).

A fresh power purchase agreement (PPA) for two years would be signed by KE with CPPA/NTDC. The initial 2-year PPA would be extendable.

The government has not yet issued national security certificate for the transfer of KE's 66pc share to Shanghai Electric of China because of over Rs100bn claims of the Sui Southern Gas Company and NTDC/CPPA against the KE while the Karachi-based private utility also had huge claims against various entities of the Sindh government. As a result, Shanghai's $1.77bn takeover plan of the KE continued to face roadblocks.

An official said the ECC did not formally approve Rs3 per unit subsidy in power tariff to industrial consumers under the prime minister's package and ordered the power division to have further deliberations with the ministry of finance and the industrial sector before seeking budgetary allocations. The industrial consumers had been enjoying the cheaper rates but the finance division had been reluctant to disburse these funds to power companies because initial allocations lapsed almost a year ago.

In order to provide additional power supply to the seven tribal agencies of ex-Fata, the committee approved additional subsidy amounting to Rs1.8bn to the Tribal Electric Supply Company for Ramazan. The power division informed the meeting that the government had been paying the electricity bills of the domestic consumers of former tribal agencies through subsidy of Rs1.3bn per month.

The ECC also acceded to the Earthquake Reconstruction and Rehabilitation Authority's proposal by granting tax exemption to the projects being constructed under the Saudi Fund for Development Grant.

On the proposal of the ministry of maritime affairs, the committee waived off demurrage (KPT storage charges) on the consignments of rice to be distributed among the needy people by a non-profit welfare organisations working for the poor and the needy people of the country.

The meeting approved technical supplementary and supplementary grants for different ministries/divisions.

NA SPEAKER FOR SPECIAL PACKAGE FOR AGRICULTURE SECTOR IN BUDGET

RECORDER REPORT | MAY 16TH, 2019 | ISLAMABAD

The government will be requested to announce a special package for agriculture sector in budget for the next fiscal year to help small farmers and improve the agriculture output, speaker National Assembly Asad Qaiser stated on Wednesday.

The speaker National Assembly and MNA Fakhar Imam jointly chaired the sub-committee of the Special Committee on Agriculture products as well as formed sectoral groups and tasked them to come up with the proposals in the next meeting for moving forward.

The meeting was held with agenda to promote collaborative linkages between the special committee on agricultural products and agriculture universities faculties as well as to promote the agriculture sector.

Asad Qaiser stated that for the first time, members across party lines and from all provinces have been brought at one platform to develop a strategy to bring about improvement in the sector and, if required, some legal changes would be done.

Some members of the committee including the convener regretted that the country is importing pulses despite being an agrarian economy and this is largely because of absence of research and adoption of new technology. They added that agriculture is the only sector that could help improve the balance of payment position and reduce debt burden in a very short time through increase in exportable surplus.

The purpose of the meeting was to devise a strategy to increase productivity, especially exportable surplus, and protect the farmers against the interests of multilaterals.

Fakhar Imam said, “For the first time this kind of discussion has taken place from the Parliament, and farming should be the focus of the country now.”

A presentation was also made to the committee highlighting the factors responsible for taking the agriculture sector to collapse after 60s and led to deterioration of food quality.

Chairman Pedaver Private Limited, Asif Sharif in a presentation stated that the current pattern in farm sector is against natural system. He added that higher cost of production and lower quality led to decline in output of the sector and poverty for the farmers. He said that challenges in the sector are poverty alleviation, stunted growth for the people attached to the sector in particular and other in general, and to make available production of industrial raw material at competitive prices and quality.

MET OFFICE ISSUES ADVISORY FOR FISHERMEN

RECORDER REPORT | MAY 16TH, 2019 | KARACHI

With windstorm looming large, the Fishermen Cooperative Society (FCS) on Wednesday alerted the weather dangers and barred all the boats from leaving harbors. The Met Office on Wednesday forecast windstorm for Karachi Division as well that prompted the FCS to take precautionary steps, barring boats from leaving Karachi and Korangi Fish Harbors.

"Weather emergency to the local fishermen communities has been issued," the FCS spokesman said, adding that the boats engaged in fishing on the seas have also been asked to drift to safe places. The restriction on boats from leaving the harbors will stay until May 18, he said.

In the next 24 hours: A scattered dust-thunderstorm with rain is expected in Malakand, Hazara, Peshawar, Kohat, Mardan, Bannu, D I Khan, Rawalpindi, Gujranwala, Lahore, Sargodha, Faisalabad, Sahiwal, Multan, D G Khan, Bahawalpur, Quetta, Zhob, Kalat, Makran, Sibbi, Nasirabad, Sukkur, Larkana, Shaheed Benazirabad and Karachi divisions, besides Gilgit-Baltistan, Kashmir and Islamabad.

Bahawalnager received 25 mm of rain, Malamjabba 13 mm, Bahawalpur City 12 mm, Sahiwal 9 mm, D G Khan and Jaccobabad 8 mm, each, Bahawalpur Airport 6 mm and Upper Dir 5 mm in the last 24 hours. Maximum temperatures were recorded in Dadu as 47 degrees Celsius, Shaheed Benazirabad 46, Padidan and Mohenjo-Daro 44 mm each.

CONSTRUCTION OF EASTBAY EXPRESSWAY IN GWADAR: BREAKWATER, ALLIED FACILITIES TO BE DEVELOPED FOR DISPLACED FISHERMEN

TANVEER AHMED | MAY 16TH, 2019 | KARACHI

Federal and Balochistan Governments will share the cost of over rupees one billion "Construction of Groyne Wall, Breakwater and allied works at Eastbay (Demizer), Gwadar" project equally to facilitate the local fishermen, to be displaced due to construction of Eastbay Expressway.

The main purpose of the project is to provide a Breakwater at Eastbay (Demizer), Gwadar to facilitate the fishermen which are going to be displaced from the existing fish harbor cum mini port for undertaking the other development works by the Chinese Operator of the Port and Construction of Eastbay Expressway, according to official documents of Planning Commission available with Business Recorder.

The existing Gwadar Fish Harbor is to be closed from the operational premises of Gwadar Port to enable deepening of the Port's Shipping Channel as well as undertaking of other development works by the Chinese Operator of the port.

The Chinese team started work on Eastbay Expressway at Demizer. The fishermen recorded their reservations on the construction of Eastbay Expressway and the area representatives also raised this issue on different forums including National Assembly, Provincial Assembly and Senate.

The local Fishermen approached Chief Minister Balochistan with the demand to develop a boat parking yard including breakwater and allied facilities at Demizer. The Chief Minister Balochistan directed Gwadar Development Authority (GDA) to take this issue on immediate knots and prepare PC-I for further processing.

The GDA surveyed the site on the directions of the Chief Minister Balochistan and it was decided to construct a breakwater so that fishermen can park their vessels inside the barricaded area as there would be no space available due to construction of Gwadar Eastbay Expressway at Eastbay (Demizer).

The project envisages construction of 1775 meters long and six meters wide stone groyne wall, training wall, auction hall, boats repair area and boat basin as parking yard with allied facilities at Eastbay Gwadar.

WHEAT SUPPLY TO KP: FLOUR MILLERS VOICE CONCERN OVER RESTRICTION

RECORDER REPORT | MAY 16TH, 2019 | PESHAWAR

Flour mills' owners have expressed serious concern over the restriction of wheat supply to local mills and warned to start protest demonstrations against Punjab government for suspending the supply to Khyber Pakhtunkhwa and Balochistan. Pakistan All Pakistan Flour Mills Association chairman Naeem Butt and provincial chairman Haji Mohammad Tariq in a joint statement here said that the ban had been imposed by the Punjab food department due to its drive for storage of wheat which led to crisis in other provinces.

The association leaders said that the wheat supply from Punjab to Khyber Pakhtunkhwa had been suspended for the past some days which had forced the millers in KP to shut the mills. It was stated that if the government did not intervene to resolve the issue then the millers in Khyber Pakhtunkhwa would have the right to agitate against the government.

Besides, the association leaders said that Punjab government had started checking wheat supply at different checkpoints/check posts. It was stated that Pakistan Tehreek-e-Insaf was in power both in the Punjab and the Khyber Pakhtunkhwa and in case the wheat supply was not restored then the people of the affected province would have the right to take part in the proposed protest rallies against the ban on wheat supply.

GOVERNMENT URGED TO REDUCE AGRICULTURE SECTOR'S INPUT COST

RECORDER REPORT | MAY 16TH, 2019 | LAHORE

Kisan Board Pakistan (KBP) Central President Chaudhry Nisar Ahmad has urged the government to pay special attention to issues being faced by the agricultural sector in the budget for the year 2019-20. While talking to a delegation of farmers in his office here on Wednesday, Chaudhry Nisar said that the government should take steps to reduce the input cost of this sector. For this, he proposed that subsidy should be given on seeds and fertilizers and special subsidy packages for pesticides and agricultural machinery.

He was of the view that agriculture should top in our priority list to improve the national economy. He said that markup on agricultural loans should also be brought down and an indiscriminate and ruthless crackdown should be launched against those involved in the heinous crime of fake pesticides.

Regarding cotton, he proposed that emergency should be imposed for resolving the problems being faced by the cotton growers and to meet the target of cotton production. KBP Chief said that the government was talking about withdrawing subsidies as a result of a recent deal with the International Monetary Fund (IMF).

He said that if subsidies given to agricultural sectors are withdrawn it would lead to a disaster in agriculture. He claimed that even developed countries extend support and subsidies to their farmers. He reiterated that subsidy being given to growers on electricity, fertilizers, pesticides, marketing, machinery and other heads should not be withdrawn.

SINDH FOOD DEPT OFFICIALS BOOKED IN RS1.78B SCAM

By Our Correspondent Published: May 16, 2019

HYDERABAD: In a Rs1.78 billion scam involving the illicit sale of wheat bags, Sindh Anti-Corruption Establishment (ACE) has booked 25 officials of Sindh food department besides private persons in Sanghar district. The circle officer of ACE, Yar Muhammad Rind, informed on Tuesday that multiple FIRs have been registered against the officials and others after approval of the inquiry by the Sindh chief secretary.

The officials sold the wheat bags, which the food department distributes among the wheat farmers for the provincial government’s wheat procurement, illegally to the agents and traders last year. The district was reportedly allocated 1.7 million wheat bags of 100 kilogrammes each.

The Sindh government bought wheat at Rs1,300 per 40kg from the farmers. But as the provincial government delays the wheat procurement, the traders and agents buy wheat at around Rs1,000 to Rs1,100 per 40 kg rate from the farmers and later sell the same wheat to the government at Rs1,300 rate. Under the law, the food department is under obligation to distribute the wheat bags, which are also referred to as gunny bags or gunny sacks, to the wheat farmers only.

Deputy director Ali Asghar Naich, Sanghar District Food Controller Muhammad Munawar Arain, assistant food controller Jam Abid Ali and several in-charges and food inspectors deputed at some 40 food centres in Sanghar have been booked. However, Rind informed that none of the accused could be arrested so far during the initial raids at the food offices.

A similar inquiry by the National Accountability Bureau (NAB) is underway in Ghotki district where food officials illegally shifted wheat worth billions of rupees to flour mills under the pretext of temporary storage. The NAB team, which raided several flour mills, found that the mills had utilised and sold that wheat.

CLIMATE CHANGE MAY PUSH DOWN PAKISTAN'S MANGO OUTPUT

By Usman Hanif Published: May 16, 2019

KARACHI: With constant changes in climate, Pakistan needs to adopt new techniques of farming as currently, it is not capable of dealing with the change due to obsolete agricultural practices. Considering this, the mango harvest is feared to drop 30% this season.

"Global warming is the major reason behind this fall in production," said Waheed Ahmad, Patron-in-Chief of the All Pakistan Fruit and Vegetable Exporters, Importers and Merchants Association (PFVA). "Heavy rains and hailstorms caused the decrease in output."

In 2019, mango production was expected to stand at 1.2 million tons compared with 1.8 million tons in the previous year, he said.

"This year, mango production is feared to go down 30% compared to last year," he said, adding that Punjab was going to record a 35% decrease in production whereas Sindh was going to witness a 10% decline.

"The climate is showing a paradoxical situation as it remains hot during the day while at night it becomes very mild or cold; this fluctuation in temperature is not suitable for the mango crop," he said.

Pakistan had the seventh position in the list of countries most affected by global warming, Ahmad recalled, adding, unfortunately, farmers were using the same 70-year-old techniques to deal with the change in weather.

Owing to global warming, the weather calendar was also changing, therefore, Pakistan needed to act accordingly, he said. For instance, there are techniques to save the crop from a hailstorm, but Pakistani farmers are not aware of these.

Agricultural practices were changing around the world, but there was nobody to educate the farmers in Pakistan about them, Waheed said. "We need to spread awareness among our growers to protect their crops from rains, storm, etc. This situation can lead to the food security challenge, which subsequently can turn into a national security issue," he said.

Moreover, Pakistan is a water-stressed nation. The country's 80% of water is used in the agriculture sector. Farmers rely on the flood irrigation system, which is ineffective, which is why Pakistan needs to introduce the drip irrigation system, which will help save 50% water.

The old technique is not only ineffective in dealing with climate change, but it also increases the cost of doing business, according to the PFVA chief. This turns Pakistan's exporters uncompetitive in the international market.

“If we don’t wake up to deal with this situation, food security concerns will emerge by 2022,” he cautioned, adding “we need intense research and development in the agriculture sector to increase productivity and reduce the cost of doing business.”

“We see tomatoes being sold for Rs40 per kg one day and for Rs200 the other day; this happens due to the inefficient supply chain.”

Mango is one of the cash crops, which earns foreign exchange for the country. This year’s mango export is going to commence on May 20.

“The target is to export 100,000 tons of mangoes (this year), which will fetch foreign exchange worth $80 million,” Waheed said.

This season, the production may go down, but exports were going to increase by 25,000 tons, he said. “Last year, the exporters of mangoes sold 75,000 tons to foreign markets and for this purpose, we are going to hold roadshows in Europe, the US, and China,” he revealed.

“We are ambitious that we will be able to meet the target, however, we will need help from relevant departments like the ANF, Customs, quarantine and shipping companies to meet our target,” Waheed said.

“We sincerely hope that the law and order situation of the country will stay stable; there will not be any strike or other political instability, which can hinder exports of any crop.”

The depreciation of the rupee against the dollar has also had its impact on the export business, he said. The lower value of the rupee has resulted in higher prices of petroleum products, which subsequently have become a reason for the higher prices of domestic transport and logistics.

The rupee’s free fall has caused an increase in sea and air transport fares, which further affects Pakistan’s exports. Pakistan ships 15% of its mango through the air and 15% through the land, while the rest, 70%, goes through the sea.

The official was of the view that a reduction in the number of Emirates airline’s flights to Pakistan would have an additional impact on exports.

TWO MONTHS BAN ON FISHING LIKELY BY MONTH-END

RECORDER REPORT | MAY 15TH, 2019 | KARACHI

The Sindh government is set to place a two-month ban on hunt of fish and shrimp during June and July to help improve fisheries stocks in the country’s seas, official said on Tuesday. Talking to Business Recorder, officials said that a notification to execute the ban will come out mostly likely by the end of this month. “It is must,” the officials talked about the ban that will help keep the seas calm from fishing during the high-tide season, which is also believed to be a breeding period for shrimps.

The officials said that ban is needed to continue to help improve the existing stocks of fisheries since the country’s seafood export is falling. According to Pakistan Bureau of Statistics, the country’s seafood export has declined to $293.887 million in July-Mar 2018-19, which down by 7 percent.

Fall in seafood export now stands at $21.727 million in July-Mar 2018-19 from $315.614 million in July-Mar 2017-18. In term of quantity, seafood export plunged by 5.07 percent or 6989 metric tons to 130,830 metric tons in July-Mar 2018-19 from 137,819 metric tons in July-Mar 2017-18. In Mar 2019, Pakistan faced a fall in seafood export by 11 percent or $5.502 million to $45.895 million from $51.397 million in Mar 2018. Export volume of seafood slumped by 16 percent or 3876 metric tons to 20,412 metric tons in Mar 2019 from 24,288 metric tons in Mar 2018.

MINISTRY PROPOSES WHEAT PROCUREMENT TARGET OF 5.150 MILLION TONS

MUSHTAQ GHUMMAN | MAY 15TH, 2019 | ISLAMABAD

The Ministry of National Food Security and Research has proposed wheat procurement target of 5.150 million tons for 2019, despite damage to crop in South Punjab due to thunderstorms, well informed sources told Business Recorder.Punjab Government, sources said, which is now revising down its procurement target, has imposed inter-provincial ban on movement of wheat, fearing crisis in the coming days.

According to the Ministry of National Food Security and Research financial requirement to procure 5.150 million tons of wheat has been calculated at Rs 158.522 billion. The sources said, in order to ensure food security of the country and to provide a fair return to the farming community, the respective Food Departments and Pakistan Agriculture Storage and Services Corporation Limited (PASSCO) procure wheat every year at a Minimum Guaranteed Price (MGP) from the farmers.

The ECC, in its meeting held on November 11, 2018 formally approved to maintain the MPG of wheat @ Rs 1300 per 40 kg, for the wheat crop 2018-19. Public sector enters into the local market as an alternate buyer and their wheat stocks serve the purpose of maintaining steady releases and price stability during the lean periods of wheat supplies as well as fulfilling the food requirements of the country.

During the preceding three years, the public sector had procured 6.104 million tons wheat, on average, against the assigned average target of 6.733 million tons per annum. Last year a quantity of 5.989 million tons of wheat was procured by the public sector against the procurement target of 6.100 million tons. Low wheat procurement was made due to leftover stock of the previous year to the tune of 5.942 million tons.

The current public sector wheat stocks as on April 24, 2019 were at the level of 3.785 million as compared to 6.30 million tons in the corresponding period of last year. In the meeting of wheat review committee held on February 13, 2019, a procurement target of 6.90 million tons was fixed, in consultation with all stakeholders. The target consisted of 4 million tons in Punjab, 1.40 million tons for Sindh, 0.30 million tons for KP and 0.10 million tons for Balochistan and 1.10 million tons for PASSCO.

It was decided that provincial cabinets will give concurrence and endorsement. Provincial Governments have submitted their wheat procurement targets and financial requirements on the requisites format. However, Government of Sindh decreased its procurement target from 1.40 million tons and forwarded a tentative target of 0.750 million tons subject to approval of their cabinet committee whereas the ECC on April 8, 2019 had already approved the wheat procurement target of 1.10 million tons for PASSCO.

After examining the entire situation, Ministry of National Food Security and Research has recommended the government to fix the target of wheat procurement for wheat crop 2018-19 at the tune of 5.150 million tons with the financial limits of Rs 41.787 billion as per for follows details: (i) Punjab 4 million tons, Rs 130.360 billion;(ii) Sindh 0.750 million tons- Rs 24.375 billion ;(iii) KP 0.300 million tons – Rs 0.00(KP government will utilize its own resources for wheat procurement) and Balochistan 0.100 million tons – 3.787 billion. The total financial requirement for 5.150 million tons of wheat has been calculated at Rs 158.522 billion.

The Finance Division stated that from data procurement target and financing needs and carry forward stocks in last five years in respect of PASSCO, it is ascertained that over the years, procurement quantum by PASSCO is increasing resulting in increase in carry forward stocks at the time of fresh procurement. This phenomenon has resulted in enhancement in financing requirements of PASSCO. The other aspect of this additional procurement is that PASSCO/Ministry of National Food Security and Research starts initiating offloading of wheat stocks either through exports or through private parties with subsidy to be picked up by the Federal Government.

Finance Division has supported procurement of 1.1 million tons of wheat by PASSCO for crop 2019 subject to the condition that PASSCO will manage offloading of procured wheat without subsidy from the government of Pakistan. Finance Division has further stated that the proposed incidentals of Rs 5.769 billion should be agreed at provisional basis at this stage, subject to final adjustment as per actual and past practice.

TETRA PAK HANDS OVER SIX MILK TESTING UNITS TO PUNJAB GOVERNMENT

RECORDER REPORT | MAY 15TH, 2019 | LAHORE

Tetra Pak Pakistan handed over six milk-testing units to the government of the Punjab on Tuesday to assist it in the objective of provision of safe milk to the masses.

Milk-testing units were handed over to the Punjab Minister for Food Sami Ullah Chaudhary who visited Tetra Pak Pakistan’s state-of-the-art packaging material manufacturing factory in Sundar Industrial Estate today. The Minister was briefed on the company’s world class manufacturing processes and plant features.

The Minister was also given a tour of the factory, which included factory operations and an overview of food processing packaging and the dairy value chain in the Innovation Room. The Minster experienced first-hand the enforcement of world class occupational health and safety standards and manufacturing processes practiced by Tetra Pak. As per the company’s slogan of committing to make food safe and available everywhere, Tetra Pak is deeply appreciative of the Prime Minister’s stance on providing pure milk to the masses and as such took this opportunity to present the provincial food department with 6 milk testing units to further their efforts in proving safe and healthy milk.

Upon visiting the factory, the minister showed satisfaction and appreciated the efforts made by Tetra Pak to maintain quality of production and increase customer awareness about packaged milk.

Commenting on his visit Chaudhary said, “It is great to see Tetra Pak contributing in the food sector of Pakistan as a leading processing and packaging provider. Their environment-friendly techniques are very important for sustainable development and Tetra Pak is living according to these principles. We are also thankful to the company for the milk testing units, which will benefit us in the fight against adulterated milk.” Towards the end of the visit, the food minister also took part in Tetra Pak’s plantation drive and planted a tree in the factory to advocate for a greener country. Tetra Pak is a socially responsible organization and has undertaken many community improvement initiatives while working with different NGOs, media and academic institutions.

THIRD HIKE IN FLOUR PRICES

Aamir Shafaat Khan Updated May 14, 2019

KARACHI: Having jacked up prices of various varieties for the third time before the advent of Ramazan, the flour millers on Monday warned Sindh Chief Minister Murad Ali Shah of looming food crisis.

After failing to get any response from the provincial food minister and secretary food despite repeated attempts, Pakistan Flour Mills Association (PFMA) Sindh Chapter chairman Mohammad Jawed Yusuf wrote a letter to the chief minister informing him that bad weather had damaged a major portion of Punjab wheat crop which is not suitable for milling.

About 75 per cent of the country’s wheat requirement is met by Punjab wheat crop.

“About 20,000 tonnes of wheat is being shifted from Sindh to other provinces daily, thus putting pressure on available stocks in the open market,” he stated in the letter.

The association claimed that last year’s wheat stocks were not properly stored, while no fumigation was done. Stock figures were incorrect as about 50 per cent stocks were not available physically. On papers, Sindh has 800,000 tonnes of last year’s wheat stocks.

The PFMA chief pointed out another alarming aspect as this year the Sindh Food Department has decided not to procure wheat stocks.

Yusuf said it is high time to decide about the wheat crop situation of Sindh and ways to tackle the legal complication and hindrance to seal Sindh-Punjab borders immediately.

He asked the chief minister to convene an urgent meeting to discuss facts about wheat season 2019-20, non-procurement of wheat by Sindh Food Department, position of previous wheat stocks and transfer of 20,000 tonnes of wheat daily to other provinces.

Millers had raised the rate of flour No.2.5 to Rs36.50 from Rs35 per kg followed by price hike in fine and super fine flour to Rs40 from Rs38.50 per kg.

From last week of April till to date, the price of flour no.2.5 has risen by Rs3 per kg followed by Rs3.50 per kg in fine and super fine flours respectively.

Millers attributed price hike to rising price trend of wheat, which now stood at Rs3,350 per 100 kg bag in the open market versus Rs3,000 some three weeks back.

GROWERS ADVISED TO PROTECT STANDING CROPS

RECORDER REPORT | MAY 14TH, 2019 | KARACHI

Growers should step up protection to their standing crops, livestock and other agriculture productions from the expected windstorm with hails in the next 10 days, the Met Office said on Monday. It said that the farmers should initiate measures to aim at preserving standing crops and orchids from damaging effects of the extreme weather conditions including thunder-dust storm, gusty winds, hails etc.

Wheat crop is at its heading-maturity stages in the northern half of the country, it said that the farmers should schedule their harvesting plans keeping in view the weather conditions. It also urged the farmers to remove weeds from their standing crops to help increase yield, warning that a considerable production loss the growers suffer from the outgrowth of unwanted plants.

Punjab: A light to moderate rainfall is expected in the most parts of the province with an isolated rain-hailstorm-thunderstorm in Rawalpindi, Gujranwala, Sargodha, Faisalabad, Lahore, Multan, DG Khan, Sahiwal and Bahawalpur Divisions and Islamabad until May 20.

Sindh: Mainly hot and dry weather is expected over the period. Balochistan: Mainly dry weather is expected in the province with an isolated rain-thunderstorm in Quetta, Kalat, Zhob, Nasirabad and Sibbi Divisions.

GROWERS DEMAND RS100BN PACKAGE TO RESCUE AGRICULTURE SECTOR

The Newspaper's Staff Correspondent May 13, 2019

HYDERABAD: The Sindh Chamber of Agriculture (SCA) on Sunday called for a Rs100bn package in the 2019-20 budget to save the agriculture sector in view of currency devaluation and the rising cost of inputs.

Speaking at a press conference at the local press club SCA president Qabool Mohammad Khatiyan, vice president Nabi Bux Sathio, general secretary Zahid Bhurgari, Haji Nisar Memon and others said that recent devaluation of rupee against US dollar had increased per acre cost of produce. They said the increased dollar rate had made costlier the prices of agricultural inputs, like imported hybrid seeds and pesticides. The agriculture sector would suffer a heavy loss if IMF (International Monetary Fund) conditions were accepted, they added.

The SCA leaders pointed out that farmers always demanded procurement of wheat by government to ensure stability in the commodity's market price but this year they were left at the mercy of open market forces. Wheat growers had to sell their produce to traders at inadequate rates and were incurring losses, they said, adding that the collective loss could sagely be estimated at Rs20bn.

They regretted that the federal government had withdrawn subsidy on fertilizer, diesel, tractor and other farm equipment. They argued that due to rising cost of these items, farmers' buying capacity had been badly hit. The agriculture sector was faced with an economic crisis affecting landowners and farmers equally and the conditions had forced them to hold protests, they said.

The SCA leaders rejected Sindh government's decision not to procure wheat from farmers. They urged the Sindh government to fix the wheat support price at Rs1,500/40kg.

They said that cost of diesel be reduced with a subsidy of Rs50 per litre. The subsidy should be announced for DAP fertilizer (Rs1,500 per bag), NPP fertilizer (Rs1,200 per bag) and urea fertilizer (Rs800 per bag).

They also demanded 40pc subsidy on pesticides, hybrid seed and paddy crop seed. They called for withdrawal of excise and custom duties on agriculture machinery including tractors. They pointed out that the prices of diesel, fertilizer, hybrid seed and farm mach-inery had increased by 30pc when compared with the last year's prices whereas the prices of agriculture produce had remained uncha-nged over the last 10 years. They demanded adequate rates to be offered for crops.

The SCA leaders called for holding an inquiry into alleged embezzlement of Rs3bn in the Right Bank Outfall Drain-II (RBOD) project. They said that a new saline water drain should be built in Kashmore and Jacobabad.

They warned that the prevailing poor economic conditions in the agriculture sector could lead to migration of people from rural areas to urban centres which in no way would benefit cities, which were already facing pressure of increasing population.

They said that on an average, Rs10,000 to Rs15,000 per acre losses were being incurred by farmers, adding that transport fares were also sky rocketing due to the constant rise in fuel prices. The SCA leaders said that Rs60,000 per acre expenses were being borne by growers even in producing a small crop.

The SCA leaders also led a rally of growers which was taken out from the Old Campus Chowk and culminated outside the local press club.

AGRICULTURE: CHAOS IN THE WHEAT MARKET

Ahmad Fraz Khan May 13, 2019

Punjab is in the middle of a panicky wheat procurement drive. Barely one week into the campaign, it is resorting to restricting movement and storage of wheat by the private sector. Punjab's district management machinery is nudging farmers towards procurement centres and edging the middleman out.

The Punjab Food Department has itself to blame for the chaos as it failed to read the market dynamics specific to this year. Farmers and millers think that the transfer of the secretary food only a week before the start of the drive caused the chaos.

The new secretary landed in the middle of an enervating exercise of wheat procurement. As things started spinning out of hand, he restored to administrative actions sending the entire market into a tail spin.

The Punjab Food Department has no idea how much wheat to procure to ensure national food security next year

In the first week, two departmental letters — restricting procurement to only licensed purchasers (millers alone) and then limiting them to only 48-hour grinding stocks — have been doing the rounds in the market. This is unprecedented.

To make things worse for the government, there were a number of factors unique to this year. To begin with, the department had no specific target. Thus there were no fixed targets for field formation and no one knew how many gunny bags had to be distributed and how many had to be taken back.

All this made the field staff unsure of the whole exercise. Since the crop was late by two to three weeks, everyone expected a sudden glut and a resultant price crash once harvesting picked up pace.

But here another factor intervened — the price of wheat hay that had hit Rs1,200 per maund last year due to the expanding dairy sector. Thus, farmers opted for manual harvesting and use of thrashers instead of harvesters that lay hay waste. Thus, the arrival of wheat was slowed down by about 50pc.

This, along with rumours about the exceptionally small crop size, sent the price shooting beyond the official limit of Rs1,300 per maund. Hence, official procurement became irrelevant compared to ground realities. On May 9, open market price in Lahore was Rs1,300 per maund and Rs1,340 per maund in Rawalpindi.

The slowdown and price rise came amid widespread rumours that bad weather — high speed winds accompanied by hail and thunder storms all over the country in late April — has reduced the crop size anywhere between 30 to 40pc in Punjab.

Meanwhile, the federal government also revised its production figures in early May from 25.60 to 24.20 million tonnes. Punjab conceded a loss of 3pc when it said that it would be harvesting 18.58m tonnes instead of 19.18m tonnes.

However, these official figures do not matter in the market where rumours rule. Farmers guestimate loss of 30 to 40pc, which comes to 23-24 maund yield against last year's 36-37 maund yield. It is these figures that are determining market sentiment.

Another factor that the Punjab Food Department failed to account for was export potential this year. With rupee losing around 35pc value within few months, export potential suddenly brightened.

Since there is no export ban on wheat, exporters who hit the market first (especially in South Punjab) were able to obtain huge orders and set sentiment on the higher side.

Since there is no export ban on wheat, exporters who hit the market first were able to obtain huge orders and set sentiment on the higher side

Two additional factors that made export more lucrative were Russian crop failure by 30pc, leaving Central Asian states dry, and Afghanistan dropping duty on wheat imports by Rs200 per maund to encourage its local flour milling industry.

Both these factors multiplied Afghan demand and traders from Afghanistan were early to arrive in Pakistani markets — right down to central Punjab — with ready cash.

Further complicating these circumstances is the poultry feed industry. Last year, poultry farmers had to purchase corn at a higher rate of Rs1,200 per maund. This year, fearing a further hike in corn prices, poultry farmers replaced corn with wheat for feed.

The poultry feed industry says it can use up to a million tonnes of wheat for feed manufacturing this year — an increase of 30pc from what has been traditionally purchased.

These factors were bound to hit official procurement and they have. The absence of an official target only added to panic as it shifted the responsibility of building up safety stocks till the next harvest to the Punjab Food Department. On its part, the department does not know what to do to ensure national food security next year.

It started the season with a carryover of 1.5m tonnes this year. It normally releases wheat from late September to March — for around six months. Last year, the departmental release touched 800,000 tonnes a month, which traditionally has not been more than 500,000 tonnes.

By this calculation, it needs 4.8m tonnes of stocks to see it through next year, requiring additional purchase of almost 3.3m tonnes this year.

Since Sindh has not been officially procuring wheat this year, how will the additional demand of around 2.2m tonnes impact Punjab's supplies next year?

How much of wheat has already slipped to Afghanistan from Khyber Pakhtunkhwa? And how much will Punjab have to chip in to ensure adequate supply in KP?

With so many variables in play, the Punjab Food Department has no idea how much wheat to procure for next year to keep the country food secure.

COTTON WEEKLY REVIEW: LOCAL MARKET REMAINS STABLE

NASEEM USMAN | MAY 13TH, 2019 | KARACHI

The prices of cotton remained stable. Due to escalating trade war between America and China there is a slump in international cotton market. Cotton policy should be announced immediately to increase the production of cotton. In the local cotton market the prices of cotton remained stable. Textile and spinning mills continued conscious buying while ginners were also showing their interest in buying due to the end of the season and the arrival of cotton seed is expected from Lower Sindh at end of the June. The ginners had left the stock of 4 lac bales out of which good quality cotton is available in very small amount.

On the other hand textile spinners were of the view that due to the recession in demand and price of cotton yarn the rate comes down while the financial crisis is also increasing. The pressure in the market increases due to the decrease in export of cotton and backing out from the deals by the importers while importers of cotton yarn delaying in opening of Letter of Credit. The cotton in Sindh and Punjab is available from Rs 7000 to Rs 9100 per maund while good quality cotton is sold at Rs 9400 per maund.

The Spot Rate Committee of Karachi Cotton Association has decreased the rate by Rs 50 per maund and closed the rate at Rs 8750 per maund. Chairman Karachi Cotton Brokers Forum said that international cotton market is witnessing bearish trend because of escalating trade war between America and China. The rate of New York Cotton came down at the level of 68 American Cent per pound which is the lowest in the season. The prices of cotton in China remained under pressure while the recession in Indian cotton market remained continued.

Chairman Cotton Association of India Atul S Ganatra while addressing the conference in last November said that this year due to the decrease in production of cotton from the early estimate of 3 crore 65 lac bales the price of cotton in India is expected to increase from Rs 48000 per candy (356 Kg). Although after that the price of per candy cotton increased and reached at Rs 47000 but due to the China and America trade conflict the prices of cotton decreased and reached at the lower level of Rs 45000.

The majority of the international delegates of that cotton conference were of the view that New York Cotton Rate of Promise (Waday Ka Bhao) was 80 American Cent. Few days back New York Rate of Promise (Waday Ka Bhao) reached 77 American Cent but due to America and China trade conflict the rate reached at the lower level of 68 American Cent which proved all estimates wrong.

Atul S Ganatra also told that it is expected that cotton production in India may decrease by 6 lac bales. It is expected that after the reduction of 6 lac bales the expected production of cotton will be 3 crore 15 lac bales while the export of cotton is expected to be 46 lac bales.

Moreover, Federal Minster National Food Security and Research Sahibzada Muhammad Mehboob Sultan while chairing the meeting of Pakistan Central Cotton Committee in Multan last week said that production of cotton will be increased this year and government will try to achieve the target of production of one crore 50 lac bales of cotton according to the resolve of Prime Minister Imran Khan. He said Imran Khan has said that National Agriculture Emergency Program should be implemented to increase the production. He also said that government is trying to make cotton policy in which the reasonable rate of cotton seed should be fixed and certified seeds and medicines should be provided.

While addressing the meeting Federal Secretary National Food Security and Research Dr Muhammad Hashim Popalzai said that department is trying to increase the production of cotton. He also said that Pakistan Central Cotton Committee should be more activated. The meeting was also addressed by Cotton Commissioner Khalid Abdullah.

While Few days back WWF conducted meeting with the farmers belonging to the Lasbela, Rakhni and Barkhan for cultivation of organic cotton in Balochistan. Moreover when Prime Minister Imran Khan announced his resolve to increase the production of cotton and achieve the target of one crore 50 lac bales at that time department of National Food Security and Research announced to fix the rate of cotton seed at Rs 3500 per 40 kg and also announced to buy 5 lac bales through TCP.

The sowing season has started in the areas of Punjab and Sindh but up till now and several meetings were held regarding fixing the price of cotton seed but up till no announcement has been made by the government regarding cotton policy. The sowing season will be completed till May 31. It is necessary that cotton policy should be announced before the completion of the sowing season any delay will affect the sowing of cotton.

GOVT FAILS TO CONTROL SOARING PRICES AT RAMAZAN BAZAARS

By Our Correspondent Published: May 13, 2019

LAHORE: Despite the instructions issued by the prime minister, the provincial and district administrations have failed to rein in the skyrocketing prices of essential commodities at Ramazan bazaars and the open market.

In order to facilitate the people, the government established Ramazan bazars in different areas of the city to provide citizens with essential commodities at subsidised rates.

However, reports of overcharging and the unavailability of different commodities are still on the rise. Further, many vendors have displayed inflated prices at their stalls, a gross violation of the official price list.

Several citizens have complained about the absurdly high prices of essential commodities which are continuously being jacked up by traders.

"Traders had started increasing the prices of items weeks before Ramazan. However, the government failed to take action against such individuals, giving them an opportunity to fleece citizens," said Hanif Khan, a local.

He acknowledges that a few items are being sold at subsidized rates at stalls set up by the agriculture department. "However, the prices of all other items are equal to those in the open market," he expressed. If a product is inexpensive, then its quality is most likely subpar, he said.

Speaking to The Express Tribune, a citizen, Muhammad Ilyas stated that the state has failed to control the prices and the quality of items at Ramazan bazars, where all arrangements are under the government's control.

The situation at the open market is worse as the government has little to no control over the rates and quality. "There is no system of price control, otherwise the situation would be different in both Ramazan bazars and the open market," he said.

A survey of the market by The Express Tribune revealed that the price of a 50-kilogramme sack of sugar has increased to Rs450 at a wholesale level. As a result, traders have increased the prices by five to seven rupees per kilogramme meaning that sugar is being sold for between Rs65 to Rs67 per kilogramme in the open market. A similar trend is also being witnessed in the rates of pulses, seasonal fruit and vegetables.

Further, the Utility Stores Corporation has failed to ensure the availability of wheat flour, pulses and sugar under the Ramazan package. Buying beverages, dates, rice, pulses, cooking oil and other essentials remains a distant dream for most citizens.

Meanwhile, the sale of adulterated and substandard food products is also on the rise. On Saturday, the Punjab Food Authority (PFA) discarded over 27,000 kilogrammes of frozen chicken from different brands.

An official from the authority said that the first phase of the campaign targeting frozen foods has completed. He said the authority took indiscriminate action against frozen meat companies in light of the laboratory report.

He added that the authority collected samples of frozen foods in April under the sampling schedule for 2019. However, several companies failed to meet the standards of the authority. He said that some companies have handed over their stock to the authority under a 'sense of responsibility'.

PFA Director General Muhammad Usman said that the next laboratory analysis of frozen foods will be made in June. He added that PFA would check frozen meat products two times a year as per the annual sampling schedule. The authority is taking all possible measures and steps to ensure the provision of standard food, said Usman.

Punjab Chief Minister Sardar Usman Buzdar directed the provincial administration to strictly monitor the prices of essential commodities in the open market. Issuing instructions to the administration and price control committees on Sunday, the CM said that the rates at Ramazan bazaars and in the open market should be regularly monitored to ensure the availability of essential commodities at government notified rates.

Along with the quality, the availability of items should also be ensured. An undue increase in rates will not be tolerated at any cost, he stated.

He directed officials concerned to take strict legal action against hoarders and those overcharging consumers and warned that those involved in profiteering will be dealt with strictly.

The administration and the departments concerned should continue their operation against such elements without discrimination, he said.

"It is the responsibility of the administration to ensure the availability of essential commodities at government notified rates," the chief minister maintained. In order to provide people with relief, we have to work hard and take legal action against profiteers, he said.

BALOCHISTAN CM PROMISES SPECIAL ATTENTION TO FISHERIES SECTOR

The Newspaper's Staff Correspondent May 12, 2019

QUETTA: Balochistan Chief Minister Jam Kamal Khan Alyani has said that his government will pay special attention to the fisheries sector.

Presiding over a meeting held to review the performance of fisheries and other departments on Friday, the chief minister said that revenue from the fisheries sector could be increased by modernising the department concerned.

He ordered review of the Fishermen Cooperative Society for the welfare of the community and said a plan be prepared for recruitment of life guards and sea ambulances.

Briefing the meeting, the fisheries secretary said four landing jetties had been proposed for provincial coastal areas in the next Public Sector Development Programme, while the VHF (Very High Frequency) system would be installed in 1,000 boats for better tracking of fishermen at the seas.

He said the VHF system would be helpful in timely rescue of stranded fishermen and it would also be beneficial to prevent illegal fishing through trawlers on the provincial coastal strip.

Chief Secretary Dr Akhtar Nazeer, the additional chief secretary for planning and development, senior member of the Board of Revenue, home and finance secretaries and other government officials attended the meeting.

PESHAWAR'S 'SASTA BAZAAR' FAILS TO ATTRACT BUYERS

AMJAD ALI SHAH | MAY 12TH, 2019 | PESHAWAR

The 'Sasta Bazaar' in Peshawar, set up by district government has presented deserted look on Saturday as most of the stalls in the bazaar are empty and without food items. The district government has established a 'Sasta Bazaar' at interior city nearby historic Chowk Yadgar, with a capacity of more than 20 to 25 stalls, but there were two stall open including beverage and fruits, being set up at the bazaar.

As five-day past, the efforts to attract customers to its Sasta Bazaar have flopped to achieve the desired result as the market wore a deserted look on Saturday. Stall owners were mandated to sell items at prices fixed by the administration. Since the beginning of holy month, the Ramazan Sasta bazaars have attracted not many buyers, primarily due to the poor quality of items being sold.

Talking to this scribe, the buyers said that most of the daily-use items are missing in the Sasta Bazaar besides there is no difference between the prices at Sasta Bazaar and open market.

People would have thronged the Sasta Bazaar if the prices were reasonable. There is only one beverage stall. There is no stall of dates, vegetable, chicken besides sugar and juices are not available in the bazaar. There are a number of stalls set up in the bazaar but only two are open. Chicken, vegetable, pulses and meat is also not available in the Sasta Bazaar," they said.

"Even though people visit the bazaar regularly, they return disappointed as it has little variety of food items to offer," said Awal Khan, a local who lives adjacent to the bazaar. "There is nothing worth buying here," he said.

The government of Khyber Pakhtunkhwa had announced to set up more than 107 Sasta Bazaar in the province, wherein commodities of daily use and edibles will be available to consumers at lower rates. Fifteen of such Sasta Bazars have been established in Peshawar, 13 in Mardan, 27 in Malakand, 24 in Hazara, 11 in Kohat, 9 in Bannu and 8 in D I Khan.

In spite of provision of food items on subsidised rate, the commodities were selling at 10 to 15 percent increase rate at the Ramazan Sasta Bazaars. The buyers have complained the sky-high prices of essential food commodities in the open market. According to them, the essential commodities such as pulses, sugar, rice, chicken, beef, mutton, vegetables and fruit have registered staggering increase, making purchase difficult for the common man. They also believe that certain elements are trying to thwart the business of the bazaar, as it goes against their vested interest.

With the advent of the holy month of Ramazan, the buyers said that the unprecedented increase have made by shopkeepers in all kind essentials, which are completely out from purchasing power of common man.

WATER EFFICIENCY MUST FOR RICE YIELD

Our Correspondent May 12, 2019

LAHORE: Enhancing water efficiency is vital for increasing rice production on sustainable basis with a view to improving exports from $2 billion to $5 billion in the next 10 to 15 years, said Sheikh Adnan Aslam, director of the Pakistan Basmati Heritage Association (PBHA).

Speaking at “Khushhal Kissan” seminar, organised by the association for the promotion and preservation of basmati heritage of Pakistan, Adnan highlighted the mission and objectives of Pakistan Basmati Heritage Association for mitigating challenges of basmati production and action plan for the promotion and preservation of basmati in production and exports.

“Our country is facing a looming water crisis and improving water productivity in rice ecosystem is inevitable,” he added.

Malik Imtiaz, director of Punjab Seed Corporation, advised the farmers that the use of certified seed every year will serve as a foundation for increasing yield and quality of basmati.

He appreciated the initiative of PBHA for providing healthy and certified seed on subsidised rates to the farmers.

Chaudhry Masood Iqbal, former chairman of the Rice Exporters Association of Pakistan (REAP) emphasised that the government should introduce new basmati varieties for ensuring rice productivity and pest resistance. Praising PBHA mission, he termed it a ray of hope for the rice sector.

USDA SAYS GRAIN SUPPLIES TO REMAIN MASSIVE IN NEW CROP YEAR

RECORDER REPORT | MAY 12TH, 2019 | CHICAGO

The US Department of Agriculture on Friday forecast bigger-than-expected domestic supplies of corn, soyabeans and wheat, with outlooks for big harvests and export concerns underpinning the bearish stocks view. The report added fuel to the market's ongoing worries about the US-China trade fight, which came to a head on Friday as President Donald Trump raised tariffs on Chinese goods and the latest negotiations ended without a deal.

Soyabean futures fell to their lowest in more than a decade after the government data was released and wheat sank to its lowest since January 2018. Corn hit a 7-1/2- month low. "We're reacting negatively to a negative report," said Jack Scoville, analyst with the Price Futures Group. "We'll be done with this report in a few minutes and then we'll worry what's going on in Washington and how much corn and soyabeans and wheat the government's going to have to buy to keep the farmer placated as we march forward into the 1970s and 1980s."

The government pegged US corn ending stocks for the 2019-20 crop year at 2.485 billion bushels, which would be the biggest since 1987-88. It estimated corn production at 15.030 billion bushels, the second biggest ever, based on an average yield of 176.0 bushels per acre. Corn ending stocks for 2018-19 were seen at 2.095 billion bushels, up from the April estimate of 2.035 billion bushels.

"We're swimming in grain." said Don Roose, president of US Commodities. "Now it's a matter of, as we're going into planting season, do we get some weather issues that change this. And we definitely need something positive to develop in exports." Soyabean ending stocks in 2019-20 were seen at 970 million bushels, down slightly from the record 985 million bushels expected in the 2018-19 crop year that ends on Aug. 31.

The outlook for the 2018-19 soyabean ending stocks was 100 million bushels bigger than the government's April estimate and stemmed from a cut of 100 million bushels to its export outlook. The government's May report was the first one to provide an outlook for the 2019-20 crop year, which starts on Sept. 1.

Analysts had been expecting 2019-20 ending stocks of 910 million bushels for soyabeans and 2.131 billion bushels for corn, according to the average of estimates in a Reuters poll. For 2018-19, analysts had predicted soyabean ending stocks of 920 million bushels and corn stocks of 2.055 billion bushels.

USDA estimated wheat ending stocks of 1.127 billion bushels in 2018-19, topping market expectations of 1.097 billion bushels, and 1.141 billion bushels in 2019-20, topping market expectations for 1.060 billion bushels.

PAKISTAN'S DATE PRODUCTION FALLS DUE TO LACK OF INNOVATION

By Usman Hanif Published: May 12, 2019

KARACHI: Owing to a lack of innovation, the dates industry of Pakistan, which is the fifth largest producer in the world, is on a downward trajectory.

In 1999, Pakistan produced 540,000 tonnes of dates annually. Instead of growing, this number went down to 467,000 tonnes in 2015-16, according to data collected by the Trade Development Authority of Pakistan (TDAP).

Balochistan is the major producer of dates in Pakistan as it produces 45% of the total production. Sindh stands at the second place with 43% share, followed by Khyber-Pakhtunkhwa (K-P) with 2% and Punjab with 1%.

Balochistan's Turbat district produces 100,000 tonnes of dates, almost one-fourth of the total production of Pakistan, while Panjgur produces 83,000 tonnes. On the other hand, Sindh's Khairpur district produces 237,000 tonnes, which is 42% of the total production of the country. "This makes Khairpur a densely palm populated area," said a source at the Sindh Enterprise Development Fund (SEDF). In 2016, Pakistan exported dates worth $102 million, which could go up to $200 million, said Mir Mohsin Bullo, Assistant Manager TDAP Sub-Regional Office, Sukkur.

"The government needs to pay urgent attention to production, processing and quality enhancement, preservation, research and marketing to save and ensure growth of this potent source of foreign exchange," he wrote in his report in October 2017. Yet, these issues still persist to date.

There are myriad of problems, resulting in a decline in Pakistan's date production, according to the SEDF source. A palm tree, which is the source of date production, grows in seven to eight years and produces the fruit at its optimal level for 25 years, after which its production starts declining, therefore, the tree needs to be replaced.

The 300 varieties of dates, which Pakistan produces, are also 50 years old and are not in great demand internationally, he said, adding due to that prices of Pakistani dates range between Rs100 and Rs250 per kg in the international market whereas other date varieties are sold for up to Rs700.

Due to the lack of innovation, Pakistan is losing potential revenue. Pakistan exports fresh dates to the US, Canada, France, Bangladesh, Indonesia, Malaysia and the UAE, but these comprise only 10% of total production, while most of the dates are dried and exported to India, which is a great loss.

The scope of value addition and profitability is immense. With a little value addition, dates can be used to make syrup, juice, paste, vinegar and so on, the source said.

"Instead of value addition, Pakistani traders push down the value of their dates by drying them," he said. Pakistan mainly exports dates to India, which itself is a big producer, but due to immense consumption of dates and coconut in religious activities, India also imports dates from Pakistan. "These days due to tensions between the two countries, India has slapped 200% duty on Pakistani products, which is badly impacting the export of Pakistani dates," said Sukkur Chamber of Commerce and Industry Vice President Gurdas Wadhwani.

"Dried dates cause a 60% weight and value loss," said the SEDF source. Pakistan does not have processing units or cold storages, especially for dates, so drying them remains the only option. Dates contain more heat, so they need special cold storages, but Pakistan does not have even one such facility.

Pakistan does not have a storage system due to which date growers cannot save their crop and go for the second best option, which is to dry the dates, and that too is carried out in a very unhygienic way, and not through mechanised dryers. "If you travel to Khairpur, you will see dates lying at the roadside. Due to this unhygienic way of drying, dates carry about 21% aflatoxin, a family of toxins produced by certain fungi on agricultural crops, while internationally only 2.3-7.15% is acceptable," stated the source.

Mechanised dryers are not difficult to build, he said, adding students of Karachi University and IBA have often presented their prototypes, which can dehydrate 1,000 to 2,000 dates. This can be taken to a massive level if the government or private sector supports these students. Pakistan's dates varieties are over 50 years old, which do not look or taste good, unlike the juicy Middle Eastern dates. Even Pakistanis themselves do not prefer local dates, due to which the country, despite being the fifth largest producer, imports dates in Ramazan, the source added.

Pakistan's first dates dehydration plant and cold storage is going to be built soon by a private firm in the Khairpur Special Economic Zone (SEZ). The Sindh government is offering opportunities to the businessmen who want to set up the processing and storage facilities. Date processing plants can ideally be established at the Khairpur SEZ, developed by the district administration of Khairpur under the supervision of Sindh investment department.

SUGARCOATED BITTER FACTS

Shehryar Warraich May 12, 2019

Sugarcane is one of the most important cash crops of Pakistan; it is a key input for sugar production and forms essential item for other industries like chipboard, paper, barrages, confectionery, chemicals, plastics, paints, synthetics, fiber, insecticides and detergents. Pakistan is the 6th largest sugarcane producer, 9th largest sugar producer and 8th largest sugar-consuming country in the world. However, sugarcane producers and buyers of sugar are always unhappy because of the sugar mill owners' methods of purchasing sugarcane and payments to growers and sugar prices respectively.

Over the years, domestic sugar consumption has grown from 0.5 million (m) metric tonne (MeT) in 1975 to 5.1m MeT in 2017 due to population growth. Per capita consumption of refined sugar in Pakistan was estimated at 25.7kg in FY17 (fiscal year). Processed food sector, which includes candy, ice cream and soft drink manufactures, accounts for almost 60 percent of total domestic sugar consumption. Furthermore, absence of major substitutes for sugar makes its demand inelastic.

A total of 89 sugar mills are presently operating in the country and are pre-dominantly owned by the private sector. Out of 89 sugar mills, 45 are located in Punjab, 38 in Sindh and remaining mills are located in KP. About 40 percent (36 sugar mills) in Pakistan are listed on Pakistan Stock Exchange (PSX).

According to Food and Agriculture Organization of the United Nations, sugarcane occupies nearly 1.7 million hectares of the cultivated land out of the available 22.0 million hectares. Its share in value added agriculture and GDP are 3.4 percent and 0.7 percent, respectively. The annual sugarcane production fluctuates between 45 million and 65 million tonnes depending on irrigation water supplies and rains.

The government actively controls the support prices of sugarcane, the retail average price per 40 kg stands at Rs180.6 (FY17: Rs180.6) in FY18 and FY19. Over the past four years, sugarcane prices have remained stable and increased slightly by Cumulative Average Growth Rate (CAGR) of 1.4 percent whereas, according to Pakistan Bureau of Statistics retail price of sugar in the month of April

2019 is Rs70.39 with 7.33 percent increase in one month which was Rs64.86 in March. The statistic shows continuous rise in sugar prices since January 2019.

Spokesperson for All Pakistan Sugar Mills Owners Association Chaudhry Waheed is not happy with the Pakistan Bureau of Statistics data; according to him price is no more than Rs65. “It’s true that price is increased but the cause must not be ignored; mill owners purchased sugarcane at the price of Rs210 to 230 this year, therefore the price will be set on the basis of production cost.”

In Ramzan, sugar price per kg is fluctuating between Rs70 to 80 depending upon the market. The Punjab government has issued a notice stating that the retail price of sugar cannot be more than Rs60 per kg.

Chaudhry Waheed rejects the government’s step to set the price at Rs60 and calls it a policy that will increase the price because no mill owner can afford to sell its product at such a miserable price. “The government has sealed five sugar mills in Faisalabad on the issue of sugar price; some mills are fined and some are threatened to be sealed. Such policies will create panic amongst mill owners and undoubtedly the supply of sugar would be halted; encouraging the black market.”

One of the high officials in the Punjab government tells TNS on condition of anonymity that sugar price hike is artificial because mill owners are not supplying sugar according to demand which is obviously facilitating them to create shortage in the market and increase prices ultimately. “On papers sugar mill owners are supplying sugar in the market but it is unavailable on ground that means the whole process from supplying to receiving is just paper transaction and a fraud.”

Waheed denies such allegations while putting all blames on the government and bureaucracy. “Bureaucracy is absolute corrupt and the government mismanages the issue on the misguidance of bureaucracy.”

Advisor to Chief Minister Punjab, Muhammad Akram Chaudhry, tells TNS the government is committed to keep the sugar price at Rs60 per kg come what may. “The government has started taking action against the mills indulging in price hike and creating artificial shortage in the market.”

On the other hand, mill owners have reportedly got permission from the federal government to export 1.1 million metric tonne sugar. Member Agri Forum Punjab and Director Farmers Association Pakistan, Farooq Bajwa, claims the federal government has approved Rs10 billion subsidy for the mill owners. Conversely, Chaudhry Waheed accepts that without subsidy sugar cannot be sold in the international market.

On the other hand, the industry is currently protected by a 40 percent import tariff designed to boost domestic sugar sector and protect the local industry from imports. The government intervenes in imposing trade controls over import and export of sugar by buying and selling sugar. Moreover, in order to support the export market of sugar, the government extends the export rebates to the mill owners every year.

“All the policies are to facilitate the mills mafia. Three families are sucking the blood of poor cane growers. I am certain in saying that most of the current Rs10 billion subsidy would go in the pockets of this cartel,” Bajwa states. “Instead of protecting the sugar mafia, the government must allow people to import sugar that can abolish the sugar mills’ monopoly. Nonetheless, we surely understand that it would not happen.”

According to Chaudhry Waheed the number of cane growers is increasing because of their trust in sugar mills. Moreover, mills have paid more to purchase sugarcane than the government's set price just to encourage cane growers.

Farooq Bajwa has a different perspective on sugarcane price. According to him there are two aspects behind this statement of paying more to growers; first is that mill owners accept 44 or 45kg per mann (40 kg) against the support price the government announces every year, secondly mill owners add all charges in per mann support price to present the case that they have paid more to growers – merely a deception."

He adds, "Mill owners have purchased sugarcane at the price of Rs75 to 90 per mann in the last two years and almost Rs14 billions of farmers are still to be paid. Because of mill owners' worst attitude many farmers did not grow sugarcane. In fact, annual sugarcane production is reduced from 1.7 million acres to 0.9 million acres this year."

The standing committee of Punjab Cabinet on Legislative Business, chaired by Provincial Minister for Law, Parliamentary Affairs and Local Government Raja Basharat, has empowered the Cane Commissioners and Deputy Commissioners across the province to ensure recovery of arrears of the growers from sugar mills owners.

Muhammad Akram Chaudhry states that Cane Commissioners have been advised to take serious actions against those mill owners who have not cleared the arrears yet. He asserts the Punjab government is committed to not surrender on the price hike and will take all measures to retain per kg price at Rs60.

LHC SUSPENDS NOTICES FOR AGRICULTURE TAX

Our Correspondent May 11, 2019

LAHORE: The Lahore High Court on Friday suspended notices for the recovery of agriculture income tax issued to hundreds of individuals for the period prior to promulgation of Finance Act 2013.

Justice Ayesha A Malik issued the stay order on petitions challenging the tax recovery notices for the year of 2012 by district collector of the Punjab government.

The judge also directed the district collector, Federal Board of Revenue, federal and Punjab governments to submit their replies.

The petitioners' counsel argued that the district collector of the provincial government had no powers to collect the agriculture income tax for the period prior to promulgation of Finance Act, 2013.

He said the government inserted a Section 3-B in Punjab Agricultural Income Tax Act 1997 giving retrospectively effect, which was a violation of settled tax laws and statutes. He pointed out that all the tax laws envisaged that any amendment to the law would have prospective effect, but not retrospective. However, he said, the government had been issuing notices for the tax recovery to the petitioners while relaying and misinterpreting a Supreme Court judgment.

The counsel argued that the Section 3-B of Punjab Agricultural Act, 1997 was promulgated through Finance Act, 2013; however, the recovery was being sought in respect of period prior to promulgation of that section. He argued that the agricultural income was exempted under the provisions of Income Tax Ordinance, 2001. After hearing the arguments, the judge suspended that tax recovery notices and directed the district collector, FBR and other respondents to submit their replies until June 26.

CHANGES TO LAW TO HELP SUGARCANE FARMERS

The Newspaper's Staff Reporter May 11, 2019

LAHORE: The Punjab Cabinet's Standing Committee on Legislative Business has accorded approval to amend laws regulating sugar mills of Punjab that will enable early start of crushing season and ensure recovery of arrears of the farmers from the mills owners by empowering the cane commissioner and deputy commissioners.

The approval for a number of amendments suggested by different departments was accorded in the 10th meeting of the committee held at the Civil Secretariat. Law minister Basharat Raja chaired the meeting.

Punjab Excise, Taxation and Anti-Narcotics Minister Hafiz Mumtaz Ahmad, Higher Education Minister Raja Yasir Humayun and officers of other departments attended the meeting.

The committee, while approving minutes of the last meeting, decided to accede to the amendments to the anti-narcotics laws in order to penalise the culprits preparing, selling and importing or exporting the drugs and narcotics in society. The amended law suggested enhanced imprisonment and penalties for such elements.

The excise, taxation and anti-narcotics department suggested strict measures to be taken by the public and private schools to keep a close check on the students as well as on drug traffickers.

The senior member Board of Revenue introduced 14 amendments to the existing policies regulating lease and sale of state land and the House accepted all these amendments.

The committee recommended names for the new Board of Directors of the Punjab Economics Research Institute and also gave a go-ahead to the amended draft of the Punjab Partnership Act 2019.

GOVERNOR: Law minister Basharat Raja and IG Police Arif Nawaz on Friday met Governor Chaudhry Sarwar and briefed him on law and order, suicide attack outside Data Darbar and the new local government system in the province.

The governor said the provision of basic facilities to people at their doorstep, peaceful living environment and empowerment of public were priorities of the PTI government. It had decided to strengthen institutions and empower people, he said.

"The new local government system of Punjab represents the national aspirations. It will strengthen both people and democracy," Mr Sarwar said.

The IGP briefed the governor on the investigation being carried out to trace the handlers of the terrorist attack. He informed the governor about the situation of security and Punjab police's efforts.

Mr Sarwar paid tribute to the policemen who laid down their lives in Wednesday's tragedy. He emphasised on intensifying security arrangements during Ramazan to ensure peace and security.

"We shall never rest until the menace of terrorism is eliminated," the governor said and added that the sacrifices of martyrs would not go in vain. He said people who were martyred in the suicide attack were heroes for all of us and their sacrifices would be remembered. He said the government would fully support their families in this hour of grief.

DONATION: Nishtar Medical University, Multan Vice-Chancellor Prof Dr Mustafa Kamal Pasha called on Chief Minister Usman Buzdar and presented him a cheque of Rs2 million for the dam fund.

The VC said the staff of the university had donated their one-day salary for the dam fund.

The chief minister said the construction of dam was necessary for the future of Pakistan. He said the PTI government had moved forward the construction of the dam for electricity generation and storage of water as it was a national obligation. He said the credit for laying the foundation stone of the Mohmand Dam went to Prime Minister Imran Khan and everyone should enthusiastically take part in the national cause.

DAWOOD IRKED BY INCREASE IN UREA PRICES

MUSHTAQ GHUMMAN | MAY 11TH, 2019 | ISLAMABAD

Prime Minister's Advisor on Commerce, Textile and Industries and Production, Abdul Razak Dawood has reportedly expressed annoyance at the local fertilizer industry for increasing urea prices by Rs 90 per bag to Rs 1,830 per bag in April 2019 from Rs 1,740 in October 2018, well-informed sources told Business Recorder. The Advisor conveyed his anger at a meeting of Fertilizer Review Committee (FRC) which met on May 6, 2019 and was convened to review demand, production and supply and price hike of urea fertilizer.

The sources said Advisor was also furious at the fertilizer industry for sending its second tier for an important meeting, adding that Fauji Fertilizer had requested to reschedule the meeting on the plea that its Managing Director was out of Pakistan but the request was not entertained. M/s Fauji has increased urea prices which the government thinks unjustified at a time when new sowing season is in the offing.

According to sources, fertilizer sector is also collecting Gas Infrastructure Development Cess (GIDC) from consumers but is not depositing it in the national exchequer due to existing litigation. "Advisor has indicated that government is under political pressure due to price increase," the sources said, adding that the fertilizer industry identified the following factors that led to the increase:(i) transportation cost; (ii) packaging; (iii) inflation;(iv) devaluation; and (v) mark up rates (cost of financing).

"Fertilizer industry did not pass on the inflationary impact due to price capping which is calculated at Rs 360 per bag," said Brig. Sher Shah Malik (Retd) Executive Director Fertilizer Manufacturers of Pakistan Advisory Council (FMPAC). There is an impression in the government as well as in the agriculture sector that the country's fertilizer industry is making about Rs 40-50 billion profit per annum by getting cheap feed gas and selling fertilizer at higher prices.

However, fertilizer industry maintains that it received Rs 132 billion in gas subsidy (ie, difference between feed gas price and fuel gas price) over the past 8 years whereas it passed on Rs 527 billion (difference between international and local price) benefit to farmers. However, the industry has not revealed to the government as to how much financial benefits it reaped as per the Fertilizer Policy 2001.

Fertilizer industry also brought to the notice of Advisor to Prime Minister that Government of Punjab has directed security seals be affixed on all fertilizer product containers in pursuance of article 24 inserted through amendment in Punjab Fertilizer Control Order 1973 to verify its quality and traceability.

Earlier, on PSQCA SRO(1) 2015 issued by the Ministry of Science and Technology on May 5, 2015 under section 14 of Pakistan Standard & Quality Control Act VI of 1996 had wanted to affix a similar seal however, it was challenged in the court and stayed to avoid the cost burden on the farmers. Recently, FBR, through SRO 250(1)/2019 of February 26, 2019 directed importers and manufacturers to affix electronic monitoring "tax stamp" with similar features.

Fertilizer industry, however, argues that urea is a certified product as per international standards and there have never been any reports of counterfeit products like pesticides.

The fertilizer industry further argued that multiple government agencies are issuing similar directions on this matter which reflects the dire need for coordinated action towards attainment of common objective at national level, and avoiding additional burden on farmers through sale of stickers of various origins/venders. The industry has urged the Advisor to intervene and advise PSQCA, FBR and Punjab Agriculture Department to avoid such unwarranted costs and additional financial burden on the farmers.

Fertilizer industry submitted the following recommendation during the FRC meeting: (i) gas price may be reduced for fertilizer sector to effect any change; (ii)revision of GIDC may be processed expeditiously; (iii) outstanding subsidy and tax refunds may be released to reduce cost of borrowing to the manufacturers ;(iv) mismatch of input and output GST may be addressed;(v) decision of import of 100,000 tons urea without deliberation by FRC may be reconsidered in view of adequate supply situation in the coming months; and (vi) continuity of operation of SNGPL based plants may be ensured through payment of subsidy to SNGPL to avert any possibility of shortage of urea supply.

EARLY CRUSHING: AMENDMENTS TO LAWS FOR REGULATING PUNJAB'S SUGAR MILLS APPROVED

RECORDER REPORT | MAY 11TH, 2019 | LAHORE

The Standing Committee of Punjab Cabinet on Legislative Business nods to amend the laws regulating sugar mills of Punjab enabling early start of crushing season and ensuring recovery of arrears of the farmers from the sugar mills owners by empowering the Cane Commissioner and Deputy Commissioners across province.

The approval for numerous amendments suggested by different departments was accorded in 10th meeting of the Committee held at the Civil Secretariat chaired by the Provincial Minister for Law, Parliamentary Affairs and Local Government, Raja Basharat the other day.

The meeting was also attended by the Provincial Minister for Excise, Taxation and Anti-Narcotics, Hafiz Mumtaz Ahmad, Provincial Minister for Higher Education, Raja Yasir Hamyun and officers of concerned departments among others. he Committee approving minutes of last meeting, also decided to accede the amendments in the Anti-Narcotics laws in order to crush the culprits preparing, selling and importing or exporting the drugs and narcotics in society.

The amended law suggested enhanced imprisonment and penalties for such elements. The Excise, Taxation & Anti-narcotics department suggested strict measurements to be taken by the public and private schools authorities to keep a close check on the students as well as on the drug traffickers. The Senior Member Board of Revenue introduced fourteen amendments in the existing policies regulating lease and sale of state lands all accepted by the house.

VEHICLES SEIZURE: PFMA TO CHALK OUT STRATEGY ON MAY 16

RECORDER REPORT | MAY 11TH, 2019 | LAHORE

The Pakistan Flour Mills Association will hold its meeting on May 16 to decide its future strategy in the wake of Punjab Food Department's action of impounding flour mills' vehicles carrying wheat from open market. Association Group Leader Asim Raza Ahmad disclosed this while addressing a press conference here on Friday. The Department is discouraging the flour mills owners from buying wheat from the open market. Moreover, the Association is also irked by the increase in price of wheat from Rs 1200 to Rs 1400 in open market. "This increase is very alarming," he added.

He pointed out that for feed mills there is no restriction of buying wheat from open market while there is a 48-hour restriction on the flour mills. He said the Punjab Food Secretary will retire from his position and it will be the Punjab government that will face the repercussion of this unreasonable action.

"The government should act prudently," he added. He observed that a number of feed mills and their consumption of wheat is increasing fast, so the Punjab Chief Minister should take an immediate action to reverse the situation otherwise the province could face a food crisis. He warned that the department's imprudent step will compel them (mill owners) to shut down their flour mill.

DEMAND OF PAKISTANI COTTON INCREASING IN INTERNATIONAL MARKET

RECORDER REPORT | MAY 11TH, 2019 | LAHORE

Cotton crop's indicators are very positive this year and demand of Pakistani cotton in the international market is increasing, said Additional Secretary Agriculture (Task Force) Punjab, Rana Ali Arshad. He also claimed that advance bargain of cotton is being done at Rs4200 per maund in Sindh province. He disclosed that the Pakistan Cotton Ginners Association (PCGA) has agreed to pay additional Rs200 per maund as premium to cleanly picked cotton.

These views were expressed by him while addressing different growers' gatherings held at Harrappa, Chichawatni, Arif Wala, Pakpattan and others. Director General Agriculture (Pest Warning) Zafar Yab Haider, Director Agriculture (Extension) Farooq Javed, Rao Ashfaq and other officers were also present on this occasion.

Rana Ali Arshad further hoped that canal water supply would remain better during whole cotton season and government is extending subsidy on Pottassium based and DAP fertilizers to bring down the input cost and promote balanced use of fertilizers. He also claimed that possibilities of pink bollworm on cotton crop this year would remain low because of better off season pest management.

Speaking on this occasion Director General Pest Warning and Quality Control of Pesticides Syed Muhammad Zafaryab Haider advised the growers to complete their cotton sowing till May 31, 2019. He also threw light on different measures to get better per acre yield.

BASMATI BODY CALLS FOR BOOSTING RICE EXPORTS TO $5B

By Our Correspondent Published: May 11, 2019

LAHORE: Improving water productivity in the rice ecosystem is inevitable for sustainable rice production and boosting rice exports of Pakistan from the current $2 billion to $5 billion, said Pakistan Basmati Heritage Association (PBHA) Director Sheikh Adnan Aslam.

He was speaking at the Khushal Kissan seminar arranged by the association for the promotion and preservation of basmati rice heritage of Pakistan.

Citing that PBHA was aimed at mitigating challenges to Basmati rice production, he lamented that Pakistan faced a looming water crisis and stressed the need for improving water productivity in rice fields. He shared the PBHA's action plan for the promotion and preservation of Basmati rice for export.

Punjab Seed Corporation Director Malik Imtiaz, who was present in the seminar, advised farmers to use certified seeds every year which would served as a foundation for increasing the yield and quality of Basmati rice. He appreciated the initiative of PBHA for providing healthy and certified seeds at subsidised rates to the farmers.

Rice Exporters Association of Pakistan former chairman Chaudhry Masood Iqbal emphasised that the government should introduce new basmati varieties for ensuring rice productivity and pest resistance. Praising PBHA's mission, he termed it the 'ray of light' for the rice sector in Pakistan.

PBHA Coordinator Imran Sheikh elaborated the PBHA's mission and advised Basmati rice farmers to adopt global rice standards of the Sustainable Rice Platform convened by the International Rice Research Institute for promoting resource efficiency and sustainability by ensuring food safety.

Fauji Fertiliser Senior Manager and Head of Advisory Services Rao Muhammad Tariq shared his views about balanced use of fertilisers and the importance of potash and micronutrients in boosting rice productivity, quality and profitability.

Engro Fertilisers Manager North Naeem Farukh emphasied the balanced use of fertilisers through 4R Principles (right type, right dose, right place and right time).

On-Farm Water Management Deputy Director Tariq Maqbool briefed the participants regarding dwindling water resources of Pakistan and underlined the importance of precision land levelling for improving water efficiency, yield and income.

Rice Research Institute Kala Shah Kaku Research Officer and Weed Scientist Dr Tahir Hussain Awan shared his experience of direct seeding and introduced a set of new technology for weed management.

GOVT FAILURE TO GET PAKISTANI FISHERMEN RELEASED FROM INDIAN JAILS SLAMMED

The Newspaper's Staff Reporter Updated May 10, 2019

KARACHI: Fishermen's Cooperative Society (FCS) chairman Abdul Bar on Thursday said the federal government had failed to get Pakistani fishermen released from Indian prisons despite the fact that it had freed 360 Indian fishermen who were detained for violating Pakistan's territorial waters.

"The federal government sends off 360 Indian fishermen to their country as a goodwill gesture, yet it has failed to get a single Pakistani fisherman from the Indian jails," said Mr Bar while speaking at a press conference at his office. He said it was nothing but "our government's bad diplomacy and utter failure".

"The Indian government's hands are stained with the blood of our fishermen. The jail authorities there are doing everything inhuman directed towards our innocent people incarcerated in cells. They are killing them," claimed the FCS chief.

"They are sending us gifts in the shape of the bodies of our innocent people."

FCS warns of agitation if its demands are not met

He said Pakistani fishermen were not fed well and there was no medical facility in the Indian jails.

He said Mohammad Sohail, a young fisherman, had been detained by the Indian authorities three months after his marriage, who was subjected to brutal torture until he died.

"He has left a baby who was born weeks after he was arrested by the Indians."

He said Noorul Amin, a resident of Korangi, was another fisherman who succumbed to the worst torture before Sohail's murder.

He said that instead of getting 108 Pakistani fishermen languishing in Indian jails released in return of 360 Indian fishermen, the Pakistani government had not yet taken up the issue of the killing of its citizens by Indian jailers.

He said the government should take concrete measures to get 108 Pakistani fishermen released or, "it should be ready for the agitation by the community that will not end until their demands are met".

BAD WEATHER HITS MANGO PRODUCTION

The Newspaper's Staff Reporter Updated May 10, 2019

KARACHI: Country's overall mango production is feared to have come down to 1.2 million tonnes this year from 1.8m tonnes last year owing to heavy rains and hailstorms that damaged mango crop in Sindh by 10 per cent and 35pc in Punjab.

Amid a bad crop, stakeholders have fixed a export target of 100,000 tonnes for this year which is the same as 2018.

Mango exports will kick off from May 20, 2019. Last year, Pakistan exported 75,000 tonnes against the target of 100,000 tonnes.

Patron-in-Chief of All Pakistan Fruit and Vegetable, Exporters, Importers and Merchants Association (PFVA) Waheed Ahmed said, "We are expecting to fetch $80m foreign exchange this year with an anticipated export of 100,000 tonnes."

To achieve the export target, it's imperative that besides favourable season, exporters are extended support and co-operation from shipping and airline companies, quarantine department, Anti-Narcotic Force, Customs and other related departments.

With increase in prices of petroleum products, the cost of domestic transportation and logistics have also been revised upward, while freight charges have also been raised by airlines and shipping companies making it further difficult for the exporters to remain competitive in the international markets, he said.

China and the USA, in particular, would be focus of attention for an additional export volume during this year while special mango promotions campaigns have been planned in EU countries, he added.

Export of mango by sea route holds 70pc share in total exports while land and air routes enjoy 15pc share each.

The PVFA chief says climate changes have emerged as the biggest challenge for agriculture products and horticulture. Around 30pc reduction in mango production in current season reinforces our concern about serious potential threat of the climatic changes. "So far no clear and well defined policy has been developed by the government to safeguard agriculture and horticulture sectors from this severe threat."

WHEAT, GUNNY BAGS WORTH OVER RS2BN FOUND MISSING

A Correspondent May 10, 2019

SUKKUR: A team of National Accountability Bureau (NAB), Sukkur, has reported that over 1.02 million sacks of wheat and more than 11,300 gunny bags have been found missing in the raids carried out on government warehouses and flour mills in this district over the current week.

A statement issued here on Thursday, said that value of the misappropriated wheat stocks and gunny bags was estimated at more than Rs2 billion.

The team along with Judicial Magistrate Abdul Aziz Shar has been active since Monday last following reports of misappropriation of wheat and gunny bags from the food department's warehouses. Flour mills are also being raided to locate the missing commodities. It appeared that husk or sand was filled in sacks to show wheat stocks at many warehouses.

COTTON FALLS TO NEAR THREE-MONTH LOW ON US-CHINA TRADE WORRIES

RECORDER REPORT | MAY 10TH, 2019 | NEW YORK

ICE cotton futures on Thursday slipped more than 3 percent to their lowest level in nearly three months on concerns over the prolonged China-US trade spat, while investors awaited for key monthly crop supply and demand report. The most-active cotton contract on ICE Futures US July settled down 2.08 cent, or 2.9 percent, at 70.23 cents per lb.

Earlier in the session, the front-month contract fell over 3 percent to 69.64 cents, its lowest level since Feb. 14. "Prices are going down because of the trade war. There is very less optimism on that (a trade deal) in the market," said John Bondurant, a trader in Memphis, Tennessee.

The US Trade Representative's office announced that tariffs on $200 billion worth of Chinese goods would increase to 25 percent from 10 percent at 12:01 a.m. (0401) GMT on Friday, right in the middle of two days of meetings with a Chinese delegation. However, President Donald Trump said he believed it was possible to reach a deal this week. "There's a very negative sentiment now. People are getting exhausted by the whole (speculation of) are we going to get a deal or not," said Jordan Lea, senior trader at DECA Global.

The United States is one of the world's biggest exporter of cotton, while China is the largest consumer. Meanwhile, the US Department of Agriculture (USDA) reported that net sales of 235,800 running bales (RB) for marketing year 2018/19 were up 63 percent from the previous week. Exports of 387,100 RB were up 32 percent from the previous week.

Investors also awaited the USDA's monthly World Agriculture Supply and Demand Estimates (WASDE) report due on Friday. Total futures market volume rose by 8,608 to 52,453 lots. Data showed total open interest gained 1,533 to 221,587 contracts in the previous session. Certificated cotton stocks deliverable as of May 8 totalled 87,251 480-lb bales, up from 81,588 in the previous session.

'PAKISTAN NEEDS TO MOVE AWAY FROM ITS NATIONAL FIXATION WITH FOUR CROPS'

BR Research May 10, 2019

An interview with Dr Sohail Jehangir Malik, Chairman Innovative Development Strategies, USA

Dr. Sohail Jehangir Malik is a reputed name in developmental policy circles, both in Pakistan and internationally. A prolific researcher, his career spans over 44 years and covers themes as wide as agricultural policy; public sector resource mobilisation; budget development for provincial PRSPs; technology choice and employment; biodiversity and conservation; poverty analysis; rural finance; food security and nutrition; and social safety nets.

An econometrician by training, he has extensive experience contributing to Pakistan's pro-poor developmental policy design in non-official capacity. However, his later engagements have primarily been with multi-lateral agencies in various capacities. These include leading multi-country research teams for IFPRI, USAID, WWF, World Bank, WTO, among others. He also has over fifty research publications to his name.

He is currently based out of Washington DC as the Chairman of Innovative Development Strategies, a private-sector consultancy organisation, which studies development strategies focused specifically on agricultural and rural development.

Dr. Sohail is known for his frank, no hold barred views, which have the unique exception of being rooted in evidence. BR Research was able to catch up with this prolific author on his recent visit to Pakistan last week for a short but crisp conversation.

BR Research: Let's start with the most valuable agricultural economic resource: land. You have written extensively about land fragmentation. Depending on the definition, over 80 percent of farmers are classified as small hold, with average land-owning size in this segment of less than one hectare. Do you believe Pakistan needs an exercise in land consolidation in order to achieve scale in farming?

Dr. Sohail Jehangir Malik: During the colonial times, land consolidation was a regular exercise; just the same way as agricultural census is nowadays. Contiguous lands were often consolidated into one parcel, as the administration at the time believed that the holding size needs to be able to sustain subsistence. That has not happened since the 1960s.

So, we are facing a real challenge today. Within the private sector, we see examples of entrepreneurial minded farmers coming with innovative strategies to address the gap; albeit on local level. For example, Jehangir K. Tareen has reversed the fragmentation by contracting lots of small plots, laser leveled them and then utilised the land for cultivation specific to his industrial needs. But since land consolidation has a bad rap due to feudal connotations, one may also consider the alternatives. Land holdings as small as one or two acres can be very productive if used to cultivate high value crops such as vegetables and fruits; for which growers do not necessarily require scale.

Therefore, we need to move away from the national fixation with four crops. These are not only very low return, but also require very low level of skill and technology intensity. Growers do not grow higher value crops because they lack requisite skills.

BRR: But surely growers in rural economy also have an institutional appreciation of this distortion. We must consider their incentive structure: smaller the landholding size, the greater the propensity to grow grains. Due to commoditisation, the four crops have a thickly traded market (liquidity factor), but also do not perish as easily as vegetables.

SJM: That's true. Because smaller farmers are highly risk averse, and understandably so. Like you said, vegetables are perishable and lack homogenous markets; there is no aggregating function. For example, Bangladesh has Thana markets, which are basically platforms where farmers from one village bring their produce; it is sorted and then aggregated by quality grades.

Similarly, cooperatives are another example. In India, Amul dairy has been a classic case study in aggregation of a commodity good, which has proven to be extremely successful. Sadly, in Pakistan, we view agriculture with a tunnel vision – yes, large holding sizes offer scale; but they are not the only way to add value.

BRR: Let's focus on cooperatives for a moment. There has been extensive study on the lack of success the model has received in Pakistan. One such study pointed out that behaviourally, growers have a low-trust mind-set, which explains why farmers have been less receptive to the principle. Do you agree?

SJM: That's possible. But more than that, cooperatives were abused as a vehicle for rent seeking. Cooperative members were unable to benefit from the model, whereas the leaders made money on their expense. For example, back in the 1980s, one powerful political family from Gujarat extracted billions of rupees from rural Pakistan through the cooperative societies' movement.

Cooperatives were basically used as means to disburse government's favour. A true cooperative is one formed on the basis of common commercial interests, with equal participation, backed by full force of law. Unfortunately, as a society we are inimical to the idea of rule of law. It is the same reason why we see market failure in effective price discovery and commensurate compensation to the growers for the level of risk they take. Farmers receive no security of contract, nor any mechanism exists for contract enforcement. As a result, they have no choice but to remain localised, and small in scale, largely following sole proprietorship structure.

Moreover, factors such as baradari become more powerful than economic self-interests of individuals, especially in rural economy. We find instances of growers choosing to sell produce within baradari at a discount from market, often at exploitative rates – but refusing to collaborate with those outside their circle. Thus, there is also the added factor of attitudes and literacy.

BRR: Let's talk about major crops now. Declining cotton production and yield over the past ten years has become a generic cry raised ad nauseam. Often, it is attributed to shift of cotton belt to alternate cash crops such as sugarcane. But farmers' incentives in shifting to alternate crop is not analysed. Cotton production and yield declined after repeated crop failures, which some attribute to low quality Bt. cotton seeds. Do you agree?

SJM: I agree with the assertion that Bt. cotton seeds were introduced without stewardship. The biggest problem facing cotton growers is that the only seeds available on the market are low quality choices lacking proper certifications.

Bt. seeds were brought from India through unofficial channels. Some even allege that the seeds were brought from Australia; however, I think that the latter would at least maintain some quality controls. In any case, local seed companies applied pressures to have the seeds registered as their own variants. Even though new varieties require up to eight years of testing and trial run, we saw instances where varieties were registered in less than two years' time. But seed quality is only one factor in declining cotton production. The other problem is in the value chain, as the cotton textile industry is highly monopolistic and rent seeking in its approach. It forces a price regime onto producers, which the latter must comply with. Low-value addition in garments is also another factor.

BRR: Does that mean that in order to improve returns for cotton growers, indicative price mechanism for cotton should be introduced along the lines of wheat and sugarcane?

SJM: An effort was made to introduce support price for cotton during Musharraf era, but it was scrapped by the same people who are running the show today at the centre. At that time, the federal secretary had had London spot prices for cotton uploaded on the web. In response, textile players rebelled, nearly costing the poor fellow his job.

Having said that, the debate about indicative price mechanism applies not just to cotton but to all crops. Therefore, the answer should be based on cogent analysis and not on ulterior motives to curry favour with one support group or the other.

BRR: In case of sugarcane, we saw double digit increase in cultivation due to introduction of support price. On the other hand, farmers persistently complain that they not only have to face delays but also fail to receive government set minimum rates. Despite these challenges, growers do not feel deterred from increasing area under cane cultivation, often at the expense of cotton. How do you explain the apparent contradiction?

SJM: I agree with farmers' position on both accounts: it is no contradiction. Only influential farmers with large land holdings manage to extract government set rates, as is the case with wheat as well. Others, especially small farmers, lack the bargaining power to get even the minimum price.

BRR: You drew comparison with wheat; but don't the dynamics differ from sugarcane? By most estimates, over 60 percent of wheat stays on-farm, because traded wheat is only procured by PASSCO which has historically not procured more than 10 million tons in one year, compared to average 25 million tons domestic production.

SJM: That impression is incorrect. What you are referring to as on-farm consumption eventually makes it way to the marketplace. After all, farmers do not grind the flour themselves. Except obviously once PASSCO furnishes its targeted stock, private buyers refuse to pay the government set rate. Because the producers lack bargaining power, only choices available to them is to either buy at traders' offer rate or risk letting their grain stock go to waste.

This is not to say that traders are across the board exploitative. The problem is that the support price is prohibitively unrealistic and is meant to benefit large producers only. In contrast, smaller producers usually grow wheat more or less equal to their personal demand level.

When the government increases support price levels, it is usually to benefit the 26 percent of growers that I define as ‘net sellers’ of agricultural produce. The rest fulfill their needs from the marketplace anyway.

BRR: Returning to the abysmal levels of cotton production. Do you agree that crop zoning could be one way of addressing this problem?

SJM: I fully agree. Although in principle, I am against zoning because it inhibits free movement of prices. But in Pakistan, various geographical regions have land and soil of highly variable quality, often not suitable for most crops. Thus, until we address the basic problems, crop zoning may be the way to go.

BRR: One reason why sugarcane cultivation is fast taking over traditionally cotton growing areas may be that the buyer, namely sugar mills are often large-sized and claim to incentivise and provide farmers with high quality seed-variants and encourage best agronomic practices. For example, compared to over thousand cotton gins, there are only ninety sugar mills.

SJM: The fragmentation of ginning segment into large number of players is not deniable. However, one must look at the issue holistically. More than consolidation, the cotton ginning segment needs up gradation of technology for cleaning of fibre etc.

Having said that, cotton ginners faces a monopolistic buyer, namely yarn manufacturers. The spinners set the price, and squeeze ginners off the entire margin. Sugar producer on the other hand owns the entire value chain beyond plantation, and in turn squeeze the farmer, and often the government as well in the form of subsidy on exports.

BRR: But is it possible to explain the phenomenal growth in cane cultivation if farmer is being squeezed?

SJM: Yes, because one needs to look at the opportunity cost. What alternatives does the farmer have? It is either a crop that as heavily exposed to volatility in weather; or one which with a higher chance of payment fulfillment, even if with a delay or discount.

One must also appreciate that farmers lack the access to the type of analyses we are discussing here. Whether a certain cash crop may be better suited to a given geographic region due to its favourable climatic conditions or proximity to an industrial unit is subject to broad based comparative analysis. Farmer on the other hand is only able to make decisions based on past experience. Once the sowing period is past, farmer lacks the capacity to change crop midcycle, even if there is a change in market fundamentals, such as price, demand or supply glut.

PFA SEALS 71 FACTORIES IN APRIL

RECORDER REPORT | MAY 10TH, 2019 | LAHORE

The Punjab Food Authority (PFA) sealed 71 factories in different areas of Punjab and discarded harmful eatables having worth of more than Rs40 million in April. Under the supervision of PFA Director General, vigilance and operation teams traced the adulteration mafia. DG Muhammad Usman said that adulterators were involved in selling cola drinks, tainted milk, and spurious juices.

He further said that these sealed factories were producing adulterated spices, pickles, preserved fruits, and ketchup. He added that the sale of fake cola drinks and re-use of burnt oil remained top of the list. Factories have been rooted out completely as well as confiscating their products, he added.

He said that public complaints played an important role in exposing adulteration mafia and thus he requested them to contact PFA against this mafia if they find anything unusual with food-related issues and save the others.

VEHICLES SEIZURE: PFMA PUNJAB CHIEF WARNS AGAINST FLOUR CRISIS

RECORDER REPORT | MAY 10TH, 2019 | LAHORE

Pakistan Flour Mills Association (PFMA) Punjab reiterated its allegation that the food department teams are impounding vehicles of their mills carrying wheat grain while feed mills are at liberty which is sheer injustice with the flour millers.

“The government will be responsible for the flour crisis in the province, if the impounding of mills’ vehicles is not stopped within next three days,” warned PFMA Punjab Chairman Habib ur Rehman Leghari while talking to journalists here on Thursday.

PFMA claimed that price of wheat has reached to Rs1450 per maund due to this impounding of vehicles. He urged the Chief Minister Punjab, Usman Buzdar and Food Minister Sami Ullah Chaudhry to sit across the table with the Association and sort out a solution.

PFMA Group Leader Asim Raza Ahmad, Liaquat Ali Khan, Mian Riaz and others also warned that flour prices would also go upward as mills would be unable to continue grinding and supply flour in the market. They said that the provincial food secretary had assured two days back not to impound those vehicles which have food grain license. But unfortunately, now food inspectors were tearing apart the licenses of such vehicles and impounding them.

PSMA PUNJAB TERMS GOVT’S SUGAR PRICE ‘UNREALISTIC’

RECORDER REPORT | MAY 10TH, 2019 | LAHORE

Pakistan Sugar Mills Association (PSMA) Punjab has strongly criticized the government for, what they said, negative steps being taken by the government to ensure an unrealistic price of sugar in the market. PSMA Punjab Zone Chairman, Nauman Ahmad Khan claimed that the government interventions in the way of supplies to the local and export market may hinder the availability of the sugar in the local market.

He claimed that some of the shopkeepers prefer not to sell sugar to avoid action of the administration. He alleged that the administration in some districts was also forcibly stopping supplies to local and export market.

PSMA Punjab Chairman appealed to the government of the Punjab to avoid such unjustifiable steps as neither the price of the commodity is increasing in the local market nor there is any issue of its availability.

PAK-TAJIK MINISTERIAL COMMISSION LIKELY TO MEET IN JULY

By Our Correspondent Published: May 10, 2019

ISLAMABAD: The Pak-Tajik Joint Ministerial Commission is likely to meet on July 2 this year to review cooperation between the two countries in different areas of the economy, particularly agriculture.

During a meeting with Minister for National Food Security and Research Sahibzada Mehboob Sultan on Thursday, Tajikistan Ambassador Ismatullo Naserdin said a meeting of the joint working group was likely to be held on July 2 as part of the Joint Ministerial Commission huddle between the two countries.

During the deliberations, it was highlighted that Pakistan enjoyed good brotherly relations with Tajikistan. Then prime minister of Pakistan paid an official visit to Tajikistan on June 9 and 10, 2015. An agreement on cooperation in the field of agriculture had also been signed between the two countries on March 8, 2011.

Fifth session of the Pak-Tajik Joint Ministerial Commission was held in Pakistan on June 15 and 16, 2016 where it was agreed that the two sides would collaborate in the agreed areas and a joint working group would be formed.

The federal minister for national food security pointed out that Pakistan government accorded high priority to the agriculture sector and was focusing on enhancing cooperation in the field – particularly expanding the country's trade in agricultural commodities. "Pakistan is self-sufficient in wheat and enjoys surpluses in sugar and rice," the minister pointed out. "We are also producing citrus fruit and mangoes of high quality, which Tajikistan can import from us."

The minister added that cooperation in the field of agriculture would also provide an opportunity to strengthen overall economic relations by facilitating the adoption of sanitary and phyto-sanitary measures, which would benefit both the sides.

SUBSIDISED LOAN SCHEME FOR FARMERS, SMES PLANNED

Khaleeq Kiani Updated May 09, 2019

ISLAMABAD: The government will push forward in the upcoming budget about Rs20 billion credit guarantee scheme for financial inclusion of the poor farmers and small enterprises through a subsidised loan scheme through the State Bank of Pakistan (SBP) and National Savings.

The scheme is part of the National Financial Inclusion Strategy (NFIS) supported by the World Bank to contribute to financial inclusion and development of market infrastructure. The scheme aims at creating an ecosystem that could increase access and usage of digital payments and financial services by low-income households and SMEs.

The Budget 2019-20 will envisage about Rs5.2bn needed for financial inclusion and infrastructure project (FIIP) based on feedback from both executing agencies for the project — SBP and Central Directorate of National Savings (CDNS). The scheme should have been in place last fiscal year but was delayed due to requirements of the procurement rules and some activities planned for 2018-19.

For example, consultant for payment gateway will be selected and hired in 2019-20 before bidding and procurement of hardware and software for payment gateway in 2020-21. Likewise, the activity of upgraded IT platform for CDNS will now be materialised in 2020-21 after IT consultant is hired in 2019-20.

The FIIP is a fully foreign funded project with zero local components. The World Bank has warned the Ministry of Finance that it will release only funds which are allocated in the public sector development programme (PSDP) budget.

A similar scheme is also being finalised to support small farmers in at least 100 districts across the country. Officials said the scheme to be launched through the central bank would entail training to the beneficiaries including farmers, SMEs, disabled persons and the poor who would be extended credit on fixed 5pc mark up for five years and the borrowers/beneficiaries would have six years grace period to repay their loans.

Under the scheme, the central bank would extend credit to all the banks and financial institutions loans on zero interest for providing Rs500,000 to Rs1.5m loan to the lower income groups – farmers, small businessmen, women and special persons. The state bank of Pakistan will be taking 100pc refinancing risk of the scheme.

The project is aimed to further strengthen SBP’s payment systems through its national payment gateway that have evolved over the years through microfinance banks, telecommunication companies and retail software networks. The key objective is to increase in number of digital transaction accounts to at least 60 million by 2022 with disbursements targeted to 125,000 loans to unique borrowers, micro enterprises and SMEs of which at least 60pc loans should be to female borrowers.

The scheme would also enhance the capacity of the CDNS to offer additional access points for digital transactions through upgrading its core systems and increase electronic payments per capita to at least 2.0 by 2022.

The ministry of finance and the World Bank had signed the loan agreement in January 2018 and the project had already been declared effective by the bank on March 20, 2018.

‘SINDH GOVT’S DELAY IN WHEAT PROCUREMENT CAUSING LOSSES TO FARMERS’

By Our Correspondent Published: April 22, 2019

HYDERABAD: With delays in official wheat procurement pushing the exercise far behind schedule, the Sindh Chamber of Agriculture (SCA) has blamed the Sindh government for causing financial losses to the farmers. A meeting of the SCA in Hyderabad on Sunday, attended by the farmers’ representatives from Karachi, Sukkur, Ghotki and Sanghar through video link, deplored that not a single wheat procurement centre has been opened in Sindh as yet.

The process was scheduled to start from April 1 but currently, a summary for the purchase of 0.5 million tonnes of wheat is pending approval of the Sindh chief minister. Once the sanction is given, the government will float the tender for purchase of the gunny bags only after which, the procurement process will start. It is expected that the province’s farmers, who are harvesting a bumper crop this year, would have sold a large part of their harvest in the open market by that time.

The government had fixed Rs1,300 per 40 kilogrammes as the support price of wheat. However, SCA President Qabool Muhammad Khatian said that the open market has been exploiting the farmers by paying between Rs1,050 to Rs1,150 per 40 kg to the farmers.

The wheat support price of Rs1,300 has remained static since the fiscal year 2014-15 despite repeated demands of the farmers, who cite the rising cost of cultivation as justification for the increase. Even Sindh agriculture research department had previously suggested the government to fix the price at Rs1,448.

“Because the government’s centres haven’t yet opened, traders in the open market are exploiting farmers by purchasing their crop at cheaper rates,” said Khatian, demanding that the government immediately open the centres. “This is happening for the first time in Sindh’s history that the government hasn’t opened a single centre”.

Thanks to the weather and intermittent rain, the farmers are reaping a bumper crop of up to 2,000 kg per acre against Sindh’s average productivity of around 1,350 kg per acre. The crop was cultivated at 1,046,845 hectares against the target of 1,150,000 hectares.

The provincial government appears averse to initiating the buying process because it is still utilising the carry-over stocks of its procurement last year. Another obstacle to the process is said to be Sindh food department’s limited storage capacity which ranges between 700,000 to 750,000 tons.

Meanwhile, those attending the meeting also expressed grave concern over the shortage of water, particularly in Thatta, Sujawal and Badin districts where the people have complained that they cannot even get drinking water. The farmers denounced the imposition of 200% duty on import of dates from Pakistan to India and requested the federal government and Trade Development Authority of Pakistan (TDAP) to find alternative export markets.

The farmers called for providing Rs5,000 per acre subsidy to the growers of soybean crop by Sindh government, similar to the subsidy being received by their counterparts in Punjab.

The SCA’s General Secretary Zahid Hussain Bhurgari, Syed Aijaz Nabi Shah, Nabi Bux Sathio, Ghulam Hassan Chachar, Ghulam Mujtaba Unar, Nisar Hussain Khaskheli and others attended.

BENEFICIARIES OF SUBSIDY IN SUGAR

BR Research May 9, 2019

Last week, BR Research published an attempt to map the footprint of politically influential families in the sugar industry (published in this section on May 02, 2019). Since then, two more mills owned by a PI have come to note.

Altogether, 16 distinct sponsor families/groups, owning 40 out of 90 sugar milling units installed across the country have been identified. Put together, these units command close to 50 percent share in total domestic production, based on figures published by industry association for marketing year 2017-18.

But does that speak to the influence of these sponsor groups on sector-specific policymaking? After all, it is arguable that due to factors specific to Pakistan's political economy, it is mostly rich families that make inroads into corridors of powers.

One metric to capture the intersection of policymakers and sugar mill owners is to map the beneficiaries of subsidy extended by the government to the industry on exports. Because sugar trade is regulated under strict quota due to an intermittent history of shortages in the local market, SBP publishes daily bulletin of export orders approved.

During the last fiscal year, GoP announced an export quota of two million tons of sugar, with a subsidy of Rs10.7 per kilo. This subsidy was further supplemented by an additional Rs9.3 per kilo support by the Sindh government, but with an upper cap of 20,000 tons per sugar mill (those situated in the province only). When asked if the federal government announced the subsidy at a time of ballooning fiscal deficit to curry favour with mill owners, PSMA representatives retort that the surplus has persisted in the market for over three years.

According to Mr. Iskandar M. Khan, the best time to allow export was MY16, when sugar price in the international market was at a premium to domestic cost of production. Instead, the outgoing government chose to wait until the election year. By that time, global prices had slumped, and the federal kitty had to bear a steep cost of Rs20 billion.

But did the outgoing government announce export subsidy to the benefit of patriarchs of ruling party, who are also well-known mill owners? The answer may come as a surprise to readers.

Turns out, of the export orders of two million tons approved, one-third came from three mills owned by three political families. At the top, come three mills owned by Late Makhdum Ruknuddin family of South Punjab with export of 249,532 tons of sugar. These are closely trailed by five mills owned by JKT group, with mills concentrated both in southern Rahim Yar Khan Districts and Ghotki region of upper Sindh.

The story of Sindh is even more interesting, where the largest beneficiary is the Omni group, which incidentally also has the largest regional market share of 5 percent in total domestic output. Omni's gains from the subsidy are also the highest in the country, considering it recorded additional gains of R 9.3 per kg support per mill for up to 20,000 tons export. No surprises there that the average export by nine Omni units stood at 20,128 tons, with no unit exporting higher than 21,948 tons and lowest at

18,066 tons. No wonder, the market share is so fragmented. Put together, mills owned by 11 distinct sponsor families had a share of 75 percent in total domestic export, of which only four have distinct political ties (the fourth being Humayun Akhtar). Seven other non-PI family units all belonged to Sindh province, who appear to be unintended beneficiaries of benevolence showered at Omni group.

IMPORT OF PULSES DROPS BY 4 PERCENT

RECORDER REPORT | MAY 9TH, 2019 | KARACHI

Pakistan's seafood import dipped to $393.357 million in July-Mar 2018-19, down by 4 percent, official figures say. Fall in pulses import now comes to the tune of $14.573 million in July-Mar 2018-19 from $407.930 million in July-Mar 2017-18, Pakistan Bureau of Statistics shows. In term of quantity, 712,540 metric tons of pulses were imported in July-Mar 2018-19 higher by 28 percent or 153, 972 metric tons from 558,568 metric tons imported in July-Mar 2017-18.

In Mar 2019, Pakistan's pulses import slumped by 33 percent or $17.755 million to $36.740 million from $54.495 million in Mar 2018.

Pulses import volume also plunged by 22.09 percent or 18587 metric tons to 65,551 metric tons in Mar 2019 from 84,138 metric tons in Mar 2018

HIGH-PRICED VEGETABLES, FRUITS GO BEYOND COMMON MAN'S REACH

RECORDER REPORT | MAY 9TH, 2019 | KARACHI

People have complained about soaring prices of vegetables, fruits and other essentials as Ramadan began, a holy month in which Muslims worldwide abstain from eating and drinking from dawn to dusk. In different retail markets in the city, prices of the ingredients used particularly for preparing Iftar meals such as tomatoes, potatoes, beans, and onions showed an upward trend. During the first two days of Ramadan, many consumers from fixed and low-income groups said that the skyrocketing food prices deprived them of enjoying the joy and spirituality of their religious month. "Traders are using this month as an opportunity to multiply prices much more than before Ramadan. We are tired of the soaring vegetables and fruits prices," said customers.

Despite the claims of the provincial government and city administration, profiteering continues unchecked in markets in almost all the localities of the city. Vegetables and fruits are being sold at rates much higher than those fixed by the Commissioner Office. In the open market, vendors are selling goods at prices about 40% to 50% higher than the notified rates.

Many consumers, especially of the limited income group, expressed their resentments over yet another hike in prices of essentials. They held the government responsible for failing to ensure market monitoring.

Servants working in houses (as Massies) told Business Recorder that many low-income families decided to cancel buying fruits and vegetables for their Iftar meals during Ramadan due to the soaring prices and it become unaffordable for them. They said that "fruits and vegetables are absent in the Iftar meals of Ramadan this year for the first time in PTI government."

The rate of low-quality khajla has been fixed at Rs200 per kg but it is being sold at Rs260 per kg. Bananas, which are a popular fruit during Ramadan, were being sold at a makeshift market at Rs160 a dozen if they are of high-quality and Rs140 a dozen if they were of regular quality. The commissioner's list priced bananas at Rs110 a dozen for good quality and Rs88 for average quality. Garlic was sold for Rs200 to Rs220 per kg, earlier it was sold for Rs160 to Rs180 per kg. Ginger was available for Rs170 to Rs180 per kg while earlier it was sold for Rs145 to Rs150 per kg. Apples sold for Rs300 to Rs330 per kg, lemon Rs 300 to Rs 340 per kg, cantaloupe (Kharbooza) Rs 150 per kg, watermelon Rs 50 to Rs 60 per kg, peach Rs 250 to Rs 270 per kg, blueberries (Falsa) Rs 200 to Rs 250 per kg, Mulberry (Shah Toot) Rs 200 per kg, Spinach (Palak) Rs 60 per kg, potato Rs 45 per kg, green chili Rs 100 per kg, cauliflower (Phool Gobhi) Rs 70 to Rs 90 per kg, Arvi Rs 80 to Rs 100 per kg, okra (Bhindi) Rs 100 per kg, tomato Rs 60 to Rs 80 per kg.

The government initiatives have almost failed to make any impact on the local markets as prices of essential commodities have gone up significantly all over the city. The country is already in the grip of exuberant high prices of daily used commodities, while the advent of Ramadan has further aggravated the situation taking the prices of fruits and vegetable sky-high and much beyond the purchasing power of the common man.

However regardless of high prices sale has been witness in dates, Bason, Dal Chana, chat masala and coking oil, sugar, cold drinks, Sharbats, banana, watermelon, green chili, lemon.

On first day sale of dates has reached on its peak as every one needs to break fasting with dates in line with the saying of Prophet Muhammad (PBUH). Higher income group people buy extra food to fill their tables full with food for the Iftar and Sahri time, shopkeepers said.

ETHIOPIA SEEKS TO BUY 1 MILLION TONNES OF WHEAT

RECORDER REPORT | MAY 9TH, 2019 | HAMBURG

The lowest offer in the tender from the Ethiopian government to buy 600,000 tonnes of wheat which closed on April 30 was $225.40 a tonne c&f, traders said on Monday.

The lowest offer in a separate tender for 400,000 tonnes which closed on April 19 was $244.34 a tonne c&f submitted by trading company Gem Crop.

No purchase has yet been reported in either tender and offers are still being considered.

Ethiopia continues to feel the impact of a drought which has devastated farms in some regions.

The country has a large wheat import programme to cool domestic prices, but has struggled to get some purchases completed because of contractual disagreements.

The lowest offer in the 600,000 tonne tender was submitted by trading house Agrocorp International for 100,000 tonnes of optional origin wheat.

The offer includes extra financial costs for a 180 day payment delay and equates to $186.95 a tonne FOB, traders said.

But the lowest offer apparently did not include liner out terms, which involve extra costs for ship unloading.

The lowest offer in the 600,000 tonne tender including liner out costs and extra financial charges was $239.27 a tonne for 100,000 tonnes from trading house Ameropa, traders said.

COTTON PRICES UP ON SHORT SUPPLY

RECORDER REPORT | MAY 9TH, 2019 | KARACHI

Official spot rates gained modestly on the cotton market on Wednesday in the process of trading activity, dealers said. The official spot rate was higher by Rs 50 to Rs 8850, they added. In the ready session, over 4000 bales of cotton changed hands between Rs 6800-9100, they said.

Market sources said that buyers showed interest in fresh buying of best quality but the ginners were not ready to oblige them as prices were not matching with their psychological levels.

Cotton analyst, Naseem Usman said that short supply of fine quality is causing increase in rates. He said that new cotton arrivals are expected by the end of June and it most likely that country may achieve desired cotton production due to expected favourable weather.

Adds Reuters: ICE cotton futures extended losses on Tuesday as the United States and China appeared far from reaching a truce on their trade dispute.

The most-active cotton contract on ICE Futures US July dipped 0.38 cent, or 0.52%, to 73.17 cents per lb

Total futures market volume fell by 18,788 to 29,118 lots. Data showed total open interest gained 1,808 to 221,696 contracts in the previous session.

The following deals reported: 800 bales from Ghotki at Rs 9100, 1090 bales from Dherki at Rs 8900, 200 bales from Haroonbadad at Rs 9000, 200 bales from Rahim Yar Khan at Rs 6800, 2200 bales from Sadiqabad at Rs 8900 and 400 bales from Ahmedpur East at Rs 8800, they said.

FIVE MORE POPULAR JUICE FACTORIES SEALED IN PUNJAB

ZAHID BAIG | MAY 9TH, 2019 | LAHORE

Food safety teams of the Punjab Food Authority (PFA) on Wednesday in the province-wide crackdown sealed five factories illegally producing juices of the different popular brands. The provincial food regulatory body recovered 1,344 litres hazardous juice, 525 litres fake soft drinks and 5,300 empty boxes during the raids. Five gas cylinders, three filling machines, storage tank, fake labels and other raw material were confiscated by PFA while it also discarded a huge quantity of loose colours and chemicals.

PFA Director General Muhammad Usman said that authority has shut down a factory in Muridke, on charges of refilling bottles in the different brands of carbonated drinks and making spurious bottles with chemicals and contaminated water. He said that PFA has registered a case against the factory owner in the nearest police station.

Moreover, PFA's officials have sealed Aftab Juice, Nadeem Juice and Kashif Juice in Sahiwal as well as Nadeem Ice Drink in Okara. He said that PFA closed down all juice factories for preparing juices with artificial flavours, loose colours and chemicals. He said that chemically contaminated juices were selling to different shops in the market in the name of juices after giving them attractive packaging. Muhammad Usman has appealed citizens to use homemade juices because homemade food is best for consumer health. The PFA is eagerly working to ensure the availability of safe and wholesome food to masses in the market. People can inform PFA about adulteration mafia and food-related issues on its Facebook Page, mobile application and Toll-Free number 0800-80500, he added.

DG PFA, meanwhile, has directed food safety teams to be more active and continuous inspections of fruits, vegetables, pulses and other essential commodities in the Ramazan Bazaars.

He also directed to depute food safety teams round the clock in markets to ensure the provision of healthy and safe food for mass.

USC OUTLETS FACING SHORTAGE OF ESSENTIAL GOODS

Khalid Iqbal May 9, 2019

ISLAMABAD: Adviser to Prime Minister on Commerce, Textile and Industrial Production Abdul Razak Dawood has cancelled his visit to an outlet of Utility Stores Corporation (USC) at Karachi Company (G-9 Markaz) due to strong protest of public and employees where they were complaining of shortage of essential items on Wednesday.

All Pakistan Utility Stores Corporation Welfare Association Chairman Arif Shah who was also present in protest demonstration said that 90 per cent outlets are empty without essential items throughout the country. The store employees were bringing necessary items from open market shops to store here at Karachi Company to make happy Adviser to Prime Minister Abdul Razaq Dawood who was expected to visit here, he said.

He said that Adviser to Prime Minister wanted to visit here the store but due to abashment he did not come. All Pakistan Utility Stores Corporation Welfare Association Senior Vice President Malik Muhammad Ameer said that all outlets throughout the country were facing worst shortage of pulses, ghee/cooking oil, atta, sugar, jams, surf, syrups, dry milk, basin etc. Subsidy announced by PTI government is a big fraud with public. In fact, all stores are empty without essential items, he said.

People belong to all walks of life have strongly protested lack of essential items in stores. The people of low income group benefitted from the utility stores by buying essential items at lower prices, particularly during Ramazan. But, they are deprived of all items, he denounced.

PUNJAB FOOD AUTHORITY TO IMPOSE BAN ON LOOSE MILK

By Asif Mehmood Published: May 9, 2019

LAHORE: In a bid to provide healthy, pure and uncontaminated milk to consumers, the Punjab Food Authority (PFA) has decided to ban the sale of loose milk across Lahore, making it the model city for the pilot project. Instead, only pasteurised milk will be available for sale in the near future.

The ban on the sale of loose milk is expected to be imposed after Eid. In relations to the ban, the Punjab Food Authority officials said that Prime Minister Khan is very serious when it comes to ensuring the provision of safe and pure milk to locals and, per his directives, the ban will be swiftly implemented.

In April, the provincial food minister, provincial livestock minister and director general Punjab Food Authority, together with experts, held a meeting in which a decision was taken to rid Lahore of impure, tampered with, and chemically-prepared milk. As a result, a pilot project was initiated to implement the decision.

According to PFA authorities, prior to the implementation of the decision after Ramazan, awareness regarding pasteurised milk will be raised in Lahore and all over Punjab. In this regard, provincial minister food Samiullah Chaudhry said that PM Imran Khan's vision to provide pure and uncontaminated milk to consumers is their mission.

"After making Lahore the model city, the project will be initiated across the province," Chaudhry said.

Similarly, Provincial minister livestock Sardar Hasnain Bahadur Dareshak said that the milk-tampering mafia can only be stopped through the imposition of a ban on loose milk, adding that the ban will benefit farms that produce pure milk.

According to PFA officials, pasteurisation units will be set up in the model city of Lahore to ensure the provision of pasteurised milk, adding that the discussions related to the selection of a place for the installation of plants and their construction have already been carried out.

DAIRY INDUSTRY DEMANDS SALES TAX RELIEF IN BUDGET

By Shahram Haq Published: May 9, 2019

LAHORE: The Pakistan Dairy Association (PDA) has once again contacted the country's policymakers, seeking some relief in the sales tax regime in the upcoming budget.

Talking to Adviser to Prime Minister on Commerce, Textile and Industry Abdul Razak Dawood, the association stated that growth of the dairy industry had been going down since 2016 as that was the year when the industry touched a record high of around 1,400 million litres of consumption. After that, the growth took a turn for the negative.

“The industry suffers a 7-8% price hit due to the end of the zero-rated regime, which further increases the price difference between packaged and loose milk,” said PDA Senior Vice President Sulaiman Monoo while talking to The Express Tribune.

However, even if the zero-rated regime was restored, prices of dairy products, especially milk, were unlikely to reverse as the ongoing scenario including rupee depreciation and petrol price hike may have their impact, said Monoo.

“In the last five years, FDI (foreign direct investment) in the dairy industry was recorded at $1 billion whereas in the next five years, investments of around $1.5 billion are due in allied industries, expansions and new FDI,” he added. Pakistan’s dairy sector enjoyed the zero-rated regime from 2006 to 2016, when the sector saw a massive growth of around 130%, from around 600 million litres to around 1.4 billion litres.

However, the previous government through Finance Act 2015 and 2016 once again imposed 10% sales tax on the concentrated milk powder and allied products like cream, yogurt, cheese, butter, whey, UHT and fat-filled milk.

According to the PDA senior vice president, such a confusing situation is the reason why the share of packaged milk in Pakistan is stagnant at 5%, despite the fact that Punjab has announced that it will implement the pasteurisation law by 2022.

“Look at Indonesia, Turkey and Thailand, which managed to increase their processed milk share to 95%, 80% and 95% respectively. Even India has managed to increase its processed milk ratio to 20% and is now exporting skim milk and other value-added dairy products,” he said.

He called for ending inter-provincial laws and instead framing one national law as dealing with multiple authorities and laws was widening the gap.

Nevertheless, Punjab Food Authority Director Qaiser Abbas termed these reservations inconsequential, saying as per the 18th Amendment, food and other such regulations fell within provincial domains.

“Even before the independence of the country, food and its regulation were a provincial matter and the federal govt always followed provinces in this domain as defined by our constitution,” Abbas told The Express Tribune.

JULY-MARCH SEAFOOD EXPORT PLUNGES BY 5.07 PERCENT

RECORDER REPORT | MAY 8TH, 2019 | KARACHI

Pakistan's seafood export continues to decline to $293.887 million in July-Mar 2018-19, down by 7 percent, official figures say. Fall in seafood export now stands at $21.727 million in July-Mar 2018-19 from $315.614 million in July-Mar 2017-18, Pakistan Bureau of Statistics shows.

In term of quantity, seafood export plunged by 5.07 percent or 6989 metric tons to 130,830 metric tons in July-Mar 2018-19 from 137,819 metric tons in July-Mar 2017-18.

In Mar 2019, Pakistan faced a fall in seafood export by 11 percent or $5.502 million to $45.895 million from $51.397 million in Mar 2018.

Export volume of seafood slumped by 16 percent or 3876 metric tons to 20,412 metric tons in Mar 2019 from 24,288 metric tons in Mar 2018.

IN K-P, FOOD PRICES SKYROCKET WITH ADVENT OF RAMAZAN

By Our Correspondent Published: May 8, 2019

PESHAWAR: All claims of the provincial government to control price hike in Ramazan fell to the ground as rates tested new records in a month known for the high demand for fruit and culinary delights.

The food department teams, in particular, failed to check prices. The advent of the fasting month of Ramazan has opened the floodgates of inflation in prices of fruits and many kitchen items.

According to a field survey of The Express Tribune, food department teams were seen limited their activities to the wholesale markets of the province while the hoarders and profiteers are looting the people in retail bazaars unchecked.

Market prices in provincial capital were seen above the official rates. Lemons were selling out at Rs480 per kg against an official rate of Rs200, mango for Rs500 per kg, watermelon Rs42 per kg as against the official rate of Rs25 per kg and banana Rs120 a dozen instead of Rs80.

According to market sources prices have escalated by 200 per cent with the advent of the holy month of Ramazan.

Traders have flouted the order of the deputy commissioner and the district Nazim to follow the official price list. Shopkeepers and vendors were charging extra against the fixed prices of the government. The city administration has fixed the price of boned beef at Rs350 per kg, however, butchers were openly skinning the people charging Rs450 per kg. Milk rates also boiled up by another Rs10 to Rs120.

Khyber-Pakhtunkhwa Food Department Director Saadat Hasan and Peshwar DC Muhammad Ali Asghar had directed Rationing Controller Aftab Umer and Assistant Food Controller Tasbeeh Ullah to visit Peshawar's vegetable market. The food department team checked in at the Subzi Mandi when the auction was going on.

The food department officials and The Express Tribune team saw agents of vegetable commission agents standing in the crowd. The auction of lemon started from Rs200 per kg, however, the agents of traders kept raising the bid to the desired level.

Assistant Food Controller Tasbeeh Ullah taking action filed a complaint against five vegetable commission agents and Subzi Mandi Retail Sellers Association President Amanullah and four other retailers at Chamkani police station.

Meanwhile, Cantonment Magistrate Quratulain Wazir has asked people to demand price-list from shopkeepers before purchasing vegetables or other edible items to curb profiteering.

During her visit to different bazaars and markets, she asked the customers to report profiteering in case of complaints so that timely action could be taken against the accused involved and they could be sent to jail.

She assured to visit the markets and bazaars in cantonment areas on daily basis but urged the masses to also cooperation with the administration to curb profiteering and hoarding during the holy month of Ramadan.

Earlier, she visited Saddar road, Bach Khan Chowk, Warsak Road, and other areas and checked price list. She directed the shopkeepers to clearly display price-list otherwise strict action would be taken.

SKY-HIGH: WHEAT PRICES IN PUNJAB HIT RECORD HIGHS

By Rizwan Asif Published: May 8, 2019

LAHORE: As a result of the duty-free export allowance on wheat granted by the government, over 100,000 bags of the grain are being exported to Afghanistan every day.

The impact on domestic consumers has not been pretty, as the price of wheat in many Punjab markets has hit 10-year highs. In Rawalpindi, the price of wheat has gone past Rs1,370 per maund (40kg) while in Lahore, Gujranwala, and other districts the open market price per maund is hovering between Rs1,305 and Rs1,335, with further increases expected.

This additional inflationary hit comes just as the month of Ramazan begins.

Flour prices have also seen steep increases at the consumer level, as in Rawalpindi and Islamabad, a 20kg bag is being sold for Rs800, while in Lahore and other nearby areas, 20kg of wheat is being sold for between Rs755 and Rs760, up from Rs720 to Rs740 a few weeks ago.

The increased demand from Afghanistan is being met through the Torkham, Chaman, Wana and Kalawchi border crossings. According to Afghan traders, buying will shift to wheat from Russia and other Central Asian states after around three months, but in the meantime, more wheat is being demanded from Pakistan. The commodity is selling for as much as $280 (Rs39,614) per ton in the Afghan market or roughly Rs1,584 per maund.

The Pakistani government has not imposed any export duties on flour or wheat being exported to Afghanistan, although the Afghan government is charging import taxes.

There has also been a significant decrease in wheat production in Punjab, which has coupled with exports to significantly increase the prices at mills, leading to unannounced price increases for flour.

Meanwhile, the Punjab Food Department is also struggling to meet its wheat purchase target.

According to sources, unsteady decisionmaking and implementation have become commonplace at the food department. Senior food officials had gotten permission from the Punjab chief minister to enact strict measures to nip the issue in the bud, but they failed to gain the support of the district and local administrations in implementing these measures.

Sources said department officials are directing assistant commissioner on what to do, which is not being taken nicely by commissioners and deputy commissioners, due to which the assistant commissioners are reluctant to implement the directives of the food department. The sources said that food officials should convey their directives through the commissioners and deputy commissioner.

The Punjab Food Department is already understaffed and currently, more than 90 per cent of the staff is deployed on wheat selling centres, and the food authority is also trying to send its staff to inspect open market sale locations, which is stretching them too thin.

In a meeting held on Monday, Food Secretary Naseem Sadiq failed to convince the federal government to ban wheat exports and was instead faced with strong criticism over supply management in the province. The Federal Ministry for Food Security told that due to rains, Punjab has reduced its wheat production target to 18.58 million tons, while the nationwide wheat production target has been reduced from 25.51 to 24.26 million tons.

In public warehouses nationwide 3.71 million tons of wheat are currently being stored, of which Punjab has 1.563 million tons. After including the freshly wheat stock, the country it was noted that the country still has ample wheat reserves to fulfil domestic demand.

EU ‘BAN’ ON FISH IMPORT

By Editorial Published: May 8, 2019

The revelation that the European Union (EU) has not been importing fish and its related products from Pakistan for the last three years is another bad news about the country’s dwindling economy. In a country already caught up in a menace of circular debt and external debt servicing, any trade deficit due to imbalance in its imports and exports is always a bad omen.

A Senate panel was informed on Monday that EU member countries while not allowing any fish import from Pakistan in the last three years, are insisting to visit Karachi’s Fishery and other related facilities before deciding to allow import from Pakistan. The Minister for Maritime Affairs, Ali Haider Zaidi, informed the Senate Standing Committee that “The EU insists on visiting Karachi’s Fishery whose hall is not in proper condition at the moment. An inspection right now can even result in complete ban on Pakistan’s fish products.”

In fact these are the poor conditions of the fishing boats, unhygienic conditions at the Karachi Fish Harbour, use of substandard nets and the alleged lack of international standards at the fish processing units that has since long been a major source of concern for not only member countries of the EU but also the United States of America.

Earlier in April 2007, the EU had placed a complete ban on the import of raw fish and any of its processed products to its member states from Pakistan. The ban continued for six years and was lifted in March 2013 after Pakistan had agreed to and implemented the conditions of EU.

Why Pakistan cannot improve the facilities for its own economic benefits? According to Zaidi, part of the problem lies in lack of coordination between the Centre and the province. But it doesn't sound a convincing explanation. What the government must realise is that implementing the demands of EU will not only improve the imports but can help bring about a positive change in the lives of coastal communities, especially in Sindh.

REINVENTING THE TOMATO FOR SURVIVAL IN A CHANGING WORLD

By Tejal Rao April 30, 2019

NAPA, Calif. — In a borrowed van, Brad Gates of Wild Boar Farmssped south on Interstate 680 with hundreds of fuzzy tomato seedlings bumping around in the back, their trembling leaves, warmed by the sun, filling the cab with the smell of summer. It was one of a half-dozen deliveries on his to-do list.

Born and raised in Northern California, Mr. Gates has been organically farming tomatoes in the region for 25 years, working on small leased plots and introducing new varieties with cult followings, like the dark, meaty Black Beauty and the striped, rosy-pink Dragon's Eye.

For most of that time, he sold his tomatoes to top restaurants, including Chez Panisse in Berkeley. But a few years ago he completely rethought his work. Galvanized by climate change, he joined a growing number of farmers who are trying to find a future for their threatened crops — in his case, the queen of the farmers' market.

Mr. Gates now grows thousands of tomato plants each year, selling the young ones to local shops and the seeds all over the country through his website and catalogs, encouraging people to grow their own at home. He believes that the tomato's survival and continued deliciousness depend on the plant's diversity, and he considers breeding hardy, cold-tolerant and heat-tolerant varieties an essential part of his work — not just to provide food, but also to expand the number of places where the plant can flourish.

Many of the supermarket tomatoes that Americans buy are grown in Florida and California, and some arrive throughout the year from Mexico and Canada. Barry Estabrook chronicled the real cost of cheap, year-round, industrially farmed tomatoes in his 2012 book, "Tomatoland: How Modern Industrial Agriculture Destroyed Our Most Alluring Fruit," which detailed the use of chemicals and the exploitation of workers in Florida.

Since then, Mr. Estabrook said in an interview, conditions have been improved in Florida through the Fair Food Program, a coalition that protects workers and educates them on the effects of dangerous chemicals. “These tomato companies that used to treat workers like they were totally disposable are getting serious about competing with each other, because there aren’t enough migrant workers in this country,” he said. “It’s a huge crisis.”

Mr. Gates, who usually works alone, is small-time, and has no interest in scaling up. He leases a greenhouse to start his seedlings and runs the seed business out of a closet in his living room. His dream is to open a nursery in nearby Sacramento and run it with the help of his family.

“I could never compete with somebody in the Central Valley using subsidized water, underpaid labor and pumped fertilizer, getting paid by the ton,” he said. “They stomp the market.”

Mr. Gates, 51, tends to speak in an outdoor voice and to gesture broadly with thick, cracked hands. He refers to shiny, red, out-of-season tomatoes, which he considers boggy and tasteless, as “water dogs.” He thinks the best tomatoes, both for the planet and for the palate, are homegrown or grown on small farms in summer.

He left landscaping and got his start in the tomato business in the early 1990s, when gnarly, bumpy, weird-looking heirloom tomatoes were becoming a hot seller at farmers’ markets. Mr. Gates grew a few hundred varieties, and sold the tomatoes in Oakland. Back then, his business was all about outrageous aesthetics.

Tomatoes self-pollinate, but occasionally, Mr. Gates would come across a one-of-a-kind plant that had cross-pollinated naturally in his garden. The tomatoes they produced were colorful and lumpy, and some tasted very good. So he studied the breeding of tomatoes, searching for what he called the “holy grail.”

“That’s when someone grows it and someone bites it, and they’re satisfied,” he said. “They get the all-around ride.”

Like many tomato growers, he was scrutinizing his plants each year, selecting for sweetness, tang and savoriness, as well as productivity. He bred stripes and color into the tomatoes, bringing out any odd, unforgettable characteristics that would grab attention at market.

A quick glance at any commercial seed catalog will show that the tomato competition is fierce, with many hundreds of varieties. “In the last 10 years, tomatoes have changed more than in their entire existence,” Mr. Gates said.

About six years ago, he began to notice that the Northern California climate was becoming more intense and unpredictable. “A little struggle builds a tomato’s character, just like a person’s,” he said. “But it’s become a real roller-coaster ride out there.” Harvests weren’t just reduced; they were lost.

So Mr. Gates turned to selling young plants and about 60 varieties of seeds, alongside fully grown tomatoes, to help offset the uncertainties of farming. He quickly realized that he was no longer breeding tomatoes just for looks and taste, but for extreme tolerance in a rapidly changing, increasingly inhospitable planet.

The ancestor of the tomato plant we know is a hardy species that still grows as a bush in Peru and Ecuador, producing small red fruit about the size of a fresh pea. But there are about 15 other wild tomato species, each with its own potentially useful traits as researchers look to ways the tomato can adapt to drought, heat and more.

Roger T. Chetelat, a geneticist, oversees the tomato genetics resource center at the University of California, Davis — a public resource for plant breeders and researchers all over the world looking to tap into the plant's wild genetics. For decades, he has studied the genetics of a tomato species native to the Atacama Desert in Chile.

"It grows in an extremely arid environment, and up until now breeders have not been successful with it, because it's so different and so difficult to cross," he said.

Mr. Chetelat recently planted tomatoes that have just a little piece of a chromosome derived from the Atacama species. He will study the plant's response to drought this summer.

Mr. Gates, the California farmer, also tapped into the tomato's wild genetics, in a less strategic way. "It was kind of inadvertent," he said, "but I was always selecting the seeds that did the best under harsh weather conditions."

He has produced the Lucid Gem, a marbled, beefsteak-like tomato that ripens from yellow to deep orange; it is unusually heat-tolerant, a trait he noticed among many of the orange-colored tomatoes he was breeding. And it thrives in what he called "the new summers from hell."

Brad's Atomic Grape is a sweet, almost creamy, psychedelic-looking cherry tomato that is robust in the way of its ancestors. It can flourish "in a sidewalk crack," Mr. Gates said.

He has noticed patterns: The darker purple tomatoes tend to produce a lot of fruit, and withstand some disease. Some of the purple and pink fruit arrive early, which is ideal for growers in places with a short season, like Arizona or Nevada, where temperatures can rise too high for growing in the late summer.

And he has found that tomatoes rich with anthocyanin, the antioxidant that gives blueberries and blackberries their color, are protected from some fungus and disease that hit his other varieties.

Despite the tomato plant's general preference for warm, dry summers, farmers around the world have developed clever, environmentally friendly hacks for growing excellent tomatoes in a variety of climates and soils. In Santa Cruz, Calif., Dirty Girl Produce uses the technique of dry-farming on Early Girl tomatoes, which, as their name suggests, bear fruit early in the season.

Dry farming isn't entirely dry; it relies on fields soaked by rain, and cooler summers that lead to slow evaporation, along with plenty of work from the farmer to maintain its moisture, particularly in drought years. "It's all about cultivating the soil," said Joe Schirmer, Dirty Girl's owner.

Under the right conditions, the Early Girl sends a strong taproot deep into the ground. And as the plant is stressed by lack of water, it puts all its energy into producing sweet, sharp, rich-tasting tomatoes with tough skins.

Despite all the challenges, Mr. Gates believes there's never been a better time to grow tomatoes. Unlike decades ago, there are now passionate online gardening communities sharing notes with one another each season, allowing a beginner to learn quickly.

Mr. Gates has his own following online — small farmers and avid gardeners who grow his plants in the varied climates of Alaska, Idaho, Texas and Uzbekistan — and they share their experiences with him on Facebook and Instagram.

As abnormal weather becomes more normal, Mr. Gates wants to teach more gardeners how to confidently adapt, like the plants themselves, and manipulate changing environments with cheap, D.I.Y. frames and covers, which can provide shade and warmth for outdoor plants, as well as protection from freak hailstorms and rain.

“If you can, the best option for tomatoes has always been, and it still is, to grow some yourself,” he said, “whether it’s in a raised bed, a container or in the ground.”

As Mr. Gates pulled his van up to the curb to deliver hundreds of young tomato plants to Cotton Works in Los Gatos, the shop owner, Sara Fung, came out in a hurry to help carry them in. She has been selling his plants for about six years, and more than half of this year’s were already sold in a pre-order.

“Can you believe it, I already got a call this morning,” Ms. Fung said, pushing two flats of Husky Reds across the courtyard. “A lady wanted to know, are the tomatoes here yet? Where are the tomatoes?”

17 PROJECTS WORTH RS18BN GET CDWP NOD

Amin Ahmed Updated May 07, 2019

ISLAMABAD: The Central Development Working Party (CDWP) on Monday approved 17 development projects worth Rs18.8 billion and recommended nine projects worth Rs594.5bn to the Executive Committee of the National Economic Council (Ecnec) for approval.

The approved projects related to energy, transport and communication, science and technology, health, population planning, industries and commerce, food and agriculture and education.

The water resources ministry presented the position paper of the Dasu hydel power project due to increased land and compensation cost from Rs19 billion to Rs36 billion with the total cost of Rs510 billion which was approved and referred to Ecnec for consideration.

Chaired by Minister for Planning, Development and Reforms Makhdum Khusro Bakhtyar, the meeting was attended by Secretary of Planning Zafar Hasan and senior officials from the federal and provincial governments.

Plans relate to energy, transport, communication, and science and technology sectors

The national food, security and research ministry presented five projects — ‘productivity enhancement of wheat’ worth Rs31987.4 million; ‘productivity enhancement of rice’ worth Rs15809.620 million; ‘productivity en-hance-ment of sugarcane’ worth Rs5019.589 million, ‘national oilseeds enhancement programme (NOEP)’ worth Rs10167.25 million and ‘cage culture cluster development project’ worth Rs6582 million — which were referred to Ecnec for consideration.

Three projects and a position paper related to the energy sector were presented during the meeting. The first project — ‘upgrade of POL testing facilities of HDIP at Islamabad, Lahore, Multan, Peshawar and Quetta and ISO Certification of Petroleum Testing Laboratory at Islamabad' worth Rs293.614 million — was presented and approved.

The second energy project to be executed in Awaran district is construction of 132kV grid station at Mashkay and 132kV STD Nal-Mashkay transmission line (120km) worth Rs1193.39 million. Both were approved.

The third project — 500kV Moro Grid Station worth Rs5404.19 million to be executed in Naushahro Feroze district — was presented and recommended to Ecnec for consideration.

The project related to transport and communication sector — 'construction of Groyne Wall/Break Water and allied works at East Bay (Demi Zer) Gwadar' worth Rs1019.519 million — was also approved.

In the science and technology sector, four projects were presented before the CDWP. The Higher Education Commission (HEC) presented two projects — 'strengthening and development of physical and technological infrastructure at the University of Haripur' worth Rs1546.960 million and 'livestock sector development through capacity building, applied research and technology transfer, University of Veterinary and Animal Sciences' worth Rs1905 million. The meeting approved both projects.

The science and technology ministry presented two projects — 'establishment of Pak-Korea Testing Laboratory for PV Modules and Allied Equipment' worth Rs1385.429 million and 'upgrade of Polymers and Plastics Laboratory at PCSIR Labora-tories Complex, Lahore' worth Rs140.249 million — which were also approved.

Three health-related projects were presented by the national health, services, regulation and coordination ministry relating to the 'Treatment of Cancer Patients of ICT, AJK and Gilgit-Baltistan' worth Rs4772.150 million which were recommended to Ecnec for consideration.

The Pakistan Atomic Energy Commission presented two projects — 'upgrade of Atomic Energy Cancer Hospital-KIRAN' worth Rs2342.790 million and 'upgrade of diagnostic and therapeutic facilities at BINO, Bahawalpur' worth Rs1377.176 million — which were also approved.

Three projects related to population planning were presented by the national health, services, regulation and coordination ministry. Projects — 'population welfare programme, Gilgit-Baltistan' worth Rs422.621 million, 'population welfare programme, AJ&K' worth Rs355.512 million and 'population welfare programme, Fata (erstwhile)' worth Rs184.317 — were approved till June 2019.

Four projects related to industries and commerce were presented to the CDWP. The commerce division presented 'remodelling and expansion of Karachi Expo Centre (Component-II)' worth Rs2677.42 million which was given approval. The industries and production ministry presented three projects — 'handicraft export development project' worth Rs385.226 million, 'industrial designing and automation centres (IDAC)' worth Rs1470.88 million and 'footwear cluster development worth Rs78.7 million — and were approved in the meeting.

The education ministry requested extension of 'establishment and operation of basic education community schools in the country' till June 2019 worth Rs4629.742 million which was referred to Ecnec for consideration.

DEEP-SEA FISHING LICENCES TO BE ISSUED IN TWO WEEKS: MINISTER

Kalbe Ali Updated May 07, 2019

ISLAMABAD: Minister for Maritime Affairs Ali Haider Zaidi has said that new deep-sea fishing licences will be issued in two weeks.

During a meeting of the Senate Standing Committee on Maritime Affairs on Monday, he said the capacity building of fishermen was imperative with a focus on sustainable fishery in the Arabian Sea for uplifting of the fisheries sector in Pakistan.

“We have been suspended by the European Union for two years, but nobody can do anything because there is a need for up-gradation of fisheries,” he added.

The minister criticised the Sindh government for not maintaining the Karachi Fish Harbour as per the international standards.

The officials of the ministry of maritime affairs informed the committee that the EU team wanted to visit the Karachi Fish Harbour and “we have asked the Sindh government to at least clean the auction hall which is like a garbage place”.

Additional Secretary Maritime Affairs Mohammad Asad said the exporters wanted conditions to be improved, but the subject was under the provincial government.

“Besides we have a six acre plot with facilities to breed shrimps at Hawkesbay, but it can only be made operational with collaboration of the Sindh government,” he said.

Senator Usman Khan Kakar suggested that officials of fisheries departments of Sindh and Balochistan should be called by the committee to develop coordination between the provinces and the federal government.

The committee discussed the issue of non-payment to the dockworkers at Port Qasim Authority. Mr Kakar had raised the issue.

The meeting was informed that the workers employed by a Chinese company that operates Sahiwal coal power project wharf 3 & 4 at Port Qasim were managed by the company to handle imported coal.

The committee was told that the Chinese company wanted that all workforce had to be streamlined, besides they needed only 100 workers but the dockworkers had a strength of 18,000.

RS2BN SUBSIDY GIVEN UNDER RAMAZAN PACKAGE ON UTILITY STORES: FIRDOUS

Imaduddin May 6, 2019

ISLAMABAD: Special Assistant to Prime Minister on Information Firdous Ashiq Awan on Monday said that Prime Minister Imran Khan had announced Rs 2 billion Ramadan package under which essential items were being provided to the people at cheaper rates at the Utility Stores Corporation (USC).

Addressing a joint press conference along with Managing Director USC, Umar Lodhi she said it was unfortunate that during the holy month of Ramadan prices of daily use items were increased due to demand and supply gap. She said keeping in mind the problems of the masses Prime Minister Imran Khan had issued directives for issuance of Rs 2 billion to the USC so that the common man could be provided relief.

She said that subsidy was being given on 19 items including flour, ghee, cooking oil, pulses, chickpea flour (baison), dates, rice, milk, soft drinks and spices.

Elaborating the subsidy, she said that on a 20 kg bag of flour Rs 59 subsidy was being given, whereas Rs 5 subsidy was being given on per kilogram of sugar, Rs 15 on ghee, Rs 10 on cooking oil. Similarly, Rs 30 subsidy was being given on dates, Rs 10 on spices, and Rs 15 on milk.

She said that PM had issued directive to MD USC to ensure availability of all daily use items at the utility stores. She said that the previous government gave Rs 1.6 billion Ramadan package, but only Rs 760 million could be utilized, while the remaining amount lapsed due to lack of capacity of the USC.

Replying to the questions of the media, she said that opposition not only had the right to raise public interest issues in the House, but they also needed to accept who ruined the country’s economy.

She said that the present government of Prime Minister Imran Khan would restore the economy and bring about positive change in the lives of the people, but it would need some time as only eight months had passed since PTI took over.

About the so-called distribution of Pakistan Muslim League-Nawaz posts among the family members, she said that it appeared the PML-N was not a political party, but a private limited company. She said that no parliamentary party or central executive committee meeting was called to take such important decisions.

She said the changes made by PML-N leaders groomed under the shadow of dictatorship were a big joke with the democratic institutions. She said that Election Commission of Pakistan had already announced that a convicted person could not keep any party’s office bearer. She said that appointment of Mariam Nawaz as Vice President of the PML-N was against the law of the land.

She appealed to the nation to offer special prayers for solidarity and progress of the country during the holy month of Ramadan.

EU NOT BUYING PAKISTAN’S FISH FOR LAST 3 YEARS, SENATE TOLD

By Our Correspondent Published: May 7, 2019

ISLAMABAD.: The European Union (EU) has not purchased fish from Pakistan for the last three years, a Senate panel was informed.

"The EU insists on visiting Karachi's fishery whose auction hall is not in proper condition at the moment. An inspection right now can even result in complete ban on Pakistan's fish products," Minister for Maritime Affairs Ali Haider Zaidi told the Senate Standing Committee on Maritime Affairs, chaired by Senator Nuzhat Sadiq on Monday.

The minister said capacity building of fishermen with a special focus on sustainable fishery in the Arabian Sea was imperative for uplifting of the fisheries sector in Pakistan.

"This initiative will not only raise the living standard of coastal inhabitants but will also contribute a huge amount to the national exchequer," he said during the briefing.

The minister said fishery, which was considered a source of livelihood for locals of the coastal areas was suffering due to lack of coordination between provincial and federal authorities.

He asked the senators to suggest ideas for achieving the objectives.

Senator Usman Khan Kakar raised the issue of non-payment of salaries to Port Qasim Authority (PQA) dockworkers.

The committee was informed that the workers employed by the respective cargo handling companies (CHCs) were never registered by the PQA.

"The dispute of salary/compensation is purely between a Chinese company and the employees at the requisite marginal wharf 3&4 at Port Qasim Authority.

"The matter is also sub judice as the labour union has filed a case against its employers at the Labour Court Karachi and the court has granted stay to the labour union," the minister said.

COTTON FARMERS SUFFER RS52B LOSS AS MILLS PAY LOWER PRICES

By Zafar Bhutta Published: May 7, 2019

ISLAMABAD: Textile barons, being sole buyers of cotton produced in the country, have caused an annual loss of Rs52 billion to farmers by offering lower prices for the commodity and monoplising the market, reveal documents prepared by the Ministry of National Food Security and Research.

Owing to that reason, the farmers were compelled to grow other crops like sugarcane instead of cotton. Resultantly, the area planted with cotton had been continuously shrinking, the ministry said.

Besides this, according to the ministry, the quality of cotton has dropped considerably because of a lack of compliance with the Cotton Control Act 1996, non-implementation of the quality-based seed pricing system and no capacity-building of cotton pickers.

The ministry, in a report submitted to high-ups of the Pakistan Tehreek-e-Insaf (PTI) government, said the farmers were not getting proper prices for their crop, adding that no assurance was given by the government in that regard at the time of cotton harvest.

The cotton crop has a share of 1-1.7% in the overall gross domestic product (GDP) – total size of the economy – of the country. It caters to 74% of the domestic cotton requirement and provides key raw material for the textile industry. It also engages a large workforce in various activities.

However, the cotton crop has been encountering many challenges and issues. Its production and yield have decreased substantially over the past many years. There are multiple reasons for these issues which include climate change, lack of research and development, absence of a proper policy, high input costs, lack of latest seed technology, no price and profit assurance, marketing issues, unavailability of quality seeds and no support price for the crop.

The Ministry of National Food Security recalled that the 1984-92 period was a golden era for cotton production. After that, the harvest has been continuously declining, especially in Punjab.

Past governments were least interested in overcoming the challenges faced by the cotton growers. Farmers were confused in the selection of good-quality cotton seeds and pesticides as a large number of varieties were available in the country, the ministry said.

According to officials, the 2013-18 period – when the Pakistan Muslim League-Nawaz (PML-N) was running the government, was the worst as cotton harvest faced a historic decline. The PML-N government provided incentives for powerful industrial lobbies like textile manufacturers, who were allowed duty-free import of cotton, and paid little attention to shielding the interest of farmers. A report presented to the cabinet revealed that cotton production had been virtually stagnant since 1991-92 and fluctuated in a range of 10 to 12 million bales. The output fell to 9.9 million bales in 2015-16 compared to average consumption of 15 million bales, making Pakistan a net cotton importer.

These reasons brought down profits for the cotton farmers and led to 20% reduction in the area planted with the crop from 2004 to 2016.

The past governments, especially the PML-N, had been pro-industrialists and farmers were left at the mercy of textile millers. Even, the cotton commissioner had been placed under the control of textile ministry to safeguard the interest of textile barons.

The present government has also so far been pro-industrialists as it has given Rs25 billion in subsidy to the textile millers on gas supply. It also gave a relief of Rs29 billion by waiving duties on cotton import.

In addition to these, the government waived Rs40 billion in gas infrastructure development cess out of the Rs80 billion due to be paid by the textile millers.

FLOUR CRISIS LOOMS LARGE, SAY MILLERS

The Newspaper's Staff Reporter May 06, 2019

LAHORE: Flour millers say the recent oil prices' increase will make the wheat flour prices surge and also fear flour crisis during Ramazan as the Punjab Food Department has begun impounding trucks laden with wheat.

Pakistan Flour Mills Association Punjab chapter chairman Habib Leghari, Asim Raza, Liaquat Ali Khan and others said in a joint statement here on Sunday that the government kept the masses in the dark by enhancing oil tariff while the economic conditions of the country were already dismal.

They said the oil price hike would lead to an increase of at least Rs2 per 20kg bag of flour at a time when the sacred month of Ramazan is setting in. They lamented that instead of offering relief to the masses, the government threw petrol bomb on the people.

The PFMA leaders also feared that the Ramazan package would be hit leading to flour crisis in the province as the food department officials had begun checking and impounding the vehicles of flour millers carrying wheat consignments from Gujranwala and Gujrat to Rawalpindi notwithstanding the fact that the vehicle crew carried all required legal documents for transportation of the commodity.

They said if wheat won't reach the flour mills it would cause flour shortage during Ramazan.

Meanwhile, a meeting of the PFMA has been convened to discuss the situation.

HARVESTING ON PEAKS

Sajid Hussain Updated May 06, 2019

Around 55 per cent of the geographical area of Pakistan is hilly or mountainous, accommodating 51.47 million people. The population of these areas is projected to rise to 72.64m by 2030.

In mountainous areas, more than half of the population is food insecure, with the highest food insecurity (60pc), prevalence of severe stunting (36pc) and underweight (42pc) in children (below 5 years age) in Balochistan.

Food security and livelihoods of mountain communities still depend heavily on agriculture and livestock. These rely on the local resource base available at all elevations, although the specific agro-ecological and livelihood potentials vary considerably.

Agriculture and livestock are highly vulnerable to climate-induced risks and hazards. These include changes in patterns of temperature and precipitation, frequent floods and droughts, and severity of changes in timings of seasons.

Climate change demands collective action at the regional level because glaciers, rivers and landscapes are trans-boundary

During hazards, the supply of food items from downstream areas is likely to be limited, particularly after landslides block roads and floods damage bridges and roads. Moreover, transportation cost of food from plain areas to mountains is also very high.

Thus, it is very important to strengthen the local agriculture in mountain areas to reduce the dependency on production systems in plain areas. Mountain agriculture has huge potential for production of nutritious traditional crops (eg millet, barley, buckwheat, seas buckthorn, native beans etc), vegetables, fruits, and nuts.

Strengthening of mountain agriculture will result in improvements of dietary diversity as well as agro-biodiversity. In 2017, Food and Agriculture Organisation's (FAO) regional initiative on Zero Hunger Challenge in Asia and Pacific, in consultation with national and international partners relabeled traditional crops (also known as neglected and underutilised species) as 'future smart foods'.

This was in view of their emerging importance for climate change resilience, agro-biodiversity, agriculture sustainability, and food and nutrition security. Overall, mountain agriculture can contribute significantly to achieving overarching goals of the government on reducing food insecurity in the country.

Pakistan is making progress towards framing instruments for better adaptation to climate change. However, the strategies for adaptations specific to mountain agriculture need to be further strengthened.

There are several steps which can be taken to mainstream mountains in national adaptation policies for agriculture in the Hindu Kush Himalayan (HKH) countries. According to research, local institutions are not well aware of findings of scientific studies on climate change. More focus on simple communication methods from scientists and media professionals is required.

Climate change adaptation needs to be considered a national and regional priority in all sectors, especially agriculture. However, because its impact and adaptation outcomes are long term, it is not treated as a matter of utmost importance while development goals are set based on short-term consequences.

Climate change demands collective action at regional level because glaciers, rivers and landscapes are trans-boundary and highly affected by climate change. All these have direct impact on water availability, agricultural productivity, hydropower development and disaster risk management in both mountains and downstream areas.

There is a need to invest more on mountain specific research and technology. The key challenge faced by policy makers is how to increase agricultural productivity and reduce poverty without degradation of natural resources on which mountain farmers largely depend.

The research and development interventions in Pakistan for agriculture have not been very effective because they are focused on agricultural technologies and services for plain areas. For example, agriculture research institutions rarely do research on production technology of mountain specific traditional crops.

There is urgent need for mountain specific data in Pakistan for transparent decision making in all sectors. Mostly, national databases do not reveal reliable statistics for mountains because they follow a common framework to assess vulnerability of people and systems, across both mountains and plains. Mountain areas have different climatic and socio-economic characteristics and agro-ecological potential, therefore need special attention.

Despite several constraints, the mountain areas have high potential for production of traditional crops (i.e. millets, buckwheat and beans), fruits, vegetables, and nuts. There is need to tap this potential though mountain specific research, technology and institutional services.

GROWING RICE WITH LESS WATER

Muhammad Abbas Zia Updated May 06, 2019

After wheat, rice is the second most important staple of Pakistan. Through exports, it contributes significantly to the country's exchequer. This is especially true for basmati rice which is known for its aroma and quality, and is a specialty of the country. Rice is grown in all provinces on an area of 7,164 thousand acres. However, it is a water guzzler.

Transplanted puddled rice (TPR) is the preferred mode for growing the crop in Pakistan. A puddled field is one where the soil is ploughed under 10-12 inches of standing water. In TPR, rice seedlings are raised in nurseries till they are 4-6 weeks old, before being transplanted to puddled fields.

Rice is a water loving cereal. It takes about 3,000 to 5,000 litres of water to produce one kilogram of rice. 93.6 per cent of fresh water in Pakistan is consumed by agriculture of which rice accounts for 35pc.

Due to declining water resources and high water requirement of TPR, it is the need of the hour to enhance water-use efficiency and water productivity. Among various technologies, dry direct seeded rice (DSR) is the best option for water conservation.

It takes about 3,000 to 5,000 litres of water to produce one kilogram of rice

In the DSR sowing method, paddy seed is sown directly in well prepared fields through DSR drill, removing the need for seedlings to be raised in a nursery. Through this method, 25-30pc of the water consumed can be saved while using 30pc less fuel. Furthermore, less labour and time is required and optimum plant population can be obtained easily.

In Pakistan, especially in Punjab, DSR sowing method in rice crop is getting popular day by day, with area under DSR gradually increasing. Last year, estimated area under DSR was 114 thousand acres, out of which 104 thousand acres were in Punjab alone.

Factors such as severe water shortage and expensive labour due to industrialisation and urbanisation, has led the rice farming community of Pakistan to want to shift from TPR to DSR sowing technology. But they are unable to do so effectively because of the menace of weeds infestation in DSR.

Weeds are undesirable plants whose removal is essential because they compete with the crop for sunlight, water and nutrients. Weed infestation adversely impacts rice by 15-20pc and can go up to 50pc.

A DSR crop badly infested with weeds can fail entirely. Weeds in rice crop can be categorised into three classes: broad leaved, sedges and grasses weeds.

In the TPR sowing system, weed control is easy as the puddled soil inhibits weeds germination. Whereas, in DSR sowing technology, weed control is very difficult. Since weeds germinate at the same time as rice seedlings, they compete for light and nutrients. Weed competition in DSR is at its peak during the first three weeks.

No doubt, DSR technology is the future of rice in Pakistan. But this future depends on proper weed management, especially from noxious weeds like ghora, madhanas and kallar or bansi grass.

Integrated weed management is a systematic approach in which the control of weeds is achieved by keeps its infestation below economic injury level. This can be done by combining any two or more preventive, cultural and herbicidal weeds management methods.

Crop rotation, mulching of sesbania (jantar) and stale seed bed or double rouni (creating a seedbed weeks before it is due to be sown) are the best methods of cultural control of weeds in DSR system.

However, use of herbicide, such as application of glyphosate, is indispensable. Without herbicidal weed management, appropriate control can't be achieved.

UNLEASHING SHARED ECONOMY FOR RURAL DEVELOPMENT

From the Newspaper Updated May 06, 2019

Laughter would have been the response had someone told you, a decade back, that the world's largest hospitality service provider will not own any rooms, or that the world's leading taxi provider will not own any cars, or that the world's leading media company will hardly own any video contents.

But as you read this, it is likely that you have stayed in one of those sparkling clean Airbnb rooms, and have ridden with that Uber driver known for great conversations, and have watched a viral video of that cute child on YouTube.

Sharing economy is defined as a socioeconomic system enabling an intermediated set of exchanges of goods and services between individuals and organisations, which aim to increase efficiency and optimisation of underutilised resources in society. It has redefined businesses since the beginning of this decade and unlocked value for millions of service providers and customers alike.

Yet, sharing economy's most significant contribution to the world will be felt in rural development as much in business, especially in smallholder agriculture development.

In the industries that are disrupted by the rise of sharing economy, customers had cost-efficient access to resources without the burden of ownership; service providers derived income from the use of idle capacities. This has generated economic gains for both.

Close to one in two living in rural areas of Indonesia already has access to the internet, mainly through mobile. Mobile-based GPS technologies can help build platforms that can make location-based access to service providers and customers

However, the businesses that pioneered sharing economy have hitherto targeted urban centres, and thus the flow of welfare gains. Nonetheless, the possibilities of the sharing economy to smallholder and rural development cannot be overstated. Take food waste.

About 40pc of all the food grown in the developing countries are lost during the post-harvest and processing stages.

Research shows that a majority of the losses happen due to the lack of infrastructures such as well-maintained milling machines or warehouses.

Many smallholder farmers don't have the wherewithal to own these infrastructures.

Also, among the farmers who own the facilities, the utilisation rates are low. Sharing economy can provide new economic opportunities to the facility owners while providing much-needed infrastructure access to smallholder farmers.

Advancements in technology and increasing rural penetration of smartphones can further accentuate the progress.

Close to one in two living in rural areas of Indonesia already has access to the internet, mainly through mobile.

Mobile-based GPS technologies can help build platforms that can make location-based access to service providers and customers.

Say, a coffee farmer who owns a de-pulping machine can list the equipment on the platform that connects service providers and customers.

Another coffee farmer who needs a de-pulping machine could rent it through the platform and return it as soon the work is completed; products such as e-wallets can let them settle the payments with much ease.

Thanks to sharing economy, the farmer who lends the machine earns extra income which she might not have received had the machine remained idle.

The consuming farmer paid only for the duration he used the machine, thus significantly reducing the cost of ownership yet getting the much-needed access to infrastructure.

They both could leave reviews which will help others in the community to overcome information asymmetries and to decide whom the best lenders and the buyers are, incentivising the best market behaviour. This is just one example, and the opportunities are limitless ranging from inputs to capital.

The idea of sharing economy is also compatible with rural sociology. In a typical rural setup, occupations mostly involve a totality of cultivators — a few who own farm equipment and many who don't — and in a community are usually a few in several non-agricultural pursuits.

With this right ratio of providers, users, and actors who could be intermediaries, the rural setup provides a favourable natural setting for the development of sharing economy.

One of the other essential criteria required for building a thriving sharing economy platform is a phenomenon called network effect, whereby increased numbers of people or participants improve the value of a good or service.

The development of the network effort will be aided by the homogeneity in the psychological traits of the rural population, but only if the value proposition is well-communicated and the users believe that the system is credible, reliable, and ethical. Policymakers can play an important role in supporting the development of such systems.

The less density of population and remoteness of villages can pose challenges to the growth of the sharing economy.

However, if the country's leading e-commerce player can deliver to 93pc of Indonesia's 7,000 or so regencies, sharing economy can thrive, too.

In his book "The Fortune at the Bottom of the Pyramid," CK Prahalad argued: "If we stop thinking of the poor as victims or as a burden and start recognising them as resilient and creative entrepreneurs and value-conscious consumers, a whole new world of opportunity will open up."

The arguments I made above are the lineal descendants of that view.

Unleashing the sharing economy in the rural areas, where the majority of the world's poor live, is a compelling need. The encouraging thing is that it doesn't need vast mobilisation of investments or infrastructure.

In its bare form, sharing economy is all about reallocating resources from where it is idle to where it is needed, thus creating value at both ends — in the rural context, that value flows to the most neediest segment of the population.

NEWS COVERAGE PERIOD FROM APRIL 29th TO MAY 5th 2019

19 SUBSIDISED ITEMS TO BE AVAILABLE AT UTILITY STORES FROM TODAY

The Newspaper's Staff Reporter Updated May 05, 2019

ISLAMABAD: The Utility Stores Corporation (USC) announced on Saturday that 19 edible items — including rice, pulses, cooking oil, grams, gram flour (besan), sugar, dates and juices — will be available at its outlets from Sunday (today) at discounted rates.

The Economic Coordination Committee of the cabinet had approved the Rs2 billion Ramazan relief package on Friday.

The government will provide a subsidy of Rs4 per kg on wheat flour, Rs5 on sugar, Rs15 on ghee, Rs10 on cooking oil, Rs20 on gram pulse, Rs15 on moong, Rs10 on mash pulse, Rs10 on masoor, Rs25 on white gram, Rs20 on gram flour, Rs30 on dates, Rs15 on basmati rice, Rs15 on sela rice and Rs15 on broken rice, Rs15 on squashes and syrups (1,500 ml), Rs10 on squashes and syrups (800 ml), Rs50 on black tea, Rs15 per litre on Milk Pack and 10 per cent relief on spices.

Relief being provided under a Rs2bn Ramazan package

A spokesman of the USC said that some items had been delivered at the utility stores and the remaining would be supplied very soon.

Smooth supply of all commodities across the country would be ensured during Ramazan, he added.

Meanwhile, employees of the USC, who had set up a protest camp outside its head office in Blue Area, had been assured by its management that their demands would be met.

Addressing the employees, senior USC officers said that the management was committed to providing relief to the general public during Ramazan by playing its role as a price moderator and deterrent to profiteering, hoarding and black-marketing.

COMMERCIAL FISH FARMS DEPRIVE GROWERS OF RIGHTFUL SHARE IN WATER

Jan Khaskheli May 5, 2019

HYDERABAD: Coastal farmers of Keti Bunder, Sindh blame the increasing trend to establish large fish ponds on fertile lands for depriving them of their rightful share in water.

The fish growers, who the coastal agricultural farmers believe have political backing, establish ponds with water from the watercourses.

Gulab Shah, one of the leading growers of Keti Bunder, Thatta district called it a priority shift of the provincial government, which has allowed water user from the irrigation system for private fish ponds, depriving agriculture farmers of their share.

“We being farmers have the first right to get irrigation water through watercourses for food production. If there is surplus water, the authorities may provide it to private fish farms,” he said.

He called the shortage of water “artificial”, as canals were flowing at full capacity. He has cultivated cotton on 80 acres after two years in the hope of recovering previous losses; however, he was not getting water from the irrigational tributaries and watercourses.

“The standing cotton crop needs weekly water, but unfortunately farmers are not getting the essential input,” Gulab Shah said.

Coastal zone farmers used to lead in crop sowing and harvesting due to Sindh’s favourable climate, but for the last two consecutive years they could not sow cotton and other major crops due to water scarcity and various climatic phenomenon.

This year farmers were able to cultivate the crops on initial availability of water. But that has changed now and they were crying out loud for their rightful share in water to save crops. There are a number of big fish ponds, covering around 35,000 acres of land. These ponds need water up to five-six feet to produce fish.

Calculating water consumption, Shah said a five-acre fish pond consumes water equal to 50 acres of an agriculture crop. “It is not difficult to guess that the agriculture sector has been put in the hands of ignorant fish farmers and irrigation department officials,” he lamented.

Mustafa Nangraj, researcher and trainer from Sindh Agriculture Extension Department said the government's agriculture policy was clear, but it did not have micro details of procedure and planning.

He said the need was to adopt an integral approach in which agriculture, dairy, and fish were produced at a small scale to ensure nutrition for the community without a heavy cost.

"There should be small home-based fish ponds from where poor people may get their required nutrition. In fact larger fish ponds consume more water and poor community people do not have access to buy fish at low prices to overcome nutrition deficiencies," he added.

Information gathered from farmers in coastal area shows they were preparing lands to cultivate a variety of seasonal vegetables, mostly ridged gourd (tori), bitter gourd (karela), cluster bean (guar), and bottle gourd (kado).

However, water shortage disrupted their move and pushed them to wait for their turn to receive water from the watercourses.

Years ago, coastal areas were rich in producing seasonal vegetables, fruits, rice, and dairy products. Preference for cultivating vegetables existed because the coastal areas had better access to Karachi's market, where they received better rates for their produce. But now, the farmers are vulnerable to unemployment and poverty due to water scarcity and lack of support from government in case of any untoward natural phenomenon as well as manmade issues.

Also, there is no policy cover to compensate these tail end farmers, who were vulnerable to unpredictable prices.

Farmers in the two other coastal districts – Sujawal and Badin – have different crops pattern. Presently, they were preparing to develop rice nurseries, which they would plant at the end of the current month (May) and June. They usually cultivate vegetables and off season crops in rice fields after its harvest.

Despite ups and downs of water and weather pattern change, farmers from Sakro, Ghorabari, Garho and Keti Bunder of Thatta districts cultivate around 100,000 acres of land with mostly vegetables. At present, they either have cultivated cotton crops at their family lands or were preparing to cultivate seasonal vegetables.

But the private fish farmers have created trouble for them, as the authorities provide irrigation water to them ignoring the agricultural crops. Water scarcity, increasing cultivation cost and instability of market for agriculture products has also pushed many small-scale farmers to develop fish farms.

Community farmers urged the government to formulate a policy to stop the use of arable land for fish farming and other commercial purposes.

They pointed out that diverting water from water courses and canals to fish farms was not only affecting agricultural practices and food production, but also depriving natural fresh water lakes from getting replenished with this essential resource.

Fish farms consume more water. Each fish farm reservoir has capacity to store water at five to six feet level, which was enough to cultivate a 50-acre piece of land for food crops.

There are merely eight to ten landlords on each watercourse who get their share to cultivate their piece of family land in coastal areas. But in recent years, where agriculture has become a low priority area for the provincial government, more and more fish farms have been getting water from the irrigation system which was meant to supply it to the cultivators.

Leading researchers in agriculture and water fields urged the government prepare proper guidelines and rules for developing fish farms, and to preserve the share in water for agriculture, which was the backbone of the country's economy.

The farmers in Keti Bunder produce vegetables and major crops in the months of March, April and May. They mainly cultivate chilli, tomato and cucumber in August and September. Monsoon for these farmers is a blessing as it not only enables them to cultivate more, but it also recharges the underground water sources, and increases marine fish catch.

Presently, the entire coastline of the province, including Thatta, Sujawal and Badin districts, was experiencing the worst kind of water shortage. Those living in these areas have to spend a large chunk of their income to buy drinking water.

Sadly, all government-built water supply schemes are also in doldrums as they are disconnected from the canals and watercourses. In this situation, even keeping livestock has become quite difficult for the farmers; despite the fact that livestock itself has been a major source of livelihood for coastal communities.

WHEAT FLOUR FORTIFICATION PROJECT LAUNCHED

Amin Ahmed May 04, 2019

ISLAMABAD: The National Fortification Alliance of Pakistan has launched a project in collaboration with World Food Programme (WFP) and the Australian government to fight malnutrition by fortifying wheat flour in Islamabad and Rawalpindi.

The project launched on Friday will support chakkis (small-scale grinders) to mill flour that is rich in micronutrients.

"Given the extent of the consumption of wheat from chakkis, this project will provide a firm basis to reach nutritionally vulnerable populations and provide them with essential nutrients, which is another step WFP is taking to curb malnutrition in Pakistan," said WFP Country Representative, Finbarr Curran at the launch of the programme.

Almost half of Pakistan's population suffers from micronutrient deficiencies which can lead to poor child growth, anaemia and many other health issues.

Reducing these deficiencies is a high priority for the government of Pakistan. To improve families' nutrition, the country has already embarked upon the systematic fortification of wheat flour produced by large-scale mills.

Over the next five years, it is expected that the output of all industrial wheat flour mills will be fortified with essential nutrients. However, fortification goals cannot be fully achieved without addressing the output of chakkis.

These mills produce wheat flour for nearly 70pc of the population, and most of these families are the poorest of the poor. This project targets the most vulnerable populations and fulfills the urgent need to assimilate chakkis within a broader national fortification effort.

Mr Curran noted the importance of using an evidence-based approach in designing and implementing an effective fortification model for chakkis, with a view to future expansion. The pilot project will provide the government with evidence about the potential for the chakki fortification programme to prevent micronutrient deficiencies and malnutrition, particularly among the poorest populations.

GROWERS DEMAND WITHDRAWAL OF RS300 FED ON SALE OF RAW TOBACCO

The Newspaper's Staff Reporter May 04, 2019

ISLAMABAD: Tobacco growers on Friday demanded withdrawal of Rs300 federal excise duty (FED) on sale of raw tobacco.

Addressing a press conference at the National Press Club, President Labour Federation Khyber Pakhtunkhwa (KP) Abrarullah said tobacco sector of KPK was contributing Rs135 billion annually to national exchequer.

“But the excise duty of Rs300 per kg on fresh tobacco in the budget of 2018-19 has placed the growers at the mercy of multinational companies,” he said.

He added: “Tobacco like other agricultural products was under the domain of provincial government but the federal government had introduced the federal excise duty on sale of tobacco to all the buyers except for green leaf threshing GLT unit.

He added as a result only the multinational companies could purchase the tobacco because only they possessed the GLTs.

A GLT is a processing plant where tobacco is prepared after curing mainly for cigarette manufacturing. However, there are several other usages of tobacco apart from the cigarette sector.

“Now we are at the mercy of only two companies and they have started to exploit the situation by reducing the price of tobacco,” Abrarullah said.

He also said that multinational cigarette makers were damaging the local agro based economy and the government should withdraw the FED on sale of fresh leaves.

When asked why are they raising the issue after almost a year after the imposition of FED, Mr Abrarullah said: “At the start of the fiscal year we did not even know what was Rs300 FED on sale of fresh tobacco to non GLTs.”

He said that the price of raw tobacco was between Rs200 and Rs250 per kg but now the buyers were even offering as low as Rs150 to the growers and it was after the authorities started to raid and fine non-registered GLTs.

They demanded that the government should withdraw SRO 1149(1)2018 which raised the FED on unprocessed tobacco from Rs10 to Rs300, but allowed relaxations only to GLT units.

Representatives of Sarhad Agricultural Rural Development Organisation Haji Abdul Nabi pointed out that the Rs300 FED on fresh tobacco will have a negative impact on a large number of small and medium enterprises affiliated with tobacco products.

“This will not only expose the labourers and growers but also give enormous loss to national economy as cigarette manufacturers are the only consumers of raw tobacco,” he added.

COTTON PRODUCTION FALLS TO 10.7M BALES

APP May 04, 2019

MULTAN: Cotton production dipped 6.94 per cent to 10.77 million bales up to May 1 this season over the corresponding period last year.

According to fortnightly report of the Pakistan Cotton Ginners Association (PCGA) on Friday, Punjab recorded a 9.55pc fall at 6.628 million bales and Sindh witnessed 2.45pc shortfall at 4.149m bales.

Of the total production over 10.25 million bales had been sold out as textile mills purchased 10m bales and exporters bought 103,540 bales, leaving an unsold stock of 522,626 bales.

Sanghar district of Sindh remained top producer with 1.28m bales, Rahimyar Khan district of Punjab stood second with 1.19m bales followed by Bahawalnagar with just over a million bales.

Only three ginning factories were now operational including two in Punjab and one in Sindh.

FLOUR MILLERS RAISE PRICES

Aamir Shafaat Khan May 03, 2019

KARACHI: With Ramazan just few days away, flour millers have hiked flour prices for the second time in anticipation of the wheat shortage due to heavy rains in Punjab.

The price of flour no.2.5 has been increased to Rs1,750 per 50kg bag against Rs1,700. Meanwhile, the 50kg bag was selling for Rs1,675 in the last week of April.

Prices of fine and super fine flour have also been raised to Rs 1,925 per 50 kg bag from Rs 1,875 while it was available at Rs 1,825 in the last week of April.

Wheat prices have been under pressure following reports of slight wheat crop damage in Punjab coupled with quality damage owing to rains. Flour millers said that wheat in open market now costs Rs3,275 per 100 kg whereas last week, the price rose by Rs100 to Rs3,150 per 100 kg bag.

Millers said that wheat from Sindh —which was harvested in March — has found its way in to Punjab while a number of commodity traders have also begun lifting the crop in huge quantities from the open market.

In a meeting held to discuss the crop situation in the province, flour millers from Sindh said the wheat prices did not pick up during last season; however, the situation has changed this time around as rains in wheat producing areas of Punjab severely affected the quantity and quality of the crop.

‘FOOD INFLATION MAY PROVE TO MAKE OR BREAK FOR INCUMBENTS’

BR Research May 3, 2019

An interview with Abid Qaiyum Suleri, Executive Director SDPI

Abid Qaiyum Suleri is the Executive Director of the Sustainable Development Policy Institute since 2007. He is a public policy advisor and development practitioner, who serve on various policy & advisory forums at international, national & regional platforms.

Currently, he is serving his third stint at Prime Minister’s Economic Advisory Council. In the past, he has served on National Advisory Committee of Planning Commission of Pakistan; and Trade Policy Advisory Committee, GoP. He has served across a wide array of platforms ranging from the board of key universities and on audit & finance committees of public sector enterprises.

In his role as policy advisor, he regularly reflects on the political economy of Pakistan in prominent research publications. Given the recent flurry of activity on IMF program, BR Research sat down with him to seek his perspective on recent news coming out of Q-Block, and what the latest round of fiscal stabilisation might entail for economy. Below are the edited excerpts

BR Research: Let’s start with a performance review. How do you grade the nine-month performance of the incumbents?

Abid Qaiyum Suleri: I believe this government behaved in a similar way any other government would have. Given the fiscal and current account mess at the time PTI took office, it had few other choices except reaching out to friendly countries and IMF for support.

However, it could have managed things better on two fronts. First, the decisions to approach IMF were unnecessarily delayed. And second, the government failed to manage public perceptions.

A party elected on a narrative of change should have been able to build a narrative centered on reform agenda.

BRR: How do you see economic challenges panning out over the next two quarters?

AQS: As we speak, IMF mission is on a visit and has already met with the bosses at Q-block. Over the next six months, the focus of fiscal administration perhaps needs to ensure that the macroeconomic inflationary pressures are kept separate from the micro-level inflation caused due to administrative failures.

Let me illustrate. Abnormal increases in prices of commodities in food basket witnessed prior to and during Ramazan have nothing to do with IMF or currency devaluation.

Second, the government needs to take political stakeholders along with general public into confidence over why it was necessary to undertake measures for macroeconomic stabilisation at this stage.

While the fiscal and current account reasons are just as important, it was critical to approach IMF to maintain country's credibility in the global financial community. IMF's Letter of Intent is crucial to ensure that credit rating is not downgraded by rating agencies such as Moody's and Fitch. Over the past year, how often have you heard this angle being highlighted by the treasury benches, let alone the media?

Yesterday, the new finance minister interacted with financial journalists covering developments at Q-block. We need to see much more of such discussions between the press and government's economic team. Otherwise, whispers and rumours will continue to dictate market sentiment.

Third, yes, it is a foregone conclusion that the IMF package will determine the contours of fiscal contraction in the upcoming budget. But that in no way means that the ruling party will have no room to offer relief to the lowest income tier.

The PM holds agenda for social sector development very dear. PTI can still deliver on this front because it holds power in two and a half federating units. It can undertake measures to improve services such as potable water, sanitation, education, healthcare and agriculture. These are all provincial subjects anyway. Unlike at the centre, provinces have the fiscal room to invest in public sector development. Moreover, they retain unexplored avenues to raise revenues.

While it is satisfying to see that discussions on the NFC award are already underway, PTI should take the baton to push for provincial finance award as well. After all, encouraging democratic institutions at grassroots levels was a salient feature of their election manifesto.

Remember, if we are to ever see an end to inequity in public spending between Karachi and Kashmore or Rajanpur and Rawalpindi, fiscal devolution to tertiary governments is essential. It will enable a more equitable distribution of resources based on metrics such as population and poverty. This will have a ripple down effect even if austerity curtails PSDP at the centre.

BRR: Let's stay at IMF for a moment. Do you believe entering an IMF program early on would have reduced the uncertainty that we see in markets today?

AQS: The delay had its positives too. Unlike past governments, the incumbents proved their credibility by succeeding in raising support from friendly countries to meet balance of payment requirements for the first three quarters.

Except, the government should have clearly communicated from day one that it will not enter an IMF program in its first fiscal year. That would have set the inflationary expectations and investment climate accordingly.

During the past nine months, the limbo and indecision on IMF program led to a dollarisation of economy, where every other person tried to convert his savings to cash in on exchange rate speculation.

BRR: You mentioned that administrative measures are needed to curtail inflation in food prices. Stringent measures to reign in speculation in commodity mandis' were common during the PML-N rule. Do you think the incumbents have the will and competence to take similar actions in their freshman year?

AQS: It doesn't matter whether they lack the willingness; inflation in food prices may prove to be the make or break for this government.

Granted, it is in a catch-22 situation, specially since Brent prices are touching $72 per barrel. I believe the recent decision to not pass on the effect of oil prices right before Ramazan is a temporary but much needed step.

This is especially significant considering government will need to pass on additional taxes close to Rs500 billion in the upcoming budget right after Ramazan. In order to make those unpopular decisions more palatable, keeping food prices under check around Eid will be a litmus test. If they fail, you will see both opposition and media driving the government into the corner, and it may find it hard to fight its way out of it.

BRR: You are also a part of Economic Advisory Council (EAC). Do you believe that the outgoing finance minister was unable to make full use of the members' expertise?

AQS: No. Sub-groups were formed to prepare strategies on issues such as export competitiveness; macro-economic stability; poverty & social safety nets. Reports were submitted and a lot of the recommendations contained therein were incorporated into the second amendment to the finance bill presented by this government.

The macroeconomic framework was handed over by EAC back in November 2018. Yes, because of the other urgent priorities at the time, government was unable to pace its synthesis, which resulted in a delay in its announcement.

I was a member of two EACs during the previous government as well, and I can tell you that the current EAC has held meetings far more frequently than its previous incarnations. It is easy for experts like us to peddle policies sitting on the outside; decision makers on the other hand must take into account the political economy of those policies.

BRR: What approach has the fresh finance minister taken to EAC?

AQS: Please remember that it is Prime Minister's Economic Advisory Council, not finance minister's. The new FM has been preoccupied first with IMF and now BRI, but I am sure once things settle, he shall call a meeting of EAC members and apprise us with details of discussions with IMF. At the same time, most members have continued their policy advocacy through op-eds and media. As policy advisors, we continue to raise our voices from both within and without official forums.

BRR: Another economic advisory board has been formed which consists of practitioners from the industry. What is your opinion of the efficacy of forming two councils at the same time?

AQS: The efficacy depends on how well such taskforces are utilised; whether their recommendations are incorporated into policymaking. After all, governments are under no obligation to follow advisor's counsel.

BRR: A commonly held view is that outgoing FM failed to timely change the Finance Secretary, who was well reputed as an administrator but was not a subject specialist. The position of DG DMO also remained vacant. No advisors were inducted in executive capacity, even though the FM lacked experience in public finance. Do you agree that this contributed to the performance gap on fiscal front?

AQS: Asad will be better able to answer this. However, naturally a question arises whether subject specialists are better suited for these positions or technocrats who have served in the ministry under several regimes and have a better appreciation of how to keep the administrative machinery running. Both have their merits and demerits. Having a powerful finance secretary who overshadows the minister is also not a great idea. It is always a balancing act.

BRR: Another criticism on the outgoing FM is that soft negotiations with IMF did not make any headway. Is that impression correct?

AQS: No. Not only Asad Umar and his team, even the SBP governor met with the IMF team. Formal negotiations with the staff mission may have seen delay. But even informal interactions with IMF revolved around identifying targets; revenue gaps; expenditure cuts and social safety nets.

BRR: Agreed. But given that government will have to impose additional taxes equivalent to 1.2 percent of GDP to meet the revenue gap, yet no details have been figured out with the IMF to this effect?

AQS: Both FBR and FinMin are looking in avenues of revenue collection. Appreciate that the unsustainable tax breaks offered in PML-N's sixth budget created provisions for revenue gap. It will come as no surprise to most readers that those measures may be reversed in the upcoming budget. Some respite has come from the superior judiciary, as taxes in telcos have been restored.

Given the current fiscal circumstances, unrealistic reliefs must go, even if people like me were the beneficiary of reduced tax slabs.

BRR: Which new areas do you think will see new or increased taxes?

AQS: The past two IMF programs saw GST increase by one percentage point in both instances. We may hear about GST harmonization again, and it may rise by one or two percentage points. As I have already pointed out, income tax reliefs announced in the last fiscal year will have to go. Petroleum levy may also see an increase considering the collection stays with the centre and is not shared with the federal divisible pool.

On the expenditure side, you may see cuts in planned large scale infrastructure projects. Those may be shelved for the time being.

I want to point out that these are assumptions; but there are few other avenues available to centre to collect taxes from. Final figures will depend on level of fiscal deficit negotiated. That will then be used as a benchmark to reverse engineer revenue targets and expenditure cuts. This has always been the case.

BRR: During the last two IMF programs, tax exemptions were removed to a large degree. It may prove hard to remove the remaining exemptions. Do you agree?

AQS: IMF needs to appreciate that the current government has taken almost all the much-needed unpopular decisions. If we intend to keep this economy from sinking into chaos, then we may agree on a destination, but the incumbents need to be afforded the flexibility of pacing and sequencing.

In the last IMF program, 16 waivers were granted to the PML-N government, most of which pertained to the same structural reforms that the PTI government now faces. Therefore, IMF will have to be realistic. Agree on fiscal targets for next three years, but with flexibility for the government to devise its own strategy to handle the political economic repercussions of those cuts.

The pressure issue from PM’s recent interaction with IMF chief in Beijing also spoke of a comprehensive reform package; any such package will have to include social safety net and poverty alleviation measures. If the IMF is too stubborn, it will be a lose-lose for both sides. Given Pakistan’s track record, the last thing the Fund would wish for is to initiate a tough program that fails to reach completion.

It has to be a realistic program which is politically sell-able.

BRR: Can you highlight important reforms needed urgently for the power sector?

AQS: First, the government needs to figure out how to continue targeted subsidies in the energy sector, given the current levels of circular debt. We may review East Asian and Latin American models to identify with surgical accuracy consumers in most need of subsidy. I must add that this is no easy job.

But price levels are only one side of the picture. Thirty percent of losses in T&D constitute in an equal opportunity injury to the national kitty. Similarly, unaccounted for losses in gas, if reduced, can also offer some relief to the consumer.

Third, we need to pivot towards renewables, especially in CPEC Phase II. We cannot continue to depend on fossil fuels for our electricity generation. We need to bring a three-year framework which sets annual stepped-up targets for introduction of renewables in national grid.

Incidentally, PTI’s mantra of ‘clean and green growth’ has been adopted by President Xi, who spoke of a ‘clean and green’ BRI along with sustainable development goals in the latest summit. Eventually we will need to move towards future technology with our international partners. Otherwise, dependence on fossil fuel can prove ruinous for Pakistan due to their inherent volatility and peg with foreign currency.

BRR: But as fresh power plants continue to come online, capacity charge continues to grow. How should those be passed on?

AQS: The obvious way to take advantage of excess capacity is to export energy through regional corridors. Since we have closed that option for the foreseeable future, the country needs to develop indigenous demand; otherwise, in the long run, capacity charges will kill the economy.

ENGRO FOODS & FRIESLANDCAMPINA TEAM MEETS ISMAIL

RECORDER REPORT | MAY 3RD, 2019 | KARACHI

The senior management of Engro Foods and FrieslandCampina held a meeting with the Governor of Sindh, Imran Ismail at Governor House Karachi.

The agenda of the meeting was to discuss the need for public private collaboration to create sustainable livelihoods for small dairy farmers while also providing safe dairy products to the people of Pakistan.

Currently dairy comprises up to 50 percent of the agriculture sector and contributes 11 percent to the GDP of Pakistan. Engro Foods and FrieslandCampina, with the assistance of the Government of Pakistan are determined to build the capacity of small dairy farmers to improve the overall quality and quantity of milk and create sustainable livelihoods.

In the meeting, the Governor of Sindh stated that Government of Pakistan and Prime Minister Imran Khan is determined to work on empowerment of small farmers to increase their income and improve their standard of living. Also discussed was the need to harmonize food standards through regulatory authorities across the country for one main vision – safer dairy products. On the occasion Ali Ahmed Khan, Managing Director Engro Foods said,

“The vision of the Prime Minister of Pakistan to provide safe milk to consumers and to strengthen farmers is embedded in the core purpose of Engro Foods and FrieslandCampina as the company is owned by 19,000 dairy farmers globally. We believe in providing better nutrition through safe dairy products to our consumers, we are committed to empowering the small dairy farm holders to increase their livelihoods and revolutionize the dairy sector with best farming practices to build the economy of Pakistan.”-PRs

MANGO GROWERS: MRI MULTAN TO INTRODUCE ICM

ZAHID BAIG | MAY 2ND, 2019 | MULTAN

In order to achieve yield and quality enhancement and increasing Pakistan’s share in the global mango market, Mango Research Institute (MRI) Multan is introducing Integrated Crop Management (ICM) to mango growers, which include drip irrigation, nutrition, canopy management and integrated pest management.

Pakistan stands at 6th spot in production of mangoes out of over 70 countries but it is exporting only 3.2 per cent of the total global mango export owing to several issues including poor shelf-life, inadequate infrastructure (processing facilities) and quarantine issues which are different for different importing countries. Interestingly Pakistan is at 9th place in top 10 mango exporting countries while the Netherlands, which does not produce mango, is in the second position. They import mangoes from different countries and then export.

The institute is also working to increase the area under Chaunsa (Samar Bahisht) besides ensuring sustainable improved quality by inducting new innovations in mango production technology. Besides this two new varieties are also being introduced which will enhance the period of mango export from Pakistan thus pushing the exports up.

Punjab has world's largest mango producing cluster spreading over 377 kilometers from Rahim Yar Khan to beyond Khanewal, said Entomologist MRI Abid Hameed Khan while talking to a select group of journalists here on Wednesday.

In irrigation, the institute with the funding of Rs One million from Nestle Pakistan is introducing drip irrigation system which can irrigate one acre of an orchard in 7-8 minutes supplying 14 liters of water to a plant which is sufficient for its whole day need, thus saving around 90 percent of water as compared to old irrigation methods.

Another intervention is canopy management, in which distance between two plants are decreased. He said that in conventional spacing method one acre of land hosts 36-42 plants. However, in High Density and Ultra High-Density farms, the numbers of plants sown are 1300 to 2000 per acre. Two demonstration plants shown to journalists at MRI have plants in the range of 1600 plants to 2000 plants per acre.

Using the pruning technique, the height of these plants are also kept at 7-8 so as management of these trees become easy. This is called Small Tree System (STS), by adopting canopy management and STS, production can be enhanced three times per acre as compared to the traditional system, said Allah Bakhsh, Sustainable Agriculture Specialist, Nestle Pakistan.

MRI Official Abid Hameed Khan said that the mango research institute is working to propagate the commercially attractive varieties of mango through the modern nursery. In this, seeds are grown in plastic pots and then supplied for plantation. He claimed that in traditional nurseries plants are produced in 2.5 to 3 years for sale while in modern nurseries these plants are ready for sale in 12-15 months, free of diseases at a low cost. Nestle Pakistan has also provided financial assistance to MRI for development of five such tunnel nurseries.

He said that liaison of research institutes with all stakeholders and academia and estate developers. He disclosed that DHA Multan was developed on land occupied by mango orchards. He said that now DHA administration was working on a plan to create orchards at different patches in that area.

USAID-FUNDED E-BEAM IRRADIATION FACILITY OPENS

RECORDER REPORT | MAY 1ST, 2019 | LAHORE

On Tuesday, Consul General JoAnne Wagner inaugurated the Electronic Beam (E-Beam) irradiation facility established through support from the United States Agency for International Development (USAID) funded US-Pakistan Partnerships for Agricultural Market Development (AMD) programme.

The E-Beam irradiation facility benefits the agriculture sector by decreasing post-harvest food losses due to spoilage and deterioration in quality. The technology also extends the shelf life of foods, and has the potential to increase market access as well as open up new export opportunities.

"We are pleased that the US government's efforts are helping transform Pakistan's agriculture sector by introducing innovative technologies," said Consul General JoAnne Wagner. "I'm confident that this technology will prove to be a game changer for Pakistan's agricultural exports."

E-Beam irradiation technology allows for fast and efficient sanitization of food and non-food products through an electron beam passed through packaged commodities. For fruits and vegetables this means longer shelf life and cleaner products as compared to any other sanitization methods available in the country.-PR

23 'MISSING' FISHERMEN MAY BE IN INDIAN CUSTODY

By Aftab Khan Published: May 1, 2019

KARACHI: The 23 fishermen who remain missing since the storm at sea 15 days ago are suspected to be in Indian custody. It is possible that the pressure of the wind blowing towards the East might have strayed the fishermen towards Indian territory. The Fishermen Cooperative Society's (FCS) suspicions were further aroused after confirmation from Indian Port authorities of the recent arrest of three other Pakistani fishermen who had lost their way at sea due to the unusually strong winds and entered Indian territory. FCS has written a letter to the provincial home department in this regard.

After persistent efforts in the past 15 days, the search operation in various areas of the sea, and the mangrove forests near Keti Bandar, has now been scaled back. All ad hoc efforts made by different organisations including the Pakistan Maritime Security Agency(PMSA), the Edhi Foundation and the FCS came to no avail. Neither the fishermen nor their bodies have been found at sea so far. However, the equipment believed to be in their use and locally-made life boats were recovered from the sea eight days after the fishermen went missing.

Fisheries sources say that the families of the missing fishermen come to the harbour every day in hopes of receiving good news about their loved ones.

The FCS claims that it was in touch with their counterparts in Gujrat, India, where the chairperson of a fishermen association, Vilji Bhai, had informed them of the arrest of three Pakistani fishermen, who had strayed into Indian territorial waters. Vilji Bhai was also being harrassed by the Indian authorities for relaying the information to the FCS, it claimed.

The tides were dangerously high while the coastal areas of Sindh and Balochistan were experiencing extraordinarily strong winds, reads the letter. It further explains that as the pressure of the wind was blowing towards the East, it is possible that the missing fishermen entered Indian territory. As no trace of them has been found as yet, and neither have any dead bodies surfaced, the missing fishermen might be in Indian custody, it states.

The families of the affected fishermen should be assisted in this regard and the matter should be highlighted so that the status of the missing fishermen can be ascertained, reads the letter.

The recent arrest of three Pakistani fishermen, who had set out for a short fishing excursion in a small launch, has further strengthened suspicions as those fishermen were also led astray due to the stormy winds.

The letter has also been sent to the federal ministry of home affairs, ministry of foreign affairs, Sindh chief minister, ministry of livestock, Sindh fisheries, PMSA director-general and fisheries director-general.

The 23 missing fishermen are believed to have been on the launches of Fazal Akbar, Al-Azizi and Al-Mudasir. They include the pilot of Fazal Akbar, Saifur Rehman who was from But Khalifa Malakand Agency, driver Ishaq Ghaman from Goth Misri Ghora Bari while Waqar Ahmed, Abdul Majeed Ghaman, Urs Rathore, Wazir Ali, Yar Muhammad, Alhorayo, Ayub, Muhammad Urs, Nasrullah Ghaman, Diyar Khan, Hazratullah, Rasheed, Saieen Dino, Wazir Ghaman and others hail from Thatta, Ghora Bari, Sajwal and Mirpur Sakro. Most of the missing are believed to have been aboard the Fazal Akbar Launch.

‘SMALL FARMERS MUST USE SMART MACHINERY’

By Imran Rana Published: May 1, 2019

FAISALABAD: Infected seeds and a lack of mechanisation, especially by small farmers, are hampering efforts to realise the true potential of agriculture sector, said University of Agriculture Faisalabad (UAF) Vice Chancellor Dr Muhammad Ashraf.

Speaking at an event titled Zaraee Baithak, arranged by the Department of Plant Breeding and Genetics, Ashraf termed the use of smart agriculture machinery vital at the national level for small farmers.

“The university has taken up the issue of development of climate-resilient seeds for food security and enhancing per-acre production,” he said. “Amid the ever-increasing population, decreasing fertility and agricultural land, we need to adopt modern trends in agriculture to tackle the situation effectively.”

Speaking on the occasion, UAF Faculty of Animal Husbandry Dean Dr Sajjad Ahmad Khan said better feeding techniques should be adopted for improved animal milk production. He said UAF was making all-out efforts to address problems of the farming community and to turn around the agriculture sector.

UAF’s former dean agriculture Iftikhar Ahmad said, “we must keep the nutrition value of fodder in view”. He pointed out that amid the increasing population, agricultural land was depleting and was being used for residential and other purposes. “Retaining the agricultural land in present times is a challenge,” he remarked.

Department of Plant Breeding and Genetics Chairman Dr Tanwir Malik said with better fodder usage, animal milk production could be enhanced. He was of the view that with high temperature, the production of fodder decreased and the issue needed to be addressed.

Progressive farmer Basharat Jaspal said the adoption of modern agricultural methods in line with international standards, using climate-resilient seed varieties and timely sowing of crops were the prerequisites to raising agricultural yield and ensuring food security.

Department of Plant Breeding and Genetics Assistant Professor Dr Amir said UAF was coming up with new climate-resilient varieties of fodder, adding that Baithak was aimed at providing an opportunity to all stakeholders to addresses the challenges facing the agriculture sector.

SENATE BODY ASKS GOVT TO FIX COTTON SUPPORT PRICE

The Newspaper's Reporter Updated April 30, 2019

ISLAMABAD: The Senate Standing Committee on National Food Security and Research has asked the government to set minimum support price for cotton to ensure growers can earn reasonable profit on their crop.

If cotton price falls below support price levels, the government should intervene to safeguard and protect interests of growers, Senator Muzaffar Shah said while presiding over the committee meeting on Monday.

The committee asked the Ministry of National Food Security and Research to calculate the entire cost of production and fix the minimum support price based on that calculation. The committee also asked the ministry to undertake measures to ensure the cost of production is covered and growers get reasonable profit for their crop.

The committee expressed grave concerns regarding the fact that abadgars and growers were switching production from cotton to other crops. In Punjab, growers have been switching to maize, while in Sindh growers are now switching to sugarcane.

The committee recommended the ministry to take up the issue of cotton growers with the federal government.

Senator Shah said that cotton is the country's cash crop and growers would like the government to fix a minimum support price above the cost of production.

The committee directed the Ministry of National Food Security and Research to maintain a liaison with the Ministry of Commerce as well as the Pakistan Central Cotton Committee (PCCC) to purchase cotton from farmers at reasonable prices.

Ministry of National Food Security and Research Secretary Muhammad Hashim Popalzai also informed the committee that a dialogue is currently in progress with the PCCC however no positive development has emerged so far.

The committee discussed the damage to wheat crop in the wake of heavy rains and hailstorms in parts of Punjab and Khyber Pakhtunkhwa, and recommended the federal and provincial government to notice the damage and come up with a comprehensive compensation package for growers. Khanewal is stated to be the worst hit city during the recent rains and hailstorms.

The committee was informed that Government of Punjab has started lifting wheat crop at the fixed support price of Rs1,300 while Government of Sindh is yet to take a decision on lifting the wheat crop, probably due to financial difficulties. At the same time Pakistan Agriculture Storage and Supplies Corporation — federal government entity — has already started lifting wheat from farmers.

On the availability of fertiliser and water for the Kharif season, the committee was informed that the ministry had access to total availability of fertilisers and the committee was also briefed on the current water inflow situation for agriculture in the country, and was informed that surplus water was available to cater to both Kharif and Rabi seasons.

In relation to the production of vegetable oil, the committee recommended formulation of an oil policy to protect both growers and millers from losses. The committee expressed concern over the rising cost of production due to the declining sunflower and cotton production.

GREEN TEA IMPORT REDUCED DUE TO 100 PERCENT L/C MARGIN: PTA

MOHAMMAD BILAL TAHIR | APR 30TH, 2019 | KARACHI

Pakistan Tea Association (PTA) chairman on Monday asked the federal government to reduce 100 percent cash margin on imports of green commodity. “The importers running business on small scale cannot afford to import green tea due to 100 percent Letter of Credit (L/C) margin that makes it difficult for traders to run their business,” said Chairman Pakistan Tea Association (PTA) Shoaib Paracha, talking to Business Recorder.

He said green tea is mostly consumed by lower class of the country. Common man, poor people of remote areas across Pakistan especially in Khyber Pakhtunkhwa (KP) and Balochistan provinces consume this product much. Paracha requested the federal commerce ministry to look into the matter sympathetically. He demanded relief for traders in this regard so that they may sell it to poor consumers at fair price.

According to the statistics released by PTA, the total imports of green tea during past six months had been around 2.25 percent of the total such imports.

CHAKKI OWNERS REJECT OFFICIAL RATE OF WHEAT FLOUR

The Newspaper’s Staff Correspondent April 29, 2019

HYDERABAD: The Atta Chakki Owners Social Welfare Association has rejected wholesale price of flour fixed by district price control committee at Rs38 per kg and said it had been done without taking into consideration rate of wheat in open market.

The association which met here on Sunday with its head Mohammad Hafiz Khanzada in the chair said the improper price was being thrust over chakki owners. If the committee did not realise ground realities then the association would challenge the commodities’ price list in court, said a press release.

It said the committee had in fact issued a certificate for adulteration by lowering the price to unrealistic levels and added that the association had written letters to deputy commissioner on April 2 and 19, informing him that price of 100kg wheat in open market was between Rs2,950 to 2,970 whereas flour of different qualities was being sold at varying prices and flour of 'A' quality was being sold for Rs42 per kilo.

It said the DC was urged to keep wheat price intact at least till Ramazan but the administration failed to control the price and on April 25 the committee fixed wholesale price of flour at Rs39 per kg in a meeting with traders. But instead of Rs39, last year's price of Rs38 per kg was notified in the list of commodities which was condemnable, it said.

The meeting observed that the committee had in fact encouraged adulteration by fixing various rates of commodities. Wholesale price of gram of No-1 quality was fixed at Rs102 per kg and that of gram flour of No1 quality at Rs100 per kg. Price of gram flour of No2 quality was fixed at Rs70 per kg and that of No3 quality at Rs60 per kg.

It said that overhead cost of wheat flour had increased manifold, still chakki owners were selling wheat flour inclusive of all vital ingredients to 90pc population near their homes in streets and localities of Hyderabad.

It said that and appeared as if some vested interests were influencing the committee to keep consumers in trouble during Ramazan to protect their own interests.

The meeting made it clear that if the committee did not fix flour price after determining price of wheat in open market then the association would challenge price list of commodities in court. Price of 100kg wheat bag in open market was Rs3,000 as of April 25.

It said the committee had fixed wholesale price of flour at Rs39 per kg but then profiteers had raised price of 100kg bag of wheat by Rs50 to Rs80 and now the same wheat bag was being sold at Rs3,080 in market. Given these conditions chakki owners were hard pressed to adjust price of flour, it said.

DEALING WITH THE NEW WHEAT CROP

From the Newspaper April 29, 2019

The Federal Committee on Agriculture (FCA) expects the output to be 25.16 million tonnes against the target of 25.51m tonnes. But the FCA estimate is old (April 7). The actual production could be less than that.

Rains and floods in Punjab continued after that day and their impact on the crop is yet to be decisively accounted for. The wide-scale damage to some varieties of wheat due to the windstorm and hailstorm in parts of the province, including Chakwal, Mianwali, Attock and Bhakkar, will also cause additional loss to the crop, media reports suggest.

Federal Minister for National Food Security and Research Sahibzada Mahboob Sultan says the government is assessing and re-assessing the losses to the crop. By the time this write-up is published, the government will hopefully be able to quantify the total loss.

Instant causes for a crop failure immediately come to light. They are debated intensely in the media and policymaking circles. But the root causes are often ignored. When they draw enough attention, we hear promises of addressing them once and for all. If the government is new, the promises are louder. But things return to normal as promises are broken. That is how the country's agriculture has been treated, by and large, for decades.

Environmental and climatic changes are causing abrupt rains and floods. They are bound to impact our agriculture. What has Pakistan done so far to fully grasp the nature of these changes and their impact? Have we sensitised our farmers on a vast scale?

Crop failure in Punjab, mismanagement in wheat procurement in Sindh and damages to carryover stocks stored at dilapidated facilities paint an unenviable picture of how our agriculture sector is operating

Do we have today effective and greater liaison between the federal and provincial agencies and departments dealing with environmental issues and agriculture? What percentage of our farmers uses smart phones? What phone applications do we have to enable them to get quicker access to weather forecasts?

Have we equipped our weather forecasters well enough to improve the quality of their predictions? The list of such questions goes on and on. But the answers to them leave a lot to be desired. Some of these issues, however, came up at a mid-April meeting in the Ministry of National Food Security and Research, but in casual reference or in exchange of blames.

The sowing of wheat is often delayed due to the late harvesting of sugar cane. Losses to the wheat crop due to heavy rains and floods in April are sure to remain high in such areas. That brings to the fore the issues related to the cane crop. The late reaping of this crop could be to ensure the highest sucrose contents. Or it could also be due to the delayed sowing in the wake of a late decision on support price.

More often, we see delays when a traditional tiff between sugar millers and cane growers turns uglier. Who doesn't know that wheat and sugar cane crops are under immense influence of our politicians, some of whom are regularly accused manipulating things to their end? Problems are complex; solutions have to be wholesome.

The quality of wheat seed varieties is also important in determining the extent of crop losses — in the case of rains, not floods. Developing rain-resistant seed varieties and promoting their use among farmers can minimise the damage. That opens up a painful debate on whether we allocate enough funds for research and development? Do we actually use the bulk of those funds to meet core objectives? Obviously, the answer is no or very little.

Rains and floods also damage a large part of the wheat stocks of the previous crop stored improperly by farmers and even at the Pakistan Agricultural Storage and Services Corporation (Passco) warehouses that lack modern facilities. At least those stocks could be saved from heavy rains and, to some extent, floods as well. That can ensure the availability of enough wheat. The FCA's meeting on April 7 had estimated 3m tonnes of carryover stocks. Authorities may soon get a reality check once they get the final estimate of damages caused by rains and floods.

In our case, the availability of wheat for domestic consumption is not an issue. Even after accounting for the possible damage to the standing crop as well as to the carryover stocks, we will still be able to continue exports. The problem is: we will have smaller wheat stocks for exports next year. That means smaller foreign exchange earnings amidst a foreign exchange crisis.

In the first nine months of this fiscal year, Pakistan has exported about 558,000 tonnes of wheat, up more than 80 per cent from 307,000 tonnes a year ago. Export earnings, too, have risen to $122m from around $60m. To sustain this rising trend in the next fiscal year, it is not just enough to maintain the exportable surplus volumes. Equally important is maintaining the health of wheat grains. When rains and floods dampen the wheat stored at storage centres lacking fumigation and temperature maintenance facilities, large stocks go to waste or are dumped into markets for the use of the animal feed industry. We have seen that happening in the recent past.

In Sindh, the wheat crop has reportedly done well despite water shortages. But the problem is that the provincial food department is delaying wheat purchases for a paucity of funds to buy gunny bags for the purpose. Lack of storage facilities — limited to 700,000-750,000 tonnes, according to the Sindh Chamber of Agriculture — and a delay in official procurement are forcing farmers to sell the produce at less than market rates to cover expenses. Such experiences lead to crop switching in the next year.

Crop failure in Punjab, mismanagement in wheat procurement in Sindh and damages to carryover stocks maintained at dilapidated facilities paint an unenviable picture of how our agriculture sector is operating.

Major crops constitute an important part of agriculture, but issues persist in production, procurement, storage and management of the exportable surplus, affecting the entire economy. The resolution of all issues pertaining to major crops — or, for that matter, the entire agriculture sector — not only requires better policymaking but also effective implementation. Their resolution requires a strong political will at the federal as well as provincial levels. Sadly, that seems missing under the current politically charged environment. —MA

IGNORED HORTICULTURE

Amjad Mahmood April 29, 2019

THE country is unlikely to achieve a competitive cost of production and fruit yield as it lacks certified nurseries for fruit saplings. Such places help provide good quality true-to-type trees for healthy orchards, leading to better output.

According to the Pakistan Horticulture Development and Export Company, the horticulture sector contributes about 12 per cent to the national agriculture GDP, but its volume of exports remains relatively low.

Multiple factors mar export potential. These include lack of international certification, grading, labelling, value-addition, packaging, market access, and huge pre- and post-harvest losses that run between 20-40 per cent. Want of appropriate farm-to-market roads, shortage of skilled labour and absence of institutional credit further worsen the situation.

The horticulture sector contributes about 12 per cent to the national agriculture GDP, but its volume of exports remains relatively low

Due to these issues the local per hectare output in citrus is around 11 tonnes against the world per hectare average of 35 to 40 tonnes. Ironically, local production is almost half of what is being harvested in neighbouring India, which has similar soil and weather conditions.

Experts caution that despite resolving the above-mentioned issues the country cannot conquer international markets for its fruit exports until it doesn't catch up with the world average yield. This will make local agriculture products competitive. They say a farmer will benefit from their orchards only when they are able to export at least 50pc of their production.

An official of the Horticulture Research Institute, Faisalabad, counts the unavailability of true-to-type plants and low-grade nursery plants as the primary reason behind poor fruit yields.

The official who wishes not to be named, also refers to the use of low organic matter, saline soils, uncertain weather, unfit tube well water, faulty intercropping and inadequate and unbalanced fertiliser application, as other negative factors.

Endorsing this view, Director (technical, fruit and vegetable development) at Punjab Agriculture Department, Sajid Ahmad, says "Our fruit growers don't get true-to-type trees or say the saplings provided by the nurseries are not genetically pure and thus lack the ability to achieve their optimal production level to the disadvantage of the farmer. That's the major issue behind our low fruit yields. This leads to a higher cost of production that makes exports uncompetitive in world markets."

The reason behind this genetic impurity is a lack of certified nurseries with decent capacity. "There are only a few nurseries in the country that supply fruit saplings and, unfortunately, it is rare for them to have developed technical, scientific and financial capacity needed to maintain health and purity of the germ-plasm," he says.

The situation will continue to worsen as at least 10,000 acres per annum are being added to citrus orchards while old trees are also being uprooted to plant new ones in the hope of reaping a better return from new plantations.

Sharing his experience about the capacity and standards of nurseries internationally, Mr Ahmad says that there are nurseries in Australia each one of which may provide two million healthy, certified saplings per year to farmers with not a single complaint about genetic impurity or disease.

Meanwhile, minimum Fruit Plant Certification Standards for citrus, mango and guava have been drafted and are awaiting approval from the National Seed Council, while the standards for grapes, olive and palm are still being drafted. Arrangements to carry out sampling and virus indexing of the fruit plant germ-plasm units (GPUs) are also in the pipeline.

Some public sector institutions are making an effort to meet the need for certified rootstock and budding. The Pakistan Agriculture Research Council recently announced the provision of 20,000 certified hybrid fruit plants to promote orchard farming in different ecologies of the country.

Plant nurseries have been developed at the National Tea and High Value Crop Research Institution (NTHRI), Mansehra, where 60 types of fruit plants, including apple, peach, apricot, cherry, almond, fig, pomegranate and walnut have been developed.

But these efforts are inadequate keeping in mind the volume required for export and the fact that the government cannot do business as efficiently as the private sector can, says the agriculture official.

Mr Ahmad says that plant spacing is another issue because of deficient labour technologies and machinery. The world has successfully experimented with high density cropping by growing citrus and mango trees at close distances. The result is that the lower branches of the trees become deadwood and bear less fruit under the shade of the upper branches.

PRICES OF ESSENTIAL FOOD ITEMS SKYROCKET AHEAD OF RAMAZAN

AMJAD ALI SHAH | APR 29TH, 2019 | PESHAWAR

Prices of essential commodities, including vegetable, pulses, sugar, dates, beverages, except chicken meat, eggs, have increased manifold in provincial capital ahead the holy month of Ramazan, said in a survey carried out by Business Recorder here on Sunday.

According to the survey, the prices of almost all edibles have touched new heights as just a week left in commencement of the Ramazan. It was noticed that price of gram flour (baisen) has been raised at Rs 140 per kilogramme which was selling at Rs 120 per kilogramme in the previous week. Sugar is being sold at Rs72 per kilogramme against the rate of Rs68 per kilogramme in last week.

Dates are being available within range of Rs 200 and Rs 300. A visible increase in prices of different quality/brands beverages was also witnessed in retail market. Butchers have also sharpened their knives as charging the consumers with artificial rates. One kilogramme cow meat is being sold at Rs 400 and Rs 450 per kilogramme in local market, while mutton beef priced at Rs 800 and Rs 900 per kilogramme.

One-kilogramme chicken live/meat were being sold at Rs 191 per kilgoramme which was selling at Rs 197 per kilogramme in the last week. Farm eggs are being sold at Rs 80 and Rs 90 per dozen.

Good quality rice (sela) is being sold at Rs 150 per kilogramme which was selling at Rs 140 per kilogramme, while toota rice priced at Rs 80 per kilogramme. Big size white channa is being sold at Rs 140 against the price of Rs 130 per kilogramme.

Dal mash is available at Rs 140 per kilogramme, dal masoor at Rs 100 per kilogramme against the price of Rs 90 per kilogramme, the survey noticed, and added that dhoti dal priced at Rs 130 per kilogramme, red bean is being sold at Rs 140 and Rs 180 per kilogramme which was selling at Rs 120 and Rs 160 per kilogramme respectively. Moonge is being sold at Rs 150 per kilogramme.

The survey further said that white lobiya is being sold at Rs 120 per kilogramme which was selling at Rs 110 per kilogramme. Dal chilka (black) was available at Rs 140 per kilogramme while dal chilka (green) priced at Rs 130 per kilogramme. Dal channa is being sold at Rs 120 per kilogramme.

According to the survey, the prices of cooking oil/ghee of different brands and quality was remained unchanged in the retail market as available within range of Rs 170, Rs 180 and Rs 200 per litre/kg.

Price of tomato has increased at Rs 80 and Rs 100 per kilogramme which was selling at Rs60 per kilogramme in last week, while rate of onion also touched new peak as available at Rs50 and Rs 60 per kilogramme which was selling at Rs 30 and Rs40 per kilogrmame in the last week.

Price of green chili has decreased at Rs 150 per kilogram which was selling at Rs 200 per kilogramme in last week. Carrots are being sold at Rs50 per kilogramme, while lemon priced at Rs 120 and Rs 140 per kilogramme in open market.

The survey further witnessed that ginger is being sold at Rs 280 and Rs 300 per kilogramme which was selling at Rs 240 per kilogramme in the local market. Garlic is being sold at Rs 140 per kilogramm and 160 per kilgoramme

Ladyfinger is being sold at Rs 100 per kilogramme against the rate of Rs80 per kilogramme. Peas are being sold at Rs80 per kilogramme which was selling at Rs 60 per kilogramme. Apple, round and long gourds are being available at Rs 60 per kg, Rs 80 per kg, and Rs 100 per kilogramme. Capsicum is being sold at Rs80 per kilogramme. Red potato is being sold at Rs 20 and Rs 30 per kg.

Bitter ground (Kerala) is being sold at Rs 100 per kilogramme which was selling at 80 per kg.

As the holy month of Ramazan is approaching fast, the price of fruits is dearer in the local market as banana is being sold at Rs 120 per dozen, showing an increase of Rs 60 per dozen.

Melon is being sold at Rs70 per kg against the price of Rs40 per kg in the previous week. Apples are being sold at Rs 120 and Rs 140 per kg. Strawberry is being sold at Rs 100 and Rs 120 per kg.

KEEPING PACE: CAN TURKISH METHODS REVOLUTIONISE FISH FARMING IN K-P?

By Ehtisham Khan Published: April 29, 2019

PESHAWAR: Following the Turkish model of fish farming, the provincial government has decided to increase the production of trout fish by using underwater cages as part of fish farming ships.

For this purpose, the Khyber-Pakhtunkhwa (K-P) government has finalised a three-year pilot project to install cages in dams and lakes across the province.

While fish farming is an old practice in K-P, the fisheries department has for the first time decided to initiate trout production through cages in the cold waters of Diamer with the help of large farming ships, The Express Tribune has learned.

This cage system – often referred to as “off-shore cultivation” – is a method wherein fish are locked in cages where they are bred and are harvested when they reach a certain marketable size.

The government has allocated Rs26 million for the project, work on which has already commenced on an experimental basis.

As a starting point, the tendering process to purchase two purpose-built cages and a large ship for Diamer-Bhasha Dam has been completed. The process of establishing a shelter office, installing the cages, and construction of a store for fish feed is expected to be completed by the end of 2019.

Speaking to The Express Tribune, the director of appointment for trout fish farming Taj Muhammad said that they are likely to outsource the project of installing the ship and the cages to a private firm after inviting tenders, while the department will look after the production of fish, food, and other affairs.

"The first phase of the project is being carried out on an experimental basis," Muhammad explained. "If it turns out to be successful, then it will be expanded to other dams of the province as well."

Explaining the advantages of cage farming, Muhammad said that the method will not only increase the production of trout fish in the province but will also create awareness about the new fish farming method among the people of the province.

"The idea of the project came from Turkey," Muhammad conceded, adding, "A few months ago, a K-P delegation, which included the K-P Minister of Agriculture, Livestock and Fisheries Mohibullah Khan had toured Turkey, where they got a chance to get a closer look at some modern methods of cage farming and how it plays an important role in the Turkish economy."

At present, Turkey is at the top of its game in fish farming and is rapidly expanding the industry. The country exports different types of fish to many countries of the world and utilises about 91% of its marine water resource for the purpose.

According to the Turkish Statistical Institute, Turkey produces more than 172,492 tonnes of fish annually through cage farming and other farming methods. A chunk of this production is related to trout harvesting in cold water.

In 2016, Turkey was the largest fish-producing country in the world and is currently the largest exporter of fish to Europe, the United States and Central Asia.

Speaking on the matter, the deputy director planning and development at K-P's fisheries department Muhammad Zubair told The Express Tribune that K-P is well-known for the quality of its trout and it annually produces 300 metric tonnes of the fish.

"Currently, there are eight trout hatcheries in the province out of which seven are functional where 1.53 million trout fish are produced each year," Zubair said.

"Young trout fish are produced in the hatcheries and then sold to around 208 different private fish farms," he said, adding, "One young trout fish, which is about an inch long, is sold for six rupees, while a two-inch trout is sold for Rs18 to fish farms in accordance with government rates."

He elaborated that the government is taking steps to increase the production of fish other than trout as well. Every year, thousands of fish species are released into rivers, lakes and dams, per the department of fisheries.

"About 200,000 small fish have been released into Tarbela Dam with the assistance of the government, while another 50,000 were released into the river in Azakhel Bala, in Nowshera, so as to increase the number of fish in there," he said.

Zubair also said that if the government facilitates the production of more trout fish then it will not only be beneficial from a business perspective but will also boost tourism in K-P.

At the moment, trout fish is available at Rs1,000 to 1,500 per kilogramme in Swat, Dir, Kalam, Peshawar and other northern areas, while it is sold for Rs3,000 in most upscale hotels and restaurants. However, if the cage farming project proves successful, then an increase in the production of trout will also lower its prices.

SURPLUS RICE SEED AVAILABLE FOR 2019-20 SOWING SEASON

By APP Published: April 29, 2019

ISLAMABAD: For the 2019-20 Kharif sowing season, the total amount of available paddy seed is 50,192 metric tons (mt), including 2,757 metric tons of imported seeds, which is 121.28 per cent of the requirement of 41,385 metric tons.

According to official data, the total availability of paddy seed had been 74,485 metric tons, 135 per cent of the total demand, for the 2018-19 sowing season.

The data also revealed that Punjab has 41,975 metric tons of paddy seed available which is 174.83 per cent of its demand, Sindh has 5,290 metric tons, 39.74 per cent of the provincial demand, while Balochistan has 170 metric tons of seed available which is just 5.62 per cent of its demand.

For the sowing of the maize crop in 2019-20, public and private sector seed agencies procured about 32,599 metric tons of seed, including 7,799 metric tons of imported seed, which is around 112.83 per cent of the total requirement of 28,892 metric tons.

The maize seed availability during the year 2018-19 had been 32,599 metric tons which was 98 perc ent of the total demand for that year.

The provincial breakdown for the availability of maize seed indicated that it is 24,567 metric tons in Punjab, 144.77 per cent of its demand, whereas, in Khyber Pakhtunkhwa, it is 234 metric tons which is just 1.99 per cent of its provincial demand.

The data also tells us that, for the sowing of the 2019-20 Kharif crop of the ‘mung’ bean, the total seed availability is 1,401 metric tons which is only 32 per cent of the total requirement.

In Punjab, public and private sector seed agencies have procured 1,261metric tons of the seed, just 32.35 per cent of its requirement, while Khyber Pakhtunkhwa has 140 metric tons which is 62.25 per cent of its required amount. APP

JUNE 2019

AGRICULTURE

NEWS COVERAGE PERIOD FROM JUN 24th TO JUN 30th 2019

FOOD PROCESSING AND VALUE ADDITION – A MISSED OPPORTUNITY

By DR MUHAMMAD KHURSHID Published: June 24, 2019

ISLAMABAD: As Pakistan is primarily an agricultural economy, its food industry is the second largest with more than 1,000 large-scale processing plants including those for fast food.

Most reputable food units include both multinational and national brands. The food industry accounts for 3-5% of value addition, which can be easily enhanced up to 10% through research-based capacity building of farmers, service providers, processors, entrepreneurs and traders.

Pakistan is among world's top 15 countries in the production of major food-related crops. A variety of food crops, fruits, vegetables and animal breeds are produced in the country, which are sufficient for domestic needs besides contributing to exports.

With over 200 million consumers, Pakistan holds the status of world's eighth largest market. Consumers spend an average 42% of income on food. Food processing provides 16% of total employment in the manufacturing sector.

Over 75% of rural-based food manufacturers are running in the informal sector, which may find it difficult to have quality raw material, proper skills, knowledge and management.

Pakistan's food sector is changing significantly with a rapid shift in lifestyles and traditional eating habits. Retail sales of processed food are expanding 10% per annum with current estimated size of about $1.4 billion (including $325 million worth of imported products).

Supermarkets are gaining more popularity as a shopping venue and account for about 10% of all retail food sales. In addition to these, Pakistan now hosts numerous western-style fast-food chains, reflecting a rising popularity for such food.

Despite tremendous potential and opportunities, the food processing industry in Pakistan faces numerous challenges. The ability of food processors at the industrial level depends absolutely on the availability of raw material but they mostly lack value addition.

Pakistan is a major producer of commodities and industrial crops such as wheat, rice, sugarcane and oilseeds. Livestock and horticultural products are also important elements in agriculture and provide additional raw material for processing and export.

A significant portion – 30-40% – of the total fruit and vegetable produce is wasted and degraded due to the lack of proper harvesting tools, insufficient on-farm storage, processing and packaging facilities, difficulties in cool chain management and storage, absence of international standards for quality and safety, and lack of adoption of global Good Agricultural Practices (GAP).

Other areas of concern include lack of vertical and horizontal integration in public and private sectors, lack of awareness, low capacity and skills including market intelligence, policy issues and insufficient data on food processing and value addition.

Consequently, Pakistan's economy is incurring losses of over $10 billion per annum due to these challenges.

Despite the obstacles, the industry comprises thousands of food processing units, generating millions of job opportunities in the country.

The size of the global processed food industry is estimated at around $3.5 trillion and it accounts for three-fourths of the global food sales. Employment in the US food industry is around 12 million and in Europe it is 2.5 million.

Most of the growth is taking place in developing countries in Eastern Europe, Asia and the Pacific, which are recording an increase in population, though major units are owned by American and European companies.

Japan is the largest food processing market in the Asian region followed by India and China. The huge market in Asean countries alone, with over 550 million people, provides a vast potential that needs to be tapped.

Despite its large size, only 6% of processed food is traded across borders compared to 16% of major bulk agricultural commodities. Fortune 500 indicates the food sector has been growing 15.9% annually over the past five years. Convenience products such as dried and instant food, reconstituted fruit juices, fruit juice concentrate like freshly squeezed juices and shelf cooking are becoming popular the world over.

Though Pakistan's food processing and value-addition industry faces many challenges, there is a great potential that can easily be exploited by tapping the available opportunities. Therefore, there is a need to devise a realistic and achievable national policy and strategic framework for enhancing the quality and volume of food processing and value addition in Pakistan.

Encourage and facilitate small-scale food processing units at household and village levels.

Ensure capacity building and credit facilities for small and medium enterprises in food processing and value addition.

Ensure adequate marketing facilities at the village level.

Increase awareness and disseminate information for promoting food processing, value addition and marketing.

The writer is a PhD in natural resources management and is a civil servant

DCS' NEGLIGENCE REASON FOR FLOUR PRICE HIKE

By Rizwan Asif Published: June 25, 2019

LAHORE: Negligence by Punjab deputy commissioners (DCs) and their lack of coordination with the provincial food department has exacerbated an already tense situation with regards to the price of flour in the province it seems.

The DCs, in addition to other tasks, are responsible for procuring wheat for flour mills on state-approved prices. According to sources, however, the DCs have not even issued a notification in this regard as of yet, opting instead to pin the blame for the hike on the food department.

Now, the Pakistan Flour Mills Association (PFMA) is demanding authorities immediately determine new prices for wheat and flour supplied by the government, which is currently being sold at rates set a year and a half ago despite the drastic increase inflation, electricity and fuel prices and the dollar rate.

Taking note of the issue, the food department has agreed to meet PFMA representatives to resolve the matter peacefully through consensus and a meeting is expected today, sources said.

Punjab's flour mills currently procure between 4.5 million and 6.5 million tonnes of wheat from the food department and between one million and 1.2 million tonnes from the private sector. As per prices set by the food department in 2018, a 20kg bag of wheat costs wholesalers Rs738 and retailers Rs760. Flour mills, meanwhile, could pick up a 40kg bag of wheat for Rs1,300 under the state-approved rate. Rising inflation, however, has resulted in the price for a 40kg bag of wheat soaring to between Rs1,420 and Rs1,460.

Under the government's formula, the price of a 20kg bag of flour is arrived at by halving the open market price of a 40kg wheat bag and adding a Rs100 grinding charge. The food secretary is responsible for calculating this price only when the wheat is sold by the government. In all other cases, the price must be determined by the relevant DC and announced through a notification. As the food department is not currently providing wheat to flour mills, the DCs are supposed to notify revised wheat prices in their respective districts.

According to PFMA sources, the association wants the Rs100 grinding charge increased by Rs10 due to the hike in electricity, fuel and other costs. The rise in dollar rates means that the cost of imported machinery and spare parts has also shot up.

CRACKDOWN TO BE LAUNCHED AGAINST HOARDERS OF SUGAR

RECORDER REPORT JUN 25TH, 2019 ISLAMABAD

The government has decided that a crackdown in collaboration with provincial governments would be launched against sugar mills involved in hoarding of sugar for profiteering which led to a considerable increase in the price of sugar in the domestic market. This was stated by Minister of States for Revenue Hammad Azhar on Monday while briefing the Special Committee on Agriculture, chaired by Speaker National Assembly Asad Qaiser.

"The federal government in collaboration with provinces and their minister will launch a crackdown against hoarding of sugar in sugar mills immediately after the budget," he said. The prices of sugar in the local market have increased considerably due to the impact of GST increase in sugar because of hoarding. The impact of GST increase on sugar from 8 percent to 17 percent would increase the price of sugar by Rs 3.64 per kg; however, increase in price is much more than this.

The minister said that the government has decided to review proposed powers to Federal Board of Revenue (FBR) Commissioner Inland Revenue to enter and search residential premises and houses on the basis of information of undeclared gold, bearer security or foreign currency.

A new sub-section 6-A was included which reads that "the Commissioner shall, subject to the condition as may be prescribed, raid any premises where there is reliable information of undeclared gold, bearer security or foreign currency and confiscate the same in order to enforce any provision of this Ordinance."

The proposed powers to FBR commissioners were opposed by the Senate Standing Committee on Finance as well. "We are reviewing this proposal," he added. The minister of state for revenue also stated that the government has agreed to withdraw green leaf thrashing (GLT) tax on tobacco because it was a burden on the grower. However, he stated that this would not have any impact on the price of cigarettes. "We are ready to review all those things in the budget that could hurt the growers," he added. The minister said that withdrawal of this tax does not mean there would be any reduction in duty or revenue loss to the government.

The government, he said, is following the latest studies with regard to tobacco sector and "those days have gone when mutilators" and powerful lobbies" interest was considered important in policy making." He said this on some members" complaint with regard to influence of powerful lobbies on the Federal Board of Revenue (FBR) and wanted the minister to stop their influence. Azhar said that the government has estimated between Rs 114 and Rs 115 billion tax collection from tobacco sector in the next fiscal year and Rs 135 to Rs 140 billion for the subsequent fiscal year. The minister said that cigarette manufactures are not in favour of removal of GLT tax for farmers.

The meeting also decided to adopt a holistic policy with regard to revival of agriculture sector and especially arresting the declining trend witnessed during the last few years in cotton areas where sugar production is replacing cotton. The speakers assured the representatives of farmers that all their legitimate issues would be addressed and their meeting with the Prime Minister would be arranged as well. The farmers stated that it is extremely difficult for them to afford even existing rate after the inclusion of FPA and other taxes. The committee also proposed for increased allocation for agriculture research, particularly seeds certification and developing verities of new seeds.

GOVERNMENT URGED TO FIX RS 500 PER MAUND WAGE FOR COTTON PICKERS

RECORDER REPORT JUN 25TH, 2019 HYDERABAD

Government has been urged to fix Rs 500/maund wage for cotton pickers in upcoming picking season as inflation is going up day by day. This was demanded by the representatives of the 10 registered trade unions of women cotton pickers from Matiari district in a meeting held at SCF office Hyderabad. The meeting was organized by Sindh Community Foundation, a non-profit organization working for the protection of the rights of the women cotton pickers.

The meeting was aimed to discuss the issues of the wages, poor working conditions and social safety nets for the cotton workers. Javed Hussain of the SCF presided over the meeting and said that the picking season of cotton will start soon but no such framework of fixing the wages yet started for the informal agriculture workers. He said that only giving the right to association do not address the issues of cotton pickers under the SIRA but it should be coupled with inclusion of these workers in Worker Welfare Fund, social security and other social and health safety nets.

He said that these women workers also face miss-calculated wage as they are unable to calculate the wage per day as per picked cotton. He said that the SCF will soon launch literacy program for these workers so that they would be able to read and write and calculate wage properly.

Aisha Agha, Program Officer SCF, said that as these workers living below poverty line and work hard in the fields. She added that there should be legislative cover to provide these workers with better working environment providing drinking water, mask and gloves.

Sadori, President of a trade union of cotton pickers in Village, Yameen Ahpan said that growers are only bound with the cotton and government is only concern about the clean cotton but the women cotton pickers work in very worst working environment.

LOCUST ATTACK ON CROPS: GOVERNMENT URGED TO INITIATE SPRAY

RECORDER REPORT JUN 25TH, 2019 HYDERABAD

Deputy Commissioner Jamshoro Capt Fareed den Mustafa (retd) while taking a notice of locust attack on standing crops in different areas of district Jamshoro has announced to take drastic measures to control locust outbreak through insecticide aerial spray and adopting other means. This he said in a statement issued on Monday after reports of possible damages to crops in Thano Bula, Manjhand, Aamri, Sun and other adjoining areas.

FLOUR ‘CRISIS BREWING’ DUE TO VOLATILE WHEAT PRICE

The Newspaper’s Staff Reporter June 26, 2019

LAHORE: Wheat flour crisis may hit the market in a week because of the raids district administrations in the province are conducting on the shops selling the commodity at higher rates.

Flour millers claim that shopkeepers have begun refusing to accept new supplies after raids by administrations in various districts in the name of price control.

Leaders of Punjab chapter of the Pakistan Flour Mills Association Liaqat Ali Khan and Asim Raza say flour supply to the market will last only for a couple of days as most of the units could not procure wheat during the season and those having the stocks will consume in the ongoing week.

They say that the government wants to maintain flour prices at a rate when wheat was available at Rs1,300 per 40kg.

Wheat price in the open market has now crossed Rs1,400 per 40kg and the millers have no option but to pass the raise on to the consumers, they say, adding the government is adamant on forcing them and shopkeepers to maintain the flour rates.

Explaining the factors behind the wheat price hike, they say for the first time the government allowed poultry feed mills to purchase wheat from the market during the season, while flour mills were kept out of the race for the most part of the procurement drive and a major portion of whatever quantity of the commodity they could pick was again unloaded at official godowns as the government was failing to meet its procurement target, they allege.

According to them, the food department is also not announcing the issue price of wheat (the rate at which the government will supply the grain to millers later in the year) as the step can control the rising prices of the commodity in the open market.

They say the government fears that the issue price, if set at the prevailing market rate, will provide the millers legal reasons for increasing rates of their value-added wheat products.

The millers say flour price can be maintained only if food authorities begin supplying them wheat at Rs1,300 per kg, including the bag charges.

Meanwhile, Punjab Food Minister Samiullah Chaudhry says the government will soon start checking stock of the flour mills and won't allow anyone to create 'artificial' shortage of the commodity.

He says, "The government knows how to establish its writ."

NO NEW TAX IMPOSED ON GHEE, FLOUR: HAMMAD AZHAR

The Newspaper's Staff ReporterUpdated June 26, 2019

ISLAMABAD: State Minister for Revenue Hammad Azhar has defended his government's decision to increase tax on sugar, but denied imposing any new tax on cooking oil, ghee, flour and raw meat.

While the opposition in the National Assembly has been asking the government to take back its tax-heavy budget, Pakistan Tehreek-i-Insaf stalwart and former finance minister Asad Umar has also asked his government to reconsider the decision to increase tax on sugar, ghee and cooking oil.

Mr Umar has also called for an investigation as to why sugar prices are on the rise. But it appears that nobody in the government now listens to him.

On Tuesday evening, Mr Azhar, while winding up the discussion on the budget for 2019-20, acknowledged having increased the tax on sugar from 11 per cent to 17pc and claimed the move would result in a mere increase of up to Rs3.5 per kilogram.

He said his government did not impose any tax on ghee, flour, fruits, vegetables and raw meat. He said taxes had been imposed only on “branded corn flour”, “imported fruits and vegetables” and “processed meat”.

About ghee, he said the government had revised a tax on per kilogram price of ghee but this would not result in any substantial increase in its rate.

He said the price of sugar had been on the rise in the market for the past two months because of the government’s action against sugar mills to stop them from evading tax.

Mr Azhar lashed out at the opposition for what he called spreading false information regarding imposition of taxes, unemployment, etc.

He also took to task the governments of the Pakistan Peoples Party and Pakistan Muslim League-Nawaz and said the PTI government was trying its best to clear the economic mess left by them.

He said the PTI government had taken serious measures to remove the structural flaws in the economy which were not addressed by the previous governments.

Referring to the last year of the PML-N government, he said the stability of economy was put at risk during the last two years due to political reasons.

He said the gas sector was facing a loss of Rs150 billion and the circular debt had reached Rs453bn.

The minister said the previous government increased the current account deficit and crippled the economy. It decreased the foreign exchange reserves to $9bn and left a deficit of Rs2.3 trillion in its last budget.

“When we assumed power, Pakistan had reserves of only $6bn. Today, foreign exchange reserves as well as the balance of payment (situation) have been stabilised,” he said, announcing that the federal government would not take loans from the State Bank of Pakistan.

He said that during the eight months of the PTI government the exports of readymade garments, fruits and vegetables had increased.

He said the government had allocated Rs217bn for electricity subsidy. He said that 75pc of power consumers used 300 or less units per month and this subsidy would be given to them.

About the revenue target of Rs5.5 trillion for the next fiscal year, he conceded that it was an ambitious target. “We should collect Rs8,000bn every year but we are collecting Rs4,000bn. Where has the remaining Rs4,000bn gone? We have to improve our tax-to-GDP ratio and this will not be achieved without reforms at the FBR and provincial tax bodies.”

The minister said the government had extended the stay overseas for a Pakistani to be called a non-resident from 90 to 120 days.

He took credit for the legislation to end benami and said the PTI government had linked the data of around 53 million Pakistanis and put it online.

Mr Azhar said the government had also taken back powers of income tax commissioners to raid houses in search of dollars and gold.

He said that with the cooperation of the provincial governments, the PTI government would spend Rs280bn on the agriculture sector.

"It would be our top priority to cross the phase of stability to take the national economy towards high growth," he said, adding that in the new Pakistan sustainable economic growth would not be based on the [fiscal] deficit."

About Leader of the Opposition Shahbaz Sharif's offer regarding a 'charter of economy', the minister said the government was ready to discuss the matter if the PML-N leader was serious in his offer.

https://www.dawn.com/news/1490480/no-new-tax-imposed-on-ghee-flour-minister

HYDERABAD MANGO FESTIVAL BEGINS ON SATURDAY

The Newspaper's Staff CorrespondentJune 26, 2019

HYDERABAD: Divisional Commissioner Mohammad Abbas Baloch has said that the two-day Hyderabad Mango Festival-2019 would be held on June 29 and 30 at Expo Centre in order to make it an annual feature like Mirpurkhas's mango festival.

Briefing journalists on the festival at Shahbaz Hall on Tuesday, he said 30 different varieties of mangoes would be exhibited there. Hyderabad was blessed with moderate weather conditions geographically and it was rich in agriculture productivity while simultaneously having a large vegetable and fruit market, he added.

He said Hyderabad's mangoes were liked across the world and purpose of holding this festival was to invite attention of foreign investors towards the fruit. It might help resolve problems of growers, he said, adding that other seasonal fruits would also be displayed besides mangoes.

He said the civil administration would try its level best to hold this festival every year in mango season. He added that this would benefit growers and local fruit market. He maintained the Sindh government's Board of Investment was collaborating with the civil administration which was providing logistical support. He said mangoes from Tando Mohammad Khan, Matiari, Tando Allahyar and other parts of Hyderabad division would be displayed.

A seminar would also be held on the sidelines of the festival to highlight growers' problems, he said, pointing out that a concert was also part of the festival.

About locusts' attack, the commissioner said Jamshoro district had been completely cleared of locusts and over 70 per cent areas of Matiari district were now cleared of the pests. He said that now insects were moving towards Shikarpur and Sanghar. He said teams were formed at the taluka and district levels to monitor locusts and control rooms had been set up for the purpose.

Sindh Enterprise Development Fund managing director Mehboobul Haq told journalists that the festival would begin at 11am on June 29 and over 30 stalls would be established by growers. He said that various varieties, including modified ones, would be displayed.

Later, the commissioner chaired a meeting of officers and representatives of growers' bodies to finalise arrangements for the festival. The meeting decided to ensure uninterrupted supply of electricity to the event. It said that proper sanitation and close coordination should be ensured among the stakeholders.

Traders want amnesty scheme date extended

Hyderabad Chamber of Small Traders and Small Industry president Mohammad Farooq Shaikhani has urged the federal government to extend the deadline of the amnesty scheme to Sept 30.

In a statement issued here Tuesday, he said that the relief could lead to fruitful results of the scheme. He said that Federal Board of Revenue (FBR) should encourage taxpayers and people, instead of harassing them so that they could benefit from the offer.

https://www.dawn.com/news/1490412/hyderabad-mango-festival-begins-on-saturday

WHITHER COTTON EMERGENCY?

BR ResearchJune 26, 2019

For months, PTI's economy team hinted at revolutionary steps for cotton revival on national forums including ECC and federal cabinet meetings. However, like most things in agriculture, PTI's talk has proven seasonal, as action on the front appears to be wanting in budget proposals by both federal and provincial governments.

Let's scan the official documents piecemeal. The federal government announced a Rs280 billion PM Agriculture Emergency Program for uplift of agriculture. Cotton as Pakistan's largest cash crop must be the biggest beneficiary; one might hope (or argue, if you are an Imran-bakht). Except, that the program is spread over next five years, of which no more than 30 percent is budgeted to be spent in PTI's second year in power.

While the budget speech mentioned that Rs45 billion will go towards improving yields of four major crops, look to Economic Survey for detail. Turns out, close to half of the budgeted amount shall go towards enhancement of wheat productivity, an off-season crop when farmers prefer to sow little else, and with a very poor output-input ratio of less than 0.25x.

This is followed by Rs11.4 billion for paddy, Rs10 billion for oilseeds, and nearly Rs4 billion for sugarcane. If the reader insists on searching for a silver lining, he/she may point out that oilseeds is another way of saying cottonseed – after all, cottonseed is the source of nearly three-fourths of domestically produced edible oil.

Except, fifty percent of the amount has been earmarked as subsidy for purchase of oilseed extraction machinery. While remainder will go towards making higher yield variety hybrid seeds available through local and MNC crop seed firms. Not much of a plan for staging a productivity revolution in lint-based fibre.

Maybe the provincial proposals carry more hope, considering crop incentivization is now mostly a provincial subject since devolution. Unlike federal documents, Punjab doesn't disappoint by censoring mention of cotton altogether. The crop comes up thrice in the White Paper published alongside provincial budget. Once, for its poor performance last year, and twice in the context of fiscal receipts: namely, cotton fee, and cotton export duty.

So, what turned cotton from PTI's favourite crop back in February to Lord Voldemort of budget proposals (he who must not be named). The public loves dichotomies and may wish to blame behind-the-scenes sugarcane kings in PTI for cotton's conspicuous absence. But to caution fanboys of populist media, both cotton and cane have suffered equally during the ongoing year due to shortage of water, each witnessing contraction in output by nearly twenty percent. Moreover, cane cultivation is set to suffer again in the upcoming season due to lukewarm farmer interest due to payment delays.

Nevertheless, this is not to downplay the strength of cane growers as a pressure group. In sharp contrast, average cotton farmer usually has a smaller landholding and is much more exposed to vagaries of weather and pest attacks.

Pakistan last recorded a quantum jump in cotton yield back in 2000s, when GMO seeds were first introduced albeit through illegitimate channels. Policymakers are acutely aware that the second round of yield growth – one that brings Pakistani cotton at par with region – can only come once second-generation GM seeds are made available, adapted to local conditions. These, they hope, shall provide cotton crop immunity against ever-evolving pests that have long developed resistance against first generation seeds. Except, that is a long road (Read: "GMO: separating fact from fiction", published on June 14, 2019; and "GMO Redux", published on June 03, 2019)

Until that happens, allocating funds to cotton productivity may be putting more money into a black hole. Meanwhile, support infrastructure can be strengthened by investing in agronomics such as introducing water productivity techniques. To that end, the government has set aside Rs179 billion over next five years. Cotton's conspicuous absence thus may not be such a bad idea after all.

Whither cotton emergency?

GOVERNMENT URGED TO RESTORE RD ON IMPORT OF COTTON

ZAHEER ABBASI JUN 26TH, 2019 ISLAMABAD

A special committee on agriculture has recommended the government to restore regulatory duty on import of cotton to prevent its massive import and dumping and protect the local farmers. A set of pre-budget recommendations made to the government was also circulated among the members of the committee during the meeting presided over by Speaker National Assembly Asad Qaiser.

The committee also recommended that the Ministry of Commerce should explore the prospects of an indicative price mechanism and devise a viable plan for implementation after consultation with stakeholders.

The committee's recommendations included: (i) Gas Infrastructure Development Cess (GIDC) should be abolished and no additional taxes should be imposed on pesticides and fertilizers; (ii) impose regulatory duties on competing agricultural products of Pakistan; (iii) reduce taxes on the import of skimmed milk powder and whey powders; (iv) ensure stringent price regulation mechanism to control the price of agriculture inputs; (v) and ministries of commerce, industries and production should seek and facilitate Chinese investors to set up fertilizers' active ingredient manufacturing and pesticides formulations facility in Pakistan in the next phase of CPEC.

The committee also recommended that the ministries of finance and commerce should explore feasibility of reducing customs duty and sales tax on supply of imported hand tool and small-scale agriculture machinery.

The committee seconded the proposal to extend incentives given under the green field and brown field investment to tractor industry as provided to auto industry under ADP 2015-21 to attract foreign investment.

The committee recommended that the funding for agriculture research should be integrated in the National Agriculture Emergency programme, Ministry of Finance and Ministry of National Food, Security and Research should jointly approach the multilateral banks and donor agencies to secure assistance for agriculture research and taxes should not be imposed on the supply of imported and locally manufactured tractors.

The committee was also of the view that exemptions should be granted on equipment and machinery supplied to agriculture research institution for research purposes.

PHUTTI PRICES MOVE UP

The Newspaper's Staff CorrespondentJune 27, 2019

MULTAN: Phutti (seed-cotton) prices on Wednesday jumped by Rs200 and ranged between Rs3,550-4,200 per 40 kilograms.

Meanwhile, the Karachi Cotton Association lowered down its spot rate by Rs100 to Rs8,400.

Cotton expert Syed Muddabir Shah said cotton arrivals in Sindh was down by 60 per cent on Wednesday as growers — disappointed by declining prices — have halted picking. However, ginners who had advanced orders ended up making deliveries after procuring phutti at higher rates.

Shah said that if the situation of declining trend in prices continued, the farmers are likely to ignore standing crop and not invest in pesticides. This will eventually affect the government's target of 15 million bales

Major deals on the ready counter were as follows: 1,200 bales, Rahim Yar Khan, at Rs8,650; 2,000 bales, Alipur, at Rs8,600; 200 bales, Khipro, at Rs7,775; 400 bales, Tando Adam, at Rs7,700-7,750; and 400 bales, Sanghar, at Rs7,700-7,800.

FARMING OUR FUTURE

BR ResearchJune 27, 2019

Who will be the farmer of the future? The globally renowned agricultural and food expert Prof. Louise Fresco raised this question in her talk on the 'future of farming' at the recent biennial Global Entrepreneurship Summit held in the Hague. Louise, who has previously held the position of Assistant Director-General of the UN's FAO, laid out many possibilities.

She said the farmer of the future will be a little robot that cuts the bell peppers, with a very intricate 3-D system and knows exactly what the bell peppers are. The farmer of the future will also be a person who manages a vertical farm in a city inside a building with LED lights or alongside city's sewerage system; he will probably have no farming background but will know how to make use of digital technologies and artificial intelligence (AI). Yet the farmer of the future will also be someone who still has to bend over and plant seeds and harvest manually without fancy technologies of drone, self-driven tractors, AI-based pesticide control and what not.

Her reasoning: “Farming by definition is location specific; it’s the art of diversity; it’s the art of managing exact resources of land or climate or animal.” And while there are some scientific principles and some values to be followed, “there is no blue-print to farming”. Farming of the future is not just about producing or extracting more from the land or using fancy technology instead of manual labour. It’s really about a balanced way in which we will deal with the environment.

There are some classical challenges to farming, such as climate change, water shortages, crop adaptation, food quality, animal welfare. In addition to these, there are a host of new challenges of which we as humans are only starting to see the contours of. How to bring farming in balance with the carrying capacity of the planet and biodiversity? How can we move away from a fossil-based energy system to a bio-based energy system – a kind of a bio-based circular economy? And how to detox earth’s bio-mass once fossil fuel addiction comes to an end?

“The most important sector of the future will be farming, because farming, forestry and aquatic environment are going to be the only way in which we can manage the biological resources of this earth. It’s through managing the bio-mass that we will have to meet all our needs,” says Louise. Others in the field, to whom BR Research spoke to at GES-2019, agree – adding that the management of earth’s biomass may not necessarily be through mobile apps, something touched upon yesterday. (See BR Research’s Want entrepreneurship? Change mindset! Jun 26, 2019)

Elsewhere in Europe as well as in the US and in Australia, strategic thinkers at government and private sector think tanks are trying to come up with ways to arrest urbanization. Some are curating countryside museums or otherwise organising educational field trips to youth to involve them with farming. Others are creating incentive systems to keep rural or countryside youth from migration, whereas some are retraining urban youth to kickstart a wave of crop and dairy farming in the cities. The argument being that while two out of five people in the world will live in cities, food that is natural and sustainable will still come from the farms.

These are some of the fundamental questions and ideas that the developed west is thinking about. It is up to Pakistanis whether they want the developed world to think about these questions, and be fed by them in terms of the products, policy and solutions they develop; or do they want to join them on this intellectual journey to ensure that they also have their say in the future.

Pakistan is not a complete stranger to private sector’s investments in affordable quality education. There were a lot of them prior to 70s’ nationalisation, which burned that field. But green shoots have begun to emerge. LUMS by Babar Ali, and Habib University by Habib group; these are some goof examples of private sector’s initiative to set up good quality relatively affordable educational institutes; the former started off as top business management school, and the latter as liberal arts school.

It’s about time that someone from Pakistan’s private sector invests in a state-of-the-art agriculture university focusing both on crop and livestock; but one that has a futuristic mindset instead of training young minds for ways of the yester centuries. Meanwhile, the country’s start-up and incubator community would do well to retune their focus to include modern notions of farming while keeping in mind that innovation is not just doing things through a chip; it’s a state of mind and in the case of farming it will have to be problem and location specific.

SUGAR INDUSTRY PERTURBED OVER CRACKDOWN REPORTS

RECORDER REPORT JUN 27TH, 2019 ISLAMABAD

Sugar industry is reportedly perturbed over the speculations of a crackdown being launched by the Federal Board of Revenue (FBR) soon after the passage of the federal budget.

Talking to Business Recorder, one of the sugar industry players said there was a harrowing fall in the price of sugar due to a glut-like situation in the country during the past several years and the industry was not in a position to recover its cost of production that is why a number of mills were sold. As a consequence, the crushing season 2018-19 also started late in December due to carryover stocks and in the absence of any mechanism to dispose of the surplus stocks of sugar.

He said the industry remained engaged with the government as it was not possible to buy sugarcane from the growers at the support of Rs 180/40 kg at that time when sugar price was at a level of Rs 50/51 per kg.

The government having realised the gravity of situation and to mitigate the plight of the growers allowed export for the disposal of surplus sugar from the country and to facilitate this approval, province of Punjab also allowed export subsidy of Rs 5.35 per kg on the cascading mechanism basis so that price of sugar which had fallen below the break-even level could get stabilised in the interest of the growers and their payments in view of the international sugar prices.

Replying to a question, he said sugar industry has time and again reiterated that its cost of production based on the support price of Rs 180/40kg comes closer to 63/kg with the previously notified rate of sales tax. With the disposal of surplus, the domestic sugar market stabilised and industry was able to pay up to Rs 225-230/40 kg to the growers during the crushing season and the industry average was around 190-195/40kg and resultantly the average break-even with other cost push factors and interest/financial costs has considerably increased for this season. The Chief Minister of Punjab has also acknowledged the fact that almost all payments to sugarcane growers have been made for the current crushing season which was became only possible because of the stability in sugar price.

With the increase in sales tax rate, price will escalate further. However, ever since the budget has been announced on June 11, 2019 there is a downward trend in the market by almost two/three rupees per kg as the dealers have started taking delivery of the sold unlifted stocks and the availability in the market is in abundance. Sugar millers are obliged to deliver according to the demand and delivery instructions of the buyers/dealers, he added.

Answering another question, he said sugar is produced in 100-120 days crushing season and sold throughout the year therefore at any given point of time there will be stock in the godowns of sold/unsold quantity. Therefore, assuming that the sugar mills are hoarding stocks is a sheer fallacy. The industry is and remains tax compliant and in general all assumptions against the industry are based on hearsay, he said.

SINDH, CENTRE LOOK TO EACH OTHER FOR LOCUST CONTROL AS FARMERS FEAR FOR CROPS

By Our Correspondent Published: June 27, 2019

HYDERABAD: As the locust swarms continue to cut a swathe through the agricultural fields in parts of Sindh, the federal and provincial governments appear to be shifting responsibility on each other for terminating the harmful insects. The Sindh government has asked the Centre to depute more insect control teams to actively engage in both aerial and field spray.

“The first generation of locusts has already caused around Rs500 million to Rs600 million loss to the crops. The second generation, if it manages to grow in far larger number over the next week, will wreak havoc on the crops,” warned Zahid Hussain Bhurgari, general secretary of Sindh Chamber of Agriculture (SCA) while talking to The Express Tribune. “If the provincial government can provide Rs4 billion subsidy on sugar, it can spend Rs100 to Rs200 million on paying for the spray and other equipment required for aerial and ground sprays.”

While the provincial government seems to be relying on the federal government-led aerial and field operations, the farmers want the province to utilise its own resources and manpower instead of wasting time waiting for the Centre. “The provincial government will also have to play a critical role in quickly identifying and devising control measures,” said Sindh Abadgar Board Vice President Mehmood Nawaz Shah, pointing out that the infestation has also entered the populated areas where only ground sprays can be carried out instead of aerial one.

The locusts have attacked crops in Khairpur, Jamshoro, Matiari, Sanghar, Nawabshah, Noshehro Feroze and Sukkur districts so far. The farmers claim that the insects are more active in Khairpur, Jamshoro, Nawabshah and Sukkur.

The director-general (DG)of Sindh Agriculture Extension wing, Hidayatullah Chajro, informed The Express Tribune that the Centre’s Department of Plant Protection (DPP), which is primarily responsible for fighting the insects, has been requested to increase its manpower in Sindh. “We have asked them to depute at least one team in each division of Sindh,” he said, adding that currently one aerial team and one field team are operating in the province.

“The provincial government has set up emergency centres in each district to monitor and report the presence of locusts. We need a team in each division which can be immediately moved to conduct field spray”. An official source said that Sindh’s chief secretary assured the Centre at a meeting on Tuesday that the province will also contribute its resources besides providing monitoring services.

Chajro said that the Centre has also been requested to carry out satellite imaging of the areas under attack by the locusts. Hyderabad division Commissioner Muhammad Abbass Baloch claimed that Jamshoro has been cleared of locusts but the operation is underway in Matiari district. He acknowledged that the division is rich in agriculture and a further spread of locusts can endanger the crops. On Wednesday new videos emerged on the movement of locusts in Khairpur. The DG, however, denied that the insects have crossed Noshehro Feroze district.

SHC GIVES FLOUR MILL OWNERS TWO MONTHS TO PAY ALL ARREARS

By Our Correspondent Published: June 27, 2019

KARACHI: The Sindh High Court (SHC) directed flour mill owners on Wednesday to pay the mark-up money and arrears while hearing the reference against them of Rs400m corruption committed by getting wheat from the Sindh food department. A two-member bench comprising Justice KK Agha and Justice Omar Sial heard the corruption reference.

The food department presented the details of the meeting before the court. An official of the food department informed the court that his department, National Accountability Bureau (NAB) officials and flour mill owners collectively found a solution to the issue. All flour mill owners returned the money for the wheat but the mark-up money was not paid. The flour mill owners have been informed of the markup details.

The court directed flour mill owners to pay the mark-up money and all remaining arrears immediately. The court remarked that all dues should be paid by August 23 or the bail pleas of the accused would be rejected and adjourned the hearing.

According to the counsel for the accused, the money for the wheat taken from the food department was paid within 180 days according to the policy. The counsel argued that NAB was demanding mark-up money which was higher than the price of wheat. Khairpur, Ranipur and Sachal Flour Mills owners borrowed wheat from the Sindh food department.

According to NAB, the accused allegedly misplaced the wheat after borrowing it from the government.

Another two-member bench, comprising Justice Hasan Azhar Rizvi and Justice Saleem Jessar, directed police officials to take immediate action on a plea filed for the recovery of Sindh education and literacy department's missing employee, Aslam Kamal.

Aslam's wife informed the court that is has been five years since her husband went missing. She said that their daughter's wedding is coming up and the department has also stopped paying Aslam's salary now.

The court expressed annoyance with police officials for not making any headway in the case.'

"Does anyone realise what the family of a missing person goes through?" asked Justice Rizvi. He remarked that the police and other law enforcement agencies were not doing anything. The departments take around three months to complete just the paper work, said Justice Rizvi, adding that the police was simply playing the role of a postman.

The court asked if it would take another six months to find out where the missing person was?

The court directed police officials to take immediate steps for Aslam's recovery and find his whereabouts.

Meanwhile, the bench comprising Justice KK Agha and Justice Omar Sial gave NAB officials an extension to file the reference against the accused in the inquiry against Sindh chief minister's inspection team chairperson, Abdul Subhan Memon, and others.

[Type here]

NAB officials presented a previous verdict passed by the high court in a land allotment case.

The court directed NAB officials to submit a copy of that verdict in the court and provide another copy to the accused.

The court inquired from the NAB prosecutor when the inquiry against the accused would be completed and the reference would be filed.

NAB prosecutor said that a month's time was needed to file the reference. He informed the court that after completing the inquiry, the reference has been sent to the NAB chairperson for approval.

The court gave NAB the extension and adjourned hearing till August 22.

According to NAB, the accused gave seven acres of land in Jamshoro to Qadir Bakhsh Shoro while he was still on the run. A total of 49 acres of land was allotted and Rajputana Hospital filed a plea claiming that the land belongs to them. To whom was the land was allotted, the hospital had asked. Around 42 acres of land was returned to the hospital following orders by the Supreme Court. Abdul Subhan and others are accused of allotting an amenity plot in Hyderabad illegally.

The same bench granted interim bail to former minister Sharjeel Memon till August 6 and issued notices to NAB Sindh director-general and NAB prosecutor. A two-member bench comprising Justice KK Agha and Justice Omar Sial was hearing the pre-arrest bail plea filed by Memon in the inquiry against him pertaining to illegal assets.

Memon's counsel, Khalid Javed, maintained that NAB's inquiry is based on mala fide intent and his client fears arrest. He asked for NAB officials to be restricted from arresting his client and said that the court cancelled NAB's arrest warrant for Memon in this case as NAB's mala fide intent was exposed.

The court accepted Memon's interim pre-arrest bail plea till August 6 and sought replies from the NAB Sindh DG and NAB prosecutor. The bench directed Memon to submit Rs1 million as surety amount against the bail.

UREA SALES JUMP 103% AS KHARIF SEASON IN FULL SWING

By Our Correspondent Published: June 27, 2019

KARACHI: As the Kharif sowing season is in full swing, urea sales jumped 103% to 593,000 tons in May 2019 against 292,000 in April 2019, according to data released by the National Fertiliser Development Corporation (NFDC).

"Fertiliser sales displayed a positive trend due to the Kharif season (April to September), which will also remain high in coming months," said Aba Ali Habib Securities' research analyst Zubair Jatoi.

On a year-on-year basis, the fertiliser sales recorded a 20% increase over May 2018. In first five months of the current calendar year 2019, urea sales grew 6%.

Diammonium phosphate (DAP) registered the highest-ever sales growth of 147% at 213,000 tons in May 2019 against 86,000 tons in April 2019. Year-on-year, DAP sales rose 263% in May 2019 against the same month of previous year. However, in the first five months, DAP sales inched down 1%. Company-wise, Fauji Fertiliser Company (FFC) achieved the highest monthly growth of 206% in urea sales, followed by Fauji Fertiliser Bin Qasim Limited (FFBL) posting month-on-month growth of 178% and Fatima Fertiliser with 143% rise.

On the contrary, urea sales of Engro Fertilisers stood static at 141,000 tons in May 2019 over the previous month.

“Benefiting from seasonality, the overall fertiliser sector posted a positive growth in DAP sales,” Jatoi said.

The largest month-on-month surge in DAP sales of 638% was enjoyed by FFC, followed by 316% for Engro Fertilisers, 202% for FFBL and 55% for Fatima Fertiliser.

In the urea segment, FFC remained the market leader, contributing 46% of industry sales in the month under review, followed by Engro Fertilisers at 24%, FFBL at 13% and Fatima Fertiliser 6%.

In the DAP segment, FFBL emerged as the market leader, having 36% share in industry sales, followed by Engro Fertilisers at 28%, FFC 16% and Fatima Fertiliser 2%.

“The sector shows signs of growth in the near future, but demand may weaken if fertiliser producers decide to pass the impact of gas tariff hike on to consumers,” said the analyst.

The Oil and Gas Regulatory Authority (Ogra) has proposed 31% and 20% across-the-board increase in gas sale prices for all categories of consumers of Sui Northern Gas Pipelines Limited (SNGPL) and Sui Southern Gas Company (SSGC) respectively, except for the domestic sector.

GROWERS OPPOSE MASSIVE CUT IN TOBACCO DUTY

Bureau ReportJune 28, 2019

PESHAWAR: The growers have opposed massive cut to the advance tax on tobacco insisting the government’s move will encourage the black marketing of the cash crop and harm economy.

They demanded immediate withdrawal of the decision to prevent their ‘economic murder’.

The government has announced the reverting of the Rs300 per kg advance Federal Excise Duty on tobacco imposed to check the illegal tobacco trade to Rs10 per kg.

Addressing a news conference at the Peshawar Press Club on Thursday, local tobacco farmer Abdul Qayyum said massive cut to the advance tax on tobacco would promote the illicit tobacco trade and hurt poor growers.

Accompanied by farmers Ali Ahmad and Gulzar Khan, he criticised the government for yielding to tax evaders. He said the tobacco sector could earn huge revenue through the Rs300 advance tax.

Abdul Qayyum said some growers claimed that the collection of advance tax on tobacco was exploitation and the demand for tobacco would decrease due to the imposition of the adjustable excise duty.

He said the Pakistan Tobacco Board Ordinance, 1968, protected tobacco growers and made it binding for tobacco manufacturing companies to purchase additional tobacco yield from growers.

Ali Ahmad said the farmers' associations were being used to pressure the government for withdrawing steps meant to curtail illegal trade to help the growth of tobacco crop.

He said growers were being exploited by the local illegal cigarette manufactures since the levy not only forced them to pay the adjustable tax on processed leaf but also provided the FBR with leaf purchase data for all manufacturers.

"This tax is advance and adjustable and is applicable to manufacturers and does not hurt farmers at all, whereas local illegal cigarette manufacturers continue to misguide farmers of KP for own benefits," he said.

The grower said the commerce ministry had fixed the minimum indicative price of tobacco every year after proper consultation with the representatives of tobacco growers.

Another farmer, Gulzar Ahmad, said local companies avoided tobacco purchase in the open market just to evade tax and that they also pestered farmers by delaying payments and rejecting tobacco on the pretext of low-quality leaves.

He said the local companies met their demand by using backdoors for purchases and not providing loans, fertilisers and other facilities to farmers, while noted taxpaying companies supported growers.

CROP-BASED EXPORTS: ADAPT OR DIE?

BR ResearchJune 28, 2019

Pakistan's status as a low-value commodity exporter is at best a misnomer. Over the past decade, consolidated share of crop-based exports has remained fairly stable at 17 of total commodity exports. Yet, that stability has come about due to a concomitant contraction in value-added exports, and not due to a growth in agri-exports. In fact, since FY13 when crop-based exports peaked at $4.4 billion, the sector has witnessed a secular decline with a CAGR of negative 0.8 percent over past eight years – touching a new bottom of $3.9 billion in FY19 on annualized basis.

While it is correct that prices of major grains and cereals have ebbed over the past decade, the purported "backbone" of the economy failed to usher in a volume growth in quantities exported. Just to showcase volume of basmati rice export, pride of Pakistan's cereals, has declined to almost half since FY11.

The fate of raw cotton has during this period has been just as abysmal. Once a net exporter, the country became a net importer during the 2000s with the textile boom of Musharraf-era – an acceptable trade-off considering the re-exports were hoped to offset the exchange loss.

Ever since, not only have textile exports remained stuck at average $12 billion throughout past decade, raw cotton exports have climbed down from $0.4 billion in FY11 to almost barely twelve thousand dollars. Given how cotton production has been performing, readers should not be surprised if the country records nil cotton exports in the coming fiscal year.

Which brings us to the why part. The fact is, just as industrial and services sectors of the economy, Pakistan's crop-based out equally consumption centric. Of the four major crops – wheat, cotton, cane and paddy, only rice has a significant export share out of total domestic production. Whereas, the state of wheat and sugarcane is not even worth a comment, with erratic years of exports largely function of government subsidy in years of extreme supply glut.

Moreover, if the decline in demand for Pakistani grains a function of international commodity prices that further cements the argument that local crop's lack of competitiveness is becoming increasingly unsustainable. Afterall, total global demand continues to expand, only to be fulfilled by economies such as China and India with higher yield and improved returns per dollar invested.

A sector that employs nearly forty percent of labour force and directly & indirectly sustains two-thirds of households in the country can survive on government protection only for so long. If Pakistan's economy is to break through the cycle of subpar growth, Pakistan's crop sector needs to usher in a revolution, and fast.

Crop-based exports: adapt or die?

THE CHALLENGE OF SUGAR HOARDING

RECORDER REPORT JUN 28TH, 2019 EDITORIAL

Sugar industry of Pakistan is generally in the news for one reason or the other. The latest tiding is the unusual increase in the price of sugar in the domestic market due to hoarding of this commodity because of the increase in GST on sugar from 8 percent to 17 percent announced in the Federal Budget for FY20 and its anticipated impact on prices. Taking a serious notice of this unsavoury development, Hammad Azhar, Minister of State for Revenue, while briefing the Special Committee on Agriculture chaired by the Speaker, National Assembly, Asad Qaiser, warned hoarders that the government had decided to launch a crackdown, in collaboration with the provincial governments against sugar mills involved in hoarding of sugar for profiteering which had led to a considerable increase in the prices of this commodity in the domestic market. The impact of GST increase was expected to raise the price of sugar by about Rs 3.64 per kg but the actual increment in the local market has been found to much more than this. "Gone are the days when powerful lobbies and interest groups were considered important for policymaking," the Minister asserted and vowed to bring to an end their influence. The meeting also decided to adopt a holistic policy for revival of agriculture sector and especially to arrest the declining trend witnessed during the last few years in cotton areas where sugar production is replacing cotton. Representatives of farmers were also assured that all their legitimate grievances would be addressed and their meeting with the Prime Minister would be arranged as well.

In our view, the recent surge in sugar prices in the local market is of course unwarranted and unjustifiable given the fact that there is no shortage of the commodity in the local market and the increase in GST could only result in raising the price of sugar by about Rs 3 to 4 per kilo. The actual price increase has, however, been much more than what was anticipated by the government. Average refined sugar prices have galloped by about 18 percent since April, 2019 which is nearly 36 percent increase compared to the corresponding period of last year. The price could go up further when the higher GST is actually imposed with the beginning of the next fiscal year. The concern of the government with this abnormal and unjustifiable increase in price is very much understandable since sugar is an essential commodity, particularly for the poor and average households who spend a good part of their disposable incomes on sugar and could raise a hue and cry to make the government unpopular if the price of sugar is no longer within their reach. While the availability of sugar at a reasonable price is politically expedient in the domestic market, there is no reason for the suppliers of this commodity to increase prices. It is quite true that the sugarcane production in the country had dropped from 83.3 million tonnes last year to 67.2 million tonnes during the current year but the sugar industry with its added stocks from previous years' production could easily meet the domestic demand of this commodity. To take notice of the unfolding situation by the government is also important for other reasons. Sugarcane crop is a high value cash crop and its production accounts for 2.9 percent in agriculture's value addition and 0.5 percent of overall GDP.

While the crackdown on sugar hoarders may be justified on the basis of larger interest of the economy and consumers, it needs to be analysed whether such an action could yield the desired results. It is the common experience that whenever the government takes administrative measures like a crackdown on the hoarders or arbitrary fixation of prices of certain commodities, these commodities generally disappear from the market and the consumers end up paying more in the black market. Besides, hoarders are known to perform a useful function to even out excessive fluctuations in prices by buying a commodity when it is in surplus and selling at a time when it is scarce in the market. The government, we are sure, is aware of these facts before a crackdown is actually launched, especially when the machinery of the government is not very famous for its efficiency and integrity to do the job assigned to it.

ANTI-LOCUST SPRAY NOT CONDUCTED: FARMERS

Dawn Report | 6/29/2019 12:00:00 AM

DADU: Menacing swarms of locust have spread across agricultural land on thousands of acres and damaged standing crops in several parts of the district but no functionary of federal or provincial government or a team of experts have reached the insectinfested areas to assess scale of damage and protect crops, farmers complain.

Farmers in Mehar, Gozo, Khairpur Nathan Shah and adjoining areas told Dawn that thanks to negligence of federal and provincial governments spray had not yet been carried out in the affected areas to exterminate swarms of locusts.

They said that locust swarms had spread across thousands ofacres and had already destroyed standing crops on many acres. After having eaten up standing crops and vegetables, the swarms were now moving to Katchho area along the Indus, they said.

They said that swarms of locusts had spread in Radhan, Nau Goth, Fareedabad, Gozo, Kakar, Khanpur, Wahl Pandhi, Tando Rahim, Sawaro, Chhinni, Moundar, Khudabad, Phakl(a, Jhaloo and Phulji Station.

A grower of sugar cane and cotton from Mehar, Mohammad Aslam Kandhro, said that since past four days, swarms of locusts were attacking crops in Fareedabad, Radhan, Nau Goth and Thariri Mohabbat areas of Mehar taluka. Locusts were now was moving towards Katchho area along the river, he said.

Ali Gul Gadehi, a grower of vegetables in Gozo, complained that no one from the federal and provincial governments or teams of experts and officials of the district administration had reached the insect-infested areas to launch spray to exterminate locusts and protect standing crops.

He said that spray had not yet been conducted due to negligence of federal and provincial governments.

Deputy director of Dadu agriculture department Ali Nawaz Kalhoro said that swarms of locusts had entered the district from hilly terrain of Jamshoro.

Locusts were spreading in different areas of the district but sprays could not be carried out through helicopters on helds near dense population, he said.

He advised people to try to shoo the insects away if they attacked their crop.

Experts had advised that the locusts would move to Thar region within a few days.

Control room set up in Thar MITHI: Thar Deputy Commissioner Dr Shahzad Tahir Thaheem on Friday set up a control room on the directives of Sindh Chief Secretary Syed Mumtaz Ali Shah to combat locust attacks in certain areas of the desert region.

The DC appointed Syed Kabir Shah, additional deputy commissioner, as focal person to keep in touch with the area people and officials, and issued directives to all functionaries concerned to stay alert in case insects` attack became severe.

Dr Thaheem told reporters in his office that they were all prepared to take precautionary measures to cope with the situation within available resources.

IMPORTANCE OF NATURAL FARMING HIGHLIGHTED

The Newspaper's Staff CorrespondentJune 30, 2019

HYDERABAD: Calling for a ban on chemical fertiliser and pesticides, speakers at a training course highlighted the importance of natural farming for the economic prosperity of rural population.

They were speaking at a two-day training course on 'Natural Farming and Kissan Cooperative for Small Farmers' held by the Pakistan Fisherfolk Forum (PFF) in collaboration with the Crofter Foundation and Sindh Agriculture University (SAU) Tandojam, at the SAU on Friday.

Participants from various districts participated in the training and highlighted issues of water scarcity, support price of crops, high prices of fertiliser, and lack of facilities for marketing, storage, value addition and developing seed varieties.

A civil society activist, Punhal Sario, said Sindh's peasant movement had started for the rights of farmers, but still they and landless farmers remained deprived of basic rights. The government should protect their rights, he added.

Highlighting the importance of natural farming, Mustafa Mirani, senior vice chairman of the PFF, said organic agriculture was need of the hour and farmers were facing problems in adopting natural farming at the field level. He added the government needed to encourage natural farming at the field level.

Calling for a ban on corporate farming in Sindh, he said there was a need for food safety and security priorities in the agriculture policy to feed the nation with safe and nutritious food and the government should implement food safety rules and regulations at the gross-root level.

Ali Palh, chairman of the Sindh Agriculture Research Council, said that the use of fertiliser and pesticides and other chemicals should be banned in Sindh. He said the youth should be trained in agriculture enterprise development for the economic prosperity of the nation.

He said indigenous varieties in agriculture, livestock and fisheries should be promoted, which was part of agriculture, and there was a need to ensure proper irrigation, support price and high-yielding varieties to peasants of Sindh.

RAHU PLAYS DOWN DAMAGE CAUSED TO STANDING CROPS BY LOCUST INVASION

The Newspaper’s Staff CorrespondentUpdated June 30, 2019

HYDERABAD: Sindh Minister for Agriculture Ismail Rahu tried to belittle the damage caused so far by locust attack on standing crops but admitted the threat still lurked as the insect’s breeding season was nearing fast when it could multiply and spell disaster for Sindh’s agriculture if it was not exterminated in time.

He told journalists after inaugurating two-day mango show at Expo Centre here on Saturday that when locusts’ presence was reported in the desert area of Nara taluka in Khairpur district around end of May Sindh government intimated the Department of Plant Protection (DPP) and kept updating it on the insect’s movements from time to time between May and June.

Visitors mill around stalls at the Expo Centre mango festival on Saturday.—Dawn

Since the insect was not stopped in Balochistan where it first arrived from Iran, it flew into Sindh and now the provincial government was trying to control it to save crops, he said.

He said that he along with Sindh chief minister visited affected areas in three districts and found “… no major damage to crops yet the threat still lurked”.

However, the insect’s breeding season was approaching fast and desert was its final destination where it would lay eggs. Its number would multiply then and the situation might become serious, he cautioned.

Mr Rahu said that Sindh government had formed field monitoring teams in 22 districts, approached Food and Agriculture Organisation and requested Suparco to conduct survey to pinpoint where locusts could be present.

He said that aerial spray could be carried out in desert but they had only one plane at their disposal to spray insecticides. Even this plane had developed faults. He termed it a serious problem and said the government would not leave growers in the lurch.

He said that Sindh government had not received required funds for development schemes and admitted that work on some projects was hampered for lack of funds. Some projects did not receive funds but still tenders had been floated for various works including some subsidy-oriented programmes for farmers.

He regretted that provincial government had to cut funds for farm sector because of financial constraints. The federal government had shown a tendency that it would neither work itself nor allow provincial governments to work, he said.

Asked why DPP was not devolved to the province, he said that how could it have been when people were concerned even on this devolution which had been achieved after great struggle by smaller provinces.

He appreciated holding of mango show in Hyderabad after Mirpurkhas and described it as a good initiative for the promotion of agriculture sector considering substantial contribution of mango farming to farm sector.

Sindh government was committed to facilitate farmers in controlling post-harvest losses and increasing productivity besides improving mango export to Middle East to earn foreign exchange, he said.

Hyderabad Commis-sioner Mohammad Abbas Baloch, managing director of Sindh Enterprise Development Fund Mehboobul Haq, representatives of growers' bodies and other officials concerned were also present at the inauguration ceremony.

FIRST-EVER 'MANGO FESTIVAL' HELD AT HYDERABAD EXPO CENTRE

RECORDER REPORT JUN 30TH, 2019 HYDERABAD

First ever 2-day mango festival in Hyderabad was organised to get the access to national and international markets here at Expo Centre, Hyderabad Saturday. The festival was inaugurated by Sindh Agriculture Minister Ismail Rahoo. Agriculture University Tando Jam Vice Chancellor Dr Mujeeb Sahrai, divisional commissioner Hyderabad Muhammad Abbas Baloch, Additional IG Police Hyderabad Ghulam Sarwar Jamali, Director General Agriculture Sindh Hidayatullah Chajro, Deputy Commissioner Hyderabad Syed Sajjad Hyder Shah, ADC Hyd Muhammad Yousuf Shaikh and concerned officers were also present.

The Sindh Minister inspected different stalls of more than 30 kinds including collector, Lal Ram Poori, Patasho, Neelam, Desi, Chausa, Langro, Kali Saroli, While Saroli, Sonaro and Sonari, Hafiz, Bombay Green, Bottel, Sindh Pahlwan, Totta Pari, Samad Mango, Kala Pahar, Bewafa Jamal Poori, Infaso, Bhoori Sindhri, White Sindhri, Bharcho and others.

Talking to media the Sindh Agriculture Minister said that Sindh had rich agricultural land and during four seasons it produced different fruits and vegetables.

He said Sindh was keen to provide modern facilities to growers so that quality and production of mangoes and other crops could be increased. Replying a question regarding 18th amendment, he said those who were against 18th amendment were actually against country's progress and solidarity.

MANGOES QUENCH PAKISTAN'S SUMMER BRUNT

By Anadolu Agency Published: June 29, 2019

KARACHI: In Pakistan, where people are exploring ways to beat the searing summer heat, delicious mangoes keep them cool and fresh.

The rising summer temperatures coincide with the harvest of mango crop as well. Extolled as king of fruits, India and Pakistan recognise it as their national fruit. Both often unleash its power in diplomacy and political outreach. The fruit has also been used by writers and poets in the region, over centuries to represent unspoken thoughts and feelings.

Summer in both countries is defined by the sights and sounds of vendors hawking piles of soft, sweet-smelling mangoes or pureeing them to create refreshing drinks to cut through the scorching heat.

"Summer in Pakistan is getting unbearable with every passing year, but mangoes only make it bearable," Tasneem Hussein, a lawyer said while bargaining with a mango-seller, at the entrance of Karachi's main fruit market.

Karachi was once known for its modest weather even in the hottest months of June and July. Global warming, associated with rising pollution levels, have upset weather clock, with the city getting warmer in recent years.

"The cold and slushy (mango) shake or the frosty mango slices beat the fatigue, caused by the heat," said Hussein with a winsome smile on his bearded face.

Tariq Ali, a resident of southern Mirpur Khas district, where temperatures touched 50 degrees Celsius earlier this month, says mangoes were the only thing he liked about summers. "It (summer) is stifling and disturbing, but I like the season because it brings with it mangoes, that make me tidy at the end," he said.

Mirpur Khas is one of the largely mango-producing regions and famous for its huge Sindhri variety of mangoes.

Pakistan produces 1.9 million tonnes of mangoes annually, thus ranking sixth in the world, followed by India, China, Thailand, Indonesia and Mexico. There are two dozens of mango varieties, notably, Anwar Ratual, Dasheri, Langra, Saroli, Sindhri, Totapari, and others. But the taste of the country is prized Chaunsa.

Last year, Pakistan exported 82,000 metric tonnes of mangoes to the Middle East, Europe, the US, Japan, Australia and other countries. The juicy Chaunsa accounted to 60% of mango exports.

"Chaunsa is a favourite in the Middle East, Europe, America and other countries because of its special taste", said Waheed Ahmed, a Karachi-based mango exporter. In terms of sweetness, Pakistani mangoes edge out their Indian and Indonesian counterparts in the international market.

Till 2011, when the US had put a ban on the entry of Pakistani mangoes, the fruit lovers would go all the way driving to Toronto, Canada, to taste Chaunsa mangoes.

Despite its aroma and taste that makes Pakistani mangoes a hot favourite; little attention is being paid to adopt the latest harvest practices to improve their quality further.

Ahmed stressed that adoption to the new technology was necessary to sustain and also to explore new markets. “Even China- the second largest mango producer- wants our mangoes, as their production does not match huge demand they have, because of a large population,” he said.

Past four years, the country’s mango production had slightly declined. “This year, production has shot up, because growers are getting better prices. But still, there is a 30% shortage compared to actual capacity and demand, mainly because of changing weather patterns,” he said.

The exporter added that the trend will definitely improve mango exports. But the impact will be seen on the ground, only by 2021-22. Pakistan plans to export 100,000 metric tonnes of mangoes this year, according to Ahmed.

Using mangoes to mend strained relations is an old tradition in the region. The competing tribes over centuries used the fruit, to defuse tensions.

In 2010, then US Secretary of State Hillary Rodham Clinton announced to open the US markets for Pakistani mangoes, in a bid to dampen anti-American sentiment, marking the latest chapter in the fruit’s curious history of diplomacy.

“I have personally vouched for Pakistani mangoes, which are delicious, and I’m looking forward to seeing Americans be able to enjoy those in the coming months,” Clinton said during her visit to Islamabad.

Prime Minister Manmohan Singh gifted crates of mangoes to the visiting US President George Bush in 2006, when they were discussing the Indo-US nuclear deal. Whether President Bush gave India waivers due to mangoes is not known, but a favourable climate helped India to clinch the access to nuclear technology.

Pir of Pagaro, famous spiritual leader and head of his faction of Pakistan Muslim League – the second largest party in rural Sindh province – has continued the tradition to gift mango crates to his friends and foes. Another politician from southern Punjab, Nawabzada Nasarullah Khan had also earned fame for sending mangoes of his orchards, to his political opponents every year till his death in 2003.

Almost every year Pakistan’s government sends a box of mangoes to the Indian prime minister and other top functionaries in the Indian capital New Delhi.

The most famous Pakistani mango is known as Anwar Ratol, which has its roots in a village two hours from New Delhi, in the Baghpat district of western Uttar Pradesh province. Many years before Partition in 1947, a mango grower from Ratol had migrated to Pakistani part of Punjab and named a sprig he had transplanted there after his father, Anwar.

Former military ruler General Ziaul Haq was killed along with several senior military officers and the then US ambassador in a plane crash in August 1988. Minutes before the plane took off; several boxes of Bahawalpur mangoes were loaded in the plane. The conspiracy theory is that mango crates had bombs. Noted Pakistani writer Mohammed Hanif has used this episode in his award-winning comic novel titled, ‘A Case of Exploding Mangoes’, to expose cynical layers of corruption.

Who killed Zia? The bomb in the mango box or a technical error. No one knows, despite several inquiries. The jury is still out on whether to hold mangoes guilty or not. Till then enjoy mangoes and stay fresh.

PUNJAB MULLS WHEAT PRICE HIKE AS STOCKS DWINDLE

By Rizwan Asif Published: June 30, 2019

LAHORE: The Punjab food department has prepared five recommendations to present to the government for the determination of sale prices of wheat and flour in the open market. Options presented vary from Rs1,300 per maund (40kg) to Rs1,750 per maund for wheat, with the final amount depending on the subsidy burden the government is willing to take on.

The final decision will be taken by Punjab Chief Minister Usman Buzdar, but there is a strong chance that the price of wheat in the open market will also account for the rise in the prices of electricity and diesel, with prices being set between Rs1,325 and Rs1,350 per maund, while the price of flour in the open market will not be allowed to exceed Rs800 for a 20kg bag.

It is noteworthy that the government appears ready to set the price points for wheat and flour separately. In the past, the price of a bag of flour was directly related to the price of wheat.

According to details, on the directives of the Punjab CM, the department of food has prepared different recommendations for determining the price of wheat and flour. A summary of these recommendations will first be sent to the cabinet committee, and then to the CM, who will take the final decision.

Last year, the food department, on account of a surplus of wheat, has sold the grain to flour mills at Rs1,300 per maund, which also included the price of jute sacks. This time, apart from raising the price of wheat, the government will also charge for bags separately.

Sources said that the recommendations prepared by the food department include four recommendations from Rs1,300 to Rs1,400 without bags. In the fifth recommendation, which the sources admitted was not politically feasible, the food department has recommended the government that the price of wheat be fixed at Rs1,787 with zero incidental charges. Currently, the food department is bearing incidental charges of almost Rs500 per maund.

Sources said that the Punjab government is facing another headache, as the food department has 4.8 million tons of wheat in storage and it cannot reduce its stock to zero. At least 500,000 to 800,000 tons must be stocked as its strategic reserve.

Of the wheat available with Pakistan Agriculture and Storage Services Corporation (Pasco), 350,000 tons of wheat has to be provided to the Air Force, Azad Kashmir, and Gilgit-Baltistan, while 300,000 tons will be given to the Pakistan Army. After setting aside another 500,000 tons as food security stock, Pasco will only have about 800,000 tons of wheat that can be sold. At this time, there is a shortage of wheat in Sindh, KP and Balochistan.

Sources said that the PTI's Core Committee Member Jahangir Tareen will preside over an important meeting in this regard in the next few days after which final decisions will be taken.

HIGH TAXES, COST OF PRODUCTION FORCE BREEDERS TO CULL CHICKS

The Newspaper's Staff ReporterUpdated June 30, 2019

Breeders have started culling day-old chicks for want of buyers after poultry farmers refused to further prepare flocks of chicken owing to massively high cost of production as well as imposition of 17 per cent tax on import of raw material and declining price of chicken meat. — Reuters/File

LAHORE: Breeders have started culling day-old chicks for want of buyers after poultry farmers refused to further prepare flocks of chicken owing to massively high cost of production as well as imposition of 17 per cent tax on import of raw material and declining price of chicken meat.

"A day-old chick, which used to cost around Rs40, is now available in the market for Rs1 or Rs2. In certain circumstances, it is even available for free at the hatcheries since there is no demand in the market," Chaudhry Muhammad Nusrat Tahir, the Pakistan Poultry Association (PPA) vice chairman (Northern region), told journalists at a press conference on Saturday. "The situation has worsened big time. It has even forced them to cull 50 per cent of the unsold chicks."

Poultry contributes 40 per cent to the total meat consumption and generates employment and income for thousands. Even in the current scenario, it is the cheapest source of protein available.

Tahir said that while the prices of all the commodities were rising fast, the PPA managed to supply chicken meat and eggs on affordable rates.

"Prices of chicken and eggs always fluctuate as per demand and supply, while more than 40pc ingredients of poultry feed are imported. Due to the hike in rate of dollar and imposition of 17pc tax on import of raw material, these ingredients have got out of the reach of feed millers, adversely impacting the cost of production of poultry feed as well as chicken meat and eggs," Mr Tahir, who was flanked by association Secretary retired Maj Javaid Hussain Bukhari, explained.

He further said that poultry farmers were reluctant to keep chicks on their farms because of costly feed and low market rate for their product. Similarly, the cost of production of day-old chicks has also increased massively. These problems are compounding by the day and will soon lead to an acute shortage of poultry meat and eggs, he predicted.

"This shortage cannot be bridged in a short time. It will end up in chicken meat price skyrocketing, taking it out of the reach of the poor," he warned.

The association sought immediate government support for the poultry industry by reducing the heavy taxes on import duty of all kinds of ingredients and poultry medicine. "If the government does not hear us, the poultry farmers will have no option but to close down their production units. It will also deprive the country of cheap source of protein," he further warned.

NEWS COVERAGE PERIOD FROM JUN 17th TO JUN 23th 2019

FEAR GRIPS FARMERS AS LOCUSTS ADVANCE TOWARDS COTTON CROP

Faiza Ilyas Updated June 17, 2019

KARACHI: Desert locusts are advancing towards the cotton crop in Khairpur where in recent days they have taken over parts of the district in Sindh province and are now threatening thousands of hectares of the plant, it emerged on Sunday.

The day also saw a visit to locust-infested areas by the federal minister for national food security who claimed the government was making all-out efforts to contain the pests but farmers voiced their reservations.

Speaking to Dawn, farmers in Khairpur expressed grave concern over the looming danger to estimated 30,000 to 40,000 hectares of the cotton crop and said if effective measures were not taken, the insects in their millions could infest the agricultural fields located a few kilometers away from the locust infested area in Nara and Mirwah talukas in Khairpur district.

“The greenbelt is located just seven kilometres from the infested area where these insects are feeding on wild bushes. We fear they could fly away and cause widespread havoc to our crops,” said Nisar Khaskheli, president of the Sindh Chamber of Agriculture, Khairpur.

He regretted no local help was available in case of such an emergency and the subject was the exclusive domain of the federal government. “The provincial government doesn’t offer any assistance since it doesn’t deal with this subject while most landlords don’t have four-wheel drive vehicles that could go into the desert area and initiate some action to fight pests,” he said.

This period, he pointed out, was critical for the crop sown last month and already very vulnerable to any kind of pest attacks.

About past locust attacks, Mr Khaskheli said it last occurred in the 1980s and 1990s. Locals said they heard of the locust outbreak in the Nara desert and Mirwah area a week before Eidul Fitr following rain in the area.

The desert locust is potentially the most dangerous of the locust pests because of the ability of swarms to fly rapidly across great distances, according to experts. The locusts first affected Yemen from where they migrated early this year to Saudi Arabia and then to Iran.

Federal Minister for National Food Security and Research Sahibzada Mohammad Mehboob Sultan visited the locust-affected areas of Nara and Thari Mirwah in Khairpur on Sunday, according to a press release. “The government is doing all possible efforts to control the menace,” he stated.

Moreover, the Ministry of National Food Security and Research through its Department of Plant Protection (DPP) and in collaboration with UN’s Food and Agriculture Organisation had activated all resources to meet the “General Operating Expenditures” survey-and-control operations in a very vast locust affected area of the country stated the press release.

An aircraft of DPP had conducted aerial surveillance of the locust-affected area of Thari Mirwah in Khairpur and also carried out aerial spraying in Sarai Mardan area. The ministry, in a statement on Sunday, said an aircraft was deployed at Sukkur airport for possible emergency aerial spraying in Nara desert.

The ministry, in a statement on Sunday also said so far 2,000 hectares had been treated in Thari Mirwah and a ground team was still working in the area.

“The outbreak was first reported two months ago and gradually it has taken over 99 per cent of our vegetation,” said Khuda Aziz Baloch heading a local farmers’ organisation in the Dasht area of Kech district.

He had informed the deputy commissioner Turbat of the situation but there was hardly any action. “Last night, a team of federal government’s DPP came with only one vehicle and sprayed pesticide on a small area. This is gravely insufficient,” he said, adding that Dasht was dependent on agriculture spread over 32,200 acres.

The team, he said, told him that aerial pesticide spraying couldn’t be carried out in the area because it didn’t have security clearance.

Rafique, a resident of Kallag, part of Turbat tehsil, narrated similar conditions prevailing in his area as well as Jusak and Ginnah, expressing dissatisfaction over government measures.

Explaining why aerial spraying has not been conducted in Balochistan so far, director technical DPP Tariq Khan said aerial fleet would only be applied when “locust hoppers were spread over hundreds of hectares”. “We believe ground operation is more effective in the present situation. There should be a scientific justification for an aerial operation,” he added.

Commissioner Makran Division Tariq Zehri rejected reports of widespread damage to crops and said damage to agricultural fields was only 15 to 20 per cent as “young locusts were only feeding on leaves and not damaging other parts of plants”.

“Over the last 60 days, we have been able to contain these pests in 80 to 90 per cent of the infested areas including parts of Turbat, Pasni and Gwadar. Now, only 15 to 20 per cent areas are left,” he said, adding that federal government’s DPP was providing full support.

According to him, three subsequent showers of rain in the Makran division provided conducive conditions to locusts which migrated from Iran. “They multiply fast so it’s a continuous challenge to contain these pests,” he said, that the situation would improve by end June as locusts were now moving towards Sindh and India.

Responding to a question by Dawn, he said there needed to be a trained staff with necessary supplies at least in those districts bordering Iran to respond to such emergencies promptly.

POLITICAL HARMONY KEY TO BOOSTING AGRICULTURE

From the NewspaperUpdated June 17, 2019

As growth in agriculture sector tanked to 0.85pc in the current fiscal year against the target of 3.8pc, the PTI government plans to spend Rs280bn on this sector during its five-year term. The purpose is to help recover growth in agriculture with the help of provinces in whose administrative domain it falls.

In the outgoing fiscal year, a paltry sum of Rs21bn was spent on agriculture against the original allocation of Rs63bn under the federal Public Sector Development Programme (PSDP). For FY20, an amount of Rs78.6bn has been set aside for this sector, budget documents reveal.

But higher allocation does not mean actual utilisation. So, the relevant question here is whether agriculture sector would actually receive Rs78.6bn in FY20 as promised? Given the fact that the PTI government has set a very ambitious revenue collection target of Rs5.5 trillion for FY20, a slippage in the target would naturally bring the PSDP under axe. And, as political confrontation is growing with every passing day, a more important question is: whether federal and provincial governments would be able to work together for promotion of agriculture—or for that matter any worthy cause—in the next fiscal year and beyond?

Agriculture sector's growth slumped below 1pc in FY19 for a host of reasons. But the Economic Survey 2018-19 cites shortage of irrigation water and lower off-take of fertiliser as two main factors. The third most important reason was an obvious lack of working relationship between PTI that is in power in the federation and in Punjab—and Sindh where PPP is in the government.

After Punjab, Sindh has the largest share in the country's agricultural output and for agriculture to grow there has to be a productive working relationship between the federal and Sindh governments. That seemed missing in FY19.

Now PPP and PML-N are up against "selective accountability" of their leaders under the PTI government and PM Imran Khan consistently holds the leadership of these two parties responsible for all conceivable ills in Pakistan economy and politics. In this environment, can PTI, PPP and PML-N work jointly for promotion of agriculture in Sindh where PPP is in power or in Punjab where PML-N is potentially a pain in the neck of PTI's government? The key to agricultural growth prospects lies in the answer to this question.

Since agriculture is a provincial subject, what FY20 holds for it in store would become obvious only after the presentation of provincial budgets. But the federal budget envisages many measures that may have a telling impact on this sector.

Unfortunately, a number of the budgetary steps may negatively impact on agriculture. And, only a few can benefit farmers or boost the sector's growth even if the much-required political harmony between the federal and provincial governments is achieved magically.

Higher PSDP allocation for agriculture and for construction of dams, if not subjected to as deep cuts and in FY19 budget, should help accelerate growth in agriculture. State Minister for Revenue Hammad Azhar mentioned in his budget speech that in addition to constructing dams out of federal expenses, the federal government would help provinces build water conservation projects and provide research and technical assistance funds for increasing yields of wheat, rice, sugarcane and cotton.

He said that federal funds would also be available for harnessing untapped potential in fisheries and for undertaking development initiatives in livestock sector. He assured the nation that the federal government would continuesubsidising agricultural tube wells and financially facilitate crop loan insurance scheme.

Apparently all these measures, if undertaken with sincerity of purpose and with active involvement of provincial governments, can help boost agricultural productivity across the country. He, however, did not reveal any details of how Pak-China cooperation in agriculture under the umbrella of CPEC would contribute to agricultural growth in future. In fact, he touched upon CPEC quite briefly and named agriculture as one of the areas added to the scope of CPEC along with socioeconomic and industrial development.

The federal budget is inflationary in nature. If the parliament approves the budgetary measures, prices of fuel including the most commonly used CNG will increase. That will add to the cost of production and transportation of agricultural produce and ultimately impact negatively on agriculture.

Proposed phasing out of direct and indirect subsidies and concessions will also affect agriculture and will make agricultural inputs costlier. With consumer inflation already above 9pc and the rupee's depreciation is continuing, the cost of output in all sub-sectors of agriculture including livestock and fisheries would go up.

This seems a real possibility also because a slippage in ambitiously projected revenue target and further fall in the rupee value cannot be ruled out, due to an obvious lack of political consensus on revenue collection measures and structural imbalance in external sector.

In FY19 (up to June 12) the rupee has already lost about 25pc value against the US dollar fuelling inflation and adding to the cost of production of everything including farm produce. (On June 12 this year it closed at 151.57 per dollar against 121.50 at the end of June last year).

The budget FY20 is silent on what PTI's federal government would be doing to help provinces in fixing structural problems that affect growth in agricultural sector. Water distribution has remained a thorny issue and Sindh complains that it receives lesser irrigation water than its due share that affects its agricultural growth. Sea intrusion is eating away thousands of acres of arable land in coastal areas of Sindh.

And, rapid environmental changes have made the entire Pakistan vulnerable to abrupt flooding. The state minister did not touch upon such important issues from the federal government's perspective and promised nothing to address them.

One should hope that PTI would soon come up with details of federal initiatives designed to help smaller provinces tackle these and other challenges that affect agricultural growth. — MA

SWEET ALTERNATIVE TO TRANSFORM ENERGY SECTOR

By Faraz Ahmed Published: June 17, 2019

KARACHI: The whole nation was eagerly waiting for the outcome of ultra-deep water drilling exercise by ExxonMobil and Eni in Kekra-1 around 280 km off Karachi shore.

Since the stakes were high, the disappointment from the unfavourable outcome is understandable. While it is necessary to keep exploring conventional fossil fuels and even non-conventional ones like shale deep under the surface, policymakers should not be shy away from utilising what is available on surface and in abundance ie biofuel.

It is high time that the policymakers explore all the available alternative and indigenous resources to meet growing energy needs and at the same time curb trade deficit. However, the good news is that it will not be the first time that we will revolutionise the fuel space of the country.

In fact, the introduction of compressed natural gas (CNG) for vehicles during the early 1980s and subsequent commercialisation of CNG as an alternative motor fuel in 1992 is a prime example of what can be achieved with perseverance. In addition to the economical advantages of using CNG, we also managed to reduce the carbon footprint by using a more environment-friendly fuel mix.

Let’s look at the global trend for biofuel and the distinct model adopted by the two top biofuel producers in the world ie the US (16 billion gallons) and Brazil (8 billion gallons). They both use different biomass ie corn and sugarcane respectively.

The Brazilian model to produce ethanol from sugarcane is very close to what can be easily adopted in Pakistan on a national scale and is more economical than the one used in the US. In this Brazilian model, there is an option to either produce ethanol directly from sugarcane juice or convert it into sugar and molasses and then further distillate molasses into ethanol.

However, the success of the Brazilian model is not just based on government incentives to farmers and better ethanol yield but also on the establishment of a whole ecosystem of efficient supply chain that brings sustainable growth.

Let’s carry out a cursory SWOT analysis to establish a sustainable biofuel ecosystem in Pakistan, which is the fifth largest sugarcane producer in the world with production levels of around 70-80 million tons. Sugarcane is mostly utilised by 90 sugar mills spread across the country to produce sugar as the main product while selling molasses and bagasse as byproducts.

Few of the mills have installed distillation facility either integrated with the main plant or associated with it with the added advantage to convert molasses into ethanol and industrial alcohol.

As far as the raw material to produce biofuel is concerned, the government has already set the sugarcane support price at Rs180 per 40kg, which incentivises the farmers to grow the crop. However, there are some issues of lower yield due to loss of sucrose content as a result of delay in the start of crushing season.

The main reason for this delay is usually the tussle between the politically influential mill owners and the farmers to get a better deal. These issues must be resolved to ensure timely commencement of crushing season to optimise the recovery of ethanol.

Currently, the ethanol is mostly exported but the government can roll out a favourable policy to bring a green revolution by introducing the hybrid fuel. At first, a minimum of 10% ethanol blending (normally referred to as E10 globally) can be introduced at the filling station.

Although most cars on road these days can handle E10 easily, strict quality control is needed to minimise water content as ethanol is prone to absorb water, which may lead to internal corrosion.

The establishment of a sustainable blended fuel ecosystem requires all stakeholders from distilleries, to refineries to oil marketing companies to be on board and the Petroleum Division has to take the lead to re-create the success story of CNG revolution.

The writer is a financial market enthusiast and attached to Pakistan stocks, commodities and emerging technology

FALLING LIVESTOCK GDP

BR Research June 17, 2019

Last week BR Research flagged how livestock sector, which has 60 percent share in agriculture GDP has been growing at a seemingly flat pace for year, and yet no one questions those numbers. (See Facts, fiction & poor press engagement, June 11, 2019)

The reason why livestock GDP, where cow and buffalo combined have the biggest share, grows at a flat pace every year is because the statistics department simply assumes that livestock growth rate between the last two livestock census (1996 and 2006) holds true today as well. That assumption is wrong and would have been proven such, had the statistics wing been conducting livestock census at least every ten years, and intermediate surveys at every three years.

In 2016, Punjab livestock department did their own livestock census and their numbers challenged the federal government’s estimates used for livestock GDP. Punjab’s 2016 livestock census revealed that total livestock in the province was about 25 percent lower than the provincial number for 2016 estimated by federal government for that year, which as mentioned earlier is simply based on inter-census growth.

In some Punjab districts it was 30 percent lower, in others, it was 40 percent. Only in two districts, one being Dera Ghazi Khan, the number from provincial census was higher than the federal government estimate for that district. In all other districts it was lower than the federal estimate. These results are very alarming, and sources in Sindh livestock department say that the size of Sindh’s livestock has also dwindled noticeably, albeit, they haven’t done their own survey as yet.

There are a host of reasons behind weak or negative growth in livestock across various districts in Sindh and Punjab. At the one end, livestock industry does not get sufficient credit from the banking sector, and at the other, public sector investment in the sector had fallen between 2010 and 2015 – the years after devolution.

Prior to devolution, federal Ministry of Food and Agriculture (Minfal) used to spend some money on livestock. After devolution, developmental spending on this sector fell sharply, though in Punjab it did pick up after 2016 but by then, the damage had been done.

Meanwhile private sector investment remained poor as regulation of milk prices by DMG officials doesn’t create enough incentives across the milk and meat value chain. The rise of corporate sector – packaged milk – triggered some investments in the sector ten years ago, but not enough to move the needle since packaged milk industry is still no more than 10 percent of the total milk market. The rest of the milk is mostly supplied by farmers who have no more than 3-5 animals.

Moreover, there is a problem of pre-mature culling of the animals before they complete their calving cycle. This is somewhat limited to Karachi and some urban areas of Punjab and KP, but still a major problem nevertheless that is hurting local livestock growth.

Pakistan's indigenous breeds have a useful life of about 10-years during which they are supposed to yield about 7 calves or crops during their lifetime. But when local pregnant animals from rural areas are brought to milking parlours in urban or peri-urban areas, their offspring is slaughtered soon after it reaches the slaughtering age, (sometimes even earlier which is done illegally). This is because the calf whether male or female has a cost; it drinks the milk of its mother cow, which the owners of milking parlours in urban-peri-urban areas would rather sell. Remember these are milking parlours and not cattle or dairy farms per se.

By the end of the milking period of the cow, these milking parlours sell those cows to the slaughtering houses instead of sending them back to the rural areas where they could graze, become healthy and become pregnant again and come back to urban areas for milking. This means that a cow does not complete its crop cycle of seven cows.

In other words, the herd size catering to Karachi and some urban centres in Punjab and KP, that should have grown at the multiple of 7 and would give milk 7 times has not been happening for the last 18 years. And that's not all. Many farmers give toxin laden food to their animals – such as cottonseed cake – to increase the milk yield of the animals. But because of the toxins, the animal's calving frequency goes down, leading to lesser births per cow/buffalo. Both these factors in turn are also reducing the gene pool of good high-quality cows and buffalos, whatever little is left of them.

Add to these factors the underlying trend of urbanisation; young people from rural areas are either migrating to the cities or migrating to semi-manufacturing or service sector jobs closer to rural areas. As a result, if the grandfather had 15-20 animals; the grandson now has 3-4 animals.

The system of modern governance is such you can't fix what you don't measure. By extension if the measurement is flawed and makes everything look hunky dory, as is the case with Pakistan's livestock GDP, then there is no reason to fix anything, is there?

TOBACCO GROWERS SEEK TAX WITHDRAWAL

The Newspaper's Staff ReporterJune 18, 2019

ISLAMABAD: Tobacco growers from Khyber Pakhtunkhwa (KP) on Monday demanded withdrawal of Rs300 tax on tobacco, saying the tax will bring severe financial problems for growers and labourers.

Representatives of Sarhad Agricultural and Rural Development Organisation (SARDO), Kissan Board and Labour Federation while addressing a press conference here at the National Press Club said the government had reneged on its promise not to impose the tax on tobacco.

The participants of the press conference claimed that last month, the government had assured them that this tax would not be made part of the budget.

They sought the tax on cigarette companies instead of tobacco growers.

Haji Abdul Nabi of SARDO said the tax would be financially harmful for growers as well as labourers.

“The decision will affect 1,134,000 tobacco growers and 15,000 industrial workers only in KP,” he said.

He alleged that the multinational tobacco companies provided loan for the raw material to growers on 36pc interest rate and compelled them to sell the tobacco to the companies at less rate.

He said in the current economic situation the agricultural side needed to be strengthened, but the government was imposing more tax on it.

President KP Labour Federation Ibrarullah said the tax would prove economic death for the working class.

“The tobacco production has decreased to seven million kg from 140 million kg in the last four years due to discriminatory policy of the government,” he claimed.

He said the tobacco production has decreased by 50pc which was alarming.

Mr Ibrarullah said the tobacco growers were already paying billions of rupees in the form of taxes and an additional Rs300 tax would be financial burden on them.

“Government needs to shift its tax policy to multinational companies which are earning billions of revenue from tobacco manufacturing,” he said.

Rizwanullah of Kissan Board also urged the government to withdraw the tax otherwise they would launch a series of protests, during which no multinational company would be allowed to purchase tobacco from the market.

K-P FOOD AUTHORITY SEALS ‘SYNTHETIC’ JAGGERY FACTORY

By Our Correspondent Published: June 18, 2019

PESHAWAR: The Khyber-Pakhtunkhwa Food Authority (K-PFA) along with excise officials conducted a joint operation early on Monday and sealed a synthetic gur (jaggery) factory set up inside a house in the Hazar Khwani area of the provincial capital.

K-PFA Director General Riaz Khan Mahsud in a statement appreciated the efforts of the excise officials and announced an Rs10,000 cash prize for them.K-PFA Director General Riaz Khan Mahsud in a statement appreciated the efforts of the excise officials and announced an Rs10,000 cash prize for them. Mahsud added that making synthetic jaggery from glucose and sugar consisted a crime under the K-P Food Safety Act and that no one is authorized to do so.

K-PFA DO Khalid Khan Khattak said provincial excise officials had information about synthetic gur production.

“We deputed a team led by Food Safety Officers Ahmad Ali Shah and Wasif Shah to inspect the venue along with a technical squad. They found people were making gur with the help of glucose, sugar and non-food colours,” Khattak revealed.

PUNJAB PIVOTS TO AGRICULTURE 2.0

By Rizwan Asif Published: June 18, 2019

LAHORE: Those of us living in urban areas take for granted how pervasive rapidly advancing technologies have become in our lives. But Pakistan’s rural areas still represent a frontier yet to be fully explored in terms of technological solutions.

For reasons as varied as prohibitive cost and lack of necessary education and training, many of the latest technologies used the world over to revolutionise agriculture are still beyond the reach of most of Pakistan’s 8.3 million farmers.

Still, Punjab, which accounts for 60% of the country’s agricultural output, appears to have a leg up on other provinces in this regard. With assistance from the provincial government in the form of various new schemes, farmers in Punjab are increasingly turning to the latest technological solutions to enhance their yield.

“The demand for progressive farming solutions and practices is growing,” said Punjab Agriculture Department Director Muhammad Anjum. “The use of latest technology in agriculture is resulting in lower costs and increased productivity.”

In collaboration with the Punjab Information Technology Board (PITB), the Punjab Agriculture Department has launched the AgriSmart application to create a digital database of agricultural data, such as crop reporting, soil sampling, pest scouting and fertiliser monitoring. The department has also registered as many as three million farmers who are offered advice pertaining to cultivation, weather and prevention of crop diseases through SMS.

“We have provided over 2,000 of our field officers with Android devices to receive timely information about crops,” Anjum said.

The department has also introduced a software application aimed at training farmers and is seeking PITB assistance to monitor agriculture revenue and the condition of farmers’ land.

“An application to give loans to small farmers under an agriculture e-credit scheme is also being used while the prices of goods in the agricultural markets of Punjab under agriculture marketing information system are uploaded and their comparison with the prices of the international market is also presented,” said a senior PITB officer.

A web portal to avail fertiliser subsidies has also been introduced. Sacks of fertilisers now come with scratch codes, which can be used at the portal to obtain the subsidy.

Another web portal has been set up to issue the Kisan card and special online accounts have been set up for fertiliser and pesticide manufacturers so that the prices of their products can be monitored. The manufacturers are asked to continuously update product prices and other details on the portal, which is then accessed by agriculture department officers for fact checking.

The department has also introduced a portal and GPS tracking application to rent bulldozers to farmers who need them. The farmers can rent a bulldozer after booking it through the online portal and authorities can monitor the vehicle in real time through the GPS tracking application.

PITB has also created software to convey essential information regarding the wheat procurement drive and provision of bags and containers to registered farmers.

"PITB has done a terrific job in developing innovative new solutions for agriculture. The applications they have come up with have proven to be extremely beneficial," remarked Anjum.

Farmers in Punjab have also started installing small-scale weather stations in their fields, according to Hussain Ata who works for a private company that sells them and other latest agricultural tools. "These stations carry nearly 300 sensors and can inform farmers of weather conditions seven days in advance," he said. "The stations, which range in cost from Rs150,000 to Rs3 million, also provide hourly weather updates and can be used for pest control."

Agriculture department director Anjum, meanwhile, said his wing also issued a policy for using drones in agriculture last year as well. "However, we stopped short of allowing their usage due to concerns by defence institutions regarding border security."

He emphasised, however, that the usage of drones in agriculture is inevitable in Pakistan at some point. "Drones can be used to spray pesticides, conduct surveys and carry out research. In these latter two respects, the technology is much more economical than satellites," Anjum pointed out.

COTTON PRICES FIRM ON MODEST TRADE

RECORDER REPORT JUN 18TH, 2019

KARACHI. A kind of stability prevailed on cotton market on Monday in the process of modest trading, dealers said. The official spot rate was unchanged at Rs 8800, they added. Seed cotton per 40kg from Lower Sindh was available at Rs 3800-4000, they said. Binola per maund was available at Rs 1700-1750, they said. Approximately, 2300 bales of cotton finalised between at Rs 8750-8850, they said.

According to the market sources, sowing of seed cotton in the Punjab has almost completed and seed cotton production target for the current season is estimated at 80,000 lacs of bales.

Cotton Analyst, Naseen Usman said that several participants were on the sideline due to hovering confusions following the budgetary measurement.

They still failed to find any outcome of budget announcements, uncertainties are rising with the passage of time, other brokers said.

Besides, dollar's unprecedented rise versus the rupee also kept both buyers and sellers in a state of confusions, some analysts said.

Cotton prices moved both ways in the international markets, they said. Following deals were reported: 1200 bales of cotton from Meilsi sold at Rs 8750, 900 bales from Rahim Yar Khan at Rs 8850 and 200 bales from Sanghar (new crop) at Rs 8500, they said.

60PC CUT IN PUNJAB SUBSIDY BILL LIKELY

NASIR JAMAL Published Jun 19, 2019 07:09am

LAHORE: The Punjab government proposes to slash its subsidy bill by a hefty 60 per cent during next financial year through a massive reduction of Rs27 billion in its wheat price support to Rs1bn and a cut of Rs5.5bn in allocations for the Ramazan package to Rs2bn.

Overall, the Usman Buzdar government has set aside Rs21.6bn to provide food, transport and agriculture subsidies next fiscal year against the revised estimate of Rs53.3bn for the outgoing financial year, according to the budget documents. It is to be noted that originally the government had allocated Rs50.6bn for food, transport, Ramazan package and other subsidies this year. But the diversion of a substantial amount of Rs5.9bn in the middle of the year to support sugar manufacturers spiked its subsidy expense by 5.3pc. It has not made any allocation for sugar subsidy in the next year's budget though.

Rs21.6bn set aside to provide food, transport and agri support against revised Rs53.3bn for outgoing year

The bulk of subsidy expense proposed for the next year or equal to almost 58pc of the total budgeted amount has been set aside for providing cheaper public transport, say the documents. Another Rs6bn – up by more than 70pc from the present fiscal year – will be used to support the farmers through agriculture. The estimates for the transport subsidy appear on the higher side as the government has revised down its expenditure on this count to Rs8.4bn from original allocation of Rs14.6bn during the current year.

The proposed reduction in wheat support price budget indicates the shift in the government policy to move towards a market-based [price] mechanism and let the private sector play a more active role in procurement of the crop during the next harvest with a view to reducing its expenditure and focusing on targeted subsidies.

Some finance officials, however, consider the reduced wheat subsidy allocations as unrealistic as it was more a political matter than financial management issue. "At the end of the year, the government is more likely to end up increasing the subsidy amount on wheat to avoid any political backlash," one official said on condition of anonymity.

OVER 12,000 TONS OF HONEY PRODUCED ANNUALLY, SAYS MINISTER

Staff ReporterUpdated June 19, 2019

RAWALPINDI: Federal Minister for National Food Security and Research Sahibzada Mohammad Mehboob Sultan on Tuesday said Pakistan produced more than 12,000 tons honey annually.

Addressing as a chief guest at a ceremony held in connection with honey festival at Pir Mehr Ali Shah Arid Agriculture University the minister called for enhancing the capacity of the professionals and beekeepers to produce good quality honey.

The arid university's dean of the Faculty of Crop and Food Sciences Dr Fayyazul Hassan, dean Faculty of Forestry & Range Management and chairman Department of Entomology Dr Attaul Mohsin, faculty members, bee keepers and students were also present at the inaugural session.

The festival was organised by the Department of Entomology in collaboration with Agri Tourism Development Corporation of Pakistan (ATDCP) with an aim to promote honey, honey bees, their products and beekeeping through this unique educational platform to the public.

The event had provided a platform to the scientists, beekeepers, bee product marketing companies, growers, potential stakeholders in government, NGOs and students to share their views and ideas regarding uplift of beekeeping sector in Pakistan.

The minister said honey production was a very useful business and Pakistan had great potential to produce prime quality of honey by establishing standards and new habitats.

"Integrated efforts through capacity building for hygienic and up to mark production not only flourish beekeeping industry in Pakistan but also lead country towards economic progress through foreign earnings," he said.

He highlighted the major issues such as deforestation, indiscriminate use of pesticides, climate change effects as well as bee colony problems.

He recommended that to identify the favorable situations and suitable areas, regional survey must be conducted within country to help the beekeepers.

He asked the private sector to come forward and develop joint initiatives for promotion of bees in the agricultural system. He appreciated that the university was playing a vital role in boosting beekeeping sector in Pakistan.

The chief guest, other dignitaries and participants also visited the stalls displayed outside the main auditorium.

TOWNSHIP SELECTED AS TESTING GROUND FOR PASTEURISED MILK

By Our Correspondent Published: June 19, 2019

LAHORE: Punjab Food Authority (PFA) has selected the township area as the initial testing ground to conduct a survey to learn about the consumption of milk and make people aware of the pasteurisation process.

This was revealed by PFA Director General Captain (retd) Muhammad Usman during a press briefing on Tuesday. Talking to the media, Usman said PFA would start providing pasteurised milk at the doorstep of consumers in light of the survey results.

He said a comprehensive plan for the availability of healthy and pure milk has entered its final stages under a pilot project of pasteurisation. The DG further said PFA would spread this project across the city after executing it successfully in one area. He said that the sale of loose milk would be completely banned by 2022.
